DELEGATION TO HARRISBURG.

As a matter of interest to the readers of *Friends' Intelligencer*, we subjoin copies of two Memorials addressed to the Legislature of this State, issued by the Representative Committee or Meeting for Sufferings of our Yearly Meeting, one on the subject of Intemperance, and the other on Military Requisitions, which were presented at Harrisburg on the 15th inst by a Committee appointed to that service.

The one on Intemperance was read in the House the same afternoon, and referred to the Committee having charge of the subject. By appointment, the Friends afterwards met with this Committee, with whom they had a very satisfactory conference, and they were informed the visit was very opportune, as the subject was claiming the attention of the Legislature at this time, and the efforts of Friends would do much towards strengthening those interested in the cause. The following morning, a copy of the Memorial was printed in a Harrisburg daily paper, with an editorial, which we also subjoin.

They left the one on Military Requisitions in the care of the Committee having charge

of the subject, to be presented to the House at some future time. They also had an interesting and impressive interview with the members in relation thereto.

Friends were received and treated with marked respect and attention.

To the Governor, Senate and House of Representatives of the State of Pennsylvania:

This memorial of the Representative Committee, or Meeting for Sufferings, of the Religious Society of Friends of Pennsylvania, New Jersey, Delaware, and adjacent parts of Maryland, respectfully sheweth: That there are now in operation in the State of Pennsylvania laws imposing a penalty commonly known as a "militia fine," upon all men, citizens of the State, between certain ages considered capable of bearing arms, who do not comply with the military requisitions of the State; and as such laws are in disregard of the conscientious scruples upon the subject of war of a large class of the professors of Christianity in this Commonwealth, we deem it our duty earnestly and solemnly to remonstrate against them as a violation of our religious rights guaranteed by William Penn, the founder of this Commonwealth, in his great Charter, in the following remarkable language:

"Almighty God being the only Lord of conscience, Father of Lights and Spirits, and

the Author, as well as Object, of all Divine knowledge, faith, and worship, who only doth enlighten the mind and persuade and convince the understanding of people, I do hereby grant and declare, that no person or persons, inhabiting this province or territories, who shall confess and acknowledge Almighty God, the Creator and Upholder and Ruler of the world, and profess Him, or themselves obliged to live quietly under the civil government, shall be, in any case, molested or prejudiced, in his or their person, or estate, *because of his or their conscientious persuasion or practice, or to do or suffer any other act, or thing, contrary to their religious persuasion.*

"And, because the happiness of mankind depends so much upon the enjoying of liberty of their consciences as aforesaid, I do hereby solemnly declare, promise, and grant, for me, my heirs, and assigns, that the first article of this Charter, relating to liberty of conscience, and every part and clause therein according to the true intent and meaning thereof, *shall be kept, and remain, without any alteration, inviolably forever.*"

The Convention of 1790, which formed the first Constitution of this State, re-affirmed, in the Declaration of Rights, the great truths and rights granted by William Penn, and they were retained at the revision in 1837. Thus in the existing Constitution of this State, it is declared, "All men have a natural and indefeasible right to worship Almighty God according to the dictates of their own consciences;" also, "No human authority can, in any case whatever, control or interfere with the rights of conscience." It is likewise declared that everything in this article—that is, the Declaration of Rights—is excepted out of the general powers of government, and shall *forever remain inviolate.*

We represent a people who cannot comply with any law requiring military service without disobeying the command of God to them. Neither can they pay a fine imposed for exemption therefrom, because in so doing they feel that they would implicate themselves in a violation of their conscientious scruples in this respect.

For more than two hundred years our Society has held the doctrine that all wars and fightings were forbidden to them as followers of Christ—differing in this respect from nearly all other associations of men claiming the Christian name.

For asserting and maintaining this and other testimonies of the "Truth as it is in Jesus," they were brought under cruel persecution, enduring the despoiling of their estates, incarceration in prisons and loathsome dungeons, and death. Through this long season of darkness, their dependence was

upon the Divine Power, under which their patient suffering and earnest remonstrance obtained in some degree the favor of those in authority.

For the free enjoyment of civil and religious liberty, they came to this land, to seek amongst the so-called savages of the wilderness, immunities and privileges denied them at the hands of a professed Christian nation. Here William Penn and his friends planted their infant colony, and proved the efficacy of the principle of Peace. The conflict of arms was unknown, and history bears no record of strife between the Indian and the Friend.

We, their descendants, now approach you, not alone with a view to shield ourselves from suffering, but under a sense of duty to God, to assert the *stated rights of conscience*, to raise the standard of the Prince of Peace before the people, and in His name to ask you so to frame and modify the laws, that they shall not require those who administer them to *bring under persecution innocent men for obeying His commands*—"Ye are my friends if ye do whatsoever I command you."

In thus defining our position, we enter not into judgment or condemnation of those who differ from us.

Trusting in the mercy of our Heavenly Father, we desire that He may so touch your hearts and understandings with His wisdom, that you may grant our petition.

Signed by direction and on behalf of the Representative Committee or Meeting for Sufferings. CALEB CLOTHIER, *Clerk.*

Philadelphia, 1st month 27th, 1871.

To the Governor, Senate, &c.

This memorial of the Representative Committee of the Yearly Meeting of the religious Society of Friends, held in Philadelphia, for Pennsylvania, New Jersey, Delaware, and part of Maryland, respectfully represents—

That the evils arising from the sale and use of intoxicating liquors, as a drink, having claimed our serious consideration, we have felt it to be our duty to endeavor briefly to call your attention to the subject in all its bearings. The practice is utterly void of advantage to the individual or the State. We believe it to be the most fruitful known source of crime, entailing misery and wretchedness, both physical and mental, upon its immediate victims and their posterity; that it supplies more inmates to insane asylums, prisons, and alms-houses than any other cause; that the cost to the community in money, in addition to the moral depravity it engenders, in the occupancy of courts of justice in prosecutions for crimes committed under its influence, and the increase of taxes for the support of

alms houses, necessitated by the poverty it produces, far exceeds the income derived to the State from the sale of licenses. Were it otherwise, has the State a moral right to license this fruitful source of crime for the purpose of revenue? The places where liquor is sold are legion. The foul taint thereof is upon the breath of youth and age, in most places of public resort. We believe the increasing magnitude of this evil to be so great that it is second to none that can claim your attention. We respectfully but most earnestly, appeal to you, as the Representatives of a professed Christian community, whose duty it is to enact wholesome laws for the promotion and protection of virtue, as the surest guarantee for the public good, that you may solemnly consider the subject, and, by the exercise of the power delegated to you, do what you can to arrest and diminish this flood of iniquity.

We have laws for the protection of property and life, whilst we sanction by license means that may prove destructive to body and soul.

We therefore request you to abolish all laws granting licenses in this State for the sale of intoxicating liquors as a drink, and substitute laws entirely prohibiting such sale. Whilst we thus desire that the poisonous streams now surrounding the paths of the youth, luring them to destruction, shall forever cease, we shall hail with joy any modification of our laws approximating to so desirable an end.

Signed by direction and on behalf of said Committee. CALEB CLOTHIER, *Clerk.*

Philadelphia, 12th mo. 16th, 1870.

From a Harrisburg paper.

THE QUAKERS AND TEMPERANCE.—A Committee appointed at the last general Yearly Meeting of the Friends of Philadelphia, appeared in the House last night and presented a long and earnest memorial from the Yearly Meeting on the subject of intoxicating liquors, asking the passage of a perfectly prohibitory liquor law in this Commonwealth. It is seldom that the Friends interfere in Government policy or State and national legislation, save to protect and perpetuate their own peculiar tenets, and when they do appear in our Legislative halls or Executive chambers, their action is invariably the result of deep thought, and is deemed of absolute necessity to the cause of religion or humanity. They are the pioneers in the cause of abolition and emancipation, being the first to call the attention of Congress and the various State Legislatures to the evils of slavery, and to solemnly protest against its perpetuation, when to be an Abolitionist was a crime in the minds and prejudices of an

overwhelming majority of our fellow-citizens. They have now deemed it their duty to aid in the good fight for temperance, and some mighty strokes may be expected against the giant evil of intemperance from these plain, outspoken, fearless advocates of the rights of humanity. Their appearance in Harrisburg on this momentous errand, is as significant as it is unusual.

LET none prevail with us to think that there is any period of life, or any sphere of our activity, or any hour of our rest, which can escape the range of right and wrong, and be secluded from the eye of God. Nothing can be more offensive to a good mind than the eagerness to claim, for some portions of our time, a kind of holiday escape from the presence of duty, and the consecration of pure affections; to thrust off all noble thoughts and sacred influences into the most neglected corner of existence; and drive away religion, as if it were a haggard necromancer, that must some time come, instead of a guardian angel that must never go. It were shameful to sanction the low-minded sentiment, which so often says of *early life* that it is the time for enjoyment, and makes this an excuse for dispensing with everything else. Under such guidance, life would have no secret unity; it would be no sacred epic sung throughout by any constant inspiration, but a monster of incongruity; its first volume a jest book; its second a table of interest; and its last a mixture of the satire and the liturgy. I can form no more odious image of human life than a youth of levity and pleasure, followed by a maturity and age of severity and pietism. Both sights in this succession are alike deplorable; a young soul, without wonder, without tenderness, without inspiration; with superficial mirth, and deep indifference; standing on the threshold of life's awful temple, with easy smile, without uncovered head, or bended knee, or breathless listening! Is that the time do you say for enjoyment? Yes; and for enthusiasm, for conviction, for depth of affection and devotedness of will; and if there be no tints of heaven in that morning haze of life, it will be in vain to seek them in the staring light of the later noon.—*Martineau, as quoted in "Seed Grain."*

For Friends' Intelligencer.

ADDRESS

To the members of the Society of Friends, wherever scattered.

In accordance with the impression upon my mind, I am prepared to ask, Has not the time come in which "those who are converted should strengthen the brethren" our fellow-beings, and encourage them to come up more

fully to the standard set by our great pattern, Jesus Christ? And would it not be right at this time to make a united appeal by way of memorial to the Congress of the United States, to offer the olive branch to sister Christian nations, by asking them to league with us to settle by arbitration or refer to a High Court of Nations all differences, difficulties or misunderstandings that may occur between the so-leagued nations. Said Court to be composed of persons chosen by each government, and its decision in all cases to be final. And although we offer first to our sister Christian nations, let none be excluded, but receive every nation that is willing to come, until all are joined in one band, and "Nation shall not lift up sword against nation, neither shall they learn war any more."

Although some honest minds look upon this course as a deflection from Friends' principles, and think that we cannot consistently memorialize the Government on this subject, do we not know from history how our predecessors pleaded with the existing authorities for changes in the oppressive laws of their time, and especially that they should be allowed to worship God according to the dictates of their consciences? How much of William Penn's time was spent to accomplish the changes made in the laws in his day, which changes have been a blessing to all who have lived under them since. And do we not believe that there is the Witness for God operating in the hearts of our brethren and sisters of the different religious denominations in our favored land, that will respond to Truth's testimony and join with us in the extension thereof? and in this union of effort the walls of sectarian prejudice will be weakened.

The Representative Committees of the different Yearly Meetings could join in memorializing the Congress that is expected to meet on the 4th of this (Third) month; or, if it should be thought best to defer it until the meeting of Congress in the Twelfth month next, the Yearly Meetings will all have been held, and could give expression from the body at large.

Friends will consider whether the whole subject, when examined by the light of Truth, is not worthy our careful and early attention.

DARLINGTON HOOPES.

COUNT OVER THE MERCIES.—Count the mercies which have been quietly falling in your history. Down they come, every morning and evening, as angel messengers from the Father of Heaven. Have you lived these years wasting mercies, renewing them every day, and never yet realized whence they came? If you have, heaven pity you.

You have murmured under afflictions, but who heard you rejoice over blessings? Ask the sunbeam, the rain-drop, the star, or the queen of the night. What is life but mercy? What is health, strength, friendship, social life? Had each the power of speech, each would say, "I am a mercy." Perhaps you have never regarded them as such. If not you have been a poor student of nature and revelation. What is the propriety of stopping to play with a thorn bush, when you may just as well pluck sweet flowers and eat pleasant fruits?

From "THE GLEANER," a paper issued by Friends' Social Lyceum, Philadelphia.

The establishment of Friends' Social Lyceum was designed not only to afford an opportunity for social gathering and intellectual improvement, but also for the encouragement of each other in all that is good.

Having frequently met with those who are in the habit of convening here, and enjoyed the pleasant intermingling of older and younger, I have felt a freedom to call our attention to a subject which, though often discussed, will bear being again brought before us for serious consideration.

It is in reference to intemperance, which it is feared is on the increase in the community, and the practice gaining ground of having that which intoxicates at social entertainments, which, if not placed upon the table with the other refreshments, is put in an adjoining room where easy access can be had thereto.

On such occasions, there is an abundance of the good things of life which can be partaken of without hurt, and it is not kindness, nor true hospitality, to place the temptation of even a glass of wine in the way of invited guests. Some, under other circumstances, might be able to resist this; but in the social circle, proffered by those regarded as friends, the gentle whisperings of the "inward guide" are unheeded, and they yield thereto, when peradventure for the first time a taste is created, which if indulged in will increase, until eventually the intellect will become clouded and the soul wrecked.

I wish to impress upon those who are "heads of families," that in preparing for entertainments they be careful to discard everything that intoxicates; and I would encourage our young women on all occasions to influence their companions and youthful associates against this evil.

It is needless to recapitulate the sad effects produced by an indulgence in the inebriating cup, for instances can be daily seen of its votaries being led down into the chambers of darkness and death,—none of whom perhaps, on first tasting thereof, thought they would

ever be brought to that condition. By heeding "that Light which enlighteneth every man that cometh into the world," the Society of Friends has been led out of many customs and indulgences that are allowed by other religious denominations, amongst which is that of abstaining from the use of spirituous liquors as a drink, and in this particular have advanced further as a body than any other religious organization. Having *tried* and *proved* that it can be done, it is now prepared to hold up the fact as an ensign before the world, and as a beacon light for others to follow. Believing the time had come for this, the Representative Committee, on behalf of our Yearly Meeting, recently prepared a memorial to present before the Legislature of our State, asking it to enact laws by which a reform may be made in regard to intemperance.

I would encourage us, as members and professors of the same Society, to be so watchful over *our own* households as to be preserved from this ourselves, and then we can consistently strengthen and uphold the hands of those who through faithfulness in this age, are commanded, as were some formerly, "to speak unto the people, that they move forward."

H. M. L.

SUNLIGHT.—It is curious how patent facts and sound principles become overlaid and forgotten through the influence of tyrant custom. Sunlight is an essential to growth and health in vegetation, and the human being requires it as much as the vegetable. Yet this fact—clear as the sun itself—appears as a new discovery in a recent medical work, and is there treated with all the elaboration of argument and wealth of illustration. And the readers of the book receive as a new revelation the announcement that men, no more than vegetables, can grow in the shade. Dyspeptics are especially enjoined, if they would recover the tone and health of their stomachs, to live and work less in the shade. Sunshine is as essential as exercise, and in physical culture, no less than moral and religious, we should "walk in the light."

For Friends' Intelligencer.

A POINT OF ORDER AND DISCIPLINE.

The "Suggestions" of J. M. T. in the *Intelligencer* of last week, were read with interest. I should have been glad if he had noticed another subject which is certainly worthy of consideration. That is, the present method of appointing overseers to attend marriages accomplished under the care of Monthly Meetings.

The discipline requires that "two Friends of each sex" should be appointed "to attend and see that good order is observed."

Of the propriety of such care, there can be no question. But would it not be well to amend this rule, so that the parties concerned might, if they preferred it, make their own selection among their friends suitable for the appointment, and name those whom they desire to be present without a violation of the *letter* of the discipline?

The change need involve but few words. For instance, *instead* of "The Meeting is to leave them at liberty to accomplish their marriage according to our rules, and appoint two Friends of each sex, to attend and see that good order is observed," let it read: "The Meeting is to leave them at liberty to accomplish their marriage according to our rules;" two Friends of each sex, of whom the Meeting shall approve, "to attend, and see that good order is observed."

Friends interested in this subject may offer a better substitute. It is my purpose only to suggest something which will relieve the burdened among us, and still meet a very reasonable desire upon the part of persons who have an objection to unnecessarily enlarging a company upon marriage occasions. Argument appears unnecessary, as the present practice proves the general sentiment in regard to the privilege which individuals should have in the selection of overseers at weddings, and I am not apprehensive that the liberty would be abused so as to make the change objectionable.

2d mo. 21st, 1871.

Selected.

CONTEMPT.

Contempt of man is a great sin. It is at variance with the highest principles, and with the highest being; it is at variance with faith, for it sees not the invisible; it is blind to the invisible glory which in every man is enshrined, and it is blind to the solemn destiny for which every man is born. It is at variance with hope; it is founded on denial, a denial of capacity in the worst for improvement; a denial of life in the lowest, which may be awakened in a new resurrection; a denial of the worth which lies treasured in every soul, and which, though it may be long tarnished and defaced, may yet have its season of renovation, when it will shine as the stars in glory. It is at variance with charity, which includes both faith and hope, and is their end and their perfection; for charity believeth all things and hopeth all things; and charity is not only pitiful, but reverential, not only most loving, but most humble. It is at variance with God, who despiseth nothing that He has made, and in whose fatherly light all men stand equally as children. It is at variance with humanity, which the Cre-

ator made sacred with His likeness, and made immortal with His spirit. It is at variance with Christ, the mediator between God and man, through whom humanity on earth was perfect.

In Christ's humanity every man has brotherhood; and in Christ's brotherhood every man has honor. If there be one in our universal race whom the good spirit of Jesus would have scorned or despised, then with impunity that wretch you may scorn and despise; but if you can find no such wretch, at your own peril you must venture, and upon your own soul be the consequences.—*H. Giles.*

I THINK the resentment of injustice is one of the first-born and strongest passions in an ingenuous heart. And to this, I believe, is often due the falling off of children from the party of their parents. They hear hard things said of their opponents; on closer acquaintance they find these to be exaggerations, or, at least, suppressions; the general gloom of a picture being produced even more by effacing lights than by deepening shadows. The discovery throws a doubt over the whole range of inherited beliefs, and it is well if in the heart of youth the revulsion is not far greater than the wrong; if in their indignation at discovering that the heretic is not an embodied heresy, but merely a human creature believing something wrong, they do not glorify him into a martyr and a model.

EXTRACT FROM "RELIGION AND THEOLOGY."

There are hours in which I catch in nature the sense of a universal presence; above nature, yet in it. In the infinite beauty of a summer day; in the solemn majesty of a winter night; in the sublimity of ocean lashed by the tempest into black, roaring waves, over whose slippery sides the vessel staggers and reels through the pitiless storm; in the deep stillness of the autumn woods, where no sound comes but the dropping of nuts or the faint whistle of the lonely bird—amid all these scenes there comes up in the soul the sense of a great unity, a substance below all, a power above all, a life within all; and we come face to face with God. This is religion. Analyzing this sentiment, and stating it in metaphysical formulas, is theology.

When I open the Gospels, and read the words of Jesus, I find myself in sunshine. Light and warmth are united in his teachings, inseparably. The light warms, the warmth illuminates. He makes goodness lovely, natural, simple, easy. He is no austere moralist, no cold law-giver, but a man among men; not bound by the etiquette of

religious ceremonies, but just as willing to take a walk with his disciples on the Sabbath as on any other day. He does not use the stereotyped language of piety; but he teaches by the bread in the bread-trough, by the door through which he passes, by the net which his disciples are pulling out of the water, with good and bad fishes sticking in its meshes. He makes God seem near and heaven close by, and life full of good opportunity, and every soul capable of goodness. He is my friend, my teacher, my brother, and his thought seems to become a part of mine. That is religion. Then some learned man comes and defines Jesus; saying how much of him is human, and how much divine; and shows me how it is proper to talk of him according to the metaphysics of Aristotle. That is theology.

Perhaps I have never prayed; or I have *said* my prayers, repeating by rote some formula. God has seemed a great way off, and very high up, and I do not know whether He hears me or not. If I speak to Him, I think it proper to praise and adore Him very much, using the grandest words I can find. But some day in my hour of need—in my great sorrow, when the darling of my heart lies cold by my side; when my love is deceived; when all my hopes are shattered—I suddenly find myself talking with my God, as though He, indeed, were close by, and could help me into His peace. In a moment everything in my heart is changed. "He has rebuked the winds and waves, and there is a calm." After that I know what prayer means. After that I go to God just as I am—poor, weak, sinful—and talk with Him as a friend. After that, whenever I feel too weak for my work, I just look up inwardly; and I find myself fed with the daily bread I need. This is religion. But when I take these experiences, classify them, philosophize about them, and state them as an article of faith, that is theology.—*J. F. Clarke's "Steps of Belief."*

THE BRUISED REED.

"The road to the Pyramids," says C. S. Robinson, writing from Egypt to the Christian Union, "after an abrupt but not an unwelcome departure from the precincts of Old Cairo, dusty and odorous, lies for the most part through a pleasant series of cultivated gardens and luxuriant fields, until we reach the confines of the desert itself. But the verdure gradually degenerates into mere stubble when the sand begins to grow dominant. The path is elevated slightly, beaten down into a compact mass like matted gravel—the ditches on either side of it filled with slender reeds—bulrushes like those which Jochabed plaited the ark from when she decided to cast

the unprotected Moses out upon the charities of the world. So thin and slight are those long withes of water vegetation, growing tall and rank from the pools, that even a child could easily scratch the outer stem off any one of them with his nail. Yet they looked so strong that my old instinct returned, and I imagined that they would make capital riding-whips with which to encourage my donkey. So I plucked one or two of them, but, instead of getting a whip, I got one of the finest illustrations of Scripture I met in the East; for, on handling these long, lithe stalks, that seemed tough as willows, I found that they had no strength or substance within. They were hollow; and the moment the outer coating of silvery fibre was abraded in the least, instantly it appeared that the entire reed was demoralized, all its stability and power of self-support being singularly gone. I could scarcely keep it upright, for it could not bear its own weight. The slightest wind playing over it bent its frail head and sent it drooping into the swamp.

"Accurate and beautiful beyond expression seemed to me the inspired figure of divine gentleness and forbearance employed by the prophet: 'The bruised reed he will not break.'"—*The British Friend*.

Scraps

FROM UNPUBLISHED LETTERS.

I do not feel as if I had much more to communicate to thee on paper at this time, than to acknowledge the receipt of thine dated the 17th, and to assure thee I account it a privilege to be the recipient of my children's sorrows when their full bosoms overflow, and they find some relief in pouring forth their troubles. Ah, it is the Christian's duty and gain "to feel another's woe," to "weep with them who weep," as well as to "rejoice with them who rejoice." But all these dispensations are to be regulated and improved, both as to their degree and continuance, by a close attention to the Divine gift. For we may give way to mourning to excess as well as to intoxication of joy. I wrote to our dear S. soon after thy information of the death of her brother in a distant land. I feel for her affliction. Such a case involves reflections very different from the circumstance which released E. W. in so short a time from all the trials and probations of this life. I had heard of the event previous to thy letter, but if "not a sparrow falls to the ground" without our heavenly Father's care, no more did this solemn event

occur without His special care and providence. "For human weal, Heaven husbands all events." Oh! that we were deep and humble enough to read His language in such dispensations—yea, "in all the varied dispensations of His providence. For they are doubtless all intended for our good and our furtherance in the way of holiness. My daughter, thou asks where I am. May I answer in the language of Peter Yarnall, "In the Lord's keeping; I have that evidence"—at least at some times. But I am still clothed in sackcloth and suffering with the seed, on account of the carrying away into captivity of the daughter of my people and the scattering of the flock. Farewell.

Thy consolatory letter was cordially received. It has been read and re-read with lively emotions of gratitude for the evidences furnished of Divine support under thy recent and very close trial in the removal of a beloved brother. Surely the experience of heavenly condescension and the sustaining arm in the midst of affliction, must have prepared thee largely to share in deep fellow feeling with our dear Sarah in her present proving season. I feel much for you both, and it seemed right to say so on paper, as a testimony of that affection and interest which I continue to feel toward you. Oh, how precious the unity of the spirit, in which we are permitted to pray for one another. Dwell deep; be watchful; abide with the suffering seed, and when Truth calls for dedication to labor, be firm in its cause. My dear love to all my children in the Truth.

I duly received thine, my dear friend, and acknowledge thy kindness not only in *thinking* of me, but endeavoring to bring before me some "good news," which I think Solomon said was like cold water to a thirsty soul. I am willing to gain all the refreshment I can from "a fresh visitation of heavenly good" evinced by such circumstances as thou brought into view, and I think I feel a little capacity "to rejoice with them that rejoice." But the sackcloth still remains. The general gloom over Society admits only of *rejoicing* with *trembling*. Yes, my dear friend, I think I "understand" thee. Go on to number thy blessings and improve them. Keep to the gift that is conferred upon thee; occupy it faithfully, firmly, obediently. But do not expect to get along without deep baptisms and provings. The seed is under suffering, and it seems my allotment to suffer with it, even as if arraigned before Pontius Pilate, in silence too, while the spirit of the chief priests, the accuser of the brethren, is permitted to vaunt over the suffering seed of life.

FRIENDS' INTELLIGENCER.

PHILADELPHIA, THIRD MONTH 4, 1871.

OUR PAPER.—The 28th volume begins with the present number. The commencement of *Friends' Intelligencer* was prompted by the desire to supply a want then felt in our society of a journal devoted to its interests. For many of its early years it languished for want of a sufficient number of subscribers for its support; and there were times in its history when but for the liberal contributions of public spirited Friends, the enterprise must have been given up. But the persevering zeal of those who from time to time conducted it, and of those who supplied what was lacking pecuniarily has been rewarded, by seeing it established on a self-supporting basis. Yet a considerable increase in the number of subscribers would enable the editors still further to reduce the price, and extend its usefulness.

In looking over some of the earlier volumes we have been struck with the fact that while partly dependent on charity for its pecuniary support, its pages were then enriched by contributions from mature and gifted minds, some of whom have since been gathered to the higher life, some are occupied in other fields of labor, and others have ceased to contribute to it of their stores of thought.

Without intending to draw a discouraging contrast, we would ask whether the places of these are fully filled at the present time? Those among our younger and middle-aged members who have profited by the more enlarged views of education now prevalent in our Society, whose reading has been extensive, and whose opportunities for knowing what is passing in the world around them are far greater than were those who lived only thirty years ago, are they sufficiently aware that they owe a debt to the Society to which they belong? That their talents, their culture and their opportunities are not their own, but belong to the common stock to be used for the benefit of all? There are events transpiring around us, and great questions agitating the public mind, which should be viewed and discussed from the stand-point of the principles of

Friends, and in this regard we need the aid of thoughtful, concerned and cultivated minds.

OUR FUNDAMENTAL PRINCIPLE.—What is it?—on what basis does it rest?—and what are its fruits? We often hear it spoken of, and we are cited to it as to a “foundation sure and steadfast,” and yet the child or honest enquirer asks “what it is?” Can we meet this inquiry? Can we reply to it so plainly as almost to give it a tangible form? We are told, we should be ready to give to him who asketh, a reason for the hope that is in us. What, then, is this “Fundamental Principle” upon which we rest our hope? We answer, The life of God manifested in the soul. That Light which maketh all things manifest. The grace of God which bringeth salvation. The word nigh in the heart. Christ within, the hope of glory; and our faith is, that if this Omnipresent, indwelling power, is exalted into full dominion, all pertaining to the creature will be drawn into unison with it, and it will be, to the mind thus influenced, “wisdom and righteousness, sanctification and redemption.”

This operative principle is its own basis. It is itself *Immutable Power*. It is “the Foundation sure and steadfast.” If we turn to Scripture for corroborative evidence that this is no ignis-fatuus, no idle chimera, we find abundant testimony to sustain our trust, and if we turn within and read carefully the pages of our own experience, we shall see even greater evidences that this indwelling, operative Power, is a blessed reality, and the language of the heart can be, We thank Thee, Oh Father, Lord of heaven and of earth, that the wisdom of this world is not needed for the discovery of this rich treasure, for it is revealed even unto babes.

A little child is sensible of an impression of duty made upon his mind, and if, in answer to his inquiry, “What is it?” he is told, it is his Heavenly Father's Love, which, if heeded, will guard him from all evil, and enable him to do all that is right, here is our “Fundamental Principle” held up to view in its native simplicity and power; and if this child, as he grows in stature, grows also in a more intimate knowledge of this indwelling, omnipresent Power, and listens to the voice

of this one true Teacher, he will discover for himself that the fruits thereof will be, even as Scripture tells us, "love, joy, peace, long-suffering, gentleness, goodness, faith, meekness, temperance, against which there is no law."

The records left by many of our ancient worthies, plainly show that the rich treasure of God's "unspeakable gift" (our "Fundamental Principle,") is revealed unto babes. In S. M. Janney's "History of Friends," mention is made of John Griffith and John Churchman, who, at the early age of seven and eight years, practically acknowledged the immediate teachings of the divine Spirit, and surrendered to convictions of duty in opposition to surrounding influences. John Churchman says, "About the age of eight years, as I sat in a small meeting, the Lord by the reaches of His love overcame and tendered my heart, and by His glorious Light discovered to me the knowledge of Himself, so that I saw myself and what I had been doing, and what it was that had reproved me for evil."

James Banks and James Parnell, at the age of fifteen, also yielded to these secret impressions of duty. John Banks, at that early age, bore a practical testimony against formal prayer, by refusing to read prayers in the congregation. He also refused to receive compensation for services he had been rendering in that department. James Parnell, at the same age, made a stand against the vain customs and formal worship prevailing around him, and was strengthened to bear the cross and despise the shame. George Whitehead, in obedience to convictions of duty, went forth on a gospel mission before he was eighteen.

We will give yet another instance of an early acknowledgment of our "Fundamental Principle." Patience Scott, when but eleven years old, was brought before a public tribunal to answer the charge of heresy, on which occasion the wisdom of her speech confounded her accusers. Thus we see that one almost a babe in years, realized the fulfilment of the promise, "I will give you mouth and wisdom, tongue and utterance." And the testimony of one of the apostles also was ful-

filled when he said, "Out of the mouth of babes and sucklings Thou hast perfected praise."

Under a renewed conviction that our Fundamental Principle is a "Foundation sure and steadfast," and that its blessings are freely open unto all, we close with the word of Gospel invitation, "Ho, every one that thirsteth, come ye to the waters, and he that hath no money, come ye, buy and eat: yea, come buy wine and milk without money and without price."

THE PEACEABLE SETTLEMENT OF NATIONAL QUESTIONS.—On behalf of the English Government, the British Minister at Washington recently proposed to the United States the appointment of a joint commission for the settlement of certain difficult questions, "That a friendly and complete understanding should be come to between the two governments as to the extent of the rights which belong to the citizens of the United States and her Majesty's subjects, respectively, with reference to the fisheries on the coast of her Majesty's possessions in North America, and as to any other questions between them which affect the relations of the United States towards these possessions."

Our government received the proposition favorably, and acknowledged the friendly feeling that dictated it; but it was considered that to secure more permanent amicable relations, other questions of vital interest to mutual harmony should also be adjusted, and to this end the President suggested that the claims commonly known as the Alabama claims be submitted to the consideration of the same high commission. The British government assented to this, provided that "all other claims, both of British subjects and citizens of the United States, arising out of acts committed during the recent civil war in this country, are similarly referred to the same commission."

This proposition was accepted, with the suggestion that only such claims be considered as may be presented by the respective governments. Five members have been appointed by each nation to constitute this Joint High Commission. They meet in Washington this present week, and it is fer-

vently hoped that their discussions and deliberations may result in the establishment of a permanent basis for the settlement of all future differences. Every Christian mind must earnestly desire that questions involving great issues between different governments should be submitted to legal decisions, and not be settled by military skill and strength, and the present movement is a cheering evidence that statesmen are beginning to take more enlightened views of the proper mode of adjusting international disputes.

This question has long claimed the serious thought of some of the concerned minds among us, and we would that all of us may examine it for ourselves, and be prepared to do what we can for the advancement of peace on earth. A communication on this subject will be found in our present number.

NOTE.—A correspondent calls attention to an article in the 38th number of the *Intelligencer* of 1870, headed "A Few Words on First-day Schools," and suggests that the Conferences should be held just before or just after our Quarterly and Yearly Meetings; and he requests Friends to consider the subject between now and the next Annual Conference.

MARRIED.

KNOX—GARRETSON.—At Clear Creek Meeting-house, with the approbation of the Monthly Meeting, on the 13th of Tenth month, 1870, William Knox to Ann Garretson, both of Putnam Co., Ill.

PRICE—FLOWERS.—At the house of Thomas Flowers, Clear Creek, Illinois, on the 11th of First month, 1871, with the approbation of the Monthly Meeting, John B. Price to Martha Emma Flowers, both of Putnam Co., Ill.

DIED.

GILLINGHAM.—Suddenly, on the 16th of Second month, 1871, John W. Gillingham, a member of Green Street Monthly Meeting, in the 51st year of his age.

RODGERS.—On the 29th of Twelfth month, 1870, Catharine Rodgers, in the 64th year of her age; a member of Chester Monthly Meeting, N. J. In manner she was quiet and unobtrusive, in disposition gentle and kind, and she was careful to fulfil the duties of life. At a sudden summons, she peacefully passed away to a "house not made with hands, eternal in the heavens."

SPENCER.—On the 13th of Second month, 1871, at Dixon, Lee county, Ill., David Spencer, formerly of Half-moon Valley, Centre county, Pa., aged 68 years. This dear Friend requested that his remains should be interred in a private burying-ground belonging to a friend some miles from his residence, where there were no monuments or tombstones. He passed off as a shock of corn fully ripe.

WALKER.—On the 11th of Twelfth month, 1870, at his residence in Woodville, Chester county, Pa., Asahel Walker, in the 62d year of his age; a member of London Grove Monthly Meeting. He was of a quiet and retiring disposition, honest and upright in the daily walks of life; rendering to no man evil for evil, but as far as was in his power holding forth an open hand, with a heart full of charity and sympathy for his fellow men. From his heart went up prayers and thanksgivings daily, with implicit confidence in the love and power of his Heavenly Father. On the verge of eternity, his spiritual eye beheld the glory beyond earth's cares and trials.

JONES.—In Norristown, suddenly, on the 18th of First month, 1871, Loyd Jones, in the 57th year of his age. The interment took place at Friends' burial ground, Plymouth.

NOTICE.

Persons having books placed with me "on sale" will please call, or send and inform what disposition is to be made of them. Being about to withdraw from my connection with this office, I wish to close up these accounts at or before the 15th inst. Those having books left here for *binding* will please call or send for the same.

My nephew, John Comly, will succeed me as agent for *Friends' Intelligencer* (at this office), and I am authorized by him to state that he expects to continue the sale of books, and attend to orders for binding.

EMMOR COMLY,

2d mo. 24, 1871.

144 N. 7th St.

A Stated Meeting of Friends' Charity Fuel Association will be held on Seventh-day evening, 3d mo. 4th, in the Monthly Meeting room of Friends' Meeting-house, at 15th and Race Sts., at 7½ o'clock.

WM. HEACOCK, Clerk.

INDIAN COMMITTEE.

The Indian Committee of Philadelphia Yearly Meeting will meet on Sixth-day afternoon, Third month 17th, at 3 o'clock, in the Monthly Meeting Room, Race St. The general attendance of the Committee is desirable. JACOB M. ELLIS, Clerk.

FRIENDS' LIBRARY ASSOCIATION.

Committee of Management will meet on Fourth-day evening next, 3d mo. 8th, at 8 o'clock.

J. M. ELLIS, Clerk.

PENNSYLVANIA HOSPITAL FOR THE INSANE.

The Thirtieth Annual Report of this Institution from its Superintendent and physician, Thomas S. Kirkbride, M. D., is before us. The extract given below is on a subject of general interest, to which we would call the attention of our readers.

In my report of last year, I gave a brief history of the mode of receiving patients into hospitals for the insane, which has been in use in Pennsylvania for one hundred and seventeen years, and of the movement which led, in 1869, to the enactment of a law, which for the first time, in this commonwealth, defined with precision the mode of proceeding for the admission and detention of the insane, in hospitals founded for their

custody and treatment; and under the provisions of which law, all such cases are now received into the various institutions. An analysis of this law was also made, and its various provisions now seem to be pretty generally understood; and although some complaints of the trouble and expense to which they are subjected, continue to be made by persons in humble circumstances, and in cases where there can be no manner of doubt, the general feeling is, that advantages more than sufficient to counterbalance these objections are probably attained. To the officers of institutions for the insane, it is certainly, if nothing more, a great convenience to be able to refer the friends of patients to specific legal forms that are to be complied with, before any one can be restrained of his liberty, no matter how seriously or how slightly his mind is disordered.

During the year just ended, three cases have been before the courts for adjudication under the new law. Although it did not seem that there could be the slightest question in regard to the insanity of any one of them, collateral circumstances led to rather protracted proceedings in two, but the result was the same in all; the patients were unhesitatingly remanded to the care of the hospital by the learned Judges, before whom the cases were tried. One of them served to illustrate some of the abuses liable to be perpetrated under this law, and which were emphatically alluded to by Judge Paxson in the decision of the question brought before him. The practical point of most importance was, that while a Judge had no choice but to issue a writ of habeas corpus, under the circumstances sworn to, no member of the bar was compelled to prosecute a case, unless previous investigation had satisfied him of the truthfulness of the allegations, and the propriety of the proceedings; and without which, great injustice might be done to individuals and families, and feelings, that ought always to be held sacred, needlessly wounded. In this connection I deem it proper to bear testimony to the courtesy extended to the officers of this hospital, by the members of the legal profession, in a very large majority of all the cases that have come before the courts in the last thirty years.

There is one class of cases about which, if carried to court, there is always a liability to an honest difference of opinion. These are patients whose convalescence has clearly begun, and who are just at that stage of it, where they have unbounded confidence that they are out of all danger,—where, indeed, they do not realize the serious character of the malady with which they have been suffering, and feel that there can be no possible

risk in their return to their families and their ordinary pursuits. A few weeks later, in a large majority of these cases, they would have lost this extreme confidence, and in its place would have come a shade of depression, and a kind of distrust of the future, that would have effectually prevented all risk of their being anxious to leave prematurely. But if just at the time first noted, as not unfrequently happens, such a case goes before a Judge, or more particularly, before any ordinary jury, something like this is likely to occur. Finding an individual apparently sane, and no obvious evidence of latent danger, it becomes difficult,—for any but those who have studied the case from its inception, or who have been taught, by sad experience, the danger there is in exposing any one just recovering from what is really a serious disease of the brain, to all the risks necessarily incident to such a change of circumstances,—to regard it as necessary to insist upon a further involuntary detention of one who seems so well, and the patient is discharged. It is, however, from this class,—those who leave a few weeks too soon,—that come not a few of the cases of relapse, and of the second admission to institutions; and too frequently, also, the chronic cases, or at least, those that subsequently require a very long-continued course of treatment, before they again reach the same favorable condition. It is because the officers of institutions for the insane are unwilling to assume the responsibility of such a course, that they often prefer that this question should be settled by the legal authorities, who, by a little wise delay, have often done incalculable service to patients.

Persons with entirely honest intentions are often found asking whether sane people are not frequently, either by mistake or from improper motives, placed in hospitals for the insane, and then restrained of their liberty, by those who have some selfish end to attain by such proceedings. Such a question as this, coming from an honest inquirer after truth, deserves to be answered, and, so far as Pennsylvania is concerned, unquestionably can be, and in a mode that must remove all rational grounds for uneasiness from those who may have entertained doubts on the subject. I believe I am able to speak positively of what has occurred in this institution during the thirty years it has been in operation, and in which period no less than 5,796 patients have been under its care; and I desire to place on record my testimony in regard to this inquiry. In all this long period, and in all this large number of patients, I have neither known any one whose mind was not diseased, or who was not recovering from an attack of insanity, and in a condition requir-

ing this kind of care, to be restrained of his or her liberty, nor have I detected an inclination on the part of the friends of a patient to make such a use of the institution; which, it may be added, if attempted, could not have proved successful, and nowhere else would have been as soon detected and exposed. In regard to the State institutions at Harrisburg and Pittsburg, and the asylum at Frankford, I have the most undoubted authority for testifying to the same effect. I am well aware that many cases, regarded by some as doubtful, have been before the courts for adjudication, in regard to a further detention in an institution, but there has been no one of these, with which I am acquainted, in which experts could have had the slightest hesitation in regard to the original insanity of the patient; not one in which the subsequent results of the case did not justify their opinions; nor one, in which any Judge, even when deciding the question of a further residence in the hospital, against the opinion of its officers, ever intimated a doubt as to the insanity of the patient when admitted into the institution. In a single case only, was the question of insanity left unsettled, owing to the death of the individual before the conclusion of the investigation.

There are certain cases of intemperance often sent to hospitals by direct order of the courts, or by authority derived from the courts by their legal guardians, or in the usual mode, for their temporary protection, when unable to take care of themselves. Many of these after a short stay, seem to have recovered their natural state of mind, and are retained only as required in the original order of court, "until discharged by due process of law." A difference of opinion may exist in regard to how much of this kind of mental trouble is real insanity, or whether it is merely a temporary effect from the habit alluded to. Intemperance is sometimes a disease, and sometimes it is only an effect of insanity,—a symptom of a disease. While many physicians have no hesitation in regarding all these cases as genuine insanity, there are some in which the officers of this hospital might entertain a different opinion, and on this account all such, although coming here under legal process, are excluded from the statement on a preceding page. Many persons, too,—dreading an attack of insanity, or suffering from the incipient stage of it, or from a general disordered condition of the nervous system,—ask to have the benefits of the hospital, but they come to it as they would go elsewhere for medical advice and as they would enter an ordinary boarding-house; and they leave it whenever it is their pleasure to do so; so that they can hardly be regarded as

the ordinary insane, nor can they in any sense be said to be restrained of their liberty. With these explanations, there are no qualifications to be made to the statement that, after the most careful inquiry, I believe there is no ground for the belief that any sane person has ever been admitted into, and restrained of his liberty in any Pennsylvania institution intended for the care and treatment of the insane.

There may be exceptions, but I believe it to be safe to say, that in nearly all the cases considered doubtful or reported as not insane, that have been before the courts in this country,—where they have been carefully followed up for any long period,—the opinions of experts have been fully justified by subsequent events. In some of the most conspicuous of these, there have been found a continued development of organic disease, as verified by examinations after death; attacks of paralysis, proving the tendency to brain disorder; the commission of acts of violence, requiring the interference of the civil authorities; the verdicts of new commissions of lunacy; the loss of life by suicide; or such a course of living as formed a continual source of fear to their families, or required the protection of legal guardians for the preservation of both the persons and property of the patients.

Having thus very briefly discussed the question, whether any but the insane are likely to be received into institutions provided for the treatment of this class of the afflicted, the transition is natural to the question, whether there is no loss in neglecting the care of those who have mental diseases, and whether there is no danger incurred from those thus affected not being sent to hospitals, or being left without proper attention and unrestrained in their movements. The first of these questions is readily answered, as all experience goes to show, that properly treated, insanity is, in its early stages, in a large proportion of all the cases, a curable disease, and that, allowed to become chronic, it is exactly the reverse. The second question may be answered by the simple statement of the fact,—which can hardly have escaped the notice of any one who carefully observes passing events, and which can be readily verified,—that during a little more than one year, in a single newspaper coming under my own observation, there have been recorded very nearly one hundred cases in which lives have been lost, or placed in the greatest jeopardy, owing to persons laboring under insanity, being left unrestrained and unguarded in their movements. A large proportion of all these,—I believe far more than a majority,—might have been saved had the warnings

which, to those familiar with such cases, were clear and unmistakable, been heeded; while the consequences of neglect are irreparable and often destructive to the happiness of whole families. This simple statement of facts, without any allusion to the unfortunate effects upon entire households, from the continued presence of these cases, and the loss of property incident to incapacity for business management, is enough to show that this is no trifling question, and that a fearful responsibility is incurred by those who in any way contribute to this state of things. This subject certainly deserves much more attention than it receives, for while every supposed case of unnecessary restraint is abundantly commented on, these terrible catastrophes,—without furnishing one or more of which scarcely a week passes,—rarely receive more than a passing notice; few journalists apparently deeming it important to show their readers the inferences naturally deducible from them, and which must possess a deep interest to the whole community.

Selected.

HYMN ON THE LOVE OF GOD.

Thou Grace Divine encircling all,
A soundless, shoreless sea!
Wherein at last our souls shall fall,
O! Love of God most free!

When over dizzy steepes we go,
One soft hand blinds our eyes,
The other leads us safe and slow,
O, Love of God most wise!

And though we turn us from thy face,
And wander wide and long,
Thou hold'st us still in thine embrace,
O, Love of God most strong!

The saddened heart, the restless soul,
The toil-worn frame and mind,
Alike confess thy sweet control,
O, Love of God most kind!

But not alone thy care we claim
Our wayward steps to win:
We know thee by a dearer name,
O Love of God within!

And filled and quickened by thy breath
Our souls are strong and free,
To rise o'er sin and fear and death,
O, Love of God to thee!

Extracts from the Third Annual Report of the Natural History Club of Philadelphia. 12th mo. 22, 1870.

This day the members of the Natural History Club of Philadelphia meet to celebrate its third birthday—meet with happy memories of the past, as they recall the experiences of 1870. Claiming no height of scientific attainment, no depth of philosophic research, they have made no brilliant discoveries; they should blush at the mere suspicion of having raised such an expectation.

With a single purpose and a simple creed, this little band of friends is held together by common tastes and common sympathies. Recognizing the Father in Heaven as the Creator of this round world and all the inhabitants thereof; and impressed with the sublime words of the Mosaic narration: "And God saw everything that He had made, and behold, it was very good"—they believe it to be a privilege to sit together and talk over His wondrous works. The Father has presented to them, as to His other children, His Book of Nature, all rich with original designs, and full of illustrations; with a child-like spirit they accept the gift, and are trying to spell out the golden text which describes the fascinating objects pictured on the glowing pages, whilst the gracious loving Father smiles on every reverent effort to understand the glories of His handiwork. If they have not made much progress in spelling out the text, they have found in each other's conversation and companionship a joy which no solitary studies can furnish. But, alas! the magic charm of conversation is soon dispelled. To preserve in a less perishable form whatever the special tastes or the individual observations of the members might supply for the common good, it was agreed that each in turn should prepare a written essay on some theme connected with the study of Nature, that should serve as the principal subject of conversation at each reunion. These, as well as the Reports made by absent members, were accompanied with illustrative specimens of plants, flowers, fruits, insects, birds and minerals referred to in the text. These, with other objects of interest, were spread upon the ample board round which the Club gathered from week to week, and were passed from hand to hand for close individual inspection. Texas sent its huge spider, the brown and hairy Tarantula; Alaska, the curious nest of the Crab or Trap-door spider (*Mygale cœmentaria*). The outside surface of the door to the underground mansion of the burrowing spider is covered with earth, and shuts so closely down upon its door-frame, the orifice of the nest, as easily to escape observation. Swinging on a perfect hinge, it is opened or held down firmly at the spider's option. The door is circular, with a convex inner surface, neatly lined with a gray silken covering, and its edge, reaching from hinge to hinge, bevelled with exquisite skill. This first Alaskan door opened to the Club awakened the desire to make "one little excursion" to the northwestern borders, and find our Alaska fellow-citizen at home. The Woodpecker (*Picus pileatus* L.) allowed us to examine his tongue; the swift Lizard (*Agama undulata*)

his tiny slender fingers; and the Devil's Coach-horse (*Reduvius novenarius*), one of the most useful residents of Washington City, was duly honored as the destroyer of many insects injurious to shade trees. California showed her gigantic pine cone measuring eighteen inches (*Pinus Lambertiana*), dwarfing by contrast the large cone, that stood by its side, of the *Pinus pinea*, from Southern Italy. The rough-cased Geode was broken open to disclose its sparkling quartz-crystals within; and the cases of the Caddis-worm of the brook displayed the architectural skill of the work-worm. From the length and breadth of the United States, and from the trans-Atlantic Alps, came specimens too numerous to mention.

Owing to the unwonted mildness of last winter, the hardier flowers of Philadelphia bloomed probably through every month. Golden dandelions gladdened the green fields, and so early as the 6th of January the *Symplocarpus foetidus*, with its inclosed flowers shedding the pollen upon the glossy, striped purple "shell," appeared as "the harbinger of spring" when mid-winter should have reigned; the next month brought the blossoms of silver maple to adorn the table where usually stood only ferns, mosses and lichens. The chief enjoyment, however, during the winter, consisted in making border raids upon the vast and still unexplored territory of microscopic life. Many organisms, animal and vegetable, the living and the dead, were questioned in the cause of truth, and one of the Club was almost frightened when the bee's dissected tongue testified, under cross-examination, that its possessor did not lap his nectar with a licking tongue, as the books had misrepresented; that his tongue is not a solid cylinder, but a delicate tube inclosing a filamentous organ whereby he gathers up his honeyed sweets. Subsequent to this observation, mention was found, in a book published by Samuelson, that the lingula is not solid, but a tube with enclosed organ. It was gratifying to find this corroborative testimony of a foreign microscopist: but as these observations, American and English, were quite independent, the palm of discovery must be awarded to both observers. Not only the tongue, but the plates between which the wax is secreted—the poison-bag, and its connection with the convoluted poison-gland—as well as the hooklets on the edges of the transparent wings, whereby they may be temporarily united, were studied. The Gammarus, a little crustacean, found in hydrant-water, showed how his blood circulated, the movement of the globules in the *large* dorsal vessel being particularly distinct. Another tiny

inhabitant of the water (name unknown) had his head, jaws, and portion of the body covered with clinging groups of parasites. Did he not feel himself a "big-bug" in comparison with these insignificant creatures that clustered around him, and lived upon his greatness? Man and his parasites have their analogues in these humbler types, and the votaries of natural science find not only material facts, but also quaint illustrations of manners, and quiet lessons of practical wisdom for guidance in the conduct of everyday life. An unknown but delicate Fungus grew upon the fern shade of one of the Club; the mycelium was examined, and later the spores were observable. These being caused to germinate, produced a septate mycelium, resembling the Bread Mould (*Mucor mucedo*). Some months previous a piece of bread had been placed in the fern case in order to obtain mould for examination. May not this throw light on the origin of the fungus? The fungus found upon the leaves of the oak, poetically called "The Tear of the Oak," when magnified, reveals a curious structure. From a common centre radiate minute black and glossy spines simulating little stars. There is no time to dwell upon the repeated examination of the tiny organs of the mosses, the cellular tissues, the germinating spores of ferns, the moulds or the arrangement of leaf-stomata; only space for a short notice of a dust shower that fell in Vermont, February 12, 1870, extending over a district of fifteen or twenty miles. A small quantity of this dust was examined by one of the Club, who detected, among much granular amorphous matter, and fragments of vegetable cells too imperfect for identification:—

1. Many round or oval granules quite transparent, disappearing when treated with nitric acid.
2. Spores of fungi or Gonidia of some lichen.
3. Diatoms.
4. Cells from coniferous wood, genus *Pinus*, having their peculiar deposits absent in spots; cells terminating *obliquely*.
5. Other cells of coniferous wood with smaller markings, five in a row and two parallel rows in each cell; the cells terminating *transversely*.
6. Many cells of Algæ resembling Red Snow; these red cells were in the stage of binary division peculiar to that Alga.

The dust is probably the ashes of some burnt forest, sifting the higher regions of the atmosphere, and gathering in transit some recognized organisms and others that could not be identified. There are well-authenticated accounts of dust showers which have

deposited matter that must have been borne through the air hundreds of miles. * *

Some minds abnormally constituted can find nothing good in worms. The essayist, who presents a monograph of the Caddis worm, writes: "We remember those holy golden days of childhood, when in our own larval condition, we hunted the crawling caddis in the brook that went singing through the meadow. We will go to the book for all the learned sawdust; and to become a book-worm, and *only that*, on all these fresh and inspiring things in the natural world, gives us, of course, a claim to natural relationship, and to call the worm brother. The books say the metamorphosis of this order is either incomplete or complete; we suppose they run no risk in the assertion. The caddis worms have respectable old relations, for the most perfect fossil insect, Eugereon Böckingii, as described by Dohm, was found in the Permian formation in Germany." While in the larval condition the caddis is peculiarly defenceless, and, to protect himself from his enemies, builds a case of sticks, leaves, small pebbles or shells, as he finds material at hand. These are glued together by an insoluble cement, excreted from glands just posterior to the under jaw, until the cylindrical case is long enough to contain and conceal his body. A pebble closes the bottom of the case, so fixed as to keep out any attacking foe, and at the same time to allow the current of water necessary to his breathing to pass through and come in contact with the tracheal tubes of extreme minuteness that float fringe-like on either side of his body. Thus the caddis passes the summer days of larval life till there comes a time of change. He eats no more; contracts his horny legs to be thrust from his stony mansion no more; excretes a little more silken cement; makes a strong lattice grating over the open end, and behind this latticed window sleeps in his pupal shroud. Another change and the image bursts forth, tears away with its jaws the silken grating, and, conscious of its rapidly expanding wings, bids farewell to aquatic perils, and basks in the sunny air.

(To be concluded.)

For the Children.
SUNBEAMS.

Heavily fell the rain, and wildly swept the wind through a narrow street in the "business part of the town," as a merchant, closing the door of his counting-room, prepared for his homeward walk.

It was not alone his usual daily toil which now had the effect of depressing his spirits, and saddening his views of life; he had met

that day with deep disappointment, and base ingratitude, involving heavy pecuniary loss. His plans, his prospects, his future career, which but the day before seemed all glowing with sunshine, now looked dark and dreary; "the trail of the serpent was over them all." And as in his homeward path he drew near the church surrounded by its green burial place, he felt that weariness of spirit and distaste of life with which most persons who have passed the spring-time of existence are familiar; and, leaning on the low wall, as the head-stones gleamed through the darkness of the night, he murmured—

"There the wicked cease from troubling and the weary are at rest."

Heavy was his footstep as he left the spot and proceeded to his own dwelling; there, too, all looked dark and cheerless—the windows were closed, and no warm ray of light found its way through them to welcome his approach.

"Like the rest of the world!" he exclaimed, "like the rest of the world! Nothing to brighten or gladden me."

Drawing the pass-key from his pocket, he turned the lock and entered. As the sound of his footstep was heard within, a bright girl opened the parlor door, and came forward to greet him.

"Father, dear father!" she exclaimed, "how wet you are! I have been so troubled about you!" and pressing her warm cheek to his, she drew him into the apartment.

Everything there told of thoughtful affection. An arm-chair was placed ready for him by the side of the blazing hearth; the hissing urn stood in its place upon the table, where a nicely prepared meal awaited him, and the tender tones of a daughter's voice sank to the depths of his heavy heart.

"Mary, darling," he said, as a tear dimmed his eye, and he leaned his aching head upon her shoulder, "I have had a sad and a weary day of it; but there's something to live for yet, while I have such a daughter's love to gladden me!"

"Dear Father!" she replied; heed not the storm and tempest without; our own fireside is bright and warm; our own hearts honest and true."

And sunbeams—bright sunbeams poured from Mary's eyes, causing sweet flowers of cheerful hope and trust to spring up in her father's bosom—a soil which, but a few hours before, he had thought would never again produce such blooming treasures.

EVEN the savage sees some beauty in nature. How much more, therefore, should we, to whom education and civilization have

given intelligence and higher aspirations, seek to beautify and adorn the heritage that God has given us. It is the surroundings that mark the man or woman of education and refinement. Trees, vines, a garden and flowers are the symbols. Wealth does not always carry with it a love of the beautiful. It is heaven-born, and is as often found in the home of the cottager as in the mansions of the rich.

ONE of the greatest blessings you can enjoy is a tender, honest, enlightened conscience.

ITEMS.

The preliminaries of peace were signed at Metz on the 26th ult. between France and Prussia.

Favre cedes Alsace and Metz. Belfort is retained. The war indemnity is fixed at five milliards of francs, for the payment of which three years' time is granted. The Germans are to hold the fortresses until paid.

The armistice has been prolonged for a week.

RUSSIA has six hundred and sixty-seven cotton factories, employing one hundred and eighty thousand operatives. Before the war in this country cotton manufacture had scarcely commenced in Russia. During that period, however, the Russians began to manufacture Bokhara, Persian, Indian, and other cotton, and it is said that their factories are now the most magnificent in the world, exceeding in style and completeness even the English establishments. The products amount to fifty million dollars annually.

The five members of the British Government appointed to meet officially with those of the United States for the settlement of international differences, are Earl de Grey and Ripen, a member of the Cabinet, Montague Bernard, Prof. of international law at Oxford, Sir Edward Thornton, (Minister at Washington,) Sir John MacDonal and Sir John Rose; the last two, Canadian officials. The American commissioners, appointed by the President with the confirmation of the Senate, are Hamilton Fish, Secretary of State; Robert C. Schenck, the newly appointed Minister to England; Judge Nelson, of the Supreme Court; Senator Williams and E. R. Hoar, late Attorney General.

It is a curious fact that there are no known descendants of Christopher Columbus. He had two sons, one of whom, Don Diego, rose to the distinction of an Admiral, and the other, Fernando, as a scholar. Fernando was a great traveler. He not only thrice visited America, but subsequently traversed the whole of Europe, and every accessible portion of Asia and Africa. He appeared to have been a profound scholar and a thoroughly good man. In his will he stipulated that his library, containing twenty thousand volumes, which he gave to the Cathedral of Seville, should be free to the people, and it is to this day. From books in this collection, the late Washington Irving obtained a considerable portion of the information on which his "Life of Columbus" was founded. The following quaint epitaph, almost obliterated by time, appears on the tablet which marks the site of his tomb: "What doth it profit to have sprinkled the whole earth with my sweat; to have three times crossed the New World discovered by my father;

to have embellished the shores of tranquil Guadalupe, and preferred by simple tastes rather than riches, or that I have assembled around the divinities from the source of Castalia, and offered to thee the riches gathered by Ptolomy, if passing in silence over this stone, thou shouldst fail to address a single salutation to my father's memory." —*Evening Bulletin.*

A cave has been discovered at Port Kennedy, Chester County, Pa., which is filled with the remains of animals of the "post-pliocene" era of the geologist. The remains of more vertebrate species have been discovered than the total of the fossils known before. The only modern species is a rabbit. Among the remains are bones of the megalonyx (a huge sloth,) vertebrae of serpents, turtles, rodent animals, portions of beetles, bones of the cave bear, tapir, and some ruminants as large as our cows, and a mastodon. There are also remains of bugs, and of hickory, walnut, and other forest-trees. Prof. Cope thinks that the species here discovered are of south-western origin, differing in this respect from the post pliocene remains heretofore found, which appear allied to Asiatic species.

PRESIDENT ABBOTT, of the Michigan Agricultural College of Lansing, in his annual report to the Legislature, refers to the women in that institution as follows:

Applications for admission of ladies have been and still are frequent and urgent. The Faculty admitted a few who occupy rooms on the floor of the steward's family, or in private houses. They study chemistry, botany, horticulture, floriculture, trigonometry, surveying, entomology, book-keeping, and other branches. Their progress in study was rapid, and their improvement marked.

Work was furnished them when it could be. They prepared seed for the ground, cut potatoes, transplanted tomatoes and flowering plants, pruned shrubbery, gathered small fruit, did some work in the green-house, and many other kinds of work.

The experiment of having women as students has worked so successfully that there would be no hesitation in admitting them if there were a hall for them.

Many ladies would find our course of study agreeable and useful. They would find a knowledge of scientific principles comprising as much additional interest and delight to them in the practice of floriculture, the care of gardens, ornamental shrubs, and orchards, in the operations of the kitchen, and in their general reading, as it does to men. Women are frequently left in circumstances where they would highly prize some knowledge of agriculture.

The applications of chemistry to woman's work are so many that a half year's course of daily lectures would not be too long a one. Among these applications are cooking, preserving of fruits, utilization of materials usually wasted, cleansing by acids and soaps, bleaching, manufacture of soaps of different kinds, disinfection, prevention and neutralization of poisons. A course of lectures on dairying is now given every year.

Women are turning their attention more and more to studies such as are taught here. Some would like the out-of-door labor, some the aid which the compensation for their labor would afford them in acquiring an education, and it is to be regretted that they cannot avail themselves of the same privileges here that are offered the young men.—*The Press.*

FRIENDS' INTELLIGENCER.

"TAKE FAST HOLD OF INSTRUCTION; LET HER NOT GO; KEEP HER; FOR SHE IS THY LIFE."

VOL. XXVIII.

PHILADELPHIA, THIRD MONTH 11, 1871.

No. 2

EDITED AND PUBLISHED BY AN ASSOCIATION OF FRIENDS.

COMMUNICATIONS MUST BE ADDRESSED AND PAYMENTS MADE TO

JOHN COMLY, AGENT,

At Publication Office, No. 144 North Seventh Street.

OFFICE OPEN from 9 A. M. to 4 P. M.

CONTENTS.

TERMS:—TO BE PAID IN ADVANCE.
The Paper is issued every week.

The TWENTY-EIGHTH Volume commenced on the 4th of Third month, 1871, at Two dollars and fifty cents to subscribers receiving it through the mail. To those receiving it through our carriers, THREE DOLLARS.

SINGLE NOS. 26 CENTS.

It is desirable that all subscriptions should commence at the beginning of the volume.

REMITTANCES by mail should be in CHECKS, DRAFTS, or P. O. MONEY-ORDERS; the latter preferred. MONEY sent by mail will be at the risk of the person so sending.

LOVE THE PRESERVING PRINCIPLE.

BY JESSE KERSEY.

In the organization of religious society it is necessary that the members should unite in the principle by which they are to be governed. If they believe in the fundamental obligations of Christianity, they will of course conclude that they are to be under and subject to that measure of the Spirit which the apostle Paul has said is given to every man to profit withal. By those who believe in this doctrine, it has been understood to be a Spirit that takes its kingdom by entreaty, and keeps it by humility, and a lowly or passive state of mind. Such a society must therefore be brought to place their whole confidence in the power and wisdom of this heavenly guide. They will under all circumstances confide in it, let their trials as individuals or as a society be what they may. They will never have recourse to any mode of relief but what they are convinced is dictated by this eternal Spirit. Now as the Society of Friends profess to have full faith in this Divine gift, they are necessarily to submit themselves to it in all that they have to meet with in the world. It would be turning away from the principle of their profession if they should have recourse to any system of human policy in order to gain any point. The fact is, to a society that professes as Friends do, there is no door which can be opened to any other wisdom and power for

the preservation of themselves or that of the order of the Society, but the wisdom and power of Truth. Now as it is understood that the Spirit they profess to embrace, acts not compulsively but by persuasion and a conviction of the judgment, so it is clear that its purposes are never to be gained by the arm of flesh. Hence we may infer that if the Society should from any cause be led away from a state of entire dependence upon this gift, it must be on the downward course, and consequently fail to maintain a true testimony to the excellency of its religious profession. In taking a view of the present circumstances of the professors of Christianity, there has appeared much reason to believe that many amongst them have been ready to conclude, since the Society of Friends have become a divided people, they have proved to the rest of mankind that it is not in the nature of their profession to keep them in connection or united together; and that from necessity they will have to abandon their confidence in the doctrine which they have professed, and come under the regulating power of fixed laws and rules of government. That the spiritual profession which they have held is incompatible with the nature of man, and that the party which they will prefer will be those who are called the "Orthodox" party, because, say they, we can see in them something like an adoption of the doctrines and opinions of other religious professors. We

are therefore placed under very serious circumstances, and it is highly necessary for Friends to endeavor clearly to understand the great responsibility that rests upon us; that so we may be found consistent with the fundamental principle of our profession. If we mean to take upon ourselves the same testimonies that were embraced and maintained by our worthy predecessors, it follows conclusively, that we must shut our eyes to the policy of the world, and turn away from any dependence upon the arm of flesh. We know that as to the past circumstances which we have witnessed, so far as they were distressing to many of us, they were the fruit of a departure from the true light that enlightens every man that comes into the world. Our early Friends having been convinced both of the power and wisdom of their heavenly Guide, relied upon it in every trial; and being faithful to its manifestations, they became a body of people in perfect submission to the one eternal Spirit. In this happy state love reigned predominant among them, and hence they knew practically that as many as walked in this Light, as He the great Author of it is Light, had fellowship one with another. Now while Friends continued in this blessed state it was impossible for rents and divisions to take place. Hence they were an unconquerable body. But as they succeeded in convincing the world of their innocent lives and conduct, they were relieved from persecution, and soon became prosperous in the world. With the rise of character, and the increase of wealth, there was a gradual falling off from that state of watchfulness and devotion which had been maintained in the beginning; and from this cause men came to have an influence in the Society, who had little more to recommend them than their wealth. Thus by a total change in the character and disposition of many of the leaders of Society, it followed that when difference of opinion arose on any subject, those high-minded individuals would not condescend to the views of their brethren. When therefore condescension was abandoned, strife succeeded; and a division was the consequence. But had the same spirit of brotherly regard been cherished which so eminently appeared among the founders of the Society, it would have been impossible for it to become divided. Our unhappy conflict and consequent separation must therefore not be charged to the profession, but to a want of individual faithfulness to the divine Spirit.

The same causes we must believe will produce the same effects; and therefore it is necessary for Friends to be on their guard, or otherwise strife and division may again

take place. But in order to preserve the body from falling into this unhappy state, it is of vast importance that it should be grounded and settled in correct principles. On this subject the author has felt a deep concern. He is fully aware that at present we stand in a very critical situation, and he feels his fears lest there should be a want of just conceptions of the consequences which threaten to overtake us. He will therefore leave with his friends a testimony of his concern, and he believes it a duty to endeavor to call the attention of Friends to the alone ground of safety, and of prosperity to the great cause of universal peace and righteousness. It should never be forgotten by us that it is one thing to profess a belief in the Divine manifestation to man, and it is another thing to have a settled faith at all times and under all circumstances in the sufficiency of the wisdom and power of this gift. For want of this faith and patient awaiting the Lord's time, when trials and difficulties arise we may go to work in our own wisdom and strength in order to remove unpleasant cases when they occur. Thus by putting forth the hand unbidden to steady the ark we may bring death instead of life, and really retard the advancement of the good cause. It has been occasion of mourning to find that we are not so fully settled in the belief of the all sufficiency of the precious gift as should be the case; if Friends are not deeply attentive to the light and Spirit of the great Head of the Church, they may introduce measures of human policy and be governed by them—the consequence of which must be that the Society may again be landed much in the wilderness state. There was perhaps never a time when it was more important to the great cause of Christianity than the present time that all who profess with us should keep close to their proper places and duties, studying to show ourselves approved unto God. And as we believe that we live in an age when there is much enquiry in the minds of the people and when all the movements of those under our name are closely watched, much depends upon what we say and do in accordance with the witness for truth in the minds of enquirers. Our meetings for divine worship being held as they are with a profession of waiting in spirit upon the great Head of the Church to be instructed by Him, it has appeared clear to me that if Friends were deep and weighty in their spirits they would be more often favored with the overshadowings of Divine love and thereby be refreshed together, as well as witness the power of truth to be raised into dominion; and thus, forward spirits that come among us, and often wound the spiritual life by running into words

without life and power would be kept down. There is perhaps no circumstance which has a greater tendency to mar the work of righteousness in the earth than a lifeless ministry. Some there are who with a small gift would be favored to know the burden of the word given to them, and would be clear in what they had to deliver, but for want of keeping in the littleness, and by giving way to the desire to enlarge, are clouded in their testimony and judgment, and do not furnish anything like a certain sound, or learn to know their proper stopping places. Hence they remain in the mixture, and Friends are often at a loss to know whether there is a gift or not; and when some of these are at last from their weak appearances advised to desist and try to keep silent, they become troublesome to Friends.

Leaving the subject of the Ministry, it remains with me to remark, that in order to maintain the testimonies of truth on the true ground, there is no point more important than that of a strict regard to the peaceable nature of the gospel spirit. So long as we trust to any other means than that of the Divine Gift for the safety and well-being of the Society, we shall be liable to weakness and error; but if we place our confidence exclusively in the Divine Gift and follow it, there will be nothing to fear. But it is to be feared that many among us are not in possession of the true and living faith,—a faith that overcometh the world. The Society of Friends from their rise have been firmly of the judgment that the light of Christ inwardly manifested is the alone sure guide, and by it every individual may be instructed in all the subjects that pertain to the Kingdom of Heaven. They have therefore maintained this testimony, that with them it is the first and primary rule of faith and practice. We make the same profession, and therefore have no new doctrine to preach; but the same that has been from the beginning, and which is preached in every creature. In this we are different from other professors of Christianity, who consider that revelation has ceased, because (say they) God has committed His will to writing. If this doctrine was true, it would follow as a consequence that none could be saved but those who could read, and who had the book. We do not advert to this doctrine with any view to controversy, but simply to present a correct view of the profession of Friends from the beginning. Now as we have embraced the doctrine of a Divine manifestation to man, and do not believe that in this blessed gift there is any tendency to strife or contention, or that it is incompetent to the preservation of those individuals, or that society which live in sub-

jection to its teachings—it is of great importance to us and to the cause of Truth, that we should in our practice conform to it. It never can be right for a people making this high profession, to have recourse to compulsory measures in defence of themselves or of the order of the Society. On the contrary, when they are brought under trials and difficulties, they should manifest their full faith in the gift. Thus they would be qualified to stop the mouths of gainsayers and all that should rise up against them. When a body of men are united in any one profession it is the duty of the individual members of that body to adopt the doctrine they have embraced. Hence it follows that as the Society of Friends wholly abandon all that kind of management which belongs to the children of this world, and to its policy,—they have only to trust to the pure and heavenly gift; and surely they have every reason to do so. When we look back into the trials and sufferings which our dear Friends had to encounter, and observe with what meekness, patience, and fortitude, they endured those impositions,—looking to the Lord alone for deliverance—surely we might be both encouraged and instructed to trust to the same blessed Power for deliverance from the comparatively insignificant difficulties of our time. It is of great importance to the Society of Friends that they should not only understand the fundamental principle of their profession, but that they should have full faith in the power and virtue of it; and having the example of our early Friends before us and finding from their case that they were happily sustained under all trials in consequence of their obedience to the principle of their profession, we are left without excuse should we attempt to take any other ground or seek a deliverance from trials by the aid of the arm of flesh or the policy of the world. The whole power of the Church of Christ is centred in love. Therefore in all cases where there is opposition, it is the business of the true believer to try to overcome by maintaining a meek and gentle spirit. But should any attempt to subdue and regulate disorderly spirits by the exercise of compulsory measures, they would only mar the work and wound themselves. From the commencement of the Society, we may see that all the extreme cases, such as have ended with rendings and division, have been produced by a departure from the spirit of meekness, forbearance, and brotherly kindness. And we may always depend upon it, that if we cannot gain the desired point by the exercise of those Christian principles, that we should not resort to any other. The fact is if we do in any degree depart from the true ground, we may be sure of losing by it.

RESPECT AND VENERATION DUE FROM YOUTH
TO AGE.

A Friend has sent the following essay with the above title, with the view to bring the subject before our readers. It is a theme which should claim consideration, as a want of proper respect for age is believed to be one of the evils of the present day.

Whatever name we may give to that in describable charm which results from the manifestation of due respect and veneration toward both equals and superiors, we know it always wins the love and admiration of all to whom it is shown. We may call it "*good manners*," "*politeness*," or "*veneration*," it matters not what, but we know that whoever would establish the habit of practising it uniformly and impartially to all, must first gain simple goodness of heart,—true Christian *love*. When this divine principle once gets possession of the heart, how all-pervading is its influence! The words, the voice, the actions, the gestures, and the very countenance, are all brought under its refining power, and show forth the genuine source from whence they spring. If any soul is so desolate and unfortunate as to have no one to love,—if the pure principle of disinterested benevolence has never moved the heart nor shed its vitalizing influence on the spirit—to such a one I should be at a loss what to say or how to advise. Such a condition is out of the range of my experience, and it seems to me that one so unfortunate is incapable of understanding phrases descriptive of the emotions of *divine love*. But to those who have truly experienced pure, disinterested love, if for only one single individual, I can speak understandingly. If they have so loved any one as to take real pleasure and satisfaction in doing such a one a kindness, then they can understand my meaning perfectly. That same principle of love, extended to any other human being, would give them the same pleasure, with a corresponding increase, till it widens the circle of their love and kindness and happiness indiscriminately to all within their reach.

But as we were talking of *good manners*, or *politeness*, we must make this application of *love* to that subject in particular. If we really possess this pure Christian benevolence of heart,—a sincere wish to please, make happy and bless,—we shall need no dancing-master to show us how to make pleasing motions or gestures—no Chesterfieldian monitor to teach us to bow and scrape and smile and put on pleasing airs. This kind, humane feeling within us, is far better than a dozen outside teachers. The art of pleasing is taught

by the desire to please, and that desire springs from love. Let us examine, and we shall find it impossible to behave rudely to those we love and desire to treat respectfully and kindly. To illustrate this, and make it a little more practical, I will relate a circumstance that occurred not long since.

The writer having recently moved into a new home, went out to a pump that stood in the yard to get a pitcher of water, the weather being very warm. I saw coming from an opposite direction a youth, who reached the pump in good time to take a drink before I got there. As I came up he looked at me with a most benevolent smile, and in a kind and polite manner and tone said, "You ought to have some ice in your pitcher." I answered, "Yea, but I have not yet learned how to get at the ice." "Oh," said he, "let me have the pitcher, and I'll get you some." And taking the pitcher, off he ran, got the ice, and quickly returned, handing it over with a bright countenance and polite manner.

Now I observed that every motion, tone and gesture in this little transaction, accorded with the best rules of politeness. They were neither learned, studied or thought of by the youth, but flowed spontaneously from the inward feeling of kindness. This may be considered a small affair, but in my esteem it was great, because it flowed from a great principle. It was an act of disinterested benevolence, in which the enactor never thought of any reward beyond the pleasure he felt in performing it. In proof of this, it may not be amiss to state that I had not purchased his kindness by any act of mine toward him: I was a stranger to him, and did not know his name. I must add here that our lives are, for the most part, made up of a succession of little transactions, and it is the true work of a benevolent heart to minister gladly to the little wants and accommodations of every day. It is the habitual performance of these little attentions that stamps the character of a more refined benevolence of mind, than that which only occasionally performs some great deed of charity. The latter may flow from pride; the former must flow from goodness of heart, especially when impartially bestowed on *all*, as occasions offer.

But I want to say, in regard to the above transaction, that my heart dilated with love for that dear youth while he was performing that act with so much cheerfulness; and oh! how earnestly did I invoke the influence of the Holy Spirit of Love to teach him to cultivate that kind spirit and manner by extending it to all impartially, and at all times, and on all occasions that should come within his reach!

All habits, whether good or bad, have strong charms and great power over us; and although we are strongly inclined by nature to contract selfish, low, mean habits, yet I have discovered by a thorough experience that good habits, when once established, have quite as powerful charms as bad ones. Besides this, they have the infinite advantage of stamping our actions with the consciousness of moral rectitude, and the sweet approval of our own conscience.

I gratefully remember the training of my childhood and youth, in respect to my behaviour toward grown people. My uncle who reared me constantly kept several men hired by the year, and he never allowed me to contradict them, nor to treat them in any manner disrespectfully, and I was required always to do any little kindness which they requested. By this, I grew up to *feel* the respect for grown people which my manners toward them indicated; and this treatment toward them excited their love and kind feeling toward me in turn. I do not remember ever suffering the least harshness or unkind treatment from one of these men, nor ever giving one of them an impertinent word, though I lived with divers of them for several years. This habitual feeling of respect has continued with me thus far through life, and although I am now over seventy years of age, I retain quite a portion of my *young* feeling of giving precedence to persons much younger than myself. This habit of feeling and acting has been of great advantage through life; it has made the path of obedience and compliance to the feelings of superiors easy, and I may say *natural*, though to some it seems *hard* and *unnatural*. It has enabled me to live in peace, and gain the good will of all the variety of persons and characters with whom it has been my lot to associate, so that I do not remember an instance for over fifty years in which there have been difficulties and hard feelings existing between myself and others. I am aware that youth sometimes labors under peculiar disadvantages. They live and work with all gradations of age, and it is difficult to define the starting point where this feeling of respect should begin. Add to this that there are always some of adult age, and even some that are aged, who expose their weakness to such a degree as almost to cancel their claim to respect. Although these are serious disadvantages, they are not without remedy. Generous minded youth, as a first step and incentive to action, will urge themselves deeply to consider and appreciate the great moral worth of character, which the genuine principle of Christian love, and consequent politeness and true benevolence, gives to all who possess them. This pure princi-

ple is the only sure fountain from which this *respectful feeling* of which we are speaking can uniformly flow. In order, then, to acquire this heavenly principle, we must *exercise it, practise it*,—must give it scope in action—must cultivate it whenever an opportunity offers. Rather than fail of attaining it, we had better bestow our kind and loving feelings on our *younger* companions, and train ourselves to treat every one, young and old, with due refinement, respect and kindness, let their treatment to us be what it may. If this is practised toward the young, it will be surely easy to bestow it on those more advanced in years. We have thus found a remedy for the first-named disadvantage. The same principle would, I think, be also found a sufficient remedy for the second; but we will add an additional consideration, which will help us wholly out of the difficulty. All the weakness, unworthiness and coarseness of manners which we are displeased with in older persons, are the result of their not having acquired the true principle and practice of politeness in their youth, and we shall be just like them unless we succeed in gaining that principle. This we cannot do if we imitate their manners, and treat them as they treat us and others. The only use we can make of their imperfections is to let them stand as a beacon to warn us of our danger, and induce us to ply every means to escape their sad condition. We must not adopt the practice of being polite to those who are polite to us, and rude to those who are rude. This would show decidedly that we have no principle of goodness or politeness of our own, or in ourselves, but that our actions depend wholly on those of other people. As we cannot admit a man to be just because he deals fairly with some people while he cheats others, so neither can a man be polite who treats some respectfully and others rudely. If youth have to associate with older persons who through their weakness and disagreeable qualities forfeit respect, still will it not be best to *treat them with respect for the sake of the principle?* Will not this be quite as effectual in disciplining and refining the manners and spirits of young people, as if the object were more worthy? Undoubtedly it will, and much more so, as it will be a victory and triumph over greater obstacles.

Respectful manners, or politeness, comes under the same law as that of *love*, of which our Saviour says, "If ye love them only which love you, what thank have you? Do not even the publicans so?" And we may as justly say, "If you are polite to those who are polite to you, what thank have you?" This but places you on the very level of uncultivated nature, without the least refine-

ment of manners, since the very savages will do the same! But by the practice and attainment of showing kindness and respect to all, regardless of their conduct to us, we are brought up to the threshold of a still higher and more God-like principle, namely, to "love and do good to our enemies!" This our holy religion requires; but if we cannot love and be kind to our aged friends because they have some faults, how can we love, pray for, and be kind to our enemies, who are seeking to do us injury? But if we gain and practise the former, we shall have made a near approach to the latter. As we cannot love and do good to our enemies merely because they have evil dispositions and are injurious to us, we place our actions on a higher principle,—we will love and bless them because Christ requires it, and for the sake of imitating the Divine Benevolence, who sends the bounties of His rain and sunshine on the *bad* and *unthankful*; we can love them with a love of pity and compassion, knowing how unhappy they are, and must continue to be, while under the influence of hatred. On more rational grounds we can descend so low as to love them for our own sakes, in order to put ourselves as far as possible from their deplorable condition. We will call nothing love that does not manifest itself in *deeds of kindness*. To reflect on two human beings, one of whom is constantly using every opportunity of abusing and ill-treating the other, while this other is as constantly improving every chance to show kindness in return, is making a contrast of character which it is hard to find language to express. Every rational being, however, will at once decide which is infinitely the more excellent of the two, and would of course prefer the possession of the good and God-like character and disposition, rather than of the bad one. There are, however, few, if any human beings, so debased that they cannot be overcome with kindness; and how noble and God-like is such a deed! I remember to have read an account of a very depraved convict which will illustrate this. The said convict had been several times confined in the penitentiary, and had several times broken out, and was considered very dangerous and unmanageable. At length he was put in the Massachusetts penitentiary, whose keeper was noted for his ability to manage depraved cases. The convict had not been long confined before he attempted to break out, and being discovered, got badly wounded by the guard in preventing his escape. The keeper called the physician, and took great pains to have the wounds well dressed, and with great kindness had the convict conveyed to his cell, and everything done necessary to make him com-

fortable. This was in the evening. Near midnight the keeper arose and went to the convict's cell and examined his wounds, and kindly inquired how he felt; told him that he had felt so uneasy about his sufferings that he could not sleep, and thought perhaps he could do something to alleviate his pain. He gave him good cool water to drink, and redressed his wounds. This was too much even for this hardened convict. He burst into tears and wept, saying, "Sir, everybody has for years treated me as a beast, but you treat me as a man. I regret trying to break out and giving you so much trouble, and I now promise to make no more such attempts." He was as good as his word, and under the influence of that kind keeper he left the penitentiary a reformed man. I would rather be the author of such a deed than possess all earthly wealth.

To attain to such sublime heights of excellence, we must begin early in youth to train ourselves to kind actions; and the very lowest beginning point in this work is to treat our equals with fairness and justice, and our superiors in age with good manners and due respect. We must, if we expect to succeed, set out in earnest in this matter. We must have no conditions, but resolve, let others do as they will to us, we will treat them, 1st, Politely; 2d, Kindly; 3d, Lovingly; and so persevere till we arrive at the sublime height of pure Christian love!

For Friends' Intelligencer.

REVIEW OF EDITORIAL

As the editorial in the *Intelligencer* of 2d mo. 18th may, from its tenor, be supposed to have been prompted by members of the committee of arrangements at the recent First-day School Meeting in this city, I would say that having heard an expression on the subject from quite a number, the feeling among them seems general of dissent from the said article. It is thought the arrangements were very much in moderation, and the plan of having the lunch convenient to the meeting-house decidedly preferable to dining at private residences. The experience of some of the earlier meetings was, that preparations were made by Friends, and in some cases no one, and in others very few favored them with their company, which, to say the least, must be very annoying, not to say anything of the useless expense and trouble incurred. In this light the more recent method will be seen to be less trouble (on which particular stress is placed in the article) and expense to families than by the former practice. Much time is also saved by not going back and forth, and we are enabled to proceed with the business with but an hour or so recess. Thi

plan is also much more promotive of sociability, and by a better acquaintance, love and unity will be advanced.

In reference to moderation in the number of meetings, is not this moderation an evidence of degeneracy amongst us as a Society? Among early Friends (if we may judge from their history and writings) their meetings were frequent and the attendance of them regular, and the interest in the Society and its principles very much kept alive in this way. Gradually one meeting after another has been dropped to accommodate our ease and our desires after pecuniary gain, until (I speak as regards our own meeting) the attendance of our adult members on a mid-week day is, say about one-tenth of our men and perhaps one-fifth of the women, and often not so large a proportion.

Then, again, this moderation in my opinion has retarded the faithful maintenance of our testimonies,—that against slavery, for instance. When we had prohibited our members from holding slaves, it seemed to be felt as though all that we were to do was accomplished, and therefore a do nothing policy seemed to prevail; and as a consequence many of our members became lukewarm, and even, in some cases, prominent Friends were apologists for the infamous system.

I am one who believes that had there been entire faithfulness on the part of our Society not only in reference to slavery, but to that other barbarous relic, war, the public mind would have been so far influenced and convinced that the late sanguinary conflict in our land would hardly have occurred. Therefore I place the late war as very probably a result of this too great moderation on the part of our Society. The same may be said in reference to temperance, in which Friends are regarded as pioneers; but the world has progressed far ahead of them, and I fear too many of our members are still in the habit of using strong drinks.

Let us beware lest the language may be to us as to the Church at Laodicea: "Because thou art lukewarm, and neither cold nor hot, I will spew thee out of my mouth."

I believe the time has come when, instead of counselling moderation in reference to First-day Schools or anything else which may be deemed advisable for the advancement of Truth and promotive of the principles which as a Society we feel called to bear to the world, we should rather say with the preacher: "Whatsoever thy hand findeth to do, do it with *thy might*, for there is no work, nor device, nor knowledge, nor wisdom, in the grave whither thou goest;" and with the Apostle: "It is good to be *zealously affected* always in a good thing."

J. M. T.

Scraps

FROM UNPUBLISHED LETTERS.

* * * * * May you, who are young and who oft feel as children, diligently attend to your callings in every good word and work. Be not discouraged, though some of us who may have borne the burden and heat of the day of trial, may now be permitted to retire a little, and leave room for you to feel your own standing, and take a portion of the burden off our shoulders. "Follow thou me," was a good lesson to one formerly who asked, "What shall this man do?" So, my dear children, while your sympathy and your prayers are for the preservation and encouragement of us who are aged and almost worn out in the service, ours may be offered up for you that ye be strong in the Lord, and in the power of His might, that ye go on fulfilling the work of your day in the day time, and especially in the morning—the best season for labor—for ye know that your reward is sure with Him who calls for the dedication of your all.

* * * * * I believe I can say as is often attributed to the apostle John, "I have no greater joy than to hear (see and know) that my children are walking in the Truth;" and as *walking* implies progression, not sitting still, joy and satisfaction arises from such evidences as I have, that those whom I may class with my children continue progressing, step by step in the way and work of Truth. Go on, dear child, with thy companions. Do what your hands find to do in the pure openings of Truth. Guard against the snares and devices which may sometimes be presented, and apply your hearts unto wisdom, in order to discriminate rightly between outside appearances and realities. Oh! that Friends, professing an inward safe Guide, the Light, may be deep in attention thereto, and when it says, "Go not after" this, that, or the other plausible device or amusement, that they may know a patient abiding in their tents, retired in spirit, and waiting in holy travailing patience. May you, who may be called by comparison young ministers, in the city of Philadelphia be preserved—deeply retired in mind, waiting for the Master's call, and when He puts any of you forth, in any testimony, to bear witness to the Truth, may you be faithful and leave all events and effects to His disposal. But "go not forth," let no other voice be listened to, however nearly it may counterfeit the voice of the true Shepherd, for it remains to be an important truth,

that "Satan" (opposing spirits, though speciously disguised) "are transformed" (by the unwary and too superficial mind) "into an angel of light." It is therefore important to us, to guard against these subtle transformations of our serpentine reasoning, under the plausible pretexts of imagination and curiosity, the principles of deception, even in the garden of Eden. Farewell, and may the holy pavilion of Divine preservation inclose thee on every side.

When Job's friends heard of his trials and afflictions, they went to see him, and held a silent meeting during seven days, for they saw that his grief was very great. The sympathy silently felt must have been much more acceptable and consoling to his deeply-trying mind, than the after scene of vocal communication. It is now several days since I heard of the affliction of my dear friend S. occasioned by the loss of a brother far from home, and the declining state of an affectionate parent. My silent sympathetic feelings and thoughts have often flowed towards her, and with emotions far different from the language used by Job's friends toward him, I would fain pour in "the oil and the wine" of consolation. I would encourage the endeavor to keep the mind steadily stayed on Him who "careth for the sparrows," and who in His perfect wisdom, mercy and goodness, doeth all things right. Inscrutable as many of His dispensations and His providences are to our finite and limited comprehensions now, the period may arrive when all will be made clear and plain to our view. Thus Jesus said to one of His disciples, "What I do, thou knowest not now, but thou shalt know hereafter." Repose thy mind then, my dear friend, as "the disciple whom Jesus loved" did, when leaning on the bosom of his Master, and may a holy calmness and quietude cover thy spirit, in which the abiding language of thy inmost feeling may be, Thy will be done, O Father; Thou hast given, or lent a little while, and it is Thy right to take away Thy gifts when Thou seest meet. I resign them all to Thee.

FRIENDS' INTELLIGENCER.

PHILADELPHIA, THIRD MONTH 11, 1871.

MISUNDERSTANDING.—One of our subscribers writes to us, requesting the withdrawal of his name from our subscription list, because he considers "the tendency of our paper is to encourage a superficial view of Quakerism."

We acknowledge our surprise at this

charge, and unhesitatingly repudiate it as unjust and without foundation, our efforts having always pointed in the opposite direction.

Our friend did not mention the offensive articles—all is left open to conjecture, and we are in a dilemma, not being aware that any sentiment has at any time been admitted that would lay waste what is to us so dear. We therefore conclude a misunderstanding of language is at the bottom of the difficulty, and we regret that any concerned Friend allows himself hastily to attach to an article a meaning the reverse of that intended to be conveyed.

It is well to cultivate that charity which thinketh no evil. We would then judge kindly when a writer fails to make his meaning clear, and if the general tenor of an article would bear such a construction, we would place upon it one that would accord with our idea of Truth, instead of making a brother an offender for a word.

"WOMAN'S WORK—WHAT IT IS—WHAT IT WILL BE."—This title attracted our attention, and we read with unusual interest the remarks of R. Collyer upon the subject. The extracts which we have selected from it will be found in the present number.

The true position of woman has occasioned, for years, much controversy, and when we reflect how nearly the best interests of society are interwoven with hers, we cannot but regard it even as a momentous question.

We have not deemed the lengthy discussions which have been widely circulated through the press, appropriate to our paper, but have watched the growth and expansion of liberal views which have taken hold of individual minds amid the conflict of opposing sentiments, that have sometimes been urged with a fervor which we could but regard as zeal untempered with Christian charity.

Our education as members of the Society of Friends has, no doubt, had its influence, and has inclined us to look upon woman as man's equal, and to regard the two as entitled to the same rights and privileges. Observation has confirmed the belief that the pathway of life is always less rugged where the footprints of both are found, and that

perfect harmony cannot exist with divided interests.

It is a notable fact that the women of our Society have privileges unknown in other religious bodies, but we feel they have not been fully appreciated.

Of latter times, however, we think there has been an awakening to favors inherited by birthright.

The more the subject of woman's equality with man is reflected upon with the desire to place her where she truly belongs, the more clearly will it be perceived, we think, that no advantages for moral or mental culture can in justice be withheld from her.

If in the cultivation of the talents with which she has been gifted, she discovers a special fitness for any particular sphere of usefulness and engages therein, and the result proves her efficiency, her reward should certainly be equal to that of a man performing similar services. To this point we would direct especial attention, as we feel that in this regard there is room for greater generosity among Friends as well as others.

The above thoughts were suggested by reading the article by R. C. already referred to, and while we are not yet prepared to follow him into the arena of politics, we have given place to his views as a foreshadowing of what may be—"what it will be." The advance of the cause of woman in England, will have the effect to forward the work on this side of the Atlantic, and the time may not be far distant when woman shall have a voice in making and administering the laws by which she is governed. If so, how important it is that she qualify herself for the responsibility! Where our influence can be felt, let no opportunity pass unimproved, of pressing upon the rising generation the acceptance of the guidance of the divine Spirit, which will regulate and bring into harmony the moral and intellectual faculties, so that in our two-fold nature, God the great Creator may be glorified.

NOTE.—Our Agent has received a letter containing money dated "Kingston," no State given, and as there are twenty-one post-offices of that name in the United States, he solicits further information in order to send

the paper and receipt. It is important in all cases that the post-office, the State, and the full name of each subscriber should be given. Plain penmanship greatly aids the duties of the Agent.

MARRIED.

EWING—DARE.—On the 9th of Second month, 1871, by Friends' ceremony, at "Cottage Home," the residence of the bride's parents, Robert P. Ewing, M.D., to Isabel M., daughter of Mark R. and Mary B. Dare, all of Greenwich.

DIED.

ADAMS.—On the 1st of Third month, 1871, at the residence of his mother, Catharine Adams, Louis P. Adams, in his 29th year; a member of Philadelphia Monthly Meeting. This dear young man was diffident and retiring in his manner, and there was an innocency that gave evidence of a desire to do his Heavenly Father's will, and that enabled him to feel when at the close of life, that he was prepared for the change.

FOLWELL.—On the morning of the 17th of Second month, 1871, at his residence in Camden, N. J., after an illness of about ten days, William Folwell, in the 81st year of his age. In his removal, the Meeting to which he belonged, as well as his family and friends, have sustained the loss of an exemplary and useful member, and one who was sincerely beloved by an extensive circle of friends and acquaintances. During his indisposition he remarked to a beloved friend: "I have attained to a great age, and it is not to be expected that I can continue much longer in mutability. I know that my Redeemer liveth; through mercy I see nothing in my way, and am willing to go when consistent with the Divine will. A bright eternity is before me, and oh, how glorious!" He quietly departed, leaving to surrounding friends the consoling assurance that through redeeming love and mercy, the language spoken to the apostle John at Patmos was applicable to him: "I heard a voice from heaven saying unto me, Write, blessed are the dead which die in the Lord from henceforth; yea, saith the Spirit, they may rest from their labors, and their works do follow them."

HOPKINS.—On the 19th of First month, 1871, Martha M., widow of the late Thomas Hopkins, in the 71st year of her age; a member of Philadelphia Monthly Meeting. Although her bodily sufferings were very great, she bore them with Christian fortitude and resignation. Naturally of a retiring disposition, she shone the brightest in the home circle, beautifully displaying those lovely traits of character that so adorn the wife, mother and friend. Her remains were interred at "Fair Hill."

NEWPORT.—On the 18th of First month, 1871, of diphtheria, Walter Janney, son of John E. and Julia Newport, aged 2 years and 10 months.

Suddenly, on the morning of the 22d of Second month, 1871, Basil Hopkins Newport, the only remaining child, aged 19 months.

THOMPSON.—At Brooklyn, L. I., on the 1st inst, of a severe but short illness, Lucy Thompson, widow of the late Samuel Thompson, in the 76th year of her age.

ROBINS.—At her residence in Woodstown, Salem county, N. J., on the 6th of First month, 1871, Ann F. Robins, in the 59th year of her age; a member of Pilesgrove Monthly Meeting.

NORRIS.—In Baltimore, on the 26th of Second

month, 1871, Henrietta T., wife of J. Saurin Norris, and daughter of the late Isaac Tyson, in the 62d year of her age.

EXERCISES OF FRIENDS' SOCIAL LYCEUM.

Third-day evening, 3d mo. 14, 1871, Lecture by WILLIAM G. FOULKE. Subject: "Inconsistency."

On the succeeding week, *Select Readings*, by Professor J. W. SHOEMAKER.

INDIAN COMMITTEE.

The Indian Committee of Philadelphia Yearly Meeting will meet on Sixth-day afternoon, Third month 17th, at 3 o'clock, in the Monthly Meeting Room, Race St. The general attendance of the Committee is desirable. JACOB M. ELLIS, *Clerk*.

FREEDMEN'S ASSOCIATION.

Will meet at 1518 Vine St., on Fourth day evening, 3d mo. 15th, at 7½ o'clock.

JACOB M. ELLIS, } *Clerks.*
ANNE COOPER, }

CIRCULAR MEETINGS.

Committee of Philadelphia Quarterly Meeting will meet at Race St. Monthly Meeting School-room, 3d story, on Sixth-day next, at 4 o'clock. Full attendance of the Committee particularly desired.

WM. EYRE, *Clerk*.

For Friends' Intelligencer.

FRIENDS AMONGST THE FREEDMEN.

No. 25.

The appeal made a few weeks since through the columns of the *Intelligencer*, for aid in sustaining our schools for freedmen, was well timed, and to the point; and although some cheerful responses have been made, pecuniary need still stares in the face the few on whom now rests the responsibility of keeping those schools in active operation. The existence of fifteen or sixteen depends on the remittances made by "*The Association of Friends of Philadelphia for the Aid and Elevation of the Freedmen*," which this additional appeal is intended to represent.

To show that a lively interest in these schools is still felt by the freedmen themselves, the writer quotes from the reports of some of the teachers recently received.

That at Falls Church, taught by Harriett Jenkins (colored), enrolls 67 pupils, of which number 44 are between 6 and 16 years of age. Of the whole number, 65 read, a large proportion write, 64 are in arithmetic, 24 in geography, while 18 are studying grammar.

The teacher queries thus:—

"I would like to know if there is any hope of getting any more books from your Society—if so, will you please let me know? The children have gathered together more old books of different kinds than I had any idea could be found in the neighborhood, each claiming a right to be taught out of all such books as he or she chooses to bring to school!"

The report of our schools at Charleston, S. C., under the care of Cornelia Hancock

and others, shows 91 pupils, of whom 87 are between 6 and 16 years of age. Of the entire number, 80 read, 55 write, 53 are in arithmetic, 28 in geography, &c.

Frances E. Gauge reports in reference to the school under her care recently established at Gordon, Alancha Co., Florida, 77 pupils on the roll, with the excellent average attendance of 62. Although this school has existed so short a time, the whole of the scholars can now spell, while 55 read, and 39 are in arithmetic, &c.

But this must suffice for the statistical condition of the schools. It may be well to add, that "progress and conduct" (embodied in the blanks the teachers are required to fill) are universally designated as "good" or "very good."

Cornelia Hancock, in referring to their industrial department, remarks:—

"We are getting along right well in our sewing-school now, and I hope it may prove the foundation of a store on a larger scale. The goods sent have been very acceptable, and have sold well. We do not want anything of a poor quality—don't mind a little damage—but desire *strength*."

She also acknowledges the reception of three barrels forwarded, adding:—

"The sewing-school materials were splendid. All interested in this enterprise were overjoyed at so many goods. The little children sew carpet rags, and I buy them from them. The boys think it very hard they cannot have a chance in something like the girls' sewing-school. Late the other evening we were called up by a little boy, with four carpet rag balls, all sewed in order, and we took them of him.

"If there was only a factory where they could earn something, I would ensure their giving cheerful labor. There is very little money here, and what there is, they manage to keep from the colored people. Energy and capital *must* come here, or stultification will be our condition. The First-day School was excellent to-day—we had the company of two teachers from Charleston, and the children seemed deeply interested."

In alluding to the financial condition of affairs, she adds—

"There has been great destitution amongst the teachers here employed by the State—they have had to wait so long for their pay—but I believe a 'Deficiency Bill' has at length been passed to pay all up to the first of the year."

She concludes with the following gratifying information: "My health is very good now, for which I am very thankful. The weather is mild and beautiful—no fires needed." (This on Second month 2d.)

Frances E. Gauge (in addition to the condition of her school as herein above reported) writes: "I am afraid I will not be able to raise more than ten dollars per month among the colored people. I am taxing them twenty cents apiece, and they all seem willing to give that.

"Yesterday I visited eight families. They are all settled on land, but have not paid for it yet, although they are in a fair way of doing well when they once get a fair start. I called on one old couple aged 92 and 80, respectively. They are very smart, and appear to have everything around them to make them comfortable. 'Uncle Cesar' (aged 92) makes shoes, tubs, buckets, &c., and comes to First-day School, seldom missing a day!

"It is very pleasant to go round amongst these people, and receive their small tokens of friendship. One place I visited, they were weaving their cloth or homespun. They say it takes a month to weave one piece. How much patience and labor it requires merely to get a little clothing to wear! They all aim to raise cotton enough to clothe themselves. Farther than that they seem to think it does not pay."

She also forwards a list of sundry articles she needs for her school. It may be well to call attention to the important significance contained in the foregoing extracts. How the spirit of self-dependence permeates them—and how the industrial education that has been bestowed upon them is beginning to bring forth good fruit.

Our faithful co-worker, George C. Round, of Manassas, gives the following list of schools opened with the assistance of our Association, and gratefully acknowledges the receipt of a box of books for their use, viz.:

		When open-ed.	No. of pupils	Salary.
Manassas	School	Jan. 23	59	\$25
Pittsylvania	"	"	30	20
Olive Branch	"	"	25	20
Chappel Springs	"	Jan. 30	25	15 on acct.
Macedonia	"	"	22	15 on acct.

Caroline Thomas, formerly in our employ, after delineating the position she occupies with her school, being, to some extent, independent of the government officials, remarks:

"I sometimes fear the free schools, in many cases, will not result in much good to the colored people. For instance, in the Leesburg district there are five schools for the whites, and only one for the colored population, although the trustees of this district seem inclined to do the fair thing as regards an equal distribution for the two races. Some days I think my school is very interesting, and that I would like some of my friends at the North to step in; at other times, I feel disheartened for a season, especially when a

large, full-grown man cannot spell "b-o-o-k," or when so many of them make so many errors in their arithmetic."

She closes with a feeling allusion to the death of the late Thomas Garrett, having the assurance that "the messenger found him ready for the summons." We are always pleased to hear from this faithful laborer, and hope the mutual interest now felt may ever continue.

Our energetic friend Chalkley Gillingham writes from Woodlawn, and thus acknowledges an appropriation made by our Association:

"Please accept my hearty thanks to all the Friends concerned. This enables us to keep a free school until the 1st of Seventh month next, and without it we could not have inaugurated it. We have now about 64 pupils on the list at each school (Gum Springs and Woodlawn), both in fine condition, and the scholars making progress in their studies."

Our friend appears to be very faithful and efficient in looking after the wants and well-being of these schools.

Amidst all our doubts and fears as to the continuance of our labors, words of cheer oft-times greet us. One friend accompanies a donation with—"I wish it was in my power at present to furnish more means for the support of the schools under the care of Friends. I also send to day, per Adams Express, a box containing some clothing for the freedmen," &c.

Another writes: "I enclose a check, which please appropriate for the benefit of freedman schools. If the school at —— should need help, I would like this donation given to them. I visited that school, and feel that it should be sustained."

A few words more, and we close. "I visited that school, and feel that it should be sustained!" Could it only be either the privilege or pleasure of Friends generally to visit the schools for freedmen, as a few of us have done, the writer is well satisfied that the universal verdict would be, not only that they *should be*, but that they *must be* sustained. And that "Appeals" would no longer be requisite, but that the much needed funds would flow freely in. "So mote it be." J. M. ELLIS.

Philada., Third month, 1871.

A VERY old man once came to King Agis of Sparta, to lament over the degeneracy of the times. The king replied, "What you say must be true, for I remember that, when I was a boy, I heard my father say that when he was a boy he heard my grandfather say the same thing."

RECONCILED.

BY PHEBE CARY.

O years gone down into the past ;
 What pleasant memories come to me,
 Of your untroubled days of peace,
 And hours of almost ecstasy !

Yet would I have no moon stand still,
 Where life's most pleasant valleys lie ;
 Nor wheel the planet of the day
 Back on his pathway through the sky.

For though, when youthful pleasures died,
 My youth itself went with them, too ;
 To-day, aye, even this very hour,
 Is the best hour I ever knew.

Not that my Father gives to me
 More blessings than in days gone by,
 Dropping in my uplifted hands
 All things for which I blindly cry ;

But that his plans and purposes
 Have grown to me less strange and dim ;
 And where I cannot understand,
 I trust the issue unto Him.

And spite of many broken dreams,
 This have I truly learned to say—
 Prayers which I thought unanswered once
 Were answered in God's own best way.

And though some hopes I cherished once,
 Perished untimely in their birth,
 Yet have I been beloved and blest
 Beyond the measure of my worth.

And sometimes in my hours of grief,
 For moments I have come to stand
 Where, in the sorrows on me laid,
 I felt the chastening of God's hand.

Then learned I that the weakest ones
 Are kept securest from life's harms ;
 And that the tender lambs alone
 Are carried in the shepherd's arms.

And, sitting by the wayside blind,
 He is the nearest to the light,
 Who crieth out most earnestly,
 "Lord, that I might receive my sight."

O feet, grown weary as ye walk,
 When down life's hill my pathway lies,
 What care I, while my soul can mount
 As the young eagle mounts the skies.

O eyes, with weeping faded out,
 What matters it how dim ye be ?
 My inner vision sweeps untired
 The reaches of eternity !

O death, most dreaded power of all,
 When the last moment comes, and thou
 Darkenest the windows of my soul,
 Through which I look on Nature now—

Yea, when mortality dissolves,
 Shall I not meet thine hour unawed ?
 My house eternal in the heavens,
 Is lighted by the smile of God !

NO TRAIT of character is more valuable than the possession of good temper. Home can never be made happy without it. It is like flowers springing up in our pathway, reviving and cheering us. Kind words and looks are the outward demonstration ; patience and forbearance are the sentinels within.

EXTRACTS FROM "WOMAN'S WORK.—WHAT IT IS.—WHAT IT WILL BE."

BY ROBERT COLLYER.

Proverbs xxxi. 31.—Give the woman of the fruit of her hands, and let her own works praise her in the gates.

I wish to speak to you about woman's work, what it is, and what it will be so far as we can guess from the signs of the times.

It is a subject of very great interest for these reasons: Work of some sort is everybody's business who is able to work,—man and woman alike. There is enough for everybody to do, when we once find out *what* to do, and are ready to do that which falls to our lot. One-half of this work and a little over falls to the lot of the woman. I say a little over, because there are about one hundred and six women, in the whole civilized world, to one hundred men, and I include what the true wife and mother does as a part of the great sum of the world's work ; the most intimate and essential and precious part, as I believe, of all the work that is done. A great deal more of what must be done outside the home has been done by the man that falls fairly to *his* lot, or that he is most naturally fitted for. While the woman has stood watching him, and longing to take hold and help, but for many reasons, some noble and some base, she has been made to stand back, and the result of that has been not only the loss of so much valuable work as she would have done, but misery to the woman more than can be told. Some of these women are, or have been, our own flesh and blood. They are all bound to us, who are not akin to us, through that common tie that makes a man instantly take a woman's part, and defend her and help her at all hazards when she appeals to him, as she helps him when he appeals to her ; so that Mungo Park said, in all his wanderings over Africa, no matter what enmity he met with from men, he never appealed to a woman in vain: she was sure to help him to her utmost ability. We are in the midst of a great, hopeful revolution, as inevitable as this of the planet we live on, in which the woman is taking her true place in the vineyard and entering on her true work, and will never rest, I think, any more until she has found out these three secrets, namely: how many things can a woman do better than a man ; how many can she do as well ; and how many can the man do better than the woman ; and says to us as the result of it all, Now attend to your part, and I will attend to mine. Because this is what we must come to when all is done that can be done by both sexes: we must come to the truth that when God made the woman, as Dr. Bartol says, he did not mean to merely

make another man. And so that is a true and good instinct which has always made men and women agree, that there are some things the woman ought *never* to do, except under the direst need, and then only as an exception to the rule of her life. This was the feeling among our ancestors in England more than a thousand years ago. Thomas Hughes says, in his life of Alfred the Great, the Anglo Saxons provided that women should be protected by special laws in all matters where their weakness of body would otherwise place them at a disadvantage; and they divided the sexes in their rude way into the spindle side and the spear side. Evidently recognizing thereby the divine division that God made, when he created man, male and female, and the truth one of our poets tells, when he says that "woman is not undeveloped man, but diverse; and their dearest bond is this: Not like in like, but like in difference." We see this at once whenever the woman is forced into doing what is coarse and hard and unfit for her finer frame. We are never reconciled, for instance, to the sight of those poor German women on our streets, with great loads of old clapboards on their backs stumbling along through the snow. Every man of us feels a little mean at that sight, and would like to take the thing off and send it home for them, if it was any use.

I remember, perhaps twenty-five years ago, when there had been a good deal said without any clear result about the hideous habit of the coal-mines in England, where women had to drag the loaded trucks from the coal-bed to the mouth of the pit, harnessed like dumb beasts, that one week all the papers published three or four pictures of the thing just as it was; and then there was a great outcry all over the land that this thing should be stopped. We could bear the report, but not the sight. It is a sign of barbarism everywhere, and it *is* barbarism, to let a woman do a great many things a man can do without the least harm. When the man compels the woman to take the coarse and heavy end, while he takes the light and pleasant, he is all one with the native Australian, or the Indian on our own Western lands. When the condition of a country compels the woman to do a great deal that is coarse and hard, that country is in a bad condition, especially if there are multitudes of men at work in places where lighter and finer work is to be done that she can do just as well as he can, if he did not crowd her out. But in that land where the man is ready to practice as fine a chivalry toward the whole work men and women have to do between them that he observes in a crowded car, and in a

hundred ways beside, then that land, whenever you find it, bears the finest fruit on the tree of life. * * * * *

Only the bravest and brightest girls break through the net and fit themselves for an independent career, just as a man does. They are nearly all pioneers, and pioneer-life is always hard. They seldom get the same price as a man gets for doing the same work, and that hurts them by its injustice. Then there is an ingrained delicacy, partly the result of their nature, and partly of long training, that makes it hard for a finely-educated American girl, especially, to encounter things, in almost every calling, the man has got hardened and used to through centuries of striving. I know of nothing in the whole history of the human family that shines to me with a finer radiance of heroism than the story of the way Dr. Elizabeth Blackwell fought for her education as a physician and surgeon, not through the bristling lines of prejudice and proscription merely, but through the unspeakable oppositions of the delicate, shrinking woman's nerve and nature.

But when she has fought that good fight, this is the result of it: that while we would all have held her back at the start, and said to her, "You ought not to do it; you will unsex yourself; it is a man's work to study anatomy;"—when we see with what a pure and perfect modesty she walks on the perilous way, and shows us in every moment and motion of her nature that this study of the architecture of the living God is a science into which the question of sex never comes; then when she enters on her career, and we see how much better she is fitted for a great deal that must be done in this noble science of healing, because she is a woman, then our opposition changes to the heartiest approval,—we welcome the new and beautiful fitness, and the way is made easier for the great host that follow her in the sacred calling. But it was hard for her, it is hard still for all her sisterhood. They bring the same delicate, shrinking organism to the task, and are only aided better in the way they learn it. But what comes out of it to all of us is this truth, to be made good, not of medicine alone, but of everything the woman undertakes and succeeds in, still remaining a woman in the purest sense: that the true woman's work is whatever a true woman feels impelled to do, that in the doing adds something to the commonwealth of humanity.

And here a little history comes in of what a woman has done in quite a different direction, and opens to us another chapter of the true woman's work. It is the true story of a kinswoman of an intimate friend of mine. Nine years ago there was an old man living

in Duchess County, N. Y., who owned a farm of about 300 acres, and had three children, a son and two daughters. He was an old man then, and past work, and his son managed the farm. He made a proposition, He could not live long, and wanted to divide the property in this manner; he would divide it into two halves; give the son one-half, and the other half to the two daughters. Then the son made a proposition. The property was worth from eleven to twelve thousand dollars, and he said he would sell his share to his sisters for five thousand, on condition that they would take care of the old man as long as he lived. One of these sisters, a small, delicate person, acts for the other, who is something of an invalid. They agreed to the proposition, and then the first thing this small person did, when she got hold of the land and found herself in debt five thousand dollars, was to run in debt four thousand more, with which she bought new stock and implements, put her buildings and fences into good repair, and got everything as a woman likes to see it. That is nine years ago. Her father lived five years, and came to be so helpless that she had to wash his face, shave him, and wait on him hand and foot. She fell sick herself of the strain, and could attend to nothing for some months. But now that whole nine thousand dollars' debt is paid. The farm is in better condition than it was when she took it. She has had the whole oversight of the place, sometimes hiring a foreman to work with the men when she needed one, but never giving up her own plan of ruling and guiding the land. One day, when she was not far on with her work, her brother came to see how things were going,—not indifferent, I suppose, to his share of the property still invested. He saw some stone wall that was just done, and said, "You must not build a wall like that; the land will not afford it." "What do you think that wall cost?" she said. The brother named the price it would have cost him. The sister brought out her book, showed him every item, and it was not quite half as much as he had said it cost. Then he found that while the woman did not touch the wall with the tip of her finger, she inspired and directed the men, so that they built as they built at the walls of Jerusalem in the days of Ezra the Scribe; and so the wall was finished. All this she has done, and has raised a poor lad beside, taught him farming; started him on a farm of his own in Missouri, and is now looking out for another.

There you see again a true woman's work where we should not have considered it possible, in the abstract, as the thing for a woman to do. It was one of those points in

her history where hundreds of her sisters would have taken the six thousand dollars and tried to live a lady-like life on the interest at 7 per cent.

Forty years ago there came a crisis in our nation, in which right and might armed for the battle on different sides. The host of the right was a small handful; that of might as the stars for multitude. It was presently found that the woman's soul was stirred here and there to take the outcast, unpopular side, as it always was and always will be. It was a war of the truth with falsehood; the weapon was the living word on the side of right, on the side of wrong anything that could be made to sound like it as nearly as possible. Well, women fought with the living word, it was found, as well as men; and so they were enrolled; and then there was a division in which those that sided with Paul bid her hold her tongue, and those that sided with Philemon made her welcome. The result was that she established her right to be heard, in the worth of what she said, on the platform; from that it seemed good to her to even enter the pulpit; and there are women now, both East and West, who are preachers in good standing, and have charge of churches. * * * *

After the great war was over, the Secretary of the Sanitary Commission said in a letter to Senator Sumner, which was printed, that "nearly the whole bulk of supplies collected in the East, amounting in value to fifteen million dollars, were collected, assorted, dispatched, re-collected, re-assorted and re-dispatched by women." In the first year of the war this business was in a measure done by men, but they began to do their work in such a clumsy and inefficient way that it became my duty, he says, to report the facts to the Sanitary Commission, and ask a remedy. The remedy they found was in the appointment of women, because "they were found to be superior to the men in work requiring extra patience, endurance, a sense of the relative fitness of details, and a conscientious methodizing of them." Now the woman had no faculty in war she does not retain in peace, and the time must come when she will be found to do *all* work requiring extra patience, endurance, and a sense of the relative fitness of detail in these grand, new mercantile establishments that are superseding all others in our great cities; and there she will still be a true woman at her true work.

And so, if time would allow me, I should go on and mention a great number of things the woman is constantly and quietly doing, and as she does them one by one we have to notice that she is still the same person, with

the same bearing and conduct. Her work does not interfere with her womanhood. * *

Last of all, let us all be sure that when the bell strikes the hour for the woman to take her place beside the man at the ballot-box, in the Senate, and wherever beside she is so sadly needed in the political life of the nation, it will be exactly as it has been in these other things. There will be no shock except among those that always predicted ruin from a change from worse to better, who have seen the country ruined at least twenty times already. Let us welcome the woman into politics, and believe as we live that what we see now in political life where the woman has no part, is exactly like the social life out there among the mines, when a great horde of men herded together with no woman within a hundred miles or a thousand. We fear she may be coarsened and degraded by the contact with the life that waits for her in politics; so might those miners fear, and so some, no doubt, did fear, for the advent of their wives to Red Dog and Sandy Bar; but the wives came, and then it was found that gradually they lifted up and refined the man more than they were dragged down and coarsened by the new, strange life; and so far as they might be harder and coarser, that was because they had to first go down to where the man *was* before they could raise him up to where he ought to be; and that was also to their praise.

It will be so in this new life. The woman, when she comes into it, will refine and ennoble it, and make it ever more good and true. It is as bad for the politicians to be by themselves, as it was for the miners.—*Christian Register*.

Extracts from the *Third Annual Report of the Natural History Club of Philadelphia*.
12th mo. 22, 1870.

(Concluded from page 15.)

On this anniversary day, too, the Club recalls how the kindly influences of its reunions enhance the attractions of the recreative trips of the summer holidays, and the gleaners scattered abroad come back with joy to celebrate their harvest-home. Gladly, did time and space permit, would we report the gleanings from Southern Louisiana to Canada North; from the two world-rivers—the burdened Mississippi and the lake-fed St. Lawrence; from the little ponds of Massachusetts and Pennsylvania to the briny waves of the Atlantic and the Gulf of Mexico; from sun-clad, barren peaks of the White Mountains and damp, dark ravines of Watkin's Glen; from Niagara's roar and the deep river-bed waters of Trenton Falls; from desert, sandy islands of New England

and from rank, rich swamps of Carolina and Louisiana; from tangled wilderness of the Blue Mountains and the cultivated meadows of Lancaster. Gladly would we ascend with the happy four to the Sappers and Miners' view and gaze upon a panorama embracing four thousand square miles, where the laughing Delaware can be traced for twelve miles as he hurries away to kiss the warm tide near Trenton; gladly stop to rest at Hunter's spring, and, whilst we rest, admire the deep green mosses, the red elder in fruit, contrasting with the almost white flowers of the laurel, and, above all, the glorious rhododendron of the mountain. From the little row boat, with sixty feet of blue waters beneath, and the cool air rushing through the Gap between the wild wooded mountain peaks, they watch how the declining sun throws golden light on dark hemlocks and glistening oaks; they visit at eventide Eureka falls and Moss grotto, and find *Mnium punctatum* growing in the cool drip, bearing on each large leaf a drop of crystal water, just as the departing sunlight was refracted through and the dripping grotto sparkled with a thousand tiny lights. From the Gap to Bushkill, a distance of fifteen miles, the road is lined with a succession of landscape pictures, shaded by grand old chestnuts that have stood sentinel for scores of years, till it reaches Shawnee, older than the rival village of Philadelphia. At length Bushkill is reached; Bushkill, with clear golden-brown waters melting into delicate amber, into rich cream color, into foamy white, as it leaps one hundred feet down into its circular basin, shaded by overhanging pines and hemlocks, and lined with mosses and ferns, gladdening to the eyes of the botanist; for here was "a little patch of *Circaea alpina*, the only spot in which we have seen it in all our rambles." Leaving Big Bushkill Falls, the party made their way over a steep path of loose shale through dense thicket of scrub pine and laurel to "Pond Run." "Unbroken wilderness" gives but faint idea of the wild confusion of mingled rocks and fallen trees, mossy and treacherous, or smooth and slippery, that must be gone over or under, or of tall ferns that hid the ground completely from view. At length the dash of falling waters is heard. It was still high noon, as we stood in twilight shadow directly in front of the cascades, whose waters find short rest in the dark pool below us, after their two leaps of a hundred and thirty feet. During our laborious descent, we learned how sturdily the laurel planted itself on the mountain side, and safely trusted to its friendly aid in our returning path.

* * * *

One whom circumstances detained in a quiet country home sends a study of a small but mischievous creature, one of the last summer's pests. On going to the garden to search for ripe tomatoes, I was surprised to find the vines lately so thrifty, drooping and stripped of much of their foliage. A large green worm with its devouring jaws was feasting on leaves and fruit. Its scientific name is a long one, but not too long, if measured by the loss and trouble which this insect caused to the farmer. The Sphinx *quinquemaculatus* is of a gray color; the four wings immaculated at the base, and the hind wings marked with two angulated bands; its body, stout and spindle-shaped, is ornamented with five orange colored spots on each side. This large Hawk-moth flies about in the evenings, and occasionally in the mornings of June. Its dark-green larva has a series of oblique greenish-yellow bands on the side; the head rather flattened; the back smooth, with a caudal horn often becoming quite red as the larva reaches its full size, more than three inches long. The caterpillar has sixteen legs, and clings firmly to vine or bush. When very young it is an object of interest, as the circulation and movements of its organs can be quite clearly traced. It consumes a leaf with astonishing rapidity, cutting it as smoothly as if by a pair of sharp scissors. During the last summer these larvæ passed from farm to farm like a devastating army over the potato fields of New Jersey. Some fields were partially destroyed; some had a few dead stems left standing, looking as though a fire had swept over them; some had nothing left to indicate that potatoes had been there. On marched the great army, regardless of intervening bushes, fences, and roads—scarce missing the hundreds now and then crushed under the horses' hoofs and the broad wagon wheels. On marched the great army, covering garden, yard, and piazza of the unfortunate homestead that lay in their path, for no home was secure from this Egypt-like plague. The people were dismayed, and rumor spread that even the potatoes whose vines had been devoured by these worms were charged with poison. "The land is as the garden of Eden before them, and behind them a desolate wilderness; they shall walk every one in his path; they shall march every one on his ways, and they shall not break their ranks; they shall run upon the wall; they shall climb upon the houses; they shall enter in at the windows like a thief." So wrote the prophet Joel, twenty-six hundred years ago—then directed the people to that mighty Power, who limits all evils and guards all peoples of the earth.

One interested in geological research reports a visit to Rocky Garden on the side of Haycock mountain, ten miles east from Quakertown. Rocky Garden consists of an aggregation of trap rocks ranging from a hundred pounds to masses of tons in weight, apparently lodged in what was once a depression in the surface, for the edges of the tract correspond with the general slope of the surrounding land. These rocks are evidently of igneous origin; some are nicely balanced, and give forth a metallic ring on being rocked or struck. Many and warm have been the discussions among the advocates of different theories in regard to this deposit of rocks. One party contends that they are relics of the Glacial period, when the alleged ice-field with its great moraines swept over this part of the world. Seamed, notched, and water-worn, they bear the traces of hard travel in their early days. Another party argues that they have been injected through the earth's surface near which they lie. Prof. H. D. Rogers says: Across the northwestern portion of Bucks County, towards the northwestern side of the Mesozoic red shale, there is a tract of country where the formation is much altered in texture and color by the presence of a great body of trappean injections. While the metamorphic aspect of the strata is a sufficient demonstration of the near proximity of much igneous rock, only a comparatively small portion consists of actual trap-work, being often in insulated outbursts. One of these latter effusions of the trap is to be seen in the bold elliptical ridge called Haycock Hill, the crest of which is transverse to the more common direction of the dykes.

With this geological notice ends the brief summary of the interesting observations made during the holidays, notwithstanding the extreme heat of 1870. As the shortening days suggested more moderate weather and also the resumption of home duties and professional cares, the summer tourists returned to the city with unabated interest in their social studies and recreations. Thus, with Microscope, and Essay, and Report, and varied conversation, the year has passed away. Not so the lasting memory of communings with nature, and the happy companionship of the members of the Club. Entering upon the third year of its existence, the Club, like any two-year-old child, pleased with the present good, simply asks for "More!"—more of the picture-book, more spelling out of the golden text, more feasting at the well-spread board.

CAROLINE A. BURGIN, *Cor. Sec.*

SPARE moments are the gold-dust of time.

FRIENDS' INTELLIGENCER.

"TAKE FAST HOLD OF INSTRUCTION; LET HER NOT GO; KEEP HER; FOR SHE IS THY LIFE."

VOL. XXVIII.

PHILADELPHIA, THIRD MONTH 18, 1871.

No. 3

EDITED AND PUBLISHED BY AN ASSOCIATION OF FRIENDS.

COMMUNICATIONS MUST BE ADDRESSED AND PAYMENTS MADE TO

JOHN COMLY, AGENT,

At Publication Office, No. 144 North Seventh Street.

OFFICE OPEN from 9 A. M. to 4 P. M.

TERMS:—TO BE PAID IN ADVANCE.

The Paper is issued every week.

The TWENTY-EIGHTH Volume commenced on the 4th of Third month, 1871, at Two dollars and fifty cents to subscribers receiving it through the mail. To those receiving it through our carriers, THREE DOLLARS.

SINGLE NOS. 6 CENTS.

It is desirable that all subscriptions should commence at the beginning of the volume.

REMITTANCES by mail should be in CHECKS, DRAFTS, or P. O. MONEY-ORDERS; the latter preferred. MONEY sent by mail will be at the risk of the person so sending.

AN EPISTLE TO THE SOCIETY OF FRIENDS, BY
GEORGE FOX.

1669.

Friends,—Dwell in the *living Spirit*, and quench not the motions of it in yourselves, nor the movings of it in others; though many have run out, and gone beyond their measures, yet many more have quenched the measure of the Spirit of God, and have become dead and dull, and have questioned through a false fear: so there hath been hurt both ways. Therefore be obedient to the power of the Lord, and His Spirit; war with that Philistine that would stop up your wells and springs. And the belief in the power keeps the spring open, and none to despise prophesy, neither to quench the Spirit; so that all may be kept open to the spring, that every one's cup may run over. For you may all prophesy one by one, and the spirit of the prophet is subject to the prophets. Would all the Lord's people were prophets, said Moses in his time, when some found fault; but the last time is the Christian's time, who enjoys the substance, Christ Jesus; and His church is called a priesthood, offering up spiritual sacrifices; and His church are His believers in the light. And so in the light every one should have something to offer; and to offer an offering in righteousness to the living God, else they are no priests: and such as quench the Spirit cannot offer, but become dull. I will pour out of my Spirit upon all flesh, in the

last time, saith the Lord, which is the true Christian's time; God's sons and daughters shall prophesy, and your young men shall see visions, and your old men shall dream dreams: and on my servants and handmaids I will pour out of my Spirit in those days, and they shall prophesy. Now, Friends, if this be fulfilled, servants, handmaids, sons, daughters, old men, young men, every one is to feel the Spirit of God, by which you may see the things of God, and declare them to His praise; for with the heart man doth believe, and with the mouth confession is made unto salvation: first, he has it in his heart, before it comes out of his mouth; and this is beyond that brain-beaten heady stuff which man has long studied about the saint's words which the holy men of God spake forth as they were moved of the Holy Ghost.

So with the Holy Ghost, and with the light and power of God, do you build upon Christ, the foundation and life; and by the same heavenly light, and power, and Spirit do you labor in the vineyard, and do you minister and speak forth the things of God, and do you dig for your pearls: therefore bring them forth, and let them be seen how they glisten. Friends, you see how men and women can speak enough for the world, for merchandize, for husbandry, the ploughman for his plough; but when they should come to speak for God, they quench the Spirit, and do not obey God's will.

But come, let us see what the wise merchants can say; have they found the pearl and field, and purchased the field which yields those glorious glistening pearls? Let us see, what can you say for God and that heavenly merchandise? What can the ploughman say for God with his spiritual plough? Is the fallow-ground ploughed up? has he abundance of the heavenly seed of life? So, what can the heavenly husbandman say?—has he abundance of spiritual fruit in store? What can the thresher say—has he gotten the wheat out of the sheaf, the heavenly wheat, with his heavenly flail? And let us see, what can the spiritual ploughman, husbandman, and thresher, say for God; and how have they labored in the vineyard, that they may have their penny? Some are breakers of clods in the vineyard, some are weeders, some are cutting off the brambles and bushes, and fitting the ground, and cutting up the roots with the heavenly axe for the seed, some are harrowing in, some are gathering and laying up the riches. So you may see, here are merchants, ploughmen, harrowers, weeders, reapers, threshers, in God's vineyard, yet no one is to find fault with another, but all laboring in their places, praising the Lord, looking to Him for their wages, their heavenly penny of life from the Lord of life.

So none are to quench the Spirit, nor to despise prophecy, lest ye limit the Holy One; and every one is to minister as he hath received the grace, which hath appeared to all men, which brings salvation; so that the Lord's grace, His light, His truth, and Spirit, and power, may have the passage and the rule in all men and women; that by it and from it in all He may have the glory, who is blessed forever and ever. The Lord hath said: "From the rising of the sun to the going down of the same, my name shall be great among the Gentiles." Now mark, Friends, this is a large space wherein God's name shall be great. And the Lord further saith: "In every place incense shall be offered unto my name, and a pure offering; for my name shall be great among the heathen, saith the Lord of hosts." Now mark, Friends, this heavenly incense, and pure offering, is a spiritual offering, which is to be offered by the spirit to God, who is a Spirit; then here none quenches the Spirit of God in his own heart; and all such come under the title of the royal priesthood, offering up spiritual sacrifices; which royal priesthood has a priest that lives forever, Christ Jesus.

And, Friends, do not quench the Spirit, nor abuse the power: when it moves and stirs in you, be obedient; but do not go beyond, nor add to it, nor take from it; for if you do,

you are reprov'd, either for going beyond or taking from it. And when any have spoken forth the things of the Lord, by His power and Spirit, let them keep in the power and Spirit that keeps them in the humility, that when they have spoken forth the things of God, they are neither higher nor lower, but still keep in the power, before and after; and being obedient to the Spirit and power of God, it keeps them from deadness, and alive to God, and keeps them in a sense that they do not go beyond and run out, as some you know have done: and all that hath come for want of living in the power of God, and in His Spirit, which keeps all things in subjection and in order, and in the true fear of the Lord, always to feel the presence of the Lord with you.

Come, fishermen, what have you caught with your nets? What can you say for God? Your brethren Peter and John, fishermen, could say much for God. Read in the Acts and you may see; I would not have you degenerate from their spirit.

Sheperds and herdsmen, where are you? What can you say now for God, whose abiding is much in the fields? David, Jacob, and Amos, your fellow-shepherds and herdsmen, (do not you see?) they could say much for God. I would have you to be like them, and not to degenerate from their spirit.

Come trademen, tent-makers, physicians, and custom-men, what can you say for God? Do not you read that your fellow-trademen in ages past could say much for God? Do not degenerate from their spirit. Do not you remember the accusations of the wise and learned Grecians, when the apostles preached Christ among them, that they were called poor trademen and fishermen! Therefore be faithful. The preachers of Jesus Christ now are the same to the wise of the world as then. G. F.

THINGS WORTH FORGETTING.

How much wiser we would be, if we could remember all the things worth remembering that occur day by day all around us! And how much better we would be, if we could forget all that is worth forgetting! It is almost frightful and altogether humiliating, to think how much there is in the common on-going of domestic and social life, which deserves nothing but to be instantly forgotten. Yet it is equally amazing how large a class seem to have no other business but to repeat and perpetuate these very things. That is the vocation of gossips—an order of society that perpetrates more mischief than all the combined plagues of Egypt put together. Blessed is that man or woman who can let drop all the burs and thistles, instead of pick-

ing them up and fastening them on the passenger! Would we only let the vexing and malicious sayings die, how fast the lacerated and scandal-ridden world would get healed and tranquilized! Forget the gossipings and bickerings, the backbitings and sneaking inuendoes; and remember only the little gleams of sunshine and poetry that can illuminate the humblest life if we will only drive away and forget the clouds engendered by things that should never be remembered.

From Hedge's *Primeval World of Hebrew Tradition*.

THE BRUTE CREATION.

"And out of the ground the Lord God formed every beast of the field and every fowl of the air, and brought them unto Adam to see what he would call them. And whatsoever Adam called every living creature, that was the name thereof."—GEN. ii. 19.

To name is to class, to subordinate, to subject. Man asserts his superiority over the brute creation in this that he can name and classify them, not they him. He subjects them in his thought, and so demonstrates the ascendancy of thought and the thinking mind over dumb, irrational life. No doubt aboriginal man was dimly conscious of this ascendancy. No doubt he discerned or suspected in himself a higher type and a nobler calling as he gazed on those animated but unconscious natures, as he looked into those eyes through which no rational soul looked back into his own. He found there no response to his thought and no "helpmeet" for his affections; he felt that these creatures belonged to another sphere, that between his nature and theirs an impassable gulf was set. * * *

The brute world still confronts the human as in the beginning. The "Lord God" who "brought" the tribes of earth and air to the first man still brings them as objects for man to consider and to name. A rich and manifold world it is, this brute creation! Its place and function in the universal economy is a topic of more than speculative interest. This, too, is a part of the great Revelation, a chapter in the God-given Bible of nature. To what purpose this multitudinous array and endless variety of animal life? The human mind constitutionally inclines to teleological judgments. The idea of use, the idea answering to the question, wherefore? to what end? intrudes itself in all our inquiries. We are not content with the simple existence of any finite nature; we seek in every object some ulterior end, a use in relation to something else, a purpose beyond itself. This want of the mind is not always satisfied by what the senses report or science reveals. This ulterior end is not always discoverable. We can generally detect the use of parts in relation to a given whole. We

determine a purpose for which an object exists in relation to its own sphere; the difficulty lies in determining the ulterior end of that sphere,—the use of the whole. An animal being given, we can trace the relation of part to part and find a use for every organ and an adaptation of every member to the comfort and well-being of the creature so organized. But when we seek further and inquire the purpose for which that animal exists, its use in relation to a higher end, that question is not so easily solved,—is insoluble on merely teleological grounds. Man as the head of earthly creations is apt to refer all things to himself, and to fancy that other animals exist for his use alone, as ministers to his need and pleasure. The horse exists for the sake of the saddle, the cattle for their draught and their flesh, the elephant for its ivory, the whale for its oil. And as for those animals whose service he has not learned to command, from whose existence he has yet derived no apparent advantage, he is fain to suppose that in some mysterious way they also assist in this ministry and are made conducive to his well-being.

Spiritually considered, the brute creation may be said to exist for man, as the visible embodiment of spiritual truths. As such, it derives from him its true and best import. Inferior animals are prophetic of man, they are graduated approaches to his perfect organism, the articulations of a series which finds its consummation in "the human form divine." Lavater found but twenty-four removes in the scale of beauty between the features of the frog and the face of the Apollo Belvidere,—each successive delineation resembling its predecessor so nearly as to be distinguishable only on minute examination. Spiritually speaking, man is the end and aim of the animal world. But we are not, therefore, to assume that animals exist for the sake of man in the base utilitarian sense, as if their highest use were to minister to his personal necessities. To prove the insufficiency of this view we have only to go a step further and inquire the use of man himself. Do you say that man exists for the service of his Master? The same may be said, for aught we know, of all animals. Do you say that man exists for his own satisfaction and joy in being? The same is true of other tribes. The happiness of all His creatures we must believe to be equally dear to the Maker of all, and the well-being of each as much the end for which that creature exists as human well-being is the end of man. The joy of an insect sporting in the sun is as much an end of God's creation as the supreme ecstasy of an immortal soul. The lower orders exist not for the sake of man alone any more than

man exists for theirs. If viewed collectively, he is their head and they his members; viewed individually, they have an independent existence of their own, and the same right that he has to their place in nature and their share in its joys. The brute creation, it is likely, existed for ages before man arrived on the earth; it might continue to exist though man were destroyed. It exists for its own sake as well as man's, and because the infinite Father, though sufficient to himself and infinitely blest in his own perfection, has not chosen to abide in self-contemplation, but has poured himself forth in creative action, producing a universe of sentient beings out of the fulness of His thought and love. The greatest possible amount of sentient existence compatible with the greatest amount of individual well-being, and, conversely, the greatest amount of individual well-being compatible with the largest number of individuals;—this I suppose to be the aim, plan, and final cause of creation. This end is attained, not by making a few individuals supremely happy, but by making an infinity of beings partially happy,—each as perfect in its way and sphere as the welfare of the whole will allow.

Hence the unmeasured, immeasurable extent and variety of animated nature, peopling all worlds and filling every particle of matter with life and joy. But a small portion of this immensity is known to us. The task of naming the creatures of earth which the "Lord God" assigned to the first man will hardly be completed by the last. We know not how many millenniums man has had his being on this planet, but we know that all these millenniums have not sufficed to finish the lesson of zoölogy assigned to Adam in Eden. Many thousands of animals man has noted and set down in his text books, but every year adds new discoveries, and who can say what numbers may still have eluded his search, since every drop of water is peopled with forms of animal life whose existence is appreciable only by magnifying instruments which increase a thousand-fold the visual power of the eye? No marvel of creation is more astounding than the sumless profusion, the prodigality of animal life which we encounter in those microscopic recesses where science shows us

"All matter quick, and bursting into birth,"

especially if we include the fossil world, together with existing life, in our view. Dr. Lardner asserts that among the Pyrenees whole mountains consist of little else than the fossilized remains of minute shell-fish, which it must have taken innumerable centuries to accumulate. Mr. Ellis in his "Chem-

istry of Creation"* tell us that most of the limestone of the world is made up of the relics of insects possessing the faculty of separating the salts of lime from the waters of the ocean. Another class of insects is found in a certain species of stone in such numbers that two thousand millions have been computed to the cubic inch. Of other terrestrial kinds who can say what unknown tribes may yet lurk in the bosom of the earth and the depths of the sea? And then, if we carry our thought beyond this earth, who can guess what wealth of animated nature may people the orbs which accompany ours in its solar round, what countless myriads of living forms the sovereign sun, a million times larger than our earth, may hide beneath its veil of light; or what new and unimaginable aspects the brute creation may assume in the star-groups which island the upper deep! Doubtless, these worlds are also the abodes of living, sentient beings, children of one Parent, clients of one Bounty, inspired by one Soul.

The Hebrew idea of the brute creation is that of a world of which man is the absolute and rightful sovereign as well as the animal head. The Old Testament, it is true, exhibits marks of occasional sympathy with the lower orders, as in that beautiful one hundred and fourth Psalm, and in the sublime strains of the Book of Job. But, on the whole, the Hebrew feeling in relation to brutes is best represented in those portions of their Scriptures which figure the inferior animals as given over to man unconditionally, for his good pleasure. "The fear of you and the dread of you shall be upon every beast of the earth and upon every fowl of the air and upon all the fishes of the sea; into your hand they are delivered. Every moving thing that liveth shall be meat for you; even as the green herb have I given you all things." This old tradition dating from the time of the patriarchs the Psalmist exultingly accepts: "Thou hast put all things under his feet; all sheep and oxen, yea, and the fowls of the air and the fishes of the sea."

The Hebrew looked upon the animal world as existing only for the sake of man; and though, as I said, occasional traces of sympathy appear, the prevailing sentiment seems to have been indifference or contempt. A remarkable illustration of this is the way in which the Scriptures speak of dogs, the most moral of brutes. It is a curious fact that there is not a single instance in the Old and New Testaments—I mean in the canonical books—in which dogs are spoken of otherwise than in terms of abhorrence and contempt. In the apocryphal Book of Tobit

* Quoted in "Preadamite Man."

mention is made of a dog without the accompanying note of scorn. And this in the ancient literature of the Hebrews, so far as I know, is the only exception. It is not a pleasing feature of the Hebrew character. In this respect the Hebrew religion contrasts unfavorably with that of the Hindus, although vastly superior to it in things more essential. The Hindu mind regards the brute creation as having equal rights with the human, as having an equal right to be, existing equally for its own sake, or as manifestation, equally sacred, of the one eternal indivisible Being, present alike in all the kingdoms of nature, and equally at home in all; delighting in all and justified in all. The brute no more exists for man than man exists for the brute; both are children of one Father, both bear His signature in the miracle of life. As animals He cares equally for both,—as much for the animal as He does for the animal man. Apart from the spiritual life, which is quite distinct from animal, and is not to be considered in this connection, man and brute have essentially one nature. It is the merit of the Hindu view of creation that it recognizes this fact. It acknowledges and adores the one Being in all creatures. "Such art thou," it bids men remember in the contemplation of every animal. Man represents all animals in his composition, and every animal has something of man in its make. This is the Hindu view of creation as opposed to the Hebrew, and this, I think, is the Christian view sufficiently indicated by that saying of Jesus, "Not a sparrow falls to the ground without your Father." The animal kingdom is not separated from us by a gulf which places them beyond our sympathy and fellow-feeling. So far as we are animals they are fellows with us, children of one Father, partakers of one life.

It follows from this view that brutes have claims on human sympathy and good-will. We are not at liberty to deal with them as mere chattels and commodities without sensibilities or rights. They have rights which no statute can define and no legislation enforce, but which educated feeling prescribes and enlightened conscience will exact. That well-known precept which expresses a refined sense of right exceeding all civil legislation, but so comprehensive, so universally applicable, and so evidently just that it bears the name of the Golden Rule,—to deal with others as we in like conditions would be dealt with,—embraces the animal world as well as the human in its large provision. The applications of that rule to animals must be left to the conscience of every right-minded person. Yet the civil law in enlightened communities so far interferes in this province

as to shield as well as it can the beast of burden from merciless blows. It is often asked if society improves. One proof of the progress of refinement, of the growth of Christian sentiment and its application to real life, is the now so frequent occurrence in Christian lands of societies for prevention of cruelty to animals. Such societies are needless where the Hindu feeling toward animals prevails. There Christian missionaries in their efforts to convert the natives find, it is said, a serious obstacle in the knowledge which the people have of the manner in which brutes are treated by Christians. In those lands there are hospitals for the cure of sick animals instituted, not, as is sometimes the case with us, in the interest of property, but in the interest of mercy, not for the sake of the owners, but of the animals. And travellers report, as a common occurrence, that when an individual has experienced unexpected good fortune he manifests his gratitude by purchasing caged birds in the market and letting them fly outside of the walls of the city. Christendom has yet much to learn from the heathen nations whom it seeks with a laudable and Christian zeal to convert. But the beauty and glory of Christianity is that Christendom can learn and will learn; that it does not shut itself out from the light, but receives it, desires it. Its faith is progressive, its moral is progressive, it knows that whatever is fair and kind and gentle and humane is according to Christ,—is required by His law. That law contains by implication, though it does not specify, all the humanities and all the virtues. And tenderness to animals is one of the humanities and one of the virtues. Christianity does not explicitly enjoin it, neither does it explicitly enjoin abolition of slavery; and slavery has been practised through all these centuries by Christian nations. But Christian sentiment has come to perceive that slavery is cruel and wrong, and, therefore, unchristian. And Christian sentiment will come in due time to perceive that all abuse of animals, all injustice to animals, is unchristian; that not the Hebrew theory of the brute creation which Christendom inherited from Judaism, and which finds expression in those questionable words of Paul,—“Doth God care for oxen?”—but the Hindu theory which teaches sympathy with animals on the ground of fellowship with the brute creation, is most in accordance with the spirit of Christ.

(To be continued.)

“THE GROWTH OF SIN.—A single snowflake is but a very small thing, so one sin indulged may appear of but little consequence. But a number of snow-flakes falling all day long, hiding the landmarks, drifting over the

doors, gathering upon mountains to come down in avalanches, and to cover trees, houses, and even whole villages! each one alone may be small, but altogether they are all but irresistible. So sin indulged grows and increases, until it becomes a mighty power, which, but for God's help, will wreck our immortal souls. We must strive by God's grace to put away *all* evil from us."

A TRIBUTE TO THE MEMORY OF HENRY C. CORNEAU,

Who died First mo. 18th, in his 11th year.

Read at a meeting of the Teachers of Friends' First-day School, Race Street, held 2d mo. 5th, 1871.

Since the last meeting of teachers we have been called to note with sadness the vacant place of one of our loving band; one whose name, though no longer recorded here, has doubtless been written in the Lamb's Book of Life; and he whom we so fondly loved as a member of our First-day Class, has been gathered by the Great Teacher into His heavenly fold. The memory of our cherished pupil, Henry C. Corneau, brings with it a fragrance of purity and goodness which will always shed an influence over all who knew him, and to us as well as the pupils with whom he associated, his life has proved an example. Though his connection with the school has been of comparatively short duration, his deportment was so characterized by those beautiful qualities of truth and integrity of purpose, made doubly attractive by his loving manner, that we realize as we look back over the period of our mingling, that each hour gave us instruction.

His mind gave evidence of a maturity that is seldom seen in one so young, and his clear perceptions of right and wrong and his constant desire to do that which he knew to be right, left much to hope for in his manhood's years.

Though his duties in the First-day School were always marked by a thorough performance of them, perhaps there was one more than all others in our recollection of him, that especially claimed our admiration, and seemed to endear him more closely to us; and we almost think we hear his clear, impressive voice and see his dignified, though child-like form as he stood so often before us; and as the well selected text was given bearing the evidence of his appreciation of that which he offered to others, we have all known its power over our minds. His heart had received the Father's love, and from earliest childhood it had been his constant desire to prove by his example that which is right in the Heavenly sight.

It was his practice kindly to reprove any

little playmate, or even a stranger, who might be giving vent to passion or wrong language, and he would always say "how sorry he was to hear it," and frequently remarked, "he hoped what he had said would have some influence." He has been called in the brightness and purity of his life, and though the messenger gave but an untimely warning, he was ready for the summons, and as a beautiful bud scarcely opened by the morning light, he has been transplanted from our shadowy earth to bloom in the eternal sunshine of the Father's love. May we who are left to treasure his memory; labor more faithfully with thankful hearts that he was with us, if but for a little while, and be able to say,

"There are loves and duties around us still,
Blessings unnumbered here,
And the love we bear for the dear one gone,
Draws towards the brighter sphere."

Philadelphia, 2d mo. 17, 1871.

"WHEN we live in close sympathy with another, we receive and impart every moment. Take a day passed with a friend, unrecorded by any remarkable event; such a day as an uninterested observer might pronounce a very common-place one. It has not been common-place to *you*. The glance comprehended without a word spoken; the smile that has recognized your thought; the trifling need that has made a way for a gift valueless to any one but you, and precious to you as a memento of the hand that gave, and the circumstance that drew it forth;—all these foot-prints of time leave the day, so uneventful to others, full of sweet memories to loving hearts."

BLOODY RELIGION.

Is the religion of Jesus Christ a bloody religion? This may seem at first an idle question, but it is the natural exclamation arising from the circumstances and lessons around me. For instance, even while I write and you read, men called Christians are by hundreds of thousands engaging in mutual destruction. They literally cut each other to pieces by machinery, and, doubtless, the majority know not for what; only they have studied the "bloody science," and now the command is given for action. And when a large slaughter is made it is deemed a fit occasion for bonfires and rejoicing! Should a stranger from another planet descend and take a bird's-eye-view of the battles on the Rhine, and then behold the victors running to Berlin to sing *Te Deum* and light their fires, would he not think he had reached the infernal regions, or some heathen land whose god delighted in blood? But Christians are engaged on both sides, and if not attended by the ministers of their religion, they at least re-

ceive their sanction and prayers from the pulpits at home. And more than 200,000,000 people, who have received more or less instructions from the teachings of Jesus Christ, are consenting to this thing. Hence the question, "Is the religion of Jesus Christ a bloody religion?"

Again the question arises with double force, when we remember that for the past ten centuries the most terrible wars of the world have been waged by Christian nations. The first missionary India sends to Christendom (Baboo Keshub Chunder Sen) teaches us a lesson of peace. He says, "I belong to a mild, peaceful race, and by nature, by religion, and by education, am opposed to all war. As a Hindoo, I really cannot see how followers of the Prince of peace can fight—war is a disgrace to Christendom." One of our foreign missionaries writes, "The heathen say that wherever Christians go they whiten the earth with human bones. We do not want your bloody religion." Soldiers from Christendom have butchered heathens in the "Opium War," and other similar cases, until in all parts of the East a hatred of Christian soldiers, as they call them, is proverbial. Our own quiet and largely Christian land sends abroad one of her sons to witness the work of war, that he may become more perfect in the art of killing men. Is this science one of the legitimate fruits of Christian thought? Is "Prince of Peace" a delusive title applied to one who delights in war? Is the religion of Jesus a bloody religion?

A correspondent from Boston sends the above to the New York *Tribune*. The questions asked are pertinent. Why all this expenditure of blood and treasure? Why are towns battered and burned, fields laid waste, men mowed down like grass, and two nations turned into a camp? Why? Because men and nations do not practice the religion of Jesus Christ.

FROM UNPUBLISHED LETTERS.

I have wanted to write to thee since thy acceptable little visit here, but a desire to write and a qualification to impart something that may be satisfactory or useful are not always the same. I heard a person speak in a public meeting lately, who appeared to have nothing opened to his mind but the desire to speak, and I thought it dry work—often there seemed a stop; and then some different subject was introduced. So it may be with my letter, but there may be this

difference, that I shall burden only one mind,—even her's whom I love, and who has already a full portion of exercise for her sensitive mind and delicate frame, while a public communication that lacks the life and savor of the Divine anointing may burden many. Oh! for preservation from a formal, lifeless ministry in the church; and oh! for preservation from dry and formal converse, either vocally or with the pen. But, my dear child, my daughter in the Truth, where art thou sitting? This is the language of inquiry that arises in my mind towards thee. Is it under the vine and fig tree, where nothing can make afraid? My wish is to see thee and to feel thee there. Hope would fain find thee where Mary sat, in stillness in the house of thy own heart—not anxious, nor careful and troubled about many things. But how can a mind exercised on behalf of the welfare of others, remain without anxiety or concern? The children want *bread*, they want *milk*, they need food. Go, my daughter, feed them, nurse them, in simplicity. Be a child with little children, sit where they sit, feel what they feel, "feed my lambs," "feed my sheep," nourish the innocent life, in thyself, in others. Rachel "kept her father's sheep," in ancient days. She brought them to the watering place. Do thou likewise, and the Divine blessing attend thy care and labor.

I hear you have evening meetings again this winter, but I have not heard how they are held—that is, whether to profit and edification or otherwise. But I hear also of another class of meetings in your city, sometimes called *parties*, even among *Friends* or their children. With these I have no unity, if I understand their nature and object. I am a friend to social intercourse, and the privileges and advantages of good society, but I believe the superficiality and excess of *parties* produce a very weakening and dissipating effect on the mind. Surely *Friends* ought to bear a faithful testimony against these, protracted as they often are to very unseasonable hours, and also extended to large circles. You know how these things operate, and I mourn with the mourners over the "slain of the daughters of my people." But I apprehend your Women's Monthly and Quarterly Meetings are the proper places to mingle your concerns, and encourage one another to hold up the testimonies of Truth, and the dignity and authority of Christian parents and heads of families. Of Abraham it was said: "I know him that he will command his children and his household." But of Leah it was said, she "was tender-eyed." Some fears attend me that

too many Friends in your city and elsewhere may be classed with Leah. Discipline, right discipline of faithful parents, is a great blessing to children." * * * *

My dear friend in her last acceptable epistolary communication gave a reason that operates upon me with advancing age in relation to letter-writing, that is, "I find in myself less inclination than formerly to transmit my thoughts to paper." But while I think it is too early in life for *thee* to avail thyself of this excuse, I hope it will be some palliation for *my* tardiness. I have an old letter written by Esther Tuke of York, England, which amply illustrates the same kind of old age disposition. I, however, am yet favored with my powers of thought and memory, and these often revert to thee and the sick chamber, and to thy many cares, anxieties and exercises. 'Tis thus we can mentally visit and sympathize with, and sometimes pray for one another. As age advances, I must expect to lose one thing after another that has been amongst the comforts of this life, and I would like to meet and sustain these privations and the increasing infirmities of this tabernacle like a philosopher and a Christian. But in this as in all other things, Divine support and heavenly wisdom are to be sought and waited for and depended on. * * * *

FRIENDS' INTELLIGENCER.

PHILADELPHIA, THIRD MONTH 18, 1871.

INDIVIDUAL LABOR.—In view of occupying the column usually reserved for editorial matter, we sometimes feel as if we, ourselves, have need of the word of encouragement which quickens and renews energy—and that anything which can proceed from our pen must fall short in conveying in its fullness, the desire that exists, that the blessed cause of Truth may not only prosper, but that *we* may do what our "hands find to do," with an earnestness, inspired by the love of the Father. It is evident that many minds are dissatisfied with shadows, and that there is a growing thirst for realities.

Several communications in sympathy with this idea, lie before us. They have had a careful re-perusal with reference to their publication, but we are obliged to decline them.

There is a suitableness which cannot be disregarded, and in such cases personal considerations must not have the priority. Arti-

cles which have cost the authors time, and perhaps trouble, are not consigned to the "waste-basket" without regret.

We believe there are those who will understand our meaning, and we hope the remarks will be accepted in the same kindly spirit in which they are made. If we have understood the contributions alluded to, the concern of each Friend may be comprised under the head of individual faithfulness, so that the members of our Society may not hold a *nominal* faith in the glorious Principle of which we make a profession; but that our fruits may prove there is an abiding in the Vine. Much is expected from those who claim to stand in the liberty which Truth gives. It is toward such we look for an exemplification of the "Golden rule." Sympathy with humanity in its varied conditions, is the channel through which our love of goodness and truth are manifested.

It places man in a position in which he may be truly helpful to those who need help. The ministration of one under the influence of this Christian spirit, has a two fold advantage, in that it not only affords physical comfort, but also imparts a sense of the origin of good.

In this way man becomes God's interpreter, and executes the mission of "doing good to both the souls and bodies of men." It has been said that "no man liveth to himself." This law is fully recognized by the disciple of Christ, and it is one that will ever be maintained. Whether we are sensible of it or not, we are more or less interested and affected by the uprightness of one another. Individual progress assists all. Much as we may shrink from the responsibility, and be disposed to persuade ourselves that we are "not our brother's keeper," the inward Teacher will remonstrate, and if we listen to its gentle pleadings, we shall be brought out of our narrow hold, and made to feel that we cannot cast our burden upon another. We are to aid in a work, the completeness of which depends upon a willingness on the part of each one to put the shoulder to the wheel, and do his part toward elevating the moral standard, so that evil may be regarded in its true light. It may be that the more

extensive the knowledge of the magnitude of evils which abound, the more herculean the task may appear to remove them; but strength will be furnished in proportion to the labor required: and if Infinite Wisdom direct our efforts, we will doubtless be made eye-witnesses of the Omnipotence of that Arm which is extended for the ingathering of the children of men—not only from one fold or one family, but from the east and the west, from the north and the south—for verily, all who *will* come may come, and be saved “with an everlasting salvation.”

MARRIED.

SANBORN—COOK.—On the 14th of Sixth month, 1870, at the residence of the bride's parents, by Friends' ceremony, Nestor Sanborn, of Brooklyn, L. I., to Caroline V., youngest daughter of Thomas and Ann Cook, of Point Pleasant, Ocean Co., N. J.

HOLLINGSWORTH—MOORE.—On the 21st of Twelfth month, 1870, at the house of David Foulke, with the approbation of Gwynedd Monthly Meeting, Edward P., son of Amos and Lois Hollingsworth, of Little Falls Monthly Meeting, Maryland, to Hannah F. Moore, daughter of the late Samuel and Ann Moore, of Upper Merion.

DIED.

ARMITAGE.—At her residence, Yongestreet, on the 23d of Seventh month, 1870, Mary, wife of Amos Armitage, in the 80th year of her age. She was a member of that Monthly Meeting from its first establishment, and held the station of elder for many years.

DENNIS.—At the residence of his son-in law, in Tecumseth, on the 16th of Eighth month, 1870, Nathan Dennis, an elder of Yonge Street Monthly Meeting, aged about 80 years. His remains were interred in Friends' burying-ground at Schomburg, on the 18th of the same month, on which occasion a large number of Friends assembled.

JOHNSON.—In Wallace township, Chester Co., Pa., on the 3d of Third month, 1871, Lizzie H., infant daughter of Joseph H. and Laura A. Johnson, aged 4 months.

WILSON.—In New Brighton, Pa., on the 18th of Eighth month, 1870, Phebe H., daughter of David Wilson, deceased, of Newcastle Co., Del.

JENKINSON.—On the 1st inst., at her residence in Kennett, Chester Co., Pa., of pneumonia, Edith, wife of Thomas Jenkinson, in the 78th year of her age.

JENKINS.—On the morning of the 8th inst., at his residence in Camden, Del., Jabez Jenkins, near the close of his 77th year, being afflicted several years with paralysis; a member of Camden Monthly Meeting.

WESTBURY QUARTERLY MEETING.

The following changes have been made in the Circular Meetings:

Instead of holding a meeting at Yonkers, it will be held at Mt. Vernon, same date and hour as given in the Almanac.

The Circular Meetings at West Chester, N. Y., have been discontinued. The other meetings are to be held as stated in the Almanac issued by Friends' Publication Association.

CIRCULAR MEETINGS.

- 3d mo. 19. Haverford, Pa., 3 P.M.
- “ Manhasset, N. Y., 11 A.M.
- “ Port Washington, N. Y., 3½ P.M.
- 4th mo. 2. Frankford, Pa., 3 P.M.
- “ Camden, N. J., 3 P.M.
- “ Providence, Pa., 3 P.M.
- “ Jericho, L. I., 11 A.M.
- “ Oyster Bay, N. Y., 3½ P.M.
- “ Penn's Manor, Pa., 10 A.M.

A Stated Meeting of Friends' Charity Fuel Association will be held on Seventh-day evening, the 18th inst., in the Monthly Meeting room of Friends' Meeting-house, at 15th and Race Sts., at 7½ o'clock.
WM. HEACOCK, Clerk.

A WINTER VISIT TO MOUNT WASHINGTON.

A letter in the Providence *Press* gives the following very interesting account of a trip up Mount Washington last week, and of a visit to the observatory upon the mountain.

We started up the mountain after a brief delay, first taking a steep lumber path a little distance through the woods, but soon striking the railroad track, along which or upon which we continued the rest of the way. We had brought in snow-shoes to use if necessary, but found they were not required, and left them at the depot below. The snow crust was in most places hard enough to bear our weight, and the snow was so deep as to cover over the low bushes, and above the stunted trees and inequalities in the rocks. One danger met with in the vicinity of “Jacob's Ladder,” and also in other places, was the slippery condition of the icy crust. At and above “Jacob's Ladder” the path is steepest and the most dangerous, for a misstep and a slip might precipitate one into the deep and rocky ravine back of Mount Clay. Then again, if the wind blows from any other quarter than northwest, it sweeps over the other mountains at this place, making the journey more hazardous still. Under favorable circumstances, which mean good weather, an absence of high winds, and a good state of the surface, the mountain may be ascended on foot easier in winter than in summer, but nevertheless, none except the most hardy ought to attempt a journey, for a change of all these conditions may occur on the way. We encountered a little snow-squall about one-third the way up, and in the neighborhood of the Gulf Tank (opposite the head of the Great Gulf) ran into a violent snow storm accompanied by a strong south, south-west wind. We took the trip easily, stopping frequently to rest, and accomplished it in four hours and a half, far less fatigued than we had expected to be. Upon arriving at the summit we found that the wind was blowing at the rate of forty-five miles an hour.

We met with a cordial reception from the remaining members of the party—Sergeant Theodore Smith, of the U. S. Storm Signal Corps, and S. A. Nelson, of Georgetown, Mass., who holds the position of Assistant Observer, and were soon comfortably encooned in the snuggerly Prof. Huntington and his companions have made their winter home.

The party did not inhabit either the Tip-Top or Summit Houses, but a portion of the new railway depot. Those who visited Mount Washington last summer will remember that this building was erected last season. It occupies an exposed site upon the very summit, and its roof is higher than that of either the Tip-Top or Summit Houses. A room has been fitted up in one corner of this building, lined and otherwise made comfortable, and here the scientific explorers after knowledge make their abiding place. The room is a sleeping-room, sitting room, parlor, kitchen, dining-room, library, observatory and telegraph office. Outside the little room, in the more open part of the depot, are stored the coals and most of the provisions. Inside every inch of space is utilized in some way, and there is a grand conglomeration of scientific instruments, books, cooking utensils, mechanical implements of various kinds, etc. Two stoves occupy the centre of the room, one a cook stove and the other of the parlor pattern, being used solely for heating purposes. Two double windows, barred without by strips of board, admit light. The "bunks" and also the telegraph instrument and battery occupy one end of the room. The door opening directly from this room is an ordinary affair, but the outside door is nothing but an aperture about two feet square, elevated about two feet from the floor. The thermometers hang in a protected place just outside the "front door."

There is probably more curiosity in regard to the manner in which the velocity of the wind is ascertained, than about anything else connected with the mountain expedition. In measuring the velocity of the wind, one of Robinson's anemometers is used. It is a simple piece of mechanism, which is said to serve its purpose better than anything else ever invented. A description of it may interest those who have not seen it. Four hemispherical cups are attached to the ends of four little bars, which cross each other at right angles. These bars are attached in the centre to a vertical shaft, which is connected with an endless screw at the bottom. A system of wheels carried by this screw, communicates motion to a dial plate, upon which two pointers or indexes mark the progress made in degrees, each degree representing a

certain number of revolutions, and consequently a given rate of velocity of the moving power. Generally in observatories the instrument is fixed in position, but on Mount Washington this is impracticable, and besides, it would become encrusted with frost and ice in a short time. The mode of "taking an observation" is to expose the instrument, by holding it in the hands when the winds blows freely, for a certain number of minutes, which is taken as the basis of calculation for the full hour. If the wind comes in sudden gusts, three or five minutes' time will give the average velocity. With a very high wind "taking an observation" in this manner is no boy's play. What we call a very high wind—a gale in fact—below, is no more than forty miles or so an hour. On Mount Washington the average velocity in winter is estimated at 45 miles, while it has several times blown at the rate of one hundred miles an hour. The velocity has once been measured this winter while it was blowing at ninety-two miles an hour, and Mr. Clough succeeded in measuring it on Moosilauke, once last year, when the terrible rate of ninety-seven and one-half miles an hour was indicated. When the wind approaches ninety or one hundred miles an hour, or even eighty miles an hour, it is unsafe to venture out of doors, for the force might be blown away bodily. If the buildings at the summit were not constructed in the strongest possible manner, they would long ago have been destroyed, for no ordinary structure would stand a moment against such blasts. The depot, like the other buildings, is chained securely to the rocks.

Our stay on the mountain was extended to four days. For three whole days the summit was enwrapped in clouds which would not permit us to see off. Some of the time we were enabled to ramble about the summit and to clamber upon the roof of the Tip-Top House, but for the greater part of two days the wind was too severe to admit of much outdoor exercise. We had left our homes on the very day the despatch was received detailing the terrible experiences of the morning of February 5th, when the thermometer descended to 59 degrees below zero, and the wind reached a velocity of one hundred miles an hour, and some of our friends had endeavored to dissuade us from our purpose in view of such a state of things, but to no purpose. We went upon the principle that what man had done, man could do—and we accordingly did it.

Our visit was well-timed, for we chanced to experience all kinds of weather, all kinds of temperature, and all states of commotion in the atmosphere. The changes at the summit are sometimes very sudden. The ther-

mometer on one day was up to 32 deg., and the second morning was down to minus 21 deg.—a difference of 53 deg. A still greater change than this occurred a few days previous. On the third night of our stay we had a genuine gale, such as man probably never experienced, except on Mount Washington. The wind, which was blowing at the rate of eighty eight miles an hour, at seven o'clock P. M., increased in fury soon after that time. The building creaked, groaned and trembled in the fierce blasts like a reed in the wind. The walls could be seen to move before the rude assaults, and everything movable was set in motion. Without, the tempest roared and thundered like the ocean upon a rocky coast, and an incessant clatter was kept up by the continuous pelting of the side of the building with fragments of ice and dislodged frost-work. At times it seemed as if the sides of the building would be crushed in. It was a fearful sight, but far less so than some others the party have experienced. A little before midnight the gale abated somewhat, but it still continued to blow with great force, and at seven o'clock the next morning sixty-six miles an hour was marked, while the thermometer was down to twenty-one degrees below zero.

After three continuous days of cloudy weather the misty curtain was lifted, and we could gaze upon the wondrous scene which had been so long withheld from us. The pure winter atmosphere imparts great distinctness to every object. The greater part of New Hampshire and Maine seemed at our feet. Our range of vision encompassed a vast expanse, and included all the mountain peaks from Wachusett in Massachusetts to the summits along the St. Lawrence. In a morning view a long stretch of the ocean near Portland was plainly visible. The adjacent mountains appeared nearer than ever, and every gorge and ravine were plainly shown by the accumulated snows bordered by their rocky sides. Mount Katahdin afar off in Maine, was almost as plainly visible as Lafayette and Moosilauke are in summer. It was a glorious view, worth all the toil, trouble and danger which might be undergone to obtain it.—*Evening Bulletin.*

"OF all the blessings that gladden our earthly pilgrimage, sympathy is the sweetest; of all the gifts of God, a friend is the chief. The man of science has his associate; the man of crime his accomplice; the man of pleasure his companion; and in all these there is sympathy, but not friendship: that comprehends an enduring affection resting on sympathy; it cannot endure if built on the things that are passing away, or that shall be burned up."

WEARINESS

O little feet! that such long years
Must wander on through hopes and fears;
Must ache and bleed beneath your load;
I, nearer to the wayside inn
Where toil shall cease and rest begin,
Am weary, thinking of your road!

O little hands! that weak or strong,
Have still to serve or rule so long,
Have still so long to give or ask;
I, who so much with book and pen
Have toiled among my fellow-men,
Am weary, thinking of your task.

O little hearts! that throb and beat
With such impatient feverish heat,
Such limitless and strong desires;
Mine, that so long has glowed and burned
With passions into ashes turned,
Now covers and conceals its fires.

O little souls! as pure and white,
As crystalline as rays of light
Direct from heaven, their source divine;
Refracted through the mists of years,
How red my setting sun appears,
How lurid looks this soul of mine!
—*Longfellow.*

GIVE.

BY ADELAIDE A. PROCTOR.

See the rivers flowing
Downward to the sea,
Pouring all their treasures
Bountiful and free—
Yet to help the r giving
Bidden springs arise;
Or, if need be, showers
Feed them from the skies.

Watch the princely flowers
Their rich fragrance spread,
Load the air with perfumes
From their beauty shed—
Yet their lavish spending
Leaves them not in dearth,
With fresh life replenished
By their mother earth.

Give thy heart's best treasures;
From fair nature learn;
Give thy love—and ask not,
Wait not a return.
And the more thou spendest
From thy little store,
With a double bounty,
God will give thee more.

THE FLIGHT OF THE BIRDS.

O wise little birds! how do you know
The way to go
Southward and northward, to and fro?
Far up in the ether piped they:
"We but obey
One who calleth us far away.
"He calleth and calleth year by year,
Now there, now here;
Ever He maketh the way appear."
Dear little birds! He calleth me
Who calleth ye;—
Would that I might as trusting be.

HOME LETTERS.

Alas, it is only too easy a dozen times a week, and in every variety of circumstance, to be selfish, unsociable, or indolent. It is selfish not to be willing to put ourselves out of the way to help and gratify those who are willing enough to help and gratify us, and who, when they write to us, of course expect us to answer them. It is unsocial never to dare to interchange a single idea with relatives, or neighbors, or friends. It is indolence that refuses the expenditure of a little time and trouble to remind distant kinsfolk that we still feel we belong to each other, and that we think it worth while to be at the pains of a letter, though we may have nothing very special to say. The secret of it all is to have a kind heart, and to be willing to please. Often the busiest men are those who contrive most opportunities for friendly letter-writing. Their paper may be small, their hand-writing large, their words few, and under some circumstances these are legitimate devices, without which they could not continue to write at all; but some men's short letters are worth more than other men's long ones; and those who remember Bishop Villier's short notes will have often felt as if his own magical smile shone out through them, as with the warmth and brightness of summer. Have you a sick sister, whose lonely life has but few bright clouds in it? Now and then make her feel that she is not utterly forgotten by the friend and companion of her happy childhood. Is there an old acquaintance whom you seldom see, but whom you ought not to forget; who knew and loved you when you were both children together, and who still prizes your friendship, though it is of little use to him? Now and then write to him. "Thine own friend, and thy father's friend forsake not." Is there a servant, retired from your service, who has nursed your children, been a kind and true friend to you in sad and dark hours, who is growing old, as you yourself some day will grow old, with few changes in a dull life, and few pleasures in a poor one? Occasionally send a message to that dear though humble friend, if not always in your own hand, at any rate, by your wife or child. It will stir thoughts of slumbering happiness in a kind heart that has loved you with a love as good as a rich man's love, and served you with a service that no mere wages could repay. Or have you aged parents, living far away, it may be, in some remote home, whose monotonous and ever-shortening life is never so pleasantly broken as by news of you; whose midnight thoughts and noonday musings are ever full of you; who grow young and brave in the thought of your success, and whose constant prayers

have much more to do with it than you know of? Never let them feel that you are too busy to think of them, or too important to care for them. Visit them when you can; you will not have them much longer; but regularly *make time* to write.—*Sunday Magazine*.

TWO THINGS TO REMEMBER.

We earnestly call the attention of our readers to two things of the utmost importance. Recent examinations of prison reports show that of seventeen thousand criminals in the penitentiaries of the different States, in 1868, 97 per cent. had never learned a trade; 28 per cent. could not read; 28 per cent. were foreigners, and 22 per cent. were under age.

Of those confined in the common jails of the State of New York, in 1864, 72 per cent. had not learned a trade; 49 per cent. were left orphans before they were fifteen years of age; 50 per cent. were foreigners; 32 per cent. could not read; and 50 per cent. admitted that they had frequented grogshops and worse places, and used liquor and tobacco. Of 2,120 criminals who have been under the care of Mr. Byers, chaplain in the Ohio penitentiaries, 74 per cent. had never learned a trade; 64 per cent. could barely read, and 14 per cent. did not know their letters. In Upper Canada, the report of the Provincial Penitentiary mentions drunkenness as one of the two chief causes of crime. Of 47,313 persons confined in the New York city prisons, in 1867, 31,298 confessed that they were intemperate.

These figures show that the two chief causes of crime are the lack of steady occupation and dram-drinking. Here, then, we have facts for the basis of our action. If we would diminish crime, we must train the young to some definite occupation, and teach them to shun the intoxicating glass. In relation to the first, there is an increasing disinclination on the part of American lads to become farmers and mechanics. They seek a more "gentlemanly" employment, and rush to the cities with the purpose of getting their living by their wits. Hence our towns and cities are crowded with a shiftless class who live from hand to mouth, and as they are often in severe straits, they begin to gamble, cheat, forge or steal. From these, as we see above, come the prison recruits.

Now, in the question of a choice of profession or calling for the young, reference, of course, must be had to fitness. All are not fitted for professions, or mercantile life. There is a large number of lads who have no decided bent. These now rush into stores. The consequence is that these places are overcrowded.

Now it would be a blessing to these and a benefit to society, if a large proportion of them would become farmers and mechanics. A steady employment of itself is a good discipline. Then when a trade is learned the young man has the means of independent living. By working steadily at one thing he acquires habits of industry and patient labor. Continued occupation keeps him from many of those temptations which beset those who seek a more precarious means of earning their bread. The farmer and mechanic are not found in so large numbers as these in our jails and prisons. Parents, heed these facts. Do you care for the future of your children? Encourage them, if they have not a decided fitness for a special calling, to become farmers and mechanics.

Now for the second fact. Side by side with idleness sits rum. This lures to crime, and fills our prisons. And yet how few parents make it a point to impress their children with this fact and train them in temperate habits. Many a father—and mother, too—have made their sons drunkards by neglect of duty. True, this has been through thoughtlessness rather than by design. Still it has been done. It may be you are now doing this very thing. If you fail to impress your son by your example as well as by positive precept with the consequences of intemperance, and encourage him to drink by the use of intoxicating liquors, you are training him to be a drunkard. After he has formed the habit it will be hard to break off. A comparatively small number do this. Hence the importance of planting ourselves early on the principle of total abstinence. Train your children to touch not, taste not.

Here, then, are two things which every parent should remember. Let your son have a trade, or some permanent occupation in which he is educated. Train him in total abstinence. Then the chances will be that he will become a good citizen, to say nothing of higher moral considerations. Neglect to do this, let him go forth without any definite calling and with the habits of frequent drinking, and the chances are increased that he will be a drunkard and a felon.—*Christian Register*.

FORMATION OF CHARACTER.—If you ever watched an icicle as it formed, you would have noticed how it froze one single drop at a time, until it was a foot long or more. If the water was clean, the icicle remained clear, and sparkled brightly in the sun; but if the water was slightly muddy, the icicle looked foul, and its rare beauty was spoiled.

Just so our characters are formed. One little thought or feeling at a time adds its in-

fluence. If every thought be pure and right, the soul will be bright and lovely, and will sparkle with happiness; but if there be many thoughts or feelings impure and wrong, the mind will be soiled, the character depraved and darkened, and there will be final deformity and wretchedness. How important, then, that we should be on our guard against every evil impulse and desire, and “hearken not to the voice of the wicked.”

WILL HE SUCCEED?

In nine cases out of ten, no man's life will be a success if he does not bear burdens in his childhood. If the fondness or the vanity of father or mother have kept him from hard work; if another always helped him out at the end of his row; if, instead of taking his turn at pitching off, he mowed away all the time—in short, if what was light always fell to him, and what was heavy about the same work to some one else; if he has been permitted to shirk until shirking has become a habit—unless a miracle is wrought, his life will be a failure, and the blame will not be half so much his as that of weak, foolish parents.

On the other hand, if a boy has been brought up to do his part, never allowed to shirk any legitimate responsibility, or to dodge work, whether or not it made his heart ache, or soiled his hands—until bearing heavy burdens becomes a matter of pride, the heavy end of the wood his choice—parents, as they bid him good-bye, may dismiss their fears. His life will not be a business failure. The elements of success are his, and at some time and in some way the world will recognize his capacity.

Take another point. Money is the object of the world's pursuit. It is a legitimate object. It gives bread and clothing, and homes and comfort. The world has not judged wholly unwisely when it has made the position a man occupies to hinge comparatively more or less on his ability to earn money, and somewhat upon the amount of his possessions. If he is miserably poor it argues either some defect in his expenditures, or a lack of fitness to cope with men in the great battle for gold.

When a country-bred boy leaves home it is generally to enter upon some business, the end of which is to acquire property, and he will succeed just in proportion as he has been made to earn and save in his childhood.

If all the money he has had has come of planting a little patch in the spring, and selling its products after weary months of watching and toil in the fall, or from killing woodchucks at six cents a head, or from trapping muskrats and selling their skins for a shilling; setting snares in the fall for game,

and walking miles to see them in the morning, before the old folks were up; husking corn for a neighbor moonlight evenings, at two cents a bushel; working out an occasional day that hard work at home has made possible—he is good to make his pile in the world.

On the contrary, if the boy never earned a dollar; if parents and friends always kept him in spending money—pennies to buy candies and fishhooks, and satisfy his imagined wants—and he has grown to manhood in the expectancy that the world will generally treat him with similar consideration, he will always be a make shift; and the fault is not so much his as that of those about him, who never made the boy depend upon himself—did not make him wait six months to get money to replace a lost jackknife.

Every one has to rough it at one time or another. If the roughing comes in boyhood, it does good; if later, when habits are formed, it is equally tough, but not being educational, is generally useless. And the question whether a young man will succeed in making money or not depends not upon where he goes or what he does, but upon his willingness to do "his part," and upon his having earned money, and so gained a knowledge of its worth. Not a little of this valuable experience and knowledge the country boy gets on the old farm, under the tutelage of old parents shrewd enough to see the end from the beginning, and to make the labor and grief of children contribute to the success of subsequent life.—*Hearth and Home.*

For Friends' Intelligencer.

TO MAKE A PRETTY DRAB PAINT.

There is sometimes a necessity to do our own work, and it is often a great pleasure to be able to do it. Householders frequently wish to paint their buildings, and have the time to spare, but employ some painter and have to wait his convenience. We are farmers, but have for many years done all our painting. The color of our house being admired, we thought it might be useful to some others to give the ingredients used.

To every 100 lbs. of pure white lead add 2 lbs. of yellow ochre, $\frac{1}{2}$ lb. of Vandyke brown, $\frac{1}{4}$ lb. of Indian red, $\frac{1}{2}$ lb. of chrome yellow. After being thoroughly incorporated with oil, try the color on a board to see if it suits, as the strength of these materials may not always be the same. Burnt umber may be substituted for Vandyke brown. By varying the quantities of these we can easily make any shade of drab we wish. If it is desirable to shade the doors and windows, we have found Blake's brown a durable paint, and when used as a base instead of white lead, or zinc, we

think it lasts as long and costs much less than the latter. By mixing yellow ochre we can have a chestnut-brown shade; with lamp-black or Venetian red the color, either light or dark, may be varied to suit the taste. White lead shaded with burnt umber or some other brown will cost much more, if there is much required, and will not last any longer. It is essential to success that we procure pure articles, from reliable manufacturers, as it will cost as much time and labor to put on adulterated paint as the best. Each color, if not ground in oil, should be mixed separately before being incorporated with the lead.

J. H.

AND perfect the day shall be, when it is of all men understood that the beauty of holiness must be in labor as well as in rest. Nay! *more*, if it may be, in labor; in our strength, rather than in our weakness; and in the choice of what we shall work for through the six days, and may know to be good at their evening time, than in the choice of what we pray for on the seventh, of reward or repose. With the multitude that keep holy day, we may, perhaps, sometimes vainly have gone up to the house of the Lord, and vainly there asked for what we fancied would be mercy; but for the few who labor as their Lord would have them, the mercy needs no seeking, and their wide home no hallowing. Surely goodness and mercy shall *follow* them, *all* the days of their life; and they shall dwell in the house of the Lord,—FOR EVER.—*Ruskin.*

Selected.

CHILDREN.

We are all well aware of the influence of the world; we know how strongly it engages our thoughts, and debases the springs of our actions; we all know how important it is to have the spirits of our mind renewed, and the rust that gathers over them cleared away. One of the principal advantages, perhaps, which arises from the possession of children is, that in their society the simplicity of our nature is constantly recalled to our view; and that, when we return from the cares and thoughts of the world into our domestic circle, we behold beings whose happiness springs from no false estimates of worldly good, but from the benevolent instincts of nature. The same moral advantage is often derived, in a greater degree, from the memory of those children who have left us. Their simple characters dwell upon our minds with a deeper impression; their least actions return to our thoughts with more force than if we had it still in our power to witness them; and they return to us clothed in that saintly garb which belongs to the possessors of a higher

existence. We feel that there is now a link connecting us with a purer and better scene of being; that a part of ourselves has gone before us into the bosom of God; and that the same happy creatures which here on earth showed us the simple sources from which happiness springs, now draw us by their influence to the graces and beatitudes of eternity.

TRIFLES.

The griefs that fall to every share,
The heavier sorrows that life brings,
The heart can nerve itself to bear;
Great sorrows are half-holy things.
But for the ills each hour must make,
The cares with every day renewed,
It seems scarce worth the while to take
Such little things with fortitude.
And he before whose wakened might
The strongest enemy must fall,
Is overcome by foes so slight,
He scorns to hold them foes at all.

For Friends' Intelligencer.

REVIEW OF THE WEATHER, ETC.,

SECOND MONTH.

	1870.	1871.
Rain during some portion of the 24 hours.....	4 days.	8 days.
Rain all or nearly all day....	1 "	3 "
Snow, including very slight falls,.....	8 "	5 "
Cloudy, without storms	6 "	5 "
Clear, as ordinarily accepted	9 "	7 "
	28 "	28 "

TEMPERATURES, RAIN, DEATHS, ETC.

	1870.	1871.
Mean temperature of 2d mo., per Penna. Hospital,	34.93 deg.	33.93 deg.
Highest point attained during month.....	60.00 "	60.00 "
Lowest do. do. do.	12.00 "	7.50 "
RAIN during the month, do.	2.53 in.	3.08 in.
DEATHS during the month, being for 4 current weeks for each year	1348	1167
Average of the mean temperature of 2d month for the past eighty-two years....		30.79 deg.
Highest mean of temperature during that entire period, (1857).....		41.03 "
Lowest mean of temperature during that entire period, (1815, 1836, 1838),.....		24.00 "

WINTER TEMPERATURES.

Mean temperature of the three winter months of 1869 and 1870.....	37.75 "
Mean do do do 1870 and 1871	33.58 "
Average of the winter temperatures for the past eighty-one years.....	31.50 "
Highest winter mean occurring during that entire period, 1827-28 and 1850-51,	38.33 "
Lowest do do 1814-15 and 1835-36	26.66 "

COMPARISON OF RAIN.

	1870.	1871.
First month,	4.07 inch.	3.46 inch
Second month,	2.53 "	3.08 "

Totals, 6.60 " 6.54 "

The above exhibit shows, for the month, a variation of only one degree from the temperature of last year—the maximum point being exactly the same, while the minimum was four and one half degrees lower. As compared, however, with the average of the means for eighty three years, it was more than three degrees higher. The winter temperature the present season exceeded the last by over four degrees, and the eighty-two years average about two degrees. The rain fall this year, as compared with last, is nearly equal, while there has been a gratifying decrease in the deaths of 1181.

In reference to snows we add the following memoranda:

1st mo. 8th—Commenced snowing about 11 A. M., continuing all the remainder of the day and evening, making excellent sleighing.

1st mo. 23d—More snow, making good sleighing, lasting about two days. Renewed again by the storm of the 26th, which is said to have been the heaviest fall of snow in Philadelphia for fourteen years past. The sleighing lasted in the city until the 31st, when a heavy rain storm set in.

The record at the Pennsylvania Hospital gives the level of this snow at six inches. Had it not been for the warm rain the sleighing would probably have lasted several days. Even at the present moment of writing large heaps of snow are to be seen in our streets all over the city.

Our esteemed friend George S. Truman, of the Santee Indian Agency, Nebraska, has furnished the writer with a full and comprehensive account of the state of the thermometer, direction of the wind, &c., from observations taken three times a day during the first two winter months, from which the following quotations are made, for the purpose of showing that they, like ourselves, are subjected to sudden and severe changes of weather as well as the intense cold sometimes experienced—the word zero to be supplied as an ellipsis to the words "above" and "below":

TWELFTH MONTH.

	6 A. M.	12 M.	6 P. M.
19,	16 above.	15 above.	9 above.
20,	1 "	5 "	zero.

From our clippings we select the following as possessing some interest:

STORM OF JANUARY 17.—“Our dispatches give information of a terrible storm in the southwest. In Tennessee, Arkansas, and Mississippi it raged with great fury, and from New Orleans we have a telegraph stating that a heavy rain and wind storm passed over that city on Friday night, unroofing houses, uprooting trees and doing considerable damage otherwise. The loss at Helena is estimated at \$75,000 to \$100,000.”

Another item states:

' In 1816 the forest tracks of Pennsylvania bordered close upon the city of Philadelphia. At that time, says the Builder, the Delaware river, a mile wide, was often frozen in a single night. The forests having now receded to a distance of thirty miles, the thermometer at Philadelphia is rarely down to zero, the river is hardly ever frozen, and the snow lies on the ground but a short time. There is no doubt that the destruction of the forests of a country usually results in an increase of the average temperature, and when excessive, in general aridity.

DISAPPEARANCE OF AN ISLAND.—A large island is missing. Captain Plock, of the bark *Adolphe*, bound from Iquique to London, states that while passing the New Hebrides Islands, he discovered that *Aurora* Island had entirely disappeared, and no trace of it was to be seen on the face of the ocean where it was before situated. What makes this occurrence more deplorable, says the *Pall Mall Gazette*, is that *Aurora* was one of the most fertile of the group of islands of which it formed a member. It was last seen in latitude 15.2 S., longitude 168.25 E.; it is described as having been about thirty-six miles in length and upwards of five miles in breadth. Any information respecting it will be thankfully received, and it becomes a question whether a reward should not be offered for its recovery. If large islands take to disappearing in this fashion we shall soon cease to congratulate ourselves on our "insular position." There is, however, this consolation—that if England were to disappear, like *Aurora* Island, there would, no doubt, be a rigid investigation made into the circumstances by the rest of the world. France would miss a useful depot for her refugees; Ireland would suffer from ennui with no one to abuse, and we may be sure that, unless we had previously settled the Alabama claims, America would never rest until she had fished us up again. J. M. ELLIS.

Philadelphia, Second month 2, 1871.

If we would have powerful minds, we must think; if we would have faithful hearts, we must love; if we would have strong muscles, we must labor. These include all that is valuable in life.

ITEMS.

THE term basalt is applied to certain rocks which have evidently been thrown to the surface of the earth in a molten condition; and, where the molten material has come in contact with other rocks, the latter often show signs of change owing to the heat. Dr. Von Labaulx, of Germany, in studying the relations of basalt to coalseams, has shown that next to the basalt the seams are decidedly anthracitic, while as the distance of the seams from the basalt increases the coal is less and less of the hard kind. To make a practical experiment in the direction thus indicated, he subjected some lignite to the action of molten slag from a furnace. The result was to produce a coal similar to that in contact with basalt; showing how the change from soft to hard coal is produced. Hard coal is only found in the region of eruptive rocks, while as we go west from the Alleghanies into the level limestone of Indiana and Illinois, we have only soft coal.

THE *Journal of Applied Science* remarks that it is found that crystals of artificial ice are essentially different from those of natural ice, the former being much more solid, while the latter, from its ten-

dency to split into flakes, and thus expose a larger surface to the atmosphere, is far less durable. Fish-buyers, therefore, estimate that thirty per cent. less of artificial than of natural ice suffices to preserve an equal quantity of fish in an equally good condition.

OPEN an oyster, retain the liquor in the lower or deep shell, and, if viewed through a microscope, it will be found to contain multitudes of small oysters, covered with shells, and swimming nimbly about—one hundred and twenty of which extend but one inch. Besides these young oysters, the liquor contains a variety of animalcules, and myriads of three distinct species of worms. Sometimes their light represents a bluish star about the centre of the shell, which will be beautifully luminous in a dark room.—*Journal of Microscopy.*

EARTHQUAKES.—An interesting communication has recently appeared in the *Boston Journal*, giving the dates of the earthquakes that have occurred within the last two years. The writer says, that of great and terribly destructive earthquakes only one each year have been registered as happening from 1800 to 1865. In 1867 and 1868, no less than eleven disastrous earthquakes, involving the loss of one hundred thousand human beings, are reported. In 1869 and 1870 twenty five serious earth quakes occurred, but were not attended with as destructive effects as those of the previous two years. These facts, it is argued, show that the earth has been passing through a period of terrestrial phenomena more remarkable than any which has been witnessed by the present generation, and that it is by no means certain that the end of the earthquake term has been reached. The writer states that in the absence of any well established theory of the internal structure of the earth, there is increasing evidence for regarding favorably the generally accepted belief that the earth's interior is a fiery molten mass. This latter theory it is argued, is the only one that fairly accounts for all the varied phenomena of earthquakes as felt on the earth's surface. The opinion is also advocated that the great shocks of 1867 and 1868 were caused by the breaking off of immense masses of solid earth from the inner crust, which falling into the boiling lava below, agitated it into gigantic throbbing and rolling waves that heaved the outer crust with great throbs and throes.

A FLORIDA SPRING.—The *Pilatka Herald* thus describes one of the natural attractions of Florida:

Silver Spring is one of the greatest curiosities in the South. It bursts forth in the midst of the most fertile country in the State. It bubbles up in a basin near one hundred feet deep and about an acre in extent, and sending from it a deep stream sixty to one hundred feet wide, and extending six or eight miles to the Ocklawaha river. In the spring itself fifty boats may lie at anchor—quite a fleet. The spring thus forms a natural inland port, to which three steamers now run regular from the *St John's*, making close connections with the ocean steamers at *Pilatki*. The clearness of water is truly wonderful. It seems even more transparent than air; you see the bottom, eighty feet below the bottom of your boat, the exact form of the smallest pebble, the outline and color of the leaf that has sunk, and all the prismatic colors of the rainbow are reflected. Large fish swim in it, every scale visible and every movement distinctly seen. If you go over the spring in a boat you will see the fissures in the rocks, from which the river pours upward like an inverted cataract.

FRIENDS' INTELLIGENCER.

"TAKE FAST HOLD OF INSTRUCTION; LET HER NOT GO; KEEP HER; FOR SHE IS THY LIFE."

VOL. XXVIII.

PHILADELPHIA, THIRD MONTH 25, 1871.

No. 4

EDITED AND PUBLISHED BY AN ASSOCIATION OF FRIENDS.

COMMUNICATIONS MUST BE ADDRESSED AND PAYMENTS MADE TO

JOHN COMLY, AGENT,

At Publication Office, No. 144 North Seventh Street.

OFFICE OPEN from 9 A. M. to 4 P. M.

TERMS:—TO BE PAID IN ADVANCE.

The Paper is issued every week.

The TWENTY-EIGHTH Volume commenced on the 4th of Third month, 1871, at Two dollars and fifty cents to subscribers receiving it through the mail. To those receiving it through our carriers, THREE DOLLARS.

SINGLE NOS. 6 CENTS.

It is desirable that all subscriptions should commence at the beginning of the volume.

REMITTANCES by mail should be in CHECKS, DRAFTS, OR P. O. MONEY-ORDERS; the latter preferred. MONEY sent by mail will be at the risk of the person so sending.

AGENTS.—T. Burling Hull, Baltimore, Md.

Joseph S. Cohn, New York.

DRAW NIGH TO GOD, AND HE WILL DRAW NIGH TO YOU.—James 4 : 8.

God only knows what are the prevailing habits of Christians of our own day, respecting the duties of the closet. On no subject is it more necessary to speak with reserve, if we would speak justly, of the experience of others. Each man knows his own, and for the most part, only his own. That is not likely to be a truthful or a candid severity, which would bring sweeping accusations against the fidelity of God's people in their intercourse with Him. We should believe no such charges. They are sometimes made in a spirit which invites one to say to the censorious brother: "Take heed to thyself; Satan hath desired to have thee."

It cannot reasonably be doubted, that multitudes of Christ's followers are struggling daily to get nearer to God. Perhaps, of all the recent treasures of hymnology, no other lines have thrilled so many Christian hearts, or called forth so deep a throb of sympathy as the following, from one of our living poets, viz:

"Nearer, my God, to Thee,—
Nearer to Thee;
Ev'n though it be a cross
That raiseth me,
Still, all my song shall be,
Nearer, my God, to Thee,—
Nearer to Thee!

None are more sensible of their failures in

prayer, than those Christians to whom these words have become a song of the heart, more precious than rubies. Yet such Christians are more successful than they seem to themselves.

It cannot be proved that the Modern Church—taking into account its numbers, the variety of rank, of nation, of temperament, and of opinion which it embraces, the breadth of its Christian character, and the energy of its benevolent activities—is inferior, in respect of the *spirit* of prayer, in its most scriptural and healthy forms, to the Church of any other, even of apostolic times. It is often affirmed, to the discredit of the modern developments of piety; but, I repeat, it cannot be proved, nor, in view of the *aggressive* revival of religion which seems to be sweeping over Protestant Christendom, is it probably true. It is not the law of Divine Influence, to bestow *such* measure of power, when and where the spirit of prayer is dying out. The law of procedure in reference to such grand strides of progress, is rather: "For all this, will I be inquired of by the house of Israel." The language of fidelity, then, should not be mistaken for the language of suspicion and of croaking.

Yet, this doubtless is true, of the tendencies of our modern Christian life—that they embody certain *centrifugal* forces, as related to a life of solitude and stillness. Modern

piety goes outward, in duties and activities, extrinsic to a secret life with God. It does this by an inborn instinct, which perhaps was never more vigorous in its operation than now. This is no evil. It is a growth, rather, upon the usage of other ages. It is an advance, certainly, upon the piety of the cloister and the cowl. It is a progress of religious life, too, beyond that of the early denominational contentions of Protestantism. Those contentions may have been a necessary preliminary to it, but it is an advance upon the spirit and the aims of them. It is a salutary growth.

But, like every large, rapid growth, it involves a peril peculiar to itself—a peril which we cannot avoid, but which, by wise forethought, we may encounter with safe courage. That very obvious peril is, that the vitality of holiness may be exhausted by inward decay, through the want of an *increase* of its devotional spirit, proportioned to the expansion of its active forces. Individual experience may become shallow, for the want of meditative habits, and much communion with God.

Should this be the catastrophe of the tendencies working in modern Christian life, centuries of conflict and corruption must follow, by a law fixed like gravitation. Our religious organizations must begin, soon to *settle*, like a building whose frame is eaten through and through with the "dry-rot." Activity can never sustain *itself*. Withdraw the vital force which animates and propels it, and it falls like a dead arm. We cannot, then, too keenly feel, each one for himself, that a still and secret life with God must energize all holy duty, as vigor in every fibre of the body must come from the strong, calm, faithful beat of the heart.

To one who is conscious of defect in his own piety, respecting the friendship of the soul with God, there will be great aptness and beauty in the appeal of a foreign preacher: "Why fleest thou from solitude? Why dost thou shun the lonely hour? Why passeth thy life away, like the feast of the drunkard? Why is it, that to many of you there cometh not, through the whole course of the week, a single hour for self-meditation? You go through life like dreaming men. Ever among mankind, and never with yourselves. * * * You have torn down the cloister, but why have you not erected it within your own hearts? Lo, my brother, if thou wouldst seek out the *still hour*, only a single one every day, and if thou wouldst meditate on the love which called thee into being, which hath overshadowed thee all the days of thy life with blessing, or else by mournful experiences hath admonished and corrected

thee; this would be to draw near to thy God. Thus wouldst thou take Him by the hand. But whenever, in ceaseless dissipation of heart, thou goest astray, the sea of the Divine blessing shall surround thee on all sides, and yet thy soul shall be athirst. Wilt thou draw near to God? * * * Then seek the *STILL HOUR*."

(Published by request.)

From Friends' Review.

MINISTRY.

RICHMOND, IND., 2d mo. 10th, 1871.

Dear friend William J. Allinson:—The remarks of Prof. Thomas Chase, on "*Tone in Preaching*," are in my view timely and appropriate. I heartily endorse them. This defect in delivery has become so very offensive to ears polite, that I fear it is sometimes spoken of in a way calculated to wound the feelings of some of Christ's little ones. We should carefully guard against giving utterance to expressions which may tend to cast ridicule upon those whose opportunities have been limited, but whom nevertheless the Head of the Church has honored by bestowing upon them a precious gift, and whose offerings, we cannot doubt, He will accept, "according to that they have, and not according to that they have not."

The following sentence in Prof. Chase's article was particularly grateful to my feelings, viz.: "Let us not deny, too, that it is possible, in strains of rapt emotion, or in the recitation of lyric bursts of Holy Writ, for the speaker to be carried up to the chant or spiritual song which was sometimes heard, under the influence of the Holy Spirit, in the assemblies of the apostolic churches."

In confirmation of this, I turn to Thomas Thompson's testimony concerning William Ellis, dated 31st of Fifth month, 1710, and read as follows, viz.:

"It was not wisdom of words that he minded, nor how to please itching ears; but to please God was his care, and to preach the Gospel so to men, as that what he spake might answer God's witness in all; and therefore he preached the Truth in the power, plainness, and simplicity of it; and yet at times there did a sort of heavenly eloquence, *as well as an heavenly melody*, attend him, because his heart was filled with the Spirit of life, and he spoke in the power and demonstration thereof."

On the whole, I know of no better way than for ministers to try to preach the Gospel as William Ellis did, "in the power, plainness and simplicity of it;" and for hearers to avoid falling into the belief, that either the presence or the absence of the "tone" is necessary to constitute true preaching.

Let it not be understood that I consider it a matter of indifference whether this and other defects of delivery be corrected or not; on the contrary, I quite agree with Samuel Bownas, that "*superfluous tones and gestures, ahs, and groans,*" are much better avoided than practised; but I would not have any man or woman, young or old, when the feeling arises in the heart that "woe is me if I preach not the Gospel," to withhold the message because of a painful consciousness that the "tone" not yet gotten rid of, will be the object of unfavorable criticism from cultivated auditors. And if we may compare extremes, neither of which is desirable, I think that the sing-song tone of our most uncouth ministers, provided it be accompanied by the "odor of the ointment," would be preferable to a Quaker ministry which we may imagine, though I hope we shall never realize it—a ministry which should resemble a lecture, with its smooth and polished diction,—its firstly, secondly and thirdly,—its minute subdivisions,—its hairsplitting distinctions,—and its rigid conformity to the artificial rules of rhetoric and logic.

One more point I do not feel satisfied to leave unmentioned. I fear there is a growing tendency which is not, as it seems to me, without its dangers, and that is the tendency to look upon a so-called "educated ministry" as a necessity of our Society. I was glad to see in an editorial of thine, several weeks ago, a sentence to the effect that there is no very obvious reason why a minister's intellectual culture should be much in advance of that of his hearers. But may we not go further than this? Are not those of inferior attainments sometimes made the vehicle of valuable instruction to those who are intellectually altogether above them? Did not Jesus rejoice in spirit because the "Lord of heaven and earth had hid these things from the wise and prudent, and revealed them unto babes?" Not that a learned man may not also be a "babe," and sit in profound humility under the Master's teachings. But in point of fact the Apostle tells us that "not many wise men, not many mighty, not many noble are called; but God *hath chosen* the foolish things of the world to confound the things that are wise, and weak things of the world to confound the things that are mighty," &c. And why? "That no flesh may glory in His presence." What was revealed to George Fox in the visions of light, viz.: "That being bred at Oxford or Cambridge is not enough to qualify a man for the ministry of the Gospel," became the foundation of one of our most precious testimonies,—that the gift of the Gospel ministry is directly from God, and conferred without regard to

external circumstances, according to His most holy will, upon the high and the low, the rich and the poor, the learned and the ignorant. Now, a cultivated intellect, and a cultivated taste, are certainly very desirable in ministers as well as others, but by no means indispensable. Thou or I could name more than one or two ministers of our Society, who have serious defects connected with their vocal organs; and yet they are "workmen that need not to be ashamed," who have travelled extensively in our country and others, "bearing precious seed;" thou or I also could mention several ministers of very limited education, who yet have made "full proof of their ministry," and have obtained leave even from the most cultivated, in the words of an Elder in England to Richard Jordan, "to *preach away, grammar or no grammar.*" Christian scholarship has its appropriate place and its indispensable work in the interest of the Church. I rejoice when our young people, whether called to the ministry or not, can receive the invaluable boon of a sound and thorough education. But Christian scholarship is one thing—the call to the Gospel ministry is another. Let us never confound them, nor suppose that either is indispensable to the other. "Men-made ministers," says Dr. Adam Clarke, "have almost ruined the heritage of God." The Lord will send by whom He will send. It may be the learned Pharisee—it may be the Galilean fisherman—it may be the doctor of divinity—it may be the mechanic or the ploughman—it may be the lady of culture and affluence, like Elizabeth Fry—it may be the timid and untaught servant girl, like Sarah Lynes Grubb. "The wind bloweth where it listeth,"

DOUGAN CLARK, M. D.

FROM the experience of the past I have a right to the conviction that He that never forsook me, that never broke a promise, that has always done exceeding abundantly more than I asked or thought, will not in my old age forsake me in fresh troubles. I do not believe that He is now going to turn His hand and administer in a different way from that in which He has administered heretofore.

And so I got comfort, and I said to myself: "What is the use of shivering and saying that I cannot bear this trouble? The time has not come for me to bear it; but when it does come the strength will be given me by which to bear it."—*Beecher.*

THE warm sunshine and the gentle zephyr may melt the glacier which has bid defiance to the howling tempest; so the voice of kindness will touch the heart which no severity could subdue.

The following essay, written by a young woman and read at the First-day School Meeting at West Chester, Tenth month 15th, 1870, is deemed worthy of a place in the *Intelligencer*.
J. M. T.

HOW SHALL WE SAVE THE CHILDREN?

Some one has wisely remarked: "Take care of the children, and you will have little trouble with the old folks." Now this is precisely what is wanted,—to take care of the children; in other words, *save them*. We cannot, indeed, give them grace; that must lie between them individually and the Father.

But how can we save them from the over-indulgent tendencies of the age, that they may grow up men and women of principle, strong to lead a life of self-denial, and to follow the example of Him whose name we unhesitatingly claim?

As First-day School teachers and as parents, we would put the query, how *shall* we teach these little ones so that they may be led to follow the Master, who said, "Let him deny himself, take up his cross, and follow me"?

As members of the Society of Friends, and holding it as a prized privilege, we are naturally jealous that *all* claiming such membership shall be consistent in maintaining our excellent testimonies. We have been taught to believe that our forefathers were men and women of sterling integrity, whose word was as good as their bond in business transactions, that they did not strive for an unnecessary amount of this world's goods, but used their means in circulating their views, aiding one another, and in the promotion of good works.

When quite young, I was much impressed with the reply of a venerable Friend upon my exclaiming that the great Chester Valley through which we were passing was a rich and beautiful country. "Yes," he replied; "a rich country, but it makes poor Quakers." I did not understand it then, but have since realized that where wealth steps in, true Quakerism frequently steps out.

Now comes again the query, How can we save the children? As means increase, we are too apt to indulge them in almost every way, thus leaving little room for the practice of *self-denial*. And if the child is not taught to deny self, will not the man take it for granted that self must come first? We would have children so taught that when the struggle of life comes, every selfish consideration will be put aside for the sake of the truth. Will this be done if in early years the child is allowed every gratification of its selfish wants?

We would have children *well educated*; for, to use the words of a recent writer, "Christianity encourages invention, promotes refinement, suggests method, insists upon or-

der, promptness, regularity, good humor, good manners, and good living; but let the lower passions be kept in subjection. God does not impose any cross upon us that is not for our good; if we take up the cross to undue sensual indulgence, our higher natures will be developed and we will enjoy greater happiness. In many ways the watchful parent and teacher can find opportunities for teaching this denial of self, as the one great step in the preparation of a life to be spent in doing good.

Parents and teachers, shall this self denial be taught? The reputation of our Society shall not then rest upon the good works of our forefathers, but we shall be still a living Church, richly deserving the name of Friends.

A PARENT.

FREEDOM OF CONSCIENCE.

O, brave Apostle! truly hast thou said,

It is indeed a trifling thing to be [free,
Judged of man's judgment. Conscience must be
Nor blindly nor dogmatically led,
Whether by living oracles or dead;

For truth admits of no monopoly,

And where it points each for himself must see,

Nor fear an independent path to tread.

No infidel is he, howe'er astray

His judgment as to wherein duty lies,

Who speaks his honest thought, and nobly tries

To follow in the straight and narrow way;

No truer man exists beneath the skies,
And only Pharisees shall him gainsay.

From Hedge's Primeval World of Hebrew Tradition.

THE BRUTE CREATION.

(Concluded from page 37.)

The law of the land endeavors to protect the horse from the cruel treatment of unfeeling and unprincipled masters, who vent their rage on the helpless beast that serves them. And who that has witnessed the too common spectacle of a savage and infuriated driver belaboring with blows and kicks the noble and overburdened animal whose muscles are unequal to the task assigned him has not felt that the master was the greater brute of the two, and has not been tempted to wish that with such measure as he metes to his beast it might be measured to him again? But the law is a very imperfect protector of animals, and beatings of horses is a very small part of the cruelty practised upon them. Some of these cruelties are perpetrated in the name of science. One can pardon much to that most worthy cause, but painful experiments on the animal organism are justifiable only where the point to be determined by such experiments is one of obvious and vital importance in medical and chirurgical art, and where it can be reached in no other way. The practice of vivisection,—dissection of live animals,—sometimes resorted to by naturalists from mere curiosity

has no such apology, and is wanton trifling with the sacredness of life. The illustrious Blumenbach, one of the greatest of modern naturalists, strongly reprobated the practice. If ever it is resorted to, he said, let it be by special permission in a public council of competent scientific witnesses, as it were a solemn sacrifice to science. As a general rule, the knowledge which can be obtained only with torture had better be dispensed with.

More reprehensible still are those spectacles in which brutes are worried and killed for the entertainment of a rude and merciless public, such as the cock-pit in England, and the bull-fight which forms the Sunday entertainment of the most orthodox of Catholic Christian lands. One can hardly imagine a stronger contrast in its kind, or one more discreditable to Christian civilization, than that between the bull-fights of Christian Spain and the Banyan hospital for maimed animals at Surat in heathen Hindostan.

Demoralizing in the highest degree are all public spectacles whose interest is pain. All public executions tend more to corrupt and subvert the vulgar mind than even the unpunished crime. If there must be capital punishment, let it be administered in the presence only of the necessary officers appointed for that end, and without superfluous suffering; for self-defence alone can justify the supreme penalty.

There is no fault in children which should give the parents greater concern than a disposition to torture animals. Let parents who observe this vice in a child hasten to correct it with all diligence, not by inflicting bodily pain in return, but by bringing all the weight of their influence to bear in the way of appeal to reason and feeling. Let the child be taught that the brute has rights, and that power is to be used for the benefit, not for the injury, of the subject. Let him be taught to enter into the feelings of his victim by putting himself in its place. Teach him to find pleasure in ministering to the wants and promoting the comfort of domestic animals, to delight in their fellowship, to cultivate their confidence and good-will. Awaken betimes and cherish in him that compassion for all suffering, the want of which is a fatal defect, the abundance of which allies the human with superior natures, and the germ of which is in every breast.

It is one of the imperfections of our mortal state, a painful necessity, which obliges us sometimes to take the life of animals,—of those that harm us, in self-defence, for the harm they do, of others for what they yield of necessary food. This right we have as

human beings; for all flesh-eating animals prey upon each other, and man by constitution is a flesh-eating animal. We have the right; so far the Hebrew view is correct. But the ground on which the Hebrew based this right I am not prepared to admit. It belongs to us *as animals*, not as superior beings for whose sake alone the animal world was made, and to whom it is unconditionally subject. And the right has its limits, which should not be transgressed. The destruction of life must not be needlessly extended or wantonly indulged. The death which necessity obliges us to inflict should be rendered as painless to the victim as the nature of the case will admit. And may we not indulge the hope of a time, in other far distant generations, when the need of destruction for defence and bodily maintenance shall no longer exist, when the discord of predatory nature shall cease, when the new-made earth shall so adjust and reconcile and mutually limit and mutually attract her various kinds, eliminating all that is hostile and hurtful, that each in its appointed and mutually conceded place shall find a sanctuary with none to molest or make it afraid; when the purged and ethereal body shall no longer subsist by slaughter and blood, but find sufficing nutriment in the grains and pulps of earth and the balms of the air, when the hard and hateful condition of life-destroying life shall be commuted for life-preserving care of life; when not "all nature's discord," as the poet says, but all nature's concord, shall "keep all nature's peace." If the Hebrew prophet in his rapt mood could dream of a time when the wolf shall dwell with the lamb and the leopard lie down with the kid and the lion eat hay like the ox, and nothing hurt or destroy in all the mountain of God, may not the higher reach of Christian hope report an amen to the blessed vision?

But what is needed for the present is due regard for the natural rights of animals, due sense of the fact that they are not created for man's pleasure and behoof alone, but have, independent of him, their own meaning and place in the universal order; that the God who gave them being, who out of the manifoldness of his creative thought let them pass into life, has not cast them off, but is with them, in them, still. A portion of his Spirit, though unconscious and unreflecting, is theirs. What else but the Spirit of God could guide the crane and the stork across pathless seas to their winter retreats, and back again to their summer haunts? What else could reveal to the petrel the coming storm? What but the Spirit of God could so geometrize the wondrous architec-

ture of the spider and the bee, or hang the hill-star's nest in air, or sling the hammock of the tiger-moth, or curve the ramparts of the beaver's fort, and build the myriad "homes without hands" in which fish, bird, and insect make their abode? The Spirit of God is with them as with us,—consciously with us, unconsciously with them. We are not divided but one in his care and love. They have their mansions in the Father's house and we have ours; but the house is one, and the Master and Keeper is one for us and them.

The rights of all creatures are to be respected, but especially of those kinds which man domesticates and subsidizes for his peculiar use. Their nearer contact with the human world creates a claim on our loving-kindness beyond what is due to more foreign and untamed tribes. Respect that claim. "The righteous man," says the proverb, "regardeth the life of his beast." Note that word "righteous." The proverb does not say the merciful man, but the righteous, the just. Not mercy only, but justice, is due to the brute. Your horse, your ox, your kine, your dog, are not mere chattels, but sentient souls. They are not your own so proper as to make your will the true and only measure of their lot. Beware of contravening their nature's law, of taxing unduly their nature's strength. Their powers and gifts are a sacred trust. The gift of the horse is his fleetness, but when that gift is strained to excess and put to wager for exorbitant tasks, murderous injustice is done to the beast. They have their rights, which every right-minded owner will respect. We owe them in return for the service they yield, all needful comfort, kind usage, rest in old age, and an easy death.

And let us take to ourselves the moral lessons which these creatures preach to all who have studied and learned to love what I venture to call the moral in brutes. Look at that faithful servant, the ox! What an emblem in all generations of patient, plodding, meek endurance and serviceable toil! Of the horse and the dog what countless anecdotes declare the generous loyalty, the tireless zeal, the inalienable love! No human devotion has ever surpassed the recorded examples of brutes in that line. The story is told of an Arab horse who, when his master was taken captive and bound hand and foot, sought him out in the dark amidst other victims, seized him by the girdle with his teeth, ran with him all night at the top of his speed, conveyed him to his home, and then, exhausted with the effort, fell down and died. Did ever man evince more devoted affection?

Surely, something of a moral nature is

present also in the brute creation. If nowhere else, we may find it in the brute mother's care for her young. Through universal nature throbs the divine pulse of the universal Love, and binds all being to the Father-heart of the author and lover of all. Therefore is sympathy with animated nature a holy affection, an extended humanity, a projection of the human heart by which we live, beyond the precincts of the human house, into all the wards of the many-created city of God, as he with his wisdom and love is copresent to all. Sympathy with nature is a part of the good man's religion. For nature is not godless as false religion has sometimes taught, nor does Christian piety recall men from nature into holy seclusion, with the feeling of that monk who shut out the view of the beautiful landscape, as God-displeasing, from his cell, but rather allies men with it in holy communion. They who have had most of the spirit of Christ have loved to converse with nature, like St. Francis of Assisi, who called the sun and moon and fire and death his brothers and sisters, and whose celebrated hymn to nature needs only a recognition of the brute creation to make it the best expression of Christian piety in communion with the visible world.

Here is the hymn, or so much of it as concerns us in this connection:—

"Praised be my Lord God with all His creatures; and especially our brother the Sun, who brings us the day and who brings us the light; fair is he and shining with a very great splendor. O Lord, he signifies to us thee!

"Praised be my Lord for our sister the Moon, and for the stars, the which he has set clear and lovely in the heavens.

"Praised be my Lord for our brother the Wind, and for air and cloud, calms and all weather, by the which thou upholdest in life all creatures.

"Praised be my Lord for our sister Water, who is very serviceable unto us and precious and clean.

"Praised be my Lord for our brother Fire, through whom thou givest us light in the darkness, and he is bright and pleasant and very mighty and strong.

"Praised be my Lord for our mother the Earth, the which doth sustain and keep us and bringeth forth divers fruits and flowers of many colors and grass."

Here let us add this supplemental stanza:

Praised be my Lord for our brothers and sisters the living creatures which thou hast made, the birds of the air, the beasts of the field, and the fishes that inhabit the sea. They, too, are thy children, they praise thy handiwork, and thou blestest them with thy love!

MUTUAL FORBEARANCE.—If we wish to succeed in life, we must learn to take people as they are, and not as they ought to be; making them better if we can, but at the same

time remembering their infirmities. We have to deal, not with ideal men, but with the real men of every day life, men precisely like ourselves. This fact of common aims, ambitions, and infirmities ought to create constant sympathy and forbearance. While every man has his own burden to bear, he may at the same time in some way help another to bear a peculiar burden, and be himself helped in turn. God has mysteriously linked all men together by this curious fact of mutual dependence, and this wonderful possibility of mutual help.

Scraps

FROM UNPUBLISHED LETTERS.

I begin this letter more for the sake of paying a debt to my beloved daughter, than for the value of anything that now presents for communication. Thou knows it is not in our power to command the clouds to rain upon the earth, nor to speak or write to edification and comfort when we please. Yet, as J. H. used to say, "sometimes by pouring a little water into a pump, and working the piston, a large supply succeeds the effort." So we should not neglect to occupy the little means in our power, because we think we are too poor and weak to do anything to profit. But this discouraging feeling belongs to certain temperaments of human nature. Moses felt it, even when he saw the bush burning and not being consumed; and reasoned on his own unfitness for the work before him. Gideon felt very poor, when he was called "a mighty man of valor;" and he wanted to prove the fleece wet and dry. But there was no real need of this; the requisition was sufficiently clear without it. And when we have sufficient intimation or manifestation of any right thing to be done, why look for more evidence?

When we think it is not needful to *wait to feel the mind of Truth* in our movements, or, mistake our own mind for that of Truth, it is no marvel that we get into difficulties. I confess I have too often been caught in this snare. Oh! my dear friend, how great the need of our dwelling deep, and carefully watching our own spirits, lest some degree of creaturely activity should entwine itself in our efforts to promote the cause of Truth! But this is preaching to myself; and I need often go down into what George Mason called "the grave of silence," deep, inward stillness to every motion of self, or the activity of the creature, that so the voice or gentle impres-

sion of the pure Spirit may be distinguished from the voice of every stranger. In this exercise and care, I am kept from going after many lo! heres and lo! theres, because I am admonished of these mixtures in concerns professedly good. But disappointment will attend many minds that are now carried along as with a strong current. I feel the need of those who minister at the holy altar, coming more and more to understand and know the figure of the priest's garments, formerly, to be to them a holy reality now; and especially that they be not girded with anything that causes heat or sweat.

When we feel a channel open to write, as well as to speak, are we to be our own choosers of a subject for either? If the account of *ourselves* seems to flow towards the person addressed, it may sometimes as thou says be to *our relief*—sometimes to his or her benefit. Facts and feelings do not so often deceive and mislead us, as speculative imaginations and serpentine reasonings. Ah! how much our *Eve* is exposed to the serpent! How much our curiosity prompts us to see (and hear) something that we think pleasant and that will make us wise; and therefore we think as *Eve* did, it is "to be desired." Oh! for stability in the Truth, among its professors.

1839.

* * * * Thy letter, and feeling interest in my situation, were cordially welcome to me. It was a filial feeling of tenderness that has its reward. Now, in return, I am permitted to travail for thy encouragement to hold fast thy confidence, and bear up under the trials attendant, and not only so, but give a practical evidence to others, that religion is as a fortress, impregnable to the arrows of adversity.

Stability, calmness, serenity, and even cheerfulness, under the pressure of losses, disappointments, and what to others might be vexations, are evidences that the mind has a stay in something solid,—that it rests on the sufficiency of Divine support, and that it can with pious Job say, "The Lord gave and the Lord hath taken away: Blessed be His name."

* * * * What is to be the result of the present operations, activity and conflicting views in our Society, I know not. How I wish Friends could be still! That the Church would retire to the place of pure inward prayer, when there are great stirrings and commotions in the land—and her habitation is safer. But safety out of this gathered, waiting, feeling state, is not to be found in any of the devices or activity of the creature; my spirit is clothed with mourning on account of the state of things, and especially in your city; but Truth opens no way

for relief at present. I can only pray for the safety of the little ones. Be thou faithful in intercession, that the Lord's heritage may not be given to reproach. Farewell, and may Light divine shine around thy dwelling.

FRIENDS' INTELLIGENCER.

PHILADELPHIA, THIRD MONTH 25, 1871.

"A POINT OF ORDER AND DISCIPLINE."

The suggestion under this head, published in No. 1, seems to have been misunderstood by some of our readers.

It has long been the custom, (though disapproved by many) in the Monthly Meetings of this city, for the parties immediately interested in a marriage, to choose the Friends who are to attend it as overseers, and this has been brought about by requesting certain Friends to name those thus chosen. This time-sanctioned usage, we, in common with the writer of the essay in question, had supposed to be general throughout the Society. From the tenor of several communications on the subject, in which the writers regard the proposition as calculated to promote deviations from our wholesome order, we presume the practice cannot be as general as was supposed. The "point" in the essay under review, is simply this: that that which has been done secretly and *out of meeting*, should be done openly and *in meeting*, with the sanction of the discipline and not contrary to its letter. The subject is one that has claimed the attention of some of our Monthly Meetings, and we know individuals who not only do not avail themselves of this custom, but also decline to serve on this appointment when they are chosen "out of meeting." We should rejoice if our members were more fully imbued with that spirit which leads to the waiving of individual preferences, and temporary inconvenience for the good of the whole. The harmony and strength of the body would thus, we believe, be increased, and the discipline as it now stands be carried out. As it is not easy, however, to do away with a long-established custom, might not the "burdened among us" on this account be relieved without any change in the Discipline? If he or she who is requested to nominate, would present both names to the Monthly Meeting as

the choice of the parties immediately interested, they would then be considered as before the meeting for its consideration. The *spirit* of the discipline would thus be carried out, provided false delicacy did not deter any from objecting where an individual nominated was manifestly unsuitable.

The responsibility devolving on a committee appointed to oversee a marriage, has been much increased since that change of our discipline which permits it to be solemnized at a private house. The religious meeting held on these occasions, should be regarded as officially under the care of that committee; their original duty of taking care that "good order and moderation be observed," being only extended by change of circumstances. We believe this responsibility is in very good measure felt by those appointed to have the oversight of marriages; the instances being very rare where sufficient solemnity has not been observed.

It has sometimes been our lot to attend marriages where the simplicity of all the arrangements heightened the touching religious interest of the occasion, and the query has arisen, whether in proportion as the claims of foolish and expensive fashions are yielded to, that sweetly solemn feeling which should be the crown of all such occasions, is not in the same proportion lessened? Yet, though a solemn occasion, marriage is also a happy and joyous one, over which no benevolent mind would wish to throw any restraint not imposed by good sense, and the fitness of things.

Simply on the ground of true refinement, it may well be asked whether "feasting" or "dressing" are in themselves so *elevated* in the scale of enjoyments, as to entitle them to be made as prominent as they are on some of these and other social occasions. But a more serious consideration should impress those who have been entrusted with ample means;—the question of their stewardship of that which has been committed to them, over and above what they need; and the influence of their example on those to whom so much has not been entrusted.

"THE CONVERSION OF ST. PAUL, by G. J. Greer, D. D."—A small volume with the

above title, sent us by J. B. Lippincott & Co., has been read with interest.

We do not draw from the prominent incident in the life of this great Apostle the inference arrived at by the author of the book above mentioned, but we do not object to looking at truths which seem to us established from the standpoint of advanced minds in other sects.

The writer tells us that Paul "received the Holy Ghost through the laying on of the hands of Ananias." And in so many explicit words, "baptism" is set forth as the "instrument of remission." We are not disposed to argue the question of water baptism, believing all outward ordinances are unessential, except as a test of individual faithfulness. In the interview between Philip and the eunuch, it was the latter that suggested baptism. Philip only acceded to the request of the eunuch.

It is true that through the touch of Ananias Paul received his sight, and arose and was baptised. From the account we may infer that this was not the first time he had received the Holy Ghost, for three days before, as he journeyed from Jerusalem to Damascus, he was the subject of a direct visitation from the Most High, and so powerful were its operations upon his mind, that he conferred not with flesh and blood, but yielded immediate and implicit obedience to the Heavenly vision. In his address before King Agrippa, he dates his conversion and the commencement of his ministry from this period, and makes no allusion to his "baptism."

While this little volume is evidently written to enhance the value of certain sectarian ordinances, yet the writer acknowledges that "before us and beyond the present, God has in reserve the vastly higher blessings of immediate communion with Him, the glorious fruition of His presence. These present appointments may be the childish things to be looked back upon as such, which shall be put away from our full manhood. As after the veil of the temple was rent in twain from the top to the bottom, an apostle, inspired to do so, could turn upon the once needful appointments of the past, and call them 'weak and beggarly elements;' so

may we, if permitted to enter the heavenly state, then look back upon the appointments of the present dispensation, and recognize their incomparable inferiority to those in the midst of which we shall be dwelling."

We believe the views contained in this quotation are those held by the Society of Friends, except that we are not looking "before us and beyond the present" for the realization of the promise, "I will put my law in their inward parts and write it in their hearts," but consider the time has already come for its fulfillment; and that no man need go to his brother, saying, "Know the Lord," for all shall know him, from the least of them to the greatest of them.

We hope the time will come when Christian sects will place less dependence upon mere ceremonials of religion, which too often serve as a veil, preventing a clear spiritual perception of the Divine nature. As we advance in our spiritual journey, we shall find that with the increase of Christ's reign in our hearts there will be a corresponding decrease in the importance we attach even to the "appointments" which once seemed necessary. Thus will be fulfilled the prophecy of John the Baptist, in allusion to the coming of Christ: "He must increase, but I must decrease."

BLUE RIVER QUARTERLY MEETING.—A correspondent informs us that Blue River Quarterly Meeting was held at Benjaminville as proposed, the latter part of last month, and was largely attended notwithstanding the weather was rather inclement. He states that it is only the second place where a Quarterly Meeting has been held in the State of Illinois. The interest manifested on the occasion was encouraging, and the hope was entertained that much good may result. Several "young in the ministry were present, from whom testimonies in the way of counsel and tender admonition flowed freely." Our friend expresses the desire, that the anointed instrument may keep the eye singly directed to Truth's teachings, and thus escape the trammels of tradition by which many are encumbered. He instanced dress as one point. Some holding

the opinion through the influence of tradition that *plainness* consists in a certain cut, losing sight of what should be the true object of clothing, viz., comfort, as well as simplicity and neatness. He thinks it as inconsistent to reject as an innovation, improvements in dress, as it would be to refuse to accept the improved agricultural implements, and other facilities for saving labor; that the effect of such an adherence to cut and color has been, to lead some others into the opposite extreme. To regard it as a matter of no importance, and that there is no religion in dress, apparently losing sight of the fact that humility will ever manifest itself in simplicity, and that its votaries could never be satisfied "to put on any thing for vain ostentation and show."

In making changes, however, he suggests that to be consistent with the profession maintained by Friends, it would be right to preserve as much uniformity as could conveniently be done. One advantage to be derived therefrom, he thinks, would be an ability to distinguish our members, so that if any needed help they might receive it, particularly if in a land of strangers.

Our correspondent also alludes to the opposition to First-day Schools as having been a loss to his neighborhood. He thus expresses his feelings on this subject:

"It certainly is surprising that any who wish Friends' principles and testimonies sustained, should object to seeing the young people collected in a school capacity on First-days, for the perusal of the Holy Scriptures and other good books, and to enter into a careful examination of how Friends' testimonies correspond therewith; for if true, how much better to receive them than to accept error, the reception of which always proves a loss. They should reflect that it is as easy to divest ourselves of a body as an opinion, and where there are so many tables kept spread, if we do not keep one for our own children they will partake at others. And those of us who have received our opinions from a full and fair investigation, and an honest conviction of their truth, should not be ashamed to impart them to others.

MARRIED.

WILSON—JOHN.—At the residence of the bride's parents, near Sterling, Ill., on the 9th of Second month, 1871, with the approbation of Clear Creek Monthly Meeting, Morris A., son of Amos and Anna Wilson, to Lydia E., daughter of Elida and Sarah John.

DIED.

BENSON.—On the 14th of Seventh month, 1870, at the residence of her son-in-law, Ross Scott, in

Harford Co., Md., Margaret Benson, senior, widow of Amos Benson, in the 86th year of her age; a member, and for many years an elder of Little Falls Monthly Meeting. She was a diligent attender of meeting, when in health, for more than fifty years. The latter part of her life she was mostly confined to the house with a lingering disease, which at times caused much suffering, which she bore with Christian fortitude and resignation. She was an affectionate mother and a kind neighbor.

GILLINGHAM.—On Sixth-day evening, 10th inst., Rebecca H., widow of Joseph Gillingham, in the 88th year of her age; a member of Philadelphia Monthly Meeting (Race St.)

Friends Editors:—I have been almost a constant reader of the *Intelligencer* for over twenty years, and nearly always read with interest the editorials; and have never thought their tendency was to encourage "superficial" or personal Quakerism, but on the contrary, their spirit and tendency have been to encourage the true spirit and life of practical Quakerism; and for the last two or three years this has been particularly the case.

A READER AND SUBSCRIBER.

New York, 3d mo. 12, 1871.

NEVER TOO LATE.

How often do we see men around us who having been discouraged by financial reverses, are broken in spirit, and declare that it is no use to make any further efforts—that fortune is against them! How often do we meet people addicted to bad habits who affirm that they are too old to break them off, that after so many years of indulgence it would be impossible to give up this or that pleasure! How often do we encounter individuals who earnestly desire this or that accomplishment, but who argue that they are too far along in years to acquire it! If they were only a little younger they would lay hold and master it! And yet all history affords illustrations of the old adage that "it is never too late to mend." It is never too late to make a beginning. Smiles tells us that Sir Henry Spelman did not begin the study of science until he was between fifty and sixty years of age. Franklin was fifty before he fully entered upon the study of natural philosophy. Dryden and Scott were not known as authors until each was in his fortieth year. Boccacio was thirty-five when he commenced his literary career. Alfieri was forty-six when he began the study of Greek. Dr. Arnold learned German at an advanced age for the purpose of reading Niebuhr in the original, and in like manner James Watt, when about forty, while working at his trade as instrument maker in Glasgow, learned French, German and Italian, to enable him to peruse the valuable works on mechanical philosophy which existed in those languages. Thomas Scott was fifty-six before

he began to learn Hebrew. Robert Hall was once found lying upon the floor racked by pain, learning Italian in his old age to enable him to judge of the parallel drawn by Macaulay between Milton and Dante. Handel was forty-eight before he published any of his great works. Indeed, hundreds of instances might be given of men who struck out in an entirely different path, and successfully entered on new studies at a comparatively advanced time of life.—*Exchange.*

“THERE is too much religious reading and speaking among some serious persons; a little precious *quiet* and *fresh* feeling, how far beyond all! Do not defend our forms; seek to have the spirit of prayer raised in the heart, and then what is offered will be in the life and meet with gracious acceptance.—*M. Dudley.*”

COMPENSATION.

BY L. B. MOORE.

As singing after silence is, or sun is after rain,
So may the lesson be that tells the blessedness of pain:

For only at the ending of the journey lies the crown;
And none see all its light but they who on its light look down.

Life's labor won is never won, until it first be lost;
As priceless things most priceless are when bought at priceless cost.

The sorrow and the sinning that are o'er shall be the way,
That leads us from a darkeuel past into a brightening day.

Though still, as in the past, the night must come before the morn;
The loftiest loves in sorrow still must deepest down be born.

Not all on page of parchment, or on monumental stone,
The records have been graven that the universe hath known:

God still is writing gospels in the lives of those that sin;
E'en while their hearts refuse to let the graver's chisel in.

Though all have sinned, and still they sin, it shall not be in vain
That any human heart has drunk the dregs of human pain;

Or not in vain the sky of life is dark with clouds of woe,
While all its misty mountain-tops are clad in trackless snow:

The light shall shine out brighter, when at last it flashes through;
And evermore the old shall be the pathway of the new.

—“OLD AND NEW.”

A TROUBLED mind is often relieved by maintaining a cheerful demeanor. The effort withdraws his attention from the cause of

pain, and the cheerfulness which it promotes in others extends by sympathy to itself.

From Whittier's Miriam.

THE BROAD CREED.

Truth is one;
And in all lands beneath the sun,
Whoso hath eyes to see may see
The tokens of its unity.
No scroll of creed its fulness warps,
We trace it not by school-boy maps,
Free as the sun and air it is
Of latitude and boundaries.
In Vedic verse, in dull Koran,
Are messages of good to man;
The angels to our Aryan sires
Talked by the earliest household fires.

Nor doth it lessen what he taught,
Or make the gospel Jesus brought
Less precious, that His lips retold
Some portion of that truth of old;
Denying not the proven seers,
The tested wisdom of the years;
Confirming with his own impress
The common law of righteousness.
We search the world for truth; we call
The good, the pure, the beautiful
From all old flower-fields of the soul;
And, weary seekers of the blest,
We come back laden from the quest,
To find that all the sages said
Is in the book our mother read.
And all our treasure of old thought
In His harmonious fullness wrought,
Who gathers in a sheaf complete
The scattered blades of God's own wheat,
The common growth that maketh good
His all-embracing Fatherhood.
Wherever through the ages rise
The altars of self sacrifice,
Where love its arms has opened wide,
Or man for man has calmly died,
I see the same white wings outspread
That hovered o'er the Master's head!
I trace His presence in the blind
Pathetic groupings of my kind—
In prayers for sin and sorrow wrung,
In cradle hymns of life they sung,
Each in its measure, but a part
Of the unmeasure! Over Heart:
And with a stronger faith confess
The greater that it owns the less.

Nor fear I aught that science brings
From searching through material things;
Content to let its glasses prove,
Not by the letter's oldness move
The myriad worlds on worlds that course
The spaces of the universe;
Since everywhere the spirit walks
The garden of the heart and talks
With man, as under Eden's trees,
In all its varied languages.
Why mourn above some hopeless flaw
In the stone tables of the law,
When Scripture every day afresh
Is traced on tables of the flesh?
By inward sense, by outward signs,
God's presence still the heart divines!
Through deepest joy of Him we learn,
In sorest grief to Him we turn,
And reason stoops its pride to share
The child-like instinct of a prayer.

WHAT I THINK OF KINDERGARTENS.

BY EMMA C. WHIPPLE.

The most striking contrast between the present Primary School system and that of the Kindergarten consists in the utilization by the latter of the natural traits and activity of young children. Fröbel seems to have made a discovery of certain laws which govern the development of children, and to have, in a most wonderfully beautiful and simple method, adapted means to this end.

The "irrepressible infant," the terror and the charm of the orderly circle of proper and staid elders, under Fröbel's methods becomes harmonious and orderly, and finding food for his activity in the series of occupations devised by this benefactor, ceases from destroying every thing within his reach, and learns to create forms of symmetry, to enjoy exercise of skill of hand in many various ways, and all this without constraint having been imposed; *direction*, it is true, is given, and the true meaning of the word *kindergarten* expresses just the sort of direction, for to give each plant a culture fitted to its best growth and development, and to prune and train into orderly and beautiful growth the plants under her care, is the function of the Kindergarten.

Fröbel seems to have thoroughly believed that the all-wise and good Father *knew* what these little ones needed to enable them to attain the harmonious development which is the birthright of all who are born of woman, and so Fröbel has provided for the education of the whole being of the child from its earliest conscious existence, carefully directing that in the earliest months only "clear impressions" shall be presented of objects, in order that afterward "clear ideas" may be formed. While yet in the arms of the loving mother or faithful nurse, the study of the new world into which the child has been ushered commences, and upon the wisdom and faithfulness of those in whose love and care it rests, will depend in a very great degree the quality of mind and heart, as well as the healthful growth of the body of the child. That so large a portion of the children born die within the first few years, proves that neither parental love, nor skill of doctors, nor science of physiologists has been of avail to find out the true methods; for it seems an insult to our Father to believe that such hosts of children are born, at such a lavish expenditure of hopes and love, of pain and sorrow, only to wither and die. That so many children are imbecile, idiotic, or in any manner abnormal, is a stern fact, which proclaims that all the wisdom of the past has not sufficed to teach us how to rear sound minds in healthy bodies. Those whose eyes have been

anointed are confident that in the system and methods of Fröbel is contained a new element, a promise of "Paradise Regained."

The child is three years old, and it may now attend a Kindergarten; but we must, however, say here that the furniture and arrangements for a Kindergarten must have a special adaptation to this method of teaching.

The desks are covered with lines which make squares of an inch; this teaches the child to arrange his materials in an orderly manner; and as rules are given for each occupation, in a few days you will see the little three year old as intently counting the squares to know on which line to place his blocks or sticks, as if he had been born to do nothing else; this enables the child to comprehend direction; "up" and "down," "right" and "left," are illustrated by means of these squares.

"But do you teach such abstractions to a child of three years old?" perhaps you ask; "is it not cruel to compel such a mere baby to sit at a desk and learn things?" Were this a common primary school of the usual kind, this would be a pertinent inquiry, and it might, perhaps, come within the scope of the investigations of Mr. Bergh. But Fröbel has found that, by combining *knowing* and *doing*, a very young child is made capable of receiving *impressions*, which become, by degrees, the basis of *ideas*, and the chasm from the unknown to the known, from the concrete to the abstract, is bridged over successfully by the various occupations of the Kindergarten.

From the first happy hour that the child enters this "Paradise of Childhood," as the Kindergarten has justly been called, *hands* and *brain*, in *work* and *play*, preserve a happy equilibrium; and it becomes apparent to all who observe that many a law of high significance to the child's future development has become a part of his consciousness, and that, too, without any strain of the mind, any weariness of the body, but with only the joy which *use* gives in the exercise of all the faculties given us by the Creator.

"How is all this accomplished?" do you inquire.

Your little pet of three years old, who has never passed a morning out of the light of his mother's eyes, has been deposited in the Kindergarten; the genial Kindergarten, whose skill has been attained through the teachings of her heart, whose tenderness thrills in her voice, and whose sincere love for childhood has led her to devote herself to this work, can not fail to attract the little one; and after the gentle murmur of subdued voices repeating the prayer to the "Father

in heaven who loves little children so well," followed by a little song or story, the day's lessons begin. "Lessons!" you say; "what lessons *can* be given to such a baby as our Tommy?"

Did you ever realize how much knowledge your child has mastered in the three years in which he has lived in our world?

He has learned to walk, to run, to climb; he has learned to judge very correctly of the qualities of many things, and attaches a value to apples and oranges in direct proportion to their size. He is quite an adept in natural history, knows most of the domestic animals, has learned to speak and understand the English language! and is withal an accomplished diplomat, and will "lobby" through a doubtful bill with a skill quite amazing and amusing to an impartial observer.

A card, with holes pricked at the distance of a quarter of an inch apart, is now given to the little one, with a thread of bright-colored worsted and a needle; he is shown how to put the needle back and forth so as to form straight lines in series; he is told that this is "perpendicular," and when this lesson by frequent repetition has been taken fully in, he is shown how to form "horizontal" lines, and before you are aware that he has learned anything at the Kindergarten, he is using these terms intelligently in reference to objects around him.

At another hour a slate and pencil are given to the child, for the drawing lesson is in progress now. You will observe that the slate is ruled into squares of half an inch by lines cut in the surface of the slate, and here again perpendicular lines of one square's length are made. These lessons go on regularly, week after week, until lines of two, three, four and five squares in length are made *perfectly*. This is the foundation for a system of drawing so beautiful in its self-developing character as to seem to those who have observed it to be the only true method.

If you will look in on another day, you will find your child and his little companions happily occupied with two, three, four or five, or perhaps ten, little smooth sticks, which they arrange, according to directions given, on the lines on their tables. When as much knowledge has been given as the young things may at once receive, permission is given to "invent" forms, and then each child starts off on its own hobby; the differences in the bent of each child begin to be seen whenever free invention is the order of the hour. The vivid imagination of the child will see a likeness to many things in the simple forms it can create from these few and simple materials; and, I speak from a careful observation of children under both conditions, there

is far greater pleasure to the child in this exercise of its inventive faculties, than can ever be obtained from the most elaborate toys, which are often broken by children simply from the desire for material to work out their own inventions with. But our careful Kindergartener is ever watchful, lest even this occupation, so light, and rendered so cheerful from the orderly interchange of opinions and ideas among these inventors, should overtask the little ones; and now the luncheon, temptingly hidden in various tiny receptacles, awaits the busy little bees, and trooping they come; and, while the gentle and sympathetic care of the teacher makes an air of peace surround the little group, the luncheon is eaten, and rosy apple and golden orange, luscious grapes or juicy pear, with bread or its substitutes, forms a feast which seems a sort of angelic picnic; the happy, merry tones bear witness to the healthful effect of this social feature of the lunch together. Ah, well may it be if in the future banquets of maturer years such genial flow of soul refine the joys of the table, and make dining a feast of reason and a flow of soul! Lunch is over, the tiny baskets are emptied, the sense of satisfaction which is inspired by food eaten in due season and in social surroundings makes every one in good humor, and, the signal being given, the "ring" is formed, and *one* of the one hundred plays, while the ball, which Fröbel calls "the earliest friend of the child," is played to the rhythm of a song adapted to each play. The balls educate more than mere skill of hand. They are six in number, of the three primary and the three secondary colors. Fröbel's directions are very precise as to the sequence in which these shall be used—a primary color should be followed by a secondary color connecting it with another color—so careful has Fröbel been in all that pertains to the education of the child; nothing so minute as to be unnoticed by him. Half an hour quickly passes, while "The ball comes round to meet us," "My ball, I want to catch you," and the ever-favorite play of "Who'll buy eggs," are each played till each child has had a turn, after which more lessons follow. You would weary of reading, sooner than I of writing, if I were to describe "The Weaving," "The Building," "The Pricking," "The Pea-work," "The Clay-modeling," "The Folding" lessons which fill out the attractive round of occupations; or of the object-lessons, which are given every week; of the knowledge of seeds and plants, which is imparted by sundry walks in autumn days to gather seeds of, perhaps, maple trees, which are planted in pots, and are actually growing before their sight; of the bulbs, which were first

made the subject of an object-lesson before they were started; and of the daily mission of watering the plants, which is given to the children in turn; of the visits to the fernery, where our frogs are passing the winter in serene and safe reticacy; of the groups of embryo artists, who are engaged at some portions of the morning in "free-hand drawing" at the several blackboards. Indeed, I verily believe there is no limit to the delights of a true Kindergarten, kept according to the teaching of Frœbel, by a teacher such as I have made my model in this letter. I must not forget to say here that everything made by the children is set apart, from its first beginning, as a gift of love to "dear mamma," or "grandma," or "nurse," or some loved one; and one of the prettiest sights imaginable is to see these little midges carrying home their completed works of art—a folded leaf, a pricked card, or a weaving leaf. Frœbel insists that the true way to teach generosity is by *doing the generous deed*.

I have been for the past six months a daily attendant on the Normal Training School for Kindergarteners. What I have in this imperfect sketch attempted to describe I have daily seen and have been part of. I cannot be considered as a youthful visionary—I am the mother of bearded men, and grandmother of several grandchildren, and I have constantly felt great regret that my practical acquaintance with Frœbel's system came too late to be of avail in training my own children. My grandchildren, God willing, shall not lose some benefit from the late-acquired knowledge I have gained. If this statement of mine, which is a hasty picture of what is the daily routine of Miss Kriege's Kindergarten, shall determine one mother only to seek such a school for her children, or inspire some young woman with a love for the work of a Kindergarten which shall induce her to study the method practically, I shall console myself for my inadequate description. I must run the risk of making my letter tediously long by continuing to say, that I do not think any person ought to attempt to teach a Kindergarten without a training under a skilled teacher. The system of Frœbel is so beautifully developed, from its first principles, that a missing link would mar its harmonious completeness; and although for many years I had been interested in accounts of German Kindergartens, and had read with a strong predisposition in favor of the system all I could find in English, I did not *begin* to understand the beauty of the theory, nor the happy adaptation of the methods, until I became a pupil at the training school.

And now—with one story of a dear little girl, not quite four years old, who entered the

school last autumn, and who might have sat for the likeness of "Little Golden Hair" herself—I will close this long letter.

One day, after the "Building Lesson," the children were left to their own free inventions, and our dear little pet, Rose, built up her eight cubes into a form which, to her eyes, seemed a fitting monument, as she expressed herself, "to that good man Frœbel, who made so many beautiful things for little children to play with in the Kindergarten."

Dear little Rose! Like the woman in Scripture, whose gift of "two mites" has become, the world over, a synonym of generous devotion, so shall this lovely act of thy pure, loving heart be told wherever the name of Frœbel shall come to be held as dearest to all lovers of childhood. Perhaps, in the true Kindergarten, beside the river which flows by the city of our God, hand in hand thou art wandering with the dear spirit who loved little children so dearly, and left such a record of his love for them.—*Herald of Health*.

THERE is nothing purer than honesty; nothing sweeter than charity; nothing warmer than love; nothing brighter than virtue, and nothing more steadfast than faith.

THE DESIRE OF LIVING.

Among the natural desires which are implanted within us, perhaps none is stronger than that which craves continued existence. The common simile, "as dear as life itself," proves how very precious is the boon, and the consciousness of each one of us bears continual witness to the same fact. It would seem as if such a sentiment, so universal and so powerful, would naturally lead every one to the most deliberate and rational care of all the means of preserving health, and guarding life against sudden emergencies. That this is not the case, however, is a fact patent to all. Many who cling to life with the utmost tenacity are yet culpably negligent about its laws, and wantonly expose it to needless dangers. Though shrinking from death as a terrible enemy, they yet make but little effort to guard against its approaches, and, by self-indulgence and other means, actually shorten the life they so much love. Others affect to regard the love of life and the fear of death equally as marks of cowardice, and with a bravado that they mistake for courage, do not hesitate to put into needless peril, or even to throw away that priceless boon of life with which they are entrusted. And there are still others who will deliberately cast away their lives, not from any fancied bravery, but from a pitiable and abject fear of its dark passages. He who

from any cause, refuses to face the trials and sorrows which have come upon him, either as the results of his own misconduct, or as his appointed and necessary lot, proves himself to be not only unfaithful to his trusts, but selfish and cowardly in the extreme.

The chief cause why so many who love life, yet waste it in these various ways, is that they are yielding to an impulse, rather than cultivating a principle. Every desire implanted within us has its special objects and limitations, and it is only as we recognize these and strive to work in unison with them, that its end can be accomplished. The desire of life, so universal in mankind, is evidently intended for its preservation. Without it, the first trouble would overwhelm us, and the race of man would soon become extinct. It therefore plainly points out to each one of us the duty of self-preservation in its broadest sense. This requires us to study carefully and obey rigidly the laws of health. It forbids all sensual indulgence, all needless exposure, all unhealthy excitement. It condemns the man, who, to increase his gains, or to enhance his knowledge, or to win fame denies himself necessary sleep or recreation, and censures him who indulges any inclination that conflicts with perfect bodily and mental vigor. It inculcates temperance, moderation, and the regulation of habits, and lays us, in fact, under a bond to follow out whatever course the best judgment approves as most conducive to our well being.

If this natural desire for life has thus its own specific mission, and conveys its own peculiar lessons, it also has its own limitation. Much of the evil in the world is caused by running a duty into the ground, or rather by failing to see its relation to other duties, and to observe the limits which they necessarily impose. Every duty holds a specific rank, and while it limits those below, it is in turn limited by those above. Thus the duty of self-preservation should limit the appetites and the inclinations. It should triumph over unmanly fears, and control all lower and counteracting impulses. But it must itself be subject to higher laws and limited by superior duties. There are cases where the desire for life must not weigh an iota against paramount claims, and where he only, who loses his earthly life, can find life in its true import. If, in order to preserve life, we must renounce our integrity, crush our affections, stifle our convictions, or disobey our consciences, then only can we prove true manhood by cheerfully giving up life, rather than accepting with it spiritual degradation.

No nobler acts has the earth ever witnessed than those of the men and women who have

laid down their lives a willing sacrifice to truth, to righteousness, to liberty or to humanity. The interests of mankind are greatly involved in such attestation of principle. Truth often lies dormant in the world until its power is asserted by such means. The martyrs of old times, in their heroic suffering for conscience sake, were accomplishing a work for future ages of which they little dreamed, and laying the foundation of the religious liberty which is now dawning all over the civilized world. * * *

Let us then honor the desire of life implanted within us, both in the duties which it involves and the limitations to which it is subject, never suffering lower desires to usurp its place, or affecting by a counterfeit courage to despise it, and never, on the other hand, allowing it to be gratified at the expense of moral excellence or by the sacrifice of truth and principle.—*Ledger*.

“FOGGY FRIDAY.”

It thickened just before dusk, on Friday evening, all of a sudden. The day had been damp and muggy, and the great banks of dirty snow in the streets had been melting and flooding the streets with the muddy solution they yielded. The sun had been shining for a while; just long enough to help on with the thaw, and to begin to draw up the moisture out of the earth, and had then hid its face in the confusion caused by the work it had done. The mist gathered gently and slowly at first, then increased in denseness.

At the locked ferry-gates stood two thousand people, who had paddled their plashy way through the miry streets, and were bent on getting home to their suppers. Some of them were clamorous; some of them railed at the ferry-boat for not being at the slip ready to start; some just quietly looked at each other, resignedly accepting the situation, while some took comfort in puffing tobacco smoke into each other's faces. For a while every thing connected with transportation at that ferry was at a stand-still. Not a ray of light could be seen from the opposite shore. The fog-bells along the wharves and docks tolled with a dismal noise, which was like the sound of forty funerals consolidated into one. The responsive toll of the few boats which were trying to pick their way through the fog made their dreary jangle even more dreary.

It seemed as if none of the throng of waiting people who besieged those ferry-gates would get home that evening; at all events, unless they took a shorter ferry, with less expanse of water to traverse. For the fog-bound ferry is one at which the voyage is considerably over a mile in length. Not

very far up-town is another ferry where the river is narrow and the lights can be dimly seen across it, even through the mist. If there is any crossing, it would seem to be there.

So the most of the people wait and wonder how and when they shall get across, and the only intelligence they have is from the cheerless tolling of those fog-bells, which seem to say, "Not yet, not yet; have patience, have patience!"

After awhile the atmosphere grew colder. The fog condensed and was no longer in the way. The full moon shone out in all its glory, and the stars seemed to sing out, as they peeped down from above, "We were here all the time, and you didn't see us; stop your fog-bells; start your boats; sail on cheerfully."

The fog has its lessons. There is many a good Christian who gets befogged on his journey, and is brought to a stand-still. He can see neither sun, moon, nor stars. He can not pick his way. He is afraid to take a step lest he should stumble or come into collision with some other equally befogged Christian. His Christian experience has stopped. The muggy atmosphere which surrounds him is unfavorable to its progress. He hardly knows where he is. He is not sure that he is anywhere. He is gloomy and despondent, and hears the fog-bells of broken resolutions and uncompleted duties tolling in his ears, as it were, the funeral knell of all his good purposes and holy aspirations.

There is much in the atmosphere. As the dampness and mugginess of a February thaw brings forth fog, so do many unfavorable conditions of mental, moral, and spiritual life surround a believer with a fog-bank, which makes him a different being from what he is when he is enjoying a high degree of religious fervor. There are crisp, sharp, bracing days when every snuff of the clear, cold air is a tonic. Then the very man who, if encompassed by fog, can make no progress at all, is invigorated and sharpened for active work and busy advance. When in the fog, he can hardly take a step. In the bright sunshine, however cold the weather, he can walk briskly for several miles without an experience of weariness.

On that foggy Friday evening, when the fog cleared away, it lightened at first from overhead. That is the way with almost every fog. Even while the sky was tolerably bright above us, we were still beclouded on the level of the earth, so that we could yet make no progress. We were "walking in darkness" while we had partial light from on high. The young man who once came to the captain of an ocean steamer thus be-

fogged, and said, "Captain, it's all clear overhead; why don't you start the vessel?" received the somewhat gruff response from the surly son of the sea, "*Because we ain't going that way.*" No; we cannot yet ascend to the perfect light. The pathway to be trod is on the earth, till the Lord calls us to come up higher. The first light we get is from on high, and it is worth more than all the lamps of this world. And when the mists and darkness and dampness and gloom are all gone, the purer and clearer light shines all around us—a very manifestation of the presence of Jesus Christ himself.—*Christian Advocate.*

ITEMS.

PREPARATION OF WOODEN LABELS FOR PLANTS.—Wooden labels for plants to be inserted in the ground may, it is said, be preserved for an indefinite time by first dipping them into a solution of one part copper vitriol and twenty-four parts water, and subsequently immersing in lime water, or a solution of gypsum.

It is a proof of the practical value of the reports of the Weather Signal Service published in the daily papers, that since its recent establishment, property of much greater value than the whole cost of the service has been saved by it. The warning given of the coming of a recent great storm on the lakes, saved property worth over a million dollars. The officers on the lakes can now confidently predict the coming and violence of a storm from twelve to twenty-fours in advance.

A singular mode of transporting letters has recently been reported in the French journals. Two hollow hemispheres of zinc were filled with eight hundred letters, and then soldered together, so as to form a ball, twenty five centimetres or nearly ten inches in diameter. This ball, on the circumference of which small paddles were attached, was thrown into the Seine some distance above Paris, and was fished up near that city at a water gate contrived for the purpose. The weight of the ball was so adjusted that it moved at a certain depth below the surface of the river, the current striking the paddles and driving it rapidly along.

INTEMPERANCE is inimical to the welfare of the people in many ways. It effects seriously Legislatures and Courts. In Iowa a valuable precedent has recently been established by the Supreme Court of that State. It has reference to sobriety on the part of jurors. The *Philadelphia Press* comments thereon very pertinently as follows:

"Trial by jury, fast falling into disrepute in this land, where it has had its own fair trial, has, in the young and prosperous State of Iowa, been arrested somewhat in its downward career. The Supreme Court of that State, it is said, recently decided that if a juror drinks intoxicating liquor during the time he is engaged on a trial, whatever the amount may be, and though no visible effect is produced, the verdict is null and void, and must be set aside. This decision is a step in the right direction, and practically prescribes certain qualifications for a juror, viz.—he must be temperate, clear sighted, and in possession of all his reasoning faculties. The next step will be to prescribe that, in addition, he must be intelligent and educated.

RACHEL MASON.

I have just read for the second time the memorial of Rachel Mason, and take pleasure in committing to writing a few interesting parts of her history, which have not been recorded in the testimony of Spruce street Monthly Meeting of Philadelphia, concerning her, which was read and approved in Philadelphia Yearly Meeting, 1850.

Written at Old Point Comfort, 1850, by
MARTHA E. TYSON.

A Testimony of Spruce street Monthly Meeting, Philadelphia, concerning RACHEL MASON.

She was the daughter of George and Susanna Mason, and was born in Kennett township, Chester county, Pennsylvania, on the 16th of the Tenth month, 1783. About the twelfth year of her age, she removed with her parents to the city of Baltimore; and of her mother's judicious care and wise training she has borne a full and interesting testimony in a volume of memoirs and letters which she compiled, by which it is evident that she was much indebted to her religiously concerned mother, not only for that instruction which fitted her for usefulness in this life, but for the guarded care with which she watched over her in the season of youth, endeavoring to shield her from temptation, especially in relation to injurious reading. And above all did this affectionate parent direct her attention to the Divine monitor, the inward teach-

er, by obedience to which, this our dear Friend was preserved in innocence in early life, and fitted for the fulfilment of her duties in maturer years.

In the city of Baltimore, where she resided most of her life, she filled the important stations of elder and overseer to the comfort and satisfaction of her friends; being eminently qualified to speak a word in season to the weary. And for those who had been drawn away from the safe enclosure, she was prepared to enter into sympathy and living concern, being animated and strengthened by that love of the Father which seeks to gather and to restore.

In the year 1837 she became a member of this Monthly Meeting, by which she was appointed to the station of elder; and there are among us those who can testify that here also she gave evidence that she was qualified by the great Head of the Church for the important duties thus devolved upon her. She moved among us in much humility and meekness, and was careful not to put forth a hand unbidden; but when she was commissioned by her Heavenly Father to extend counsel or encouragement, she was faithful in performing that which she believed was required of her.

In our Meetings for Discipline she was alive to the best interests of individuals and of Society, and willingly devoted herself to services therein, as long as bodily ability was afforded.

Although she believed that the worship of the Father, which is in spirit and in truth, is not limited by time or place, but that everywhere grateful incense may be offered to the All seeing One, and that His ear is alike open "in the wide waste, and in the city full," to hear the silent aspirations of the penitent, the humble and the sincere, yet she was one who found it good for her to assemble with her friends in social religious worship, and often attended when her enfeebled bodily powers almost disqualified her for the exertion. In a letter to a friend, after attending a distant much neglected meeting, she thus expressed herself: "Whence comes this indifference? Has any new light from the Eternal Fount broke in upon us, to show that we have nothing to do for each other? I am not among the diligent myself, my feeble body has to be remembered; but the nearer my dwelling is to the blessed Master, the stronger is my drawing, to meet and mingle in spirit with those who silently wait upon Him, or vocally utter His praise."

Her well stored mind and innocent cheerfulness made her a welcome and instructive companion to the young, and gave her a place in their affections.

Her virtues were of the quiet and unobtrusive kind, comparable to the gentle, noiseless stream, which refreshes all within its influence. In epistolary talent she was remarkably gifted, and through this medium, "as a brook by the way," was often found administering to the edification and comfort of those whom she thus addressed. She was one of those to whom an abundance of the things of this world was not given, but who realized the promise that they who "seek first the kingdom of God and His righteousness," shall have all needful things added thereto; and in the latter part of her life, having been deprived by unforeseen circumstances of nearly all the property she possessed, she was a bright example of cheerfulness under her loss, and so far from repining, that she was seldom heard to advert to it at all.

For many years her health was undermined by a pulmonary complaint, which gradually wore out the mortal tabernacle; but in her great and increasing weakness, she was a patient sufferer, looking forward to the fruition of her hopes in those "joys unspeakable and full of glory," into which it was her full faith the just of all generations have been and will be admitted; when (she said) "the righteous will shine as the sun in the kingdom of their Father."

Her delicate health requiring the pure air of the country, she was separated from us, most of her time, for the last few years of her life; but through the medium of her

pen, she often gave evidence how closely she was united to the members of this meeting. Having desired, as she expressed a short time before her close, "day by day to keep in subjection everything adverse to the purity of the law written on the heart," her day's work had been done in the day-time, and in the quietness and gentleness of a lamb, her spirit passed away on the 8th of the Fourth month, 1849, at the house of Thomas Ellicott, at New Garden, she being in the 66th year of her age.

Her remains were interred in Friends' burial-ground there on the 11th of the same, a solemn meeting being held on the occasion, in New Garden Meeting-house.

As Rachel Mason was intimately associated with every movement made for the religious improvement of the members of Baltimore Monthly Meeting of Friends, their memories of her are cherished with feelings but little removed from reverence. To many of these she had ministered with tenderness, tempered by sound judgment, under their peculiar vicissitudes; whether their trials proceeded from disobedience to known duty, from poverty, from sickness, or from sorrow.

They speak with admiration of the faithful and unobtrusive manner in which she fulfilled every office in the service of the Church, and also declare that, in the responsible stations of elder and overseer of Baltimore Monthly Meeting, she so occupied her trust as to be counted worthy of "double honor," being endowed with ability to admonish, to reprove, or to offer religious consolation, to those who claimed her care and sympathy. Their recollections of her, likewise, as the Clerk of Baltimore Yearly Meeting of Women Friends, a position she held by appointment renewed every year for fifteen years, are of the most grateful kind.

During a part of those years, intestine commotion in matters of doctrine disturbed the harmony which had previously adorned our religious gatherings. On these painful occasions she presided over the deliberations of the Yearly Meetings with a dignity, mildness and ability which has rarely been equalled,—never excelled; her minutes of their exercises and transactions are all written in a chaste and beautiful style, and may be accepted as correct models for that description of composition.

When, from declining health, she withdrew from the Clerkship, her tried fitness for the service was eloquently alluded to by Susanna Jewett, in sentiments which found an echo in every heart.

There are other interesting items of her history which should be mentioned. I have

spoken of the services rendered to our Society by Rachel Mason.

During all these active engagements, a charm was thrown around her cares and anxieties by the friendship which existed between her and her friends, Thomas and Mary M. Ellicott. This friendship, which, from its purity, might be compared to that of David and Jonathan, commenced early and ceased only with her life. It was after the money which had been bequeathed to her by her deceased mother, and which would have yielded her a supply for every necessary want, had been dissipated by a near relative, who had obtained it of her as a loan, that she was invited by Thomas Ellicott to enter his family as a teacher for his children, with a liberal salary. For more than twelve years she lived with them in that capacity, and when she ceased to be a teacher, she found a home in their house.

When Thomas Ellicott moved with his family to Avondale, Chester county, Pennsylvania, she preferred remaining with them, but the climate of that district proving too cold in winter for her delicate lungs, her certificate was taken to Spruce street Monthly Meeting, Philadelphia.

Sometimes when in a confidential mood, in conversation with her friends, she took pleasure in referring to the kindness she had uniformly received from Thomas and Mary M. Ellicott, and used freely to acknowledge that she was indebted to this distinguished and excellent pair for the brightest and happiest days of her existence. Rachel Mason was as remarkable for constancy in friendship, as she was for her other virtues.

A removal to Pennsylvania did not diminish her love for her friends in Baltimore. They had never been sparing in manifestations of regard for her, and she returned this affection, and so long as her health allowed her to travel, she continued to visit them occasionally. Shortly before her death, she spoke with feeling of the interest displayed in her welfare by Friends of Baltimore, and remarked that, whenever she had been in that city, after she had become a resident of Pennsylvania, that she had invariably received, from three different families, invitations to accept a permanent home under their roof, accompanied by the offer of a private chamber for her own use, fire and other comforts; all made at a time when her feeble health would have caused her to be a charge in any family. She referred to these kind proposals with the modesty for which she had always been conspicuous, but observed, at the same time, that she had derived some confidence in herself by remembering them in "dark hours," from the consideration that,

whatever her trials in life might have been, she must have been favored to exhibit some consistency in her life and conversation, to be thus affectionately remembered in the evening of her days. She bore the loss of all her property, a loss which occurred some years before her death, with extraordinary equanimity. This property she acquired partly from the proceeds of the salary received whilst a teacher for the children of Thomas Ellicott, and partly from the sale of her only published work, "The Memoir of Susanna Mason, by her Daughter." All was placed in an institution considered safe at the time, but which afterwards became bankrupt. On being united by certificate to the Friends of Philadelphia in 1837, she had no prospect of much further religious influence, and remarked that she could justly compare herself to "an old tree plucked up by the roots." Spruce street Monthly Meeting, however, sets this subject at rest by declaring that, being appointed an Elder by that meeting, "she gave evidence that she was qualified by the Great Head of the Church" for service in the various departments of Society. Thus, notwithstanding her very delicate health, wherever she lived, her days were passed in usefulness, and she seemed always ready to hand forth "a word in season" with the simplicity which truth dictates. Her summers were spent with Thomas Ellicott at Avondale, which, being near the New Garden Meeting, admitted her attendance on meeting days at that place of worship; her winters were passed at Philadelphia.

Finally, after the spring of 1848, she returned no more to the city, her decline became more apparent, and she died at Thomas Ellicott's house, in 1849. She had a long illness, but throughout was nursed by his wife and daughters, the latter her former pupils, with the care and tenderness which affection, combined with diligence and liberality, could bestow. She was favored to depart this life in great peace, passing quietly away from "works unto rewards," and lies buried in the graveyard which belongs to the New Garden Meeting-house, beneath the shade of beautiful trees, the remains of the original forest of Pennsylvania, which adorn that ancient and unostentatious cemetery, wherein repose the remains of some of her ancestors of the name of Mason, and the remains also of Hannah Lindley, of Ruth Anna Lindley, and Jacob Lindley, each being eminent ministers of the Gospel. Besides these, many other valuable Friends lie buried there, who having finished their work on earth, have entered into the rest "that remaineth to the people of God."

[For Friends' Intelligencer.

DIVERSITY OF GIFTS.

The Apostle Paul, after having travelled extensively among the brethren, and experienced much in divine things, was able to see, that although there was a diversity in their several gifts, yet each was influenced by the same Spirit—and although there were differences of administration, yet there was but one Lord. Now I apprehend that, when we as a religious people, individually come to be clothed with the same mantle of charity, we shall be more and more in possession of an enlarged liberality of feeling toward the brethren, though it may be their lot to labor differently from us. The Christian religion, as professed by the Society of Friends, opens a wide field for individual labor; for believing in the immediate teaching of the Divine Spirit we recognize no creed as binding, and each one is left to pursue such course as to him seems best, ever keeping in view, however, our great fundamental principle, that God teaches His people Himself, and that nothing good can be accomplished without His aid. Our Heavenly Father is unchangeable, and His truth ever the same, but man, His creature, is in possession of powers capable of almost unlimited expansion, and he is therefore a progressive being, and I may add, also, a retrogressive one, that is, if he cultivates the talents given him, he may grow and expand, but if he neglects them, that which he *hath* shall be taken from him, and he will degenerate. From this stand point we can plainly see, that there may be a great variety of growths among us, while at the same time *each branch* may be abiding in the true vine—that *our* work may differ from *that* required of any preceding generation—that individuals may have a work different from others of the same generation—the only important consideration for each one being to know that he is working the work of God, and that the Master goes before, and points out the way. May all claiming the name of Friend continue to abide here, where alone a qualification can be attained to promote any good work; and may none conclude that, because he is called in a particular direction, that others have left the sure foundation whose path of duty lies on a different plane. I sometimes fear that tried veterans in the Lamb's warfare, would have the mere child to stand in their footsteps, without having passed through *their* experience. There is no greater mistake than this—these little ones have a baptism to be baptized with, and those in the advance can do no better than wait till it be accomplished. And if these little ones feel that they have a work to do in the vineyard, and

are found doing what their hands find to do, let not the more experienced laborers forbid them, though their work in some respects is not what those of greater experience would have it to be.

W. M. W.

Fulton, 3d mo. 17th, 1871.

TRUE POLITENESS.—A poor Arab, in going through the desert, met with a sparkling spring. Accustomed to brackish water, a draught from this sweet well in the wilderness seemed to his simple mind a present fit to offer to the Caliph. So he filled his leathern bottle, and, after a weary tramp, laid his humble gift at his sovereign's feet. The monarch, with a magnanimity that may put many a Christian to the blush, called for a cup, and, filling it, drank freely; and, with a smile, thanked the Arab and presented him with a reward. The courtiers pressed eagerly around for a draught of the wonderful water, which was regarded as worthy of such a princely acknowledgment. To their surprise the Caliph forbade them to touch a drop. Then, after the simple-hearted giver left the royal presence, with a new spring of joy welling up in his heart, the monarch thus explained the motive for his prohibition: "During this long journey, the water in this leathern bottle has become impure and distasteful; but it was an offering of *love*, and, as such, I accepted it with pleasure. I feared, however, that if I allowed another to taste of it, he would not conceal his disgust. Therefore it was that I forbade you to partake, lest the heart of the poor man should be wounded."

JOHN CROOK.

This account of J. C. was published in the *Intelligencer* several years ago, but having been sent by a Friend, with the desire for its re-print, we give it place. It certainly contains much that is teaching and worthy of serious reflection.

John Crook was one of the earliest and most distinguished Ministers amongst Friends. During the violent persecutions in the reign of Charles II., a large portion of suffering fell to his lot, but his gift in the ministry was such that he frequently in those times of great affliction, while free from imprisonment, continued his declarations in public meetings for upwards of three hours, during the whole of which such an increasing degree of authority attended as to convince many of his auditory that nothing short of a Divine commission could produce the baptizing effect of his ministry, in consequence whereof and through his labors many were joined to the Society of Friends, and became ornaments thereof.

He outlived those days of dark intolerance

some years, and was much beloved, and frequently appeared in the meetings of his friends in very long testimonies of sound doctrine and pleasing expressions. But some deeply exercised minds amongst his friends, observed with concern that the energy or melting virtue which had attended his gospel labors in former times, to their great consolation, was now very little if at all felt in his ministry. Two of these Elders from a sense of duty, when they thought their minds suitably qualified, waited on him, and with all the tenderness and deference due to age, experience, and great worth, communicated to him their fears on this head, and intimated their wish that he would look at this matter and seek to that gracious Being in whose service he had been so successfully engaged for many years, for His blessed counsel on the subject, and at a suitable time favor them with the result of his deliberations on what they had laid before him.

He received their communication with great meekness, and after some weeks went to see them in a broken, tender frame of mind, letting them know with many tears that their brotherly or rather fatherly conduct towards him was a kindness that he should never forget, and that in deep thoughtfulness on the matter referred to him, he found there was ample cause for it, and he looked upon them as the messengers of love from his great Master to warn him of his dangerous situation. He then related how he now found he had gradually and imperceptibly slid off in these times of public tranquility from receiving his ministry through that pure, unmixed channel he had formerly received it. The spring of the ministry, he said, during the fiery trials of persecution, flowed so copiously through him, that he felt little labor to come at it; but in these latter days of the church's tranquility, he, from the love he felt for the cause, delivered words as they occurred to him in public assemblies, which he did not perceive (until their kind intimations to him) were only from his natural powers as a man, and not from the Divine gift of gospel ministry as formerly, of which he was now fully convinced and returned praise for his great deliverance where first due, and gratitude to them as instruments thereof. He continued for three years after this quite silent as a minister, then again appeared in a few words, and gradually increased in his gift to the comfort and edification of his friends, and was always very careful ever after not to exceed his measure of Divine opening, that he was favored with in the exercise of his gift.

Our aforesaid Friend was brought by an informer before a justice of the peace for preaching in a meeting; the justice, being a

moderate man, was loath to send him several miles to prison so late in the evening as he was brought before him, and told the informer to call in the morning and he would then hear his accusation, and told John Crook as he appeared a decent man, he should have lodging in his house that night, if he had no objection to lie in a room that his servants said was haunted; no other being unoccupied, as he had company on a visit to him. John expressed his acknowledgment for this favor, and accepted the offer. He was kindly entertained, and had much conversation with the company on religious subjects, with which they and he appeared well pleased. He was shown his lodging at the farther end of a long gallery by the justice himself, and slept well until about one o'clock, and then awoke with the overflowing of sweetness and peace covering his mind, and such intimations of Divine favor as greatly refreshed him. Just at this time a rattling noise was heard along the gallery which held for some time, and on ceasing, a shrill voice, as if coming through the key-hole of the chamber door, said, "you are damned!" repeating it three times. John answered, "Thou art a liar, for I feel this moment the sweet peace of my God flow through my heart." All the noise and voice then ceased, and John soon fell asleep and did not wake until about his usual time of rising. He then walked about the garden, waiting for the justice's rising; soon after which a servant man came up to him, fell on his knees and begged forgiveness, and that he would pray to God to forgive him, and then confessed that it was he that made the noise near his chamber in the night, and spoke those wicked words, but that his reply pierced him to the heart. He informed John how his master was robbed by him and others for many years past, and concealed their practices by the pretence that the house was haunted. All this, at John's request, the servant confessed to his master with penitence, and obtained his pardon, as John did his dismissal from the informer, and this servant soon after became an honest Friend and a Minister.

THERE is a touching passage in a poem by Coventry Patmore, which embodies the reflections of one in the first moments of bereavement, dwelling, in that strangely vivid light which no fogs of working-day existence obscure, on the thought of the friend with whom life's familiar scenes have been passed. At that moment, how does not all love, all regret, all self-examination concur in the one yearning wish that no word intended for affront, no action intended for pain giving hostility or defiance, had ever been set down

in the note-book which unforgiving, unforgetting conscience keeps as a witness against itself! And, could we only think of *that* moment with reference to any friend against whom we are about to launch the bitter taunt, how would it not seem worth our while to make every effort at self-restraint, if only for the selfish aim of making our own heart-ache in the severance of death more tolerable! — *Cornhill Magazine.*

THE INNER LIGHT.

From the *National Standard* we take the concluding remarks of J. W. Chadwick in a lecture on "George Fox and Quakerism."

His recognition of the fundamental principle of the Society of Friends invests his views with especial interest to those who rejoice in the spreading of the doctrine of the "Inner Light" as connected with the period when "righteousness shall cover the earth as the waters cover the sea."

"We need a prophet like George Fox to come into our drawing rooms, and there preach the gospel of truthfulness in conversation; there cry shame upon our fawning, supplicating manners; our bandying of lying, empty compliments; our 'glad to see you,' and our 'not at home,' when we are not glad to see you, when we are at home and looking through the blinds to see who is calling. We need him to preach against our flattery and our subserviency, our easy chiming in with every one's opinions, whether we honestly agree with them or not. We need him in our world of fashion; not to reduce all to one level, and force one uniform upon all, but to do what he did when he was here, preach economy and simplicity. Dear heart! what would he think if he could see some of our Broadway belles? if he could drop down into Stewart's some fine morning and see some of the 'sweet things' in silk and satin there exhibited, and bought much oftener by those who cannot afford them than by those who can? We need him too—how much we need him in these dreadful days of war!—or if not him, the grand old Quaker protest against all this 'blood and iron,' as Bismarck calls it. And though since his day, and largely through his influence and that of his followers, there has been great improvement in prison discipline, and the treatment of the insane; in all these things we have still much to learn; and Quakerism ought, in justice to its great traditions, to be our teacher. And though we no longer for opinion's sake send men to prison, to the gallows, and the stake, the lesson of religious liberty is not yet fairly learned. We gibbet men in

sermons, and burn them in print. We do not respect every man's honest thought; and till we do, the battle for religious liberty will not be fairly won; till then, there is something left for Quakers of the present day to do in emulation of their sires. But most of all we need their doctrine of the inner light. We need to have that driven home and stated in its due proportion to all other truths. This inner light is nothing special or miraculous. It is as natural as grass and flowers. As we walk by it, it will brighten; as we listen to the still small voice, it will every day grow clearer and clearer, inviting us to ever deeper life and ever holier joy:

'I hear it often in the dark,
I hear it in the light—
Where is the voice that calls to me
With such a quiet might?
It seems but echo to my thought,
And yet beyond the stars;
It seems a heart beat in a hush,
And yet the planet jars!

'Oh! may it be that far within
My inmost soul there lies
A spirit sky, that opens with
Those voices of surprise?
And can it be, by night and day
That firmament serene
Is just the heaven where God Himself,
The Father, dwells unseen?

'O God within, so close to me
That every thought is plain,
Be judge, be friend, be Father still,
And in thy heaven reign!
Thy heaven is mine—my very soul!
Thy words are sweet and strong;
They fill my inward silences
With music and with song.

'They send me challenges to right,
And loud rebuke my ill;
They ring my bells of victory,
They breathe my Peace, be still!
They ever seem to say, My child,
Why seek me so all day?
Now journey inward to thyself,
And listen by the way!'"

From the Calcutta "Indian Mirror" (Babu Chunder Sen's organ.)

As Creator and Father, God has made us like Him and like each other. As the indwelling Spirit, He knows our wants, aspirations, sorrows, and mutual differences. But there is a third and crowning manifestation of His personality. Fresh creations are made by Him every day, every creature, so like and so unlike all others, yet He immanent in all. He creates all men with the grand mission of humanity, that of seeking their God and attaining the peace and perfection which dwell with Him. He creates some men with a special mission, that of bringing mankind back from their wanderings to their Father

in love and righteousness. He manifests Himself generally in the lives of all men, and specially in the lives of some. Men as they on the one hand represent the poverty and helplessness of our nature, so they on the other represent the love, care, and solicitude of our Father for our salvation. They faithfully present what we are, and what we can be; and they represent humbly what our Father is and wants us to be. In them human love and Divine love are concentrated, and in them we see how far man can be heavenly and heaven can be human. Men are spontaneously led by these God-appointed guides, because in their direction they see the power from above. In them heaven makes the manifestation of one grand truth—how man can be one with God, and yet one with mankind—how God can be and wishes to be one with man, with each man according to his capacity; and yet how He can transcend the utmost limits of human progress in His infinite personality. God creates men such, dwells in them, directs their words, actions and feelings, manifests in them through and through, miraculously at every turn, to show how the Son can be worthy of the Father, and the Father of the Son. The Divine and the human thus meet and manifest each other in all the fulness and minuteness of their relation for the light, hope, and guidance of the world. No one has fully seen God. But he has seen as much as can be seen in this life who has felt the presence of Divinity in the wide universe, who has felt that overpowering presence in the world's history, who has seen it resplendent in the "human face divine," above all, who has marked its wonderful revelation in the humble yet world renowned career of those men who lived and died for their Father's service. Such men, indeed, are true guides, teachers, and prophets, the elder brothers of the human race. Their existence breathes the power of Truth, of life, and all-conquering love. There is divinity in all their ways and movements, the grace of heaven sits on their brow. There is a joy and purity in being with them. Because in loving them we cannot but feel that our hearts are uplifted and sanctified in the embrace of our Eternal Father and Saviour in Heaven.

EMPLOYMENT FOR THE INTERVALS OF LIFE.—Fit objects to employ the intervals of life are among the greatest aids to contentment that a man can possess. The lives of many persons are an alternation of the one engrossing pursuit, and a sort of listless apathy; they are either grinding or doing nothing. Now, to those who are half their lives fiercely busy, the remaining half is often torpid without quiescence. A man should

have some pursuits which may be always in his power, and to which he may turn gladly in his hours of recreation. And if the intellect requires thus to be provided with perpetual objects, what must it be with the affections? Depend upon it, the most fatal idleness is that of the heart; and the man who feels weary of life may be sure that he does not love his fellow-creatures as he ought.—*Arthur Helps.*

Scraps

FROM UNPUBLISHED LETTERS.

Much have I *thought* about thee, for a few weeks past, but did not know where to place thee in the field of labor, and therefore put off writing. But now I can (if I understand Paul rightly) greet thee "with an holy kiss;" that is, congratulate thee in the feelings of love, unity, joy and peace. I think thou must needs have "experimental knowledge" of the truth of an old saying in the good old Book: "He that goeth forth and weepeth, bearing precious seed, shall doubtless come again rejoicing, bringing his sheaves with him." Be it so, even if the sheaves of peace should belike Rachel Rowland's peaceful poverty. But there is another view given by our blessed Pattern: "When ye shall have done all things that are commanded you, say, We are unprofitable servants; we have done that which was our duty to do." Happy those who can adopt this saying!

I should love to read thy journal of the last few weeks. Do tell me all about it, for it pleases me that my children are willing to work in the harvest field, that is pleuteous. While I, who have labored and borne the burden and heat of the day, now repose in a cool resting-place, where yet I can "hear the tumult of the giddy throng," and watch the Babel builders in their confusion of language. That single piece of ancient history is a wonderful epitome of what has been attempted by aspiring minds repeatedly since. "Let us build us a city and a tower"—for these reasons—"lest we be scattered abroad"—and "let us make us a name." What a blessing to our race, that the language of this building, calculating, tower-raising spirit is confounded! Didst thou meet with this spirit? It could not understand thy language of pure love. It could not understand the language of Truth. Nor can it understand the speech of those who are in the same aspiring spirit. Let it be scattered on the face of the earth, and it will then leave off to build a tower to heaven.

But now, after setting up thy Ebenezer, and acknowledging that the Lord hath dealt bountifully with thee, what next? Some of the vessels through which, or by means of which the children are fed, before they are put by in the closet, need washing, wiping and drying; and are then clean, and ready for use again—for once using does not wear them out. I want thee to continue faithful in all things, and ready to say, Here am I, send me: for I think I am sure that even now thou canst acknowledge, that thou servest a good Master—and He rewards His faithful handmaids with ample wages. There is yet much ground to be occupied in the labors of ingathering, and those who know the voice of the true Shepherd from every counterfeit voice, will be called forth to gather the lambs and to water the sheep—the flock of Christ. My heart glows with desire that neither the activity of some forward spirits, nor the holding back of others, nor yet the faltering of the unfaithful, may discourage the honest-hearted from faithfully occupying the gifts conferred on them. Don't forget the children—remember the widowed and orphan minds—give alms of such things as ye have.

I have endeavored to feel with and for thee in the bright and in the more clouded prospect of service among the members of the "little band." Do I understand this rightly to be a family visit to the members of thy own Monthly Meeting? The "clear shining after rain," has been the experience of others before thee. The showers which you had at Baltimore might well expand the heart so as to make it "feel the flowings of love to go forth as a full stream." But, my dear child, I think I see deep instruction in the "cloud that came upon the clear and bright prospect," and let it be duly pondered. "He hath His way in the cloud," and sometimes even "clouds and darkness are round about Him," and the prospects and services which are of His own producing, and is not this, to teach us to attend as closely to His shuttings as to His openings. When John Woolman travelled in England, soon after his arrival there, the stream of love that flowed in his heart was like the raising of a gate in a water course, when a great pressure was upon it. But he found also a stop to this great flow of love, and "emptiness and poverty" succeeded, until deep instruction was sealed upon his attentive mind. "Momentous" indeed is the concern before thee. I have no doubt of its rectitude, but it may be that deeper baptisms may yet precede the right time to move in it. Thou hast my unity and near sympathy in the concern.

FRIENDS' INTELLIGENCER.

PHILADELPHIA, FOURTH MONTH 1, 1871.

"BEAR YE ONE ANOTHER'S BURDENS."—

It is said of the great John Wesley, that "When he saw a young man in danger of falling into the snares of evil associates, he did not watch him sharply at a distance, and speak of his shortcomings to others, predicting that he was "on the high road to ruin."

He invited him to his table, and by a genial, affable manner, sought to give him good subjects for thought, or hints for conduct. Advice thus hospitably enforced was very impressive.

The Christian duty of hospitality is too much neglected by Christians. They lose by inhospitality many precious opportunities of doing good and of getting good. There is nothing that endears the heart of the young and of the stranger more than a warm welcome from those on whom they have no claim. It opens wide the heart's door to receive impressions of good, and fills the memory with great remembrances.

"That woman is a Christian, if ever there was one," said a poor painter boy to me about a kind old lady who had befriended him in his loneliness and poverty. She had given him many a meal when hungry, or called him in her pleasant doorway, to receive a pocketful of cakes, and once, when sick, had taken him home and nursed him with a mother's tenderness. The boy is a man now, but the memory of those little kindnesses will never fade from his heart.

"If you wish to be good to the young, prove yourself indeed a generous, loving friend to them."

The command "Bear ye one another's burdens," comes to us as social beings—members of one family—children of the great universal Parent, and it is well for us occasionally to examine ourselves to see whether we are enough cognizant of the duties which this relationship imposes; and in view of the many claims upon us as members of one family, and as members in particular of a religious association, the question may also well be, how can a helping hand be availingly extended in order that we may be found in the right occupancy of the powers, where-with we have been entrusted and for which we are accountable.

One means by which this accountability can be discharged, a means that is open to all, and perhaps we may say binding upon all, is, to stand open to the promptings of divine love, and whatsoever they bid us do, that do.

We receive these promptings sometimes at a moment when they are very unexpected, and the intimation may point in a direction not before looked at, or toward an individual not heretofore an object of our concern; it

may be only to extend a hand or offer a word of encouragement, or perhaps a look of kindly recognition, but, blessed are we if we are watchful enough to perceive and obedient enough to heed these promptings, and we cannot tell—we may never know—*how* blessed has been the kind look or gentle word to the recipient. It may have called back a wanderer into the path of safety. It may have been as a healing balm to some wounded spirit, or as a lift out of a deep rut, to some weary traveller, who now goes on his way encouraged to believe he is still cared for. Our ability to act promptly under these intimations varies according to our temperaments. With some, to feel or see is to act; while others require time to try the feeling and to decidé upon a course to pursue. We are accountable according to our gifts. Some have received largely of the bounties of Heaven, and of these much will be required. Of others less gifted, it is said, "whosoever shall give to one of the little ones a cup of cold water *only*, in the name of a disciple, shall in no wise lose his reward," and perhaps there are none so isolated as to be beyond the reach of some claim upon their sympathy or help.

A full consideration of our duty to our fellow beings would open before us a wide field for thought and action, but we are not intending to go into detail. Our concern is only to encourage all to attend to the gentle promptings of heavenly love, as a means whereby we may labor effectually in the great household, and we may be assured that these promptings will always bring strength adequate to the required duty.

The recorded testimony of one of the prophets of old remains in full force, and is worthy of note in this connection. If in lieu of seeking after vanity, "thou draw out thy soul to the hungry and satisfy the afflicted soul, then shall thy light rise in obscurity and thy darkness be as the noon-day."

MARRIED.

DOAN—REEDER.—On the 10th of Eleventh month, 1870, at the residence of the bride's parents, under the care of Wrightstown Monthly Meeting, Edward H. Doan, of Upper Makefield, to M. Ellie Reeder, of Newtown Township, Bucks Co., Pa.

BLAKER—TWINING.—On the 16th of Third month, 1871, at the residence of the bride's parents,

under the care of Wrightstown Monthly Meeting, Achilles Blaker, of Warwick, to Rachel Anna Twining, of Wrightstown, Bucks Co., Pa.

DIED.

KIMBER.—On the evening of the 22d of Third month, 1871, Abigail, daughter of the late Emmor Kimber, in the 67th year of her age. She was a member of the Monthly Meeting of Friends held at Green Street, Philadelphia.

SHINN.—On the 15th of Second month, 1871, near Huntington, Ind., Susan Skinn, aged 71 years. She was an affectionate mother, a kind neighbor, a friend to the afflicted and unfortunate. She was ever ready to make any sacrifice to assist and console those in distress and sorrow. Her last illness brought no fear, and with that insight of eternity which is sometimes granted to the Christian, she expressed her readiness to meet her beloved Master, whose precepts she had endeavored to follow.

CLEAVER.—On the 3d of Third month, 1871, of catarrh fever, Elsie Jane, daughter of Charles G. and Maria Cleaver, aged 6 months and 22 days.

ERRATA.—In our previous number, page 58, right-hand column, 19th line from top, for *personal* read *formal*.

FIRST-DAY SCHOOL ANNUAL MEETING.

The Association of Friends for the promotion of First-day Schools within Philadelphia Yearly Meeting, will meet in Friends' Meeting-house, Woodstown, N. J., on Seventh-day morning, 4th mo. 15, at 10½ o'clock. Being the Annual Meeting, from which a report will be sent to the General Conference, it is desirable that delegates attend and accounts be furnished from all the Schools, &c.

Essays on subjects kindred to the movement will be gladly received, particularly in reference to our deficiency in suitable literature, and suggestions for its remedy.

All interested are invited. Passengers leave from the upper side of Market St., Philadelphia, at 3.30 Sixth-day afternoon and 8.15 Seventh day morning, for Yorktown Station, where Woodstown Friends will meet and convey them to the place of meeting. Wilmington Friends will cross to Pennsgrove, and thence by stage to Woodstown. (Those remaining over First-day can attend the Circular Meeting at that place.) The Committee to nominate officers, &c., will meet at the noon reunion.

JOS. M. TRUMAN, JR., } Clerks.
EMMA WORRELL, }

The Executive Committee will meet at same place Sixth-day evening, 14th inst., at 7½ o'clock, and on Seventh-day morning at 9 o'clock.

D. COMLY, Clerk.

FIRST-DAY SCHOOL LITERATURE.

Friends are invited to forward suitable poetical and other selections, and to prepare works adapted to the capacity of childhood on religious and other subjects; also to compose articles for more mature minds, presenting the principles and testimonies of Truth, as held by Friends, in a concise and clear manner. An early response is desirable, addressed to 717 Willow St., Philadelphia.

JOS. M. TRUMAN, JR.

On behalf of Committee of General Conference.

A Stated Meeting of Friends' Charity Fuel Association will be held on Seventh-day evening, the 1st inst., in the Monthly Meeting room of Friends' Meeting-house, at 15th and Race Sts., at 7½ o'clock.

WM. HEACOCK, Clerk.

For Friends' Intelligencer.

*Friends of New York Yearly Meeting and the
 Winnebago Tribe of Indians.*

Friends who during the past winter have been contributing clothing, &c., for the Indians, may be pleased to read some extracts from a letter received from Sidney Averill, the teacher at that agency, who, with his wife, superintended the delivery of the articles forwarded.

J. F.

He says: "The clothing was taken from the boxes and barrels in the agent's office, and put in three several piles or packs, for the three schools, except the bedclothes, cloth not made up, and some second-hand clothing, which were kept by the agent for gifts at his own option.

"The teachers, each for his own school, gave out his share of the clothing. The assortment for my school was given out in our house. The dresses for the girls were fitted by my wife and daughter, in a separate room. I had the assistance of two or three men (Winnebagoes), and the whole school was supplied in less than a half day; and it should be said to the credit of a tribe who are called savage, that it was done in quiet, and to evident delight,—no angry words, no envy, no complaints.

"While the boxes were being unpacked, I had to remark that some of the far-off Friends must have been inspired, to meet so perfectly the wants of these children. If the Shrewsbury Friends had made a previous tour of inspection, the adaptation of their gifts would not, it seems to me, have been improved.

"Some of the Chatham Friends may be informed that our Indian sisters patch garments as neatly as their fairer, and, as these call them, 'angel sisters' do. The contents of one of the boxes, sent, we hear, by an aged Friend, were singularly well chosen. Indeed, for all, some one should, on behalf of the Indians, return their heartfelt thanks.

"The box of toys came so long after

Christmas, that I propose to give them out as presents in the First-day Schools, of which we have two, both flourishing. The other schools (three in number) are unusually large.

SYDNEY AVERILL."

THERE is no truth more important and few less thought of than this: the more we forsake simplicity in anything, the more we multiply the means of corruption and error.

For Friends' Intelligencer.

EMBRYONIC INARCHING.

The remarks of Thomas Meehan on the subject of the inarching of plants of the Osage Orange, published recently in the *Intelligencer*, have attracted criticism in Europe, as will be seen by the following, taken from *The London Gardeners' Chronicle*, a leading English horticultural paper, edited by Dr. Maxwell T. Masters.

After copying these observations, as printed in the *Intelligencer*, which the writer says he received through the courtesy of an unknown correspondent, accompanied by a specimen, he says:

"The double almonds and peaches referred to by Mr. Meehan are of course due to the development of two ovules or two seeds in place of one; but in the case of the Osage Orange, as we understand it, two embryo-plants were produced in one and the same ovule. This, though assuredly unusual, is yet easily intelligible from the fact that under ordinary circumstances there are several germinal vesicles in the same embryo sack, though usually only one of these vesicles becomes fertilized and developed into a new plant.

Plurality of embryos in the same seed has been noticed in several genera, and is indeed frequent in the seeds of the orange. Several such instances are recorded in Dr. Masters' work on 'Vegetable Teratology,' wherein instances of the adhesion of the double embryos so produced are alluded to, though Mr. Meehan seems to have overlooked them,—in particular, one case cited by Mr. Thwaites, wherein two embryos were contained in one seed of a *Fuchsia*, and had been adherent. What is still more remarkable, the two embryos were different,—a circumstance attributable to their hybrid origin, the seed containing them being the result of the fertilisation of *Fuchsia coccinea* (Hort.), i. e., *magellanica*, by the pollen of *F. fulgens*. This last is a very important fact for horticulturists, as bearing on the question of graft-hybridisation, potato grafting, and the like, while it affords confirmation of the much doubted 'trifacial orange,' produced, as is affirmed, by causing the seeds of the citron, the orange and the

lime to adhere together. 'The fruit produced by this tree exhibits three distinct species included in one rind, the divisions being perfectly visible externally, and the flavor of each compartment as different as if it had grown on a separate tree.'

The specimen kindly forwarded to us by our correspondent consists of two seedling plants of the Osage Orange, free above the scars which indicate the position of the cotyledons, and free from the commencement of the roots downwards; the caulicles (tigella), which are nearly two inches in length, are firmly united together. There is nothing in the specimen before us to indicate when the union took place; it may have done so in the seed itself, or it may have occurred in the early stages of germination from the close contact of two seedling plants."

In addition to these remarks, another correspondent in the same paper states that he had seen a specimen of *Doelichos* throw two stems from one seed in 1870, and in 1868, a seed of *Cocos Romanzoffiana*, and of *Areca rubra*, both yielded plants which are now growing in the Botanical Gardens at Kew, and which on examination will be found to have originated from one embryo.

S. R. R.

From the American Naturalist.

THE ANT LION.

BY J. H. EMERTON.

On the 29th of August, while hunting spiders among the rocks on the hill north of Bartholomew's pond in South Danvers, Mass., I unexpectedly found the pit of an ant lion (*Myrmeleo immaculatus* De Geer), in a clear space under the shade of a large boulder. The pit was about two inches in diameter and one deep. The insect himself was hid at the bottom, but when I dropped bits of earth into the hole he showed his position by throwing up sand. I then dug him out and took him home with me, where I put him into a bowl of dry, coarse sand, such as is used by masons for mortar. He remained buried for several days, but finally came to the surface, dug his pitfall, and gave me an opportunity of observing his habits. At first he was so timid that as soon as any one approached he stopped where he was and remained motionless until left alone. If his pitfall was destroyed he dug a new one; but during all the time I kept him I never saw the whole process of digging it.

When taken out of the sand and laid on the surface he would keep quite still for a few moments, then retreat backward, by jerks, under the sand. He never moved forward, but always backward, by the contractions of his abdomen as much as by his feet, making

a furrow through the sand. He seldom travelled an inch in one direction, and often made a complete circle in that distance. I think he commenced his pitfall by making a circle of this kind, and afterward throwing out the sand from the centre. In digging he used his flat head and jaws, which were pushed under several grains of sand and then jerked upward, throwing their load sometimes as far as six inches, and always far enough to avoid leaving a ridge around the pitfall. When the pit was finished he was entirely concealed beneath it, except his jaws, which were spread apart horizontally at the bottom. The surface of the pit being as steep as the sand could be piled up, was very easily disturbed, and when an insect ventured over the edge the ant lion was apprised of it at once by the falling sand. He immediately began to throw up sand from the bottom, deepening the pit and so causing the sand to slip down from the sides and the insect with it. The ant lion seized it with his long jaws and held it up above his head until he had sucked all he wanted from it, when he threw the remainder out of the hole and repaired the trap. On the under side of each jaw is a groove, extending from one end to the other, and partly filled by the slender maxilla which lies in it, forming a tube, one end of which passes into the insect which is bitten, while the other opens near the mouth of the ant lion. After eating he became more timid, and sometimes would not take a second insect. If, however, several were put into the pit at once, he would bite one after the other until all were killed, before deciding on which to begin. I fed him two or three times a week, usually with house-flies, cutting their wings off and letting him take them in his own way. In October, having occasion to travel some distance, I put him in an ounce bottle half filled with sand, corked him up, and carried him with me in my bag. In about a week I gave him a large house-fly, which he did not catch, not having room enough in the bottle to make a pitfall. I gave him no more food till the next March. Meanwhile he remained for several months on a shelf in my room. Occasionally I tipped him out, and always found him lively enough to right himself if turned on his back, and to retreat under the nearest sand. In January he was packed up in my trunk for more than a week, and when I opened it, after it had remained several days in a warm room, I found him as lively as when first caught. He afterwards became quite torpid again in a cold closet, where he remained through the rest of the winter. About the first of March, when flies began to be plenty, I commenced to feed him again. He found it rather awkward to catch insects in the bottle, as there

was not room enough to make a pitfall, and his inability to move forward made it hard for him to seize an insect unless he met it directly between his jaws. He soon, however, made pitfalls half an inch in diameter, which answered the purpose. Sometimes he lay on the surface of the sand with a few grains scattered over his back to conceal him from notice, and his jaws extended on the surface. If a fly was put into the bottle it would circle round close to the glass, and usually run over the ant-lion's back. He would jerk up his head and attempt to seize it, which he seldom succeeded in doing the first time. If he caught a leg or wing he was unable to move nearer and shorten his hold, and the fly escaped. He would often throw up the sand and try to undermine the fly. He would sometimes work an hour in these ways before the fly would get into a favorable position. I fed him every day or two until May 15th, when he spun a spherical cocoon around him, and remained enclosed until June 25th, a very hot day, when he came partly out, and leaving his pupa skin half in the cocoon appeared as a perfect fly, but did not spread his wings completely.

WHAT THEN ?

What then ? Why, then, another pilgrim's song ;
 And then a hush of rest, divinely granted ;
 And then a thirsty stage (Ah me, so long !)
 And then a brook, just where it most is wanted.

What then ? The pitching of the evening tent ;
 And then, perchance, a pillow rough and thorny ;
 And then some sweet and tender message sent
 To cheer the faint one for to-morrow's journey.

What then ? The wailing of the midnight wind ;
 A feverish sleep ; a heart oppressed and aching ;
 And then a little water's cruse to find
 Close by my pillow, ready for my waking.

What then ? I am not careful to inquire ;
 I know there will be tears, and fears and sorrow ;
 And then a loving Saviour drawing nigher,
 And saying ; "I will answer for the morrow."

What then ? For all my sins His pardoning grace ;
 For all my wants and woes His loving kindness ;
 For darkest shades the shining of God's face ;
 And Christ's own hand to lead me in my blindness.

What then ? A shadowy valley, lone and dim ;
 And then a deep and darkly-rolling river :
 And then a flood of light—a seraph hymn,
 And God's own smile, for ever and for ever !
 —*Boston Transcript.*

LINES.

SUGGESTED BY READING THE "BABY'S DRAWER."

I, too, have a drawer of treasures,
 That belonged to a daughter fair ;
 Who passed away ere her life's young day
 Had been clouded with sorrow or care.

Here's her basket with scissors and thimble,
 And the work folded carefully nigh,
 With threaded needle waiting the hands
 That forever have laid them by.

And here are the much-prized emblems
 Of the art she loved so well—
 Her pencils, and one little picture begun
 Ere Death's shadows around her fell.

Here are handkerchiefs hemmed by her own dear
 hands,
 And marked with her own sweet name ;
 And dainty ribbons and numberless things
 That a young girl loves to claim.

Here are boots which encased her slender feet,
 And gloves all faded and worn,
 Which still bear the shape of the little hands
 That, alas ! are forever gone.

And here is something still dearer to me,
 These tresses of chestnut hair ;
 For only a few short months ago
 They shaded her forehead fair.

But ah ! these relics precious
 Can be eaten by "moth and rust ;"
 They belonged to that mortal part of her
 Which is mouldering away to dust.

But I know that in one of the mansions
 In the "Father's house" on high,
 The immortal part of my darling child
 Will greet me by and by.

Thank God for this priceless treasure !
 This faith with uplifted eye,
 That can pierce the gloom of sorrow's night,
 And see the land which is ever bright,
 Where our loved ones can never die.

From the Mt. Pleasant Journal of Third month 1st, 1871.

CONVERTED CONVICTS IN THE IOWA PENITENTIARY.

BY JOSEPH A. DUGDALE.

"My word shall not return unto me void."

More than a year since Mary H. Rogers, a Minister in the religious Society of Friends, was constrained in the love of Christ to visit the Iowa Penitentiary. While there her tongue was loosed to preach the everlasting gospel with pathos and fervor. Her voice was lifted up in prayer, as the chaplain said to me, like that of an angel. The influence was wonderful upon the prisoners. It was like an *electric fire*, and many cried to the Lord for mercy. Two of the men, John Walker and Richard Allen, were so *powerfully* impressed that the warden and keepers regarded them as converted men. Subsequently other Friends visited the prison. These two men, strange as it may appear, made request to be received into *membership among Friends*. It is well known to all acquainted with the usage of this branch of the Christian church, that much *discretion* is used in the initiation of members. Applications from such a source were without a parallel. The parties were visited by judicious committees, and after much deliberation and prayerful desire for divine guidance, they were *received* into membership by Chestnut Hill Monthly Meeting—the largest Monthly Meet-

ing, it is said, in Salem Quarterly Meeting, being a branch of *Iowa Yearly Meeting*. John Walker's sentence for five years had nearly expired, Richard Allen had seven years yet to serve. Richard was recently ordered to make billiard cues. He remonstrated with the officer, saying, I cannot do it, gambling caused me to be here; I am willing to work and do not wilfully disobey the rules, but I am conscientious in this thing. He was reported to the next higher officer and threatened with punishment. He meekly replied the punishment he could bear, but never could consent to do the work required. The warden was appealed to. It is said he is a man of rigid decision, but has nevertheless a compassionate heart. (Would that all occupying such responsible positions were not only possessed of iron will, but that spirit of reclaiming love which results from a practical acquaintance with the gospel of Christ.) Punishment in prisons is represented to be sometimes condign and terrible. In this case the appeal to the warden reached the witness in his soul. He left the converted man, telling him not to make the cues until he *heard from him again*. Subsequently he informed friends he should never *make* the request again.

Every reader will be touched with a sense of the power of God in its workings in this regenerated convict's soul. Comment would be a supererogation. Having visited prisons at divers times in several of the States, and become satisfied that visitations impelled by a prayerful desire for the conversion of the fallen may result in good, even when the *visitor* may feel *distrustful*, I will relate here a single instance. Accompanied by my dear wife and the well known President of the Peace Union, A. H. Love, of Philadelphia, we visited Moyamensing. I attempted to speak. Seeing only iron doors, I trembled; fearing I was not close enough to my Saviour to benefit the hundreds who could *hear* though they could not *see* the speaker, I was about to leave the prison with the burden, when an impression came upon me to go to the *nearest cell*. I did so, and turned open the outer door. There stood a young man not more than twenty years of age—his face pale as ashes. He thrust his hand between the bars, *grasped my extended hand* and said, "*God bless you for coming here this day; you can't know the good you have done me.*" God made this poor man a minister to me. I left the prison a wiser man than I went in. I have felt a very deep interest in the cases of John Walker and Richard Allen. Recently we went to visit the Monthly Meeting that had received them. The visit was induced from an anxiety that the meeting having taken the steps it

had in the light, might be favored to continue its duty. When we went into the meeting, which was large, John Walker was in the auditory. He had been released two weeks—he is a young man of 27, born in Scotland—he had wandered from house to house candidly telling he was from prison. He sought employment and something to eat. At last in his extremity he went to the Burlington jail and begged for work and food. The jailor did what some professed Christians would not, "*took him in and ministered to him.*" A letter came to Friends. He sat in the meeting during the service, often in tears. The Monthly Meeting appointed a committee to extend to him a kind welcome, secure to him a home and such advice and aid as his case might require. He spent the night at the hospitable home of Ellwood and Lydia Osborn, who had taken the new member with them. Here we had a conversation at length with John Walker, and became satisfied of his sincerity and parted with him, giving him our hearty benediction, and have not failed night and day to intercede at the Throne of Grace for his preservation, and that the Christian community may extend to him the courtesies and kindness which are needed to aid him in the path he has chosen. A few days since we saw him again in his new home with our valued Friends Jonathan and Lydia J. Osborn, and have written this narrative at his *earnest request* and that of several members who were instrumental in introducing him into the circle of religious Society.

ALGIERS.

A wandering correspondent contributes to a London paper the following notes on Algiers:

"Perhaps there is no place in the world where modern civilization and ancient Eastern life and manners come into such close contact, and therefore stand out in so striking a contrast, as they do in Algiers. The whole of that portion of the town which faces the sea, and borders the quays and harbors is as thoroughly French as Marseilles or Toulon. The handsome Place du Gouvernement, with its cafés, colonnades, and public buildings, would be just like that of any French provincial town, were it not for the magnificent palm trees which overshadow the marble fountain in one corner, and for the dazzling white walls of the great mosque with its elegant minaret, which forms one side of the square. The quays, crowded with sailors, and lined by large warehouses, and the vast harbor protected by piers, forts and breakwaters, and filled with large steamers and merchant shipping, has an entirely French appearance, as has also the broad and hand-

some Boulevard de l'Impératrice, with its long range of new white buildings. Behind this boulevard and the Place du Gouvernement are several straight streets, mostly at right angles to each other, all arcaded and full of excellent shops: but even here one sees something of Arab life. Arab boys perpetually accost one, offering to black one's boots or selling cigar lights, while stately men, wrapped up in white drapery, every now and then are met with, or half naked black beggars.

"When, however, we reach by a broad flight of steps the Place du Chartres, where the daily market is held, we come upon one of the most animated and picturesque scenes it is possible to see in any city in the world. Here French and Arab life thoroughly meet, and are seen in the most striking contrast. The whole place is one moving mass of human life, and displays every shade and hue of every color under the sun. Fruit, vegetables, butter, eggs, poultry, alive and dead, meat, bread, flour, in short, every necessary of life, are here offered for sale by both French and Arab dealers; it would be difficult to say which are the more noisy of the two. The purchasers, also, are of both races, and the clatter kept up by the constant bargaining going on, by the cries of the vendors, the cackle of the poultry, the shrill shrieks of Arab boys, and barking of dogs, is positively deafening,

"There cannot be a place, I should think, better supplied with provisions than Algiers: the butchers' shops in the arcades round this market place, principally kept by very picturesque Arabs, offer meat of every kind; the vegetables here displayed are most abundant and varied—salads and cabbages of the brightest green, peas, beans, yams, enormous potatoes, the yellowest carrots, the pinkest radishes, and the most crimson tomatoes. The fruit is specially tempting, and of every possible sort; the grapes are in size larger than the largest hot-house grapes we see in England; figs are large and plentiful; oranges and lemons abound; olives, pears and apples can almost be had for the asking, while pomegranates, bananas, and the prickly figs which grow on the cactus plant, all of which are thoroughly African, are to be purchased for the smallest of coins at every stall. In the centre of this market, and shaded by a spreading willow, is a large marble fountain, forming the most picturesque point in this lively scene. Round it lay sleepy Arabs in graceful attitudes, while swarthy children dabble in its waters, and the cleaner vendors wash their hands and faces in its streams.

"Above the market we begin at once to ascend the steep hillside on which Algiers is

built, and penetrate directly into the purely Arab portion of the town. Here nothing European meets our view; narrow streets, or rather lanes, mostly consisting of steps and roughly paved, formed by whitewashed, overhanging houses, with arched doorways and small grated windows; shops open to the street, in which squatting Arabs, not overburdened with clothing, sitting cross-legged, are hard at work at some trade—shoemaking, tailoring or embroidery. Here and there some beautiful bit of Moorish architecture is disclosed in an old doorway or window, and the groups in the streets, whether beggar children, with dark, almost black skins, and the brightest of eyes, or the bare-legged men, toiling up with large water-pitchers, or some other heavy load on their heads or shoulders, or veiled women, a waddling mass of white garments, huge, baggy trousers, tight, awkward slippers, with their dark eyes only to be seen peering out of this abundance of white drapery, are everywhere novel and picturesque. All this back part of Algiers is made up of steep, narrow streets of this kind; they lead to a French fortress and a number of barracks at the top of the hill, where there is a grand view of the bay, the harbor and the city.

"Just behind the Place du Gouvernement stand three interesting public buildings; two of these, the Government House and the Archbishop's residence, were both formerly Moorish palaces, the former belonging to the Dey, the latter to his chief minister. The Archevêché can be seen at any time on application to the porter. The court is an exquisite specimen of Moorish architecture, surrounded by a double row of columns supporting arches of delicate lacework and elegant tracery. The Government House, which, as councils are constantly being held in the grand saloon, it is not easy to see—is a still finer building, externally like one of the most imposing Venetian palaces. The patis is larger than that of the neighboring palace, and the rooms far more imposing. The carving and coloring of the walls and ceiling in delicate arabesque work, remind one of the Alhambra. The other, and the most striking edifice in this square, is the cathedral; built somewhat in the style of a mosque (where one formerly stood) with a fine dome and minarets, and approached by a broad, lofty flight of steps. On Sunday morning, when Marshal M'Mahon, the Governor, and his brilliant staff were leaving the church, and two rows of Zouaves and Spahiz lined the steps on either side, while gay groups of people of all nations, and in every conceivable costume, stood around, the sight was a very pretty one. The interior of the cathedral is

in the same Mauresque style; it is not too much overlaid with ornament, but is simple and chaste. There is some good stained glass in the windows behind the choir. The functions here are very imposing. The choir is a large one, and extremely well trained; the organ, too, is good, and the services are well attended. They make, however, little impression on the Arabs; I never saw one enter the church.

"Mosques, of course, abound in Algiers, but there are two specially large ones; they are very ancient, bare, dreary, whitewashed buildings; their floors covered with matting and carpet. After very careful ablution many of the worshippers appear, after a short prayer, to lie down on these mats and compose themselves to sleep. The Arabs are very particular in obliging strangers to take off their boots before they enter these sacred places. The larger Mosque boasts a magnificent marble colonnade in the Moorish style and quite recently erected; connected with it is an Arab court of justice. Here I observed a highly characteristic and interesting scene—an Arab judge, a very venerable white bearded person, with spectacles, surrounded by an equally venerable group of assessors, engaged in administering justice. Each seemed to be provided with some large book or parchment, and the faces of these old men strikingly reminded me of those ancient rabbis in Hunt's glorious picture of 'The Finding of Our Saviour in the Temple.' The criminals, plaintiffs, defendants, or whatever they were, made a terrible noise, though in this they were quite outdone by a number of veiled women, who shrieked in the shrillest and most inharmonious tones at the court from behind a screen."

THE BOTTLE OF OIL.

Once upon a time there lived an old gentleman in a large house. He had servants and everything he wanted, yet he was not happy; and when things did not go as he wished, he was cross. At last his servants left him. Quite out of temper, he went to a neighbor with the story of his distresses.

"It seems to me," said the neighbor, "it would be well for you to oil yourself a little."

"To oil myself!"

"Yes, and I will explain. Some time ago, one of the doors in my house creaked. Nobody therefore liked to go in or out by it. One day I oiled its hinges, and it has been constantly used by everybody since."

"Then you think I am like your creaking door," cried the old gentleman. "How do you want me to oil myself?"

"That's an easy matter," said the neighbor. "Go home and engage a servant, and when

he does right, praise him. If, on the contrary, he does something amiss, do not be cross; oil your voice and words with the oil of love."

The old gentleman went home, and no harsh or ugly word was found in his house afterward. Every family should have a bottle of this precious oil, for every family is liable to a creaking hinge in the shape of a fretful disposition, a cross temper, a harsh tone, or a fault-finding spirit.—*Child's Paper.*

The following remarks on the subject of fairs, taken from the *Public Ledger* of this city, so fully accord with our views that we transfer them to our columns:

A PROPER THING TO DO.

At the Wilmington Methodist Conference a resolution has been unanimously adopted condemning "gift enterprises," and "gambling at church fairs." It is somewhat surprising that these practices, thoughtlessly indulged in and encouraged by a great many good people, have not been discountenanced by all church authorities. Though they do not seem to regard those lotteries and "chances" adopted to raise money for good purposes, in the light of gambling, yet they are in reality nothing else; and they are calculated to do great mischief in familiarizing young people with a species of demoralizing influences from which they should be sedulously guarded. It is a long time since we felt obliged to banish all favorable mention of them from the columns of this paper, together with fairs generally. It would be a good thing, now that the movement has begun, for the leading people in our church congregations to try to find some other way to raise money than by "fairs" and "bazaars." They interfere sadly with the regular course of retail business; they injure the trade of a worthy class of retail dealers who are mostly women; they generally come at a season of the year when these poor people should be reaping their harvest after the long dull season of summer and fall; and they bring the voluntary and *gratuitous* labor of wealthy families into competition with the compelled labor of the poor needle women who have to depend on their earnings for their daily bread.

Forty-first Annual Report of the "Female Association for the Relief of the Sick and Infirm Poor with Clothing," &c.

In presenting the details of our labors during the past year, we feel bound to add our acknowledgment of the kindness and thoughtfulness of those whose contributions have enabled us to extend our sphere of usefulness. The funds entrusted to our care, we have endeavored to employ judiciously.

The goods purchased have been prepared and cut into garments by the members, and afterwards given to poor women to be made up at their own homes. Many poor families look forward each year with anxiety to the opening of our winter session, which furnishes them the work, the remuneration for which ekes out the slender pittance upon which they exist.

Over 1400 garments have been thus made up, and afterwards given to the sick and infirm and to children unable to work. This distribution has, we think, been carefully managed, the members personally visiting the families thus relieved. By so doing, we become acquainted with their wants and their trials, and it is not only the material warmth and comfort afforded, when the "wherewithal to clothe and to feed" is handed forth, but it gives the opportunity of offering a word of encouragement and sympathy, and we trust that some weary hands have been strengthened and suffering spirits soothed by the knowledge that others are not unmindful of their sorrows and privations.

I T E M S.

INTELLIGENCE has been received at Lieut. Gen. Sheridan's headquarters in Chicago from Fort Laramie and other points in Wyoming Territory that the Indians are breaking up their camps north of the Pacific Railroad, and are preparing to move south on the opening of spring, to occupy their reservations in the Indian Territory. The Arrapahoes are the foremost in the movement, having started on the journey in large numbers. The apprehensions which the recent dispatches to Washington aroused that the breaking up of winter would at the same time cause trouble among the savages themselves as well as the whites are dispelled to a certain extent by information that the Government agents are actively engaged in assisting the movement of the tribes, so that everything is expected to pass off smoothly, and war, it is thought, will be avoided. There are great num-

bers of Indians in the region of the Union Pacific Railroad and in Wyoming Territory; but all of the tribes, including the Arrapahoes and other bands, are disposed to be peaceable, and, if the Sioux do not disturb them, the prospect now is that the summer will see all the savages safely withdrawn to their reservations.

PROF. COOK, State Geologist of New Jersey, calls attention to a considerable waste of the coast-line. The United States Survey proves either a washing away or a recession of the Jersey coast to a depth of one hundred yards in thirty years. Much of the coast from here to Florida is supposed to have suffered in like manner. The worst part of the mischief is that the sands are blown inland, spreading over much land that would be otherwise valuable and destroying vegetation. The fringe of cedar forests which formerly served as a protection have been cut down, and any regrowth is prevented by the drifting sands. Prof. Cook's remedy is that which is used in Holland for the preservation of meadows and cultivated lands. This is the common beach-grass. It grows on our dry beaches, and is more vigorous than any other land plant. The roots form a tenacious net-work, binding the sands and holding them in place. He urges systematic and concerted effort to line our coasts with this valuable plant, which in other countries is protected by penal laws.

EMPLOYMENT OF WOMEN IN RUSSIA.—An Imperial ukase on this subject has been issued, specifying the posts in the public service where women may in future be employed. By the first article of this ukase special courses of lectures in midwifery for women are to be established in the Imperial universities, and every effort is to be made to secure the attendance at these lectures of as many female students as possible, with a view to the training of accoucheuses for each district of the empire. Women are also to be encouraged to accept places as nurses in the military hospitals, for eventual service in the field if necessary; and a certain number of schoolmistresses are to be appointed in the elementary schools. Finally, women will be admitted to a certain proportion of appointments in the telegraphic department and in the accounts branch of the Ministry of the Interior.

THE powerful effects of ice masses when started in streams by spring freshets have been illustrated in the Penobscot. Huge cakes were tilted high in air, and raised upon one another to a height estimated from ten to thirty feet. Masses weighing hundreds of tons were thrown over upon a road adjoining the river, while other masses ground out great paths for themselves in the river bed. The whole scene is represented as one of exceeding interest. The ice breaks up earlier this season than has been known for some thirty years.

THE Spanish Government has made the proposition to sell to our government the islands of Cuba and Porto Rico for the sum of \$100,000,000, to be paid in instalments.

A Kentucky church is used by four different denominations alternately.

There was a severe inundation at Vienna 2d mo. 12th, and 4000 persons were driven from their homes by the flood.

It is said that out of twenty-one millions of Italians, seventeen millions are still unable to read or write.

JOHN WESSEL.

John Wessel was born about the year 1419 or 1420, at Gröningen in Friesland. His parents were respectable citizens, his father, Herman Wessel, being by occupation a baker, and his mother descended from a family of good repute in the town. But losing both of them in early youth, he was kindly cared for by a benevolent matron of good estate, who educated him along with her own son. John was lame in one foot, having his ankle distorted; which circumstance may have promoted an inclination, as he grew up, to sedentary and scientific or literary pursuits. He was placed for some time in a school at Gröningen, and afterward in the institution of the "Brethren of the Common Lot" at Zwoll, where he had the advantage of forming an acquaintance with Thomas à Kempis, whose residence was within about half a league from the town. This acquaintance ripened into an intimate friendship, although Thomas was about forty years his senior; and this friendship appears to have had an important influence in moulding his opinions and forming the character of his subsequent life. It was about that time that Hamerkin had just written his admirable work on the Imitation of Christ; and John Wessel has acknowledged that the perusal of that book was mainly instrumental in first leading him to a decidedly religious

course of life. The instruction which he received at Zwoll, and the pious example of his teachers there, doubtless contributed to promote this inclination. But his active and inquiring mind was not fully satisfied with the amount of learning to be obtained in the schools of the "Brethren of the Common Lot," which was in some sort elementary, though practically useful and substantial. Indeed, it appears that he had an almost insatiable thirst for knowledge, in the departments both of science and literature, as well as in what was then called theology. His desire, says Ullman, was to master everything the age offered as worthy of being known. And another of his biographers, Hardenburg, tells us that from his boyhood he had always something peculiar, and entirely repugnant to all superstition. Thomas à Kempis had a great veneration for the Virgin Mary, and on one occasion exhorted his young friend to evince the same reverence for her. Wessel replied, "Father, why do you not rather lead me to Christ, who so graciously invites those who labor and are heavy-laden to come unto Him?" Thomas was also zealous in fasting, as in other parts of the usual discipline, and was once inculcating it upon Wessel, when he received from him this answer, "God grant that I may *always* live in purity and temperance, and fast from sin and vice!" The narrator of this incident adds that Thomas à Kempis was so much

struck with his youthful friend's reply, that "he took occasion to alter some passages in his writings, which now show fewer traces of human superstition."

John Wessel had complied with all the usages and discipline of the school at Zwoll, and was appointed submonitor or lector to the third class of scholars; but the freedom of certain of his opinions, indicating the opposition which he afterward maintained to various superstitions, gave some umbrage to the inmates and authorities, which is supposed to have induced him to leave the school sooner than he might otherwise have done. From the comparatively sheltered and domestic roof of the "Brethren of the Common Lot," Wessel departed for the renowned University of Cologne, where he found a very different state of feeling among both students and professors. "Theology," says Ullmann, "reigned supreme at Cologne;" but it was characterized by "the stiff, gloomy, intolerant spirit of scholastic dogmatism;" very different from the warmth of practical piety with which young Wessel had before been associated. Cologne was the chief seat of the Inquisition in Germany. Laurentius, the founder of that part of the establishment in which Wessel now resided, had boasted that he had himself pushed that great reformer John Huss into the fire at Constance! Wessel was disgusted with the condition of things in the university, yet he went through his studies regularly, and in due time received his degree of Master of Arts. But he has complained that he there heard scarcely anything but the doctrines of Thomas Aquinas and Albert Magnus, calculated either to rivet his youthful mind to superstition, or else to satiate and disgust him with the scholasticism so much in vogue. The latter seems to have been the result with him, and he placed himself in opposition to many of the dogmas and traditions taught in the university. At the same time he highly prized the opportunities of consulting the valuable libraries with which Cologne abounded, and he made himself well acquainted with the Latin, Greek, and Hebrew languages.

After remaining several years at Cologne, he visited the seats of learning in several other countries; a learned education in those days requiring many years of assiduity, and the inspection of various libraries, as the art of printing was then in its infancy, and books were comparatively rare and enormously costly. A copy of the Bible is still to be seen at Utrecht, written by Jacob Enkhuyzen about the year 1458, for which he charged 500 gold guilders; although money was then many times more valuable in comparison with the commodities of common life than it is at the

present period; when, nevertheless, the poor can purchase a good copy of the Holy Scriptures for half a dollar.

It appears that Wessel spent many years of his middle life in Paris, arriving there about the thirty-second year of his age, and residing there chiefly until 1470, when he went into Italy for about two years, and then returned to Paris. Here in 1473, he met with the celebrated John Reuchlin, who has been called "the restorer of Hebrew literature among Christians,"* with whom he afterward at least renewed his acquaintance at Basle in 1475, if he did not even become his tutor.

The University of Paris, at the time of his residence there, was the scene of endless disputes among the learned on subjects which now appear worthy only of ridicule. Abstruse questions, of no practical importance whatever, assumed vast proportions in the interest of the opposing factions of Nominalists and Realists, though really too childish to be worth dwelling upon, and at length became the subject of a royal *ex parte* interference and interdiction. For an example of the entangled nonsense which, in the middle ages, was called philosophy, we may refer the curious to what Ullmann has said of these disputes in his elaborate memoir of the life of Wessel. It is indeed sorrowful to consider that such empty disputations constituted a large portion of what was then deemed the study of theology. Wessel became involved in these discussions, along with almost every one else in the the University of Paris, probably to his own injury in so far as they drew his mind away from the comparatively simple views of religion which he had imbibed among the Brethren at Zwoll. Yet he did not blindly follow the popular religious current. Whatever he found openly contrary to the Holy Scriptures, he felt bound to call in question. Thus he was led to oppose some of the cherished articles of the Romish creed, and even to doubt the absolute authority of the Romish church, and of its head, the pope. He was willing to go along with the pope, only when the pope went along with the Scriptures. He trusted in Christ as his Redeemer, rejecting all personal worthiness as forming a claim on the favor of the Most High, and of course all desert or merit accruing from ecclesiastical penances or what were deemed good works. In this respect he seems to have advanced further than the pious friend of his youth, Thomas à Kempis. He was decidedly opposed to Indulgences, and attacked at the same time the Romish doctrine of Purgatory. He desired a return to the primi-

* McCrie's History of the Reformation in Italy, p. 29.

tive condition of Christianity, so far as he understood it, in the constitution of the church. The traditions and the hierarchy of Rome he considered as something interposed between Christ and His church. The sale of Indulgences was to his candid mind an abomination, and he openly expressed his sentiments respecting it, says Ullmann, before all descriptions of men. The degradation of morals among the students of the Universities of Cologne and Paris greatly disgusted him. He looked there in vain for Christian piety, or even good morals. He thus expresses his feelings in regard to it. "In fact, what I saw when living at Cologne and Paris was doubtless odious to God; I mean not the study itself of the sacred sciences, but the moral depravity with which it was mixed up."

During a portion of the time of his residence in Paris he appears to have been engaged in imparting instruction, partly in the form of lectures, both there and in cities within a convenient distance. At Angers, in particular, he delivered public lectures, in which he took occasion to advocate freely his opinions concerning Indulgences.

In the year 1470 he went into Italy, and visited Rome; where he cultivated an intimate friendship with Francis de Rovere, who, the next year, while Wessel was still there, was elected pope, and took the name of Sixtus IV. With this pope's particular friend the Cardinal Bessarion, Wessel had previously made acquaintance in Paris; and (what seems remarkable) he now sheltered himself under their friendship to promulgate in Rome itself, with greater security, his liberal and reformatory opinions. He had considerable medical knowledge and skill, and it has been said that he attended Sixtus in the capacity of a physician. Whether it was through his influence that this pope gave his sanction to the institutions of the Brethren of the Common Lot, is a matter of doubt, but it seems not by any means improbable. On one occasion soon after the elevation of Rovere to the papal chair, Wessel waiting on him was invited to ask for some favor from the new pope. To this he modestly and frankly replied: "Holy father, you are well aware that I have never aspired after great things; but now that you occupy the place of supreme priest and shepherd on earth, my desire is that your reputation may correspond with your character; and that you may so administer your exalted office, that when the Chief Shepherd shall appear, He may say to you, 'Good and faithful servant, enter into the joy of thy Lord;' while you on your part may be able confidently to aver, 'Lord, thou deliveredst unto me five talents; behold, I have gained beside them five talents more.'"

On the pope remarking that this was a matter which belonged to him, and that Wessel should now ask some boon for himself, he said, "Well then, I ask you to give me from the library of the Vatican a Greek and Hebrew Bible." "It shall be done," replied Sixtus, astonished; "but, foolish man, why did you not ask a bishopric, or something of that sort?" "Because," rejoined Wessel, "of that I have no need." Ullmann adds that the Bible was accordingly given to him; and this remarkable manuscript, which was more precious to Wessel than the possession of a bishopric, is said to have been long preserved in a convent near Groningen, where he spent part of his declining years.

He very undisguisedly expressed his sentiments respecting the subject of Indulgences, among all classes at Rome, not excepting those belonging to the papal court. But many of these persons had long ago divested themselves in reality of all religious sensibility, so that they could treat the prevailing prejudices, or even opposing views, with indifference if not with ridicule. Thus Wessel could for a time express his opinions with more impunity; but he learned by personal observation the hollowness and corruption of the Romish priesthood, and returned to France with his reformatory sentiments practically confirmed. This was probably about the year 1472, and he does not appear to have ever afterward felt any inclination to revisit Rome.

(To be continued.)

For Friends' Intelligencer,
EARLY CULTURE.

It is often my lot to be confined by sickness for months, deprived of the privilege of attending our religious meetings, and too feeble to indulge much in reading. At these seasons I have found the advantage of having been familiar, not only with the incidents contained in the Bible, but with the writings and journals of early Friends. Though not *confined to these*, yet they were read with avidity in very early life, and the sympathy and interest then felt has continued through the course of a long and eventful life.

I mention this only to encourage our dear young friends to pursue a course of solid and instructive reading while young. The mind is then more susceptible of durable impressions, and what is gathered may be laid up as food for the decline of life, when the avenues of terrestrial enjoyments are closing up.

My heart is now often tendered when reflecting on the beautiful simplicity of Scripture language; many passages, both in the Old and New Testament, have never been equalled. The circumstances attending the two disciples as they went to Emmaus is pecu-

liarily touching. They communed together of the sorrowful event which seemed to have blighted all their cherished prospects; to them it was a "day of trouble and of perplexity." But the compassionate kindness of Him whom they loved, and on whom they had placed their most confiding trust, in this hour of their extremity "drew near and went with them," as they walked by the way and were sad, and confirmed their doubting faith by "explaining in all the Scriptures the things concerning himself;" and though "their eyes were holden that they should not know him," yet it so reached the witness in their hearts that when they drew near to the village, and he made as though he would go further, they earnestly entreated him to stay, saying, "Abide with us, for it is towards evening, and the day is far spent." And is not this the language of the aged and way-worn disciple of the present day? Oh! how earnest the entreaty: Abide with me; pass not by, I pray thee, for "it is towards evening, and the day is far spent;" and if he is pleased to turn in, and sit at the table with us, and to bless and break the bread designed for our nourishment, our eyes are opened, and we know by our former experience of its sustaining virtue that it is *He*,—that He is indeed risen,—and we are strengthened to become testimony-bearers of glad tidings.

R. HILL.

Richmond, Ind., 1871.

For Friends' Intelligencer.

COMMUNICATION.

I notice the announcement in last week's *Intelligencer* of the departure of our dear friend Lucy Thompson, who was suddenly stricken with paralysis whilst in health of body and mind, and following the remains of her brother to the grave. Surely it is fitting, when the good and pure pass from earth to heaven, that we should pause, and reflect on their many virtues. Having long known and loved our departed sister, I feel constrained by the endearing ties of friendship, as well as for the benefit of others, to speak of her Christian character. It may be truly said, her life was a consistent one. She was ever ready to extend a helping hand to the poor and needy, and had a kind word for all. Her usefulness in her family, and in the Society to which she belonged, will be sadly missed. She filled the station of Overseer in the Monthly Meeting of which she was a member, to the satisfaction of all who were in attendance with her; her judgment was clear, and wisely administered when occasion required. Her moderation was apparent in all things. Her children will long feel the void in their hearts occasioned by her removal. May they, with us who knew her but to love

her, strive to follow her bright and shining example, as she endeavored to follow after Christ.

C. E. H.

Poughkeepsie, N. Y., 3d mo. 19, 1871.

CLAMOR AND EXCITEMENT.—The following practical paragraph, from an address by the late Thomas Starr King, is pertinent, and unfortunately likely to be pertinent as wise counsel until the Millennium. Accidentally finding and reading it, awakens again the desire that some of the writings of one who was distinguished for his common sense, metaphysical acuteness, poetic imagination, artistic taste, burning patriotism, glowing eloquence and rich humor, may be rescued from their repose in manuscript, and given to the public; so that he may again and always be speaking to the crowds ever eager and anxious to listen to the speech of a noble and true American, upon whose like, take him for all in all, we shall not soon look again. In every schoolroom and family these words should be kept, as words of daily suggestion: "It is a bad sign always for the performance and beneficence of any power, when there is much clamor in it and excitement about it. Where a school is governed by the frequent accompaniment of loud talk and whippings, there is not nearly so much power at work as in a school where, through respect for the teacher, everything goes on quietly, as it were without direction. So it is in homes; the more noise and scolding, the less parental power. Activity and clamor of the tongue and hand are brought in to supply the lack of that steady, central strength which organizes peacefully."

TO CHRISTIAN WOMEN.

(Extracts from an address by Jane M. Richardson.)

My dear Sisters,—Will you bear with me while I endeavor to bring before your impartial notice a subject which to some may be rather distasteful, while others may regard it as a matter of trivial importance; nevertheless, it seems to me at the present time worthy of more than a passing thought. I refer to our Christian duty as regards personal attire. I am aware there are many voices heard on this subject. Some are saying, "God looks only at the heart;" others, that "it is right to appear attractive and graceful to those around;" again, "It is fitting to dress according to our rank and position in society;" further, "It does not answer any good purpose to be peculiar and odd in our dress;" and, "It is our duty to make our religion attractive to the world." These plausible statements carry weight with not a few, and tend in the case of some to silence a voice within, and soothe the mental disquiet which may at times be felt, while considering some

such plain Scripture injunction as the following:—"Be not conformed to this world."

Permit me, in as short a manner as possible, to examine these statements by the light of truth.

First Statement.—"God looks only at the heart." Now we know that the great work begins there; but God looks for fruit, for our light to shine, for proof in our daily life that we are "transformed by the renewing of our minds," for evidence that we have been re deemed from the world.

But is any one ready to say, "My dress will neither glorify Him nor defile His temple?" To the former I would reply, "Whether ye eat or drink, or whatsoever ye do, do all to the glory of God;" to the latter by quoting that searching Scripture, "Whatsoever is not of faith is sin." And, pointing to extravagant fashions, I would ask, Are they not unbecoming drapery for a temple of God?—unbecoming that spirit which can say, "I am crucified with Christ"—unbecoming the followers of Him who pleased not Himself, but trod the way of cross bearing and self-denial, "leaving us an example, that we should follow His steps?"

Second Statement.—"It is right to appear attractive and graceful in the eyes of those around." In reply I would ask, What can be more attractive and pleasing, to eyes undistorted by the god of fashion, than a simple yet graceful attire, regulated by a pure and correct taste, enhanced by the native ease of unfettered movement? And what more unattractive and displeasing to the intelligent observer than some of the fashions which now prevail, by means of which dressmakers and drapers seem to use the sisterhood as pegs on which to hang in fantastic forms their wares and merchandise? When I look at these and seriously reflect, I am ready to blush for the dignity of our womanhood, and wonder if sensible men do not despise or pity.

Dear Christian sisters, let me ask, Do these things make us attractive to the eye of the Master whom we serve? Do they become women professing godliness? When we see the gold and pearls and costly array, and mark too often in the world of fashion around us the absence of the modest apparel, "with shamefacedness and sobriety," and see the symmetry of the human form deformed by "pads," and "puffs," and "bustles," and the graceful movements of nature crippled by "Grecian bends," and "Alexandra limps," is it not enough to remind us of Isaiah's solemn message, "Because the daughters of Zion are haughty, and walk with stretched forth necks, and wanton eyes, walking and mincing as they go, and making a tinkling with their feet; therefore . . . the Lord will take away

the bravery of their tinkling ornaments," etc.? (See Isa. iii. 16-24).

Third Statement.—"It is fitting and proper to dress according to our rank and position in society." In reply to this, perhaps I cannot do better than to quote the words of a holy man lately gone to his reward: "Neatness and inexpensiveness should govern the choice of all ranks; general plainness would lead to no confusion; many things better than dress make distinction between superiors and domestics; vulgar wealth, whose only right to rank is balance at a banker's, needs finery to mark it; but cultivated people, native to the air of good society, are not in such straits, and require no such label." He goes on to say, "It cuts me to the heart to see young mothers and Sunday school teachers tricked out in the height of fashion; such things will ever prove to be ruinous snares, until we start our children on another track."

Fourth Statement.—"It does not answer any good purpose to be peculiar or odd in our dress." I do not plead for peculiarity or oddness, for a badge, or for conformity to any rule of dress; but I do plead for Christian simplicity and moderation, and if this necessitates our becoming peculiar in the eyes of the world, we cannot help it. We know who-soever will be a friend of the world is an enemy of God, and we are told that Christ came to "sanctify unto Himself a peculiar people."

A great man once said, "The trimmings of the vain world would clothe a naked world;" and we do know that moderation and self-denial aid the good and blessed purpose of bringing relief and comfort into homes of wretchedness and poverty; while rich and costly apparel too often cramp the means and withhold the hand of many in moderate circumstances.

Fifth Statement.—"It is our duty to make religion attractive to the world." But by conformity to the world we weaken our power of influencing others. Christians are now too much blended with the world; many approach as near as possible to its habits, forms, and ceremonies, while they endeavor to preserve some spark of life in their own souls. This at least seems the practice, if not the aim, of too many among us. What we want to make religion attractive, and Christianity a living power, is a consistent, holy, self-denying life; not a bigoted adherence to sect or party; not mere talking—not the profession nor the form—but the language of example speaking by the simplicity of our lives, by the godly sincerity of our words and actions, by the moderation of our desires and habits, by our liberality and fervent charity.—*The Christian.*

For Friends' Intelligencer.

INTEMPERANCE.

Several months since, an article appeared in *Friends' Intelligencer* upon this subject, over the signature R. H. It must have found a response in the minds of many of its readers, as it suggested the propriety of our Society taking a more active part in the suppression of this alarmingly increasing evil.

It admitted that many of our members, especially of the younger class, felt it a duty to labor in the cause; and if no way opened for them to act within the Society and under its fostering care, they would in obedience to apprehended duty, join other associations and we as a Society lose their needed strength. Many have already overcome their scruples of the propriety of so doing, if any they had, and are now laboring to reclaim the wanderer and render him a useful member of society.

Others there are who cannot quite overcome some of the objections to the present organizations, and yet feel they are neglecting an imperative duty by lending to the cause their *silent example* only. They see the brightest talents wasted, the energy of youth recklessly destroyed, sacred vows disregarded, wives and children reduced to hopeless misery and want, the gray hairs of parents brought down with sorrow to the grave; and the reproving query will arise, hast thou done what thou could to avert this sorrowful state of things? Upon many of us the negative answer which must be given rests as a heavy burden, and we feel that the time calls aloud for a united effort to seek and to save.

Now, I would earnestly ask if Friends do not see not only the *propriety* but the *necessity* also of engaging in this reform and suggesting some method of acting in it as a body, or encouraging such as feel it a duty resting upon them, to act as conscience dictates, without fear of incurring the censure or disapproval of those to whom they are endeared by religious association?

Our early Friends hesitated not to seek the co-operation of men eminent for ability and influence to help carry on needed reforms, and why need we fear to do good as way opens? Let us not be so fearful of doing wrong that we dare not do right. As our day draws to a close, is there not less danger of standing reproved for an overdischarge of duty than of hearing the language, "Ye knew your duty, but ye did it not." If not acted upon before that time in our subordinate meetings, may we not hope it will claim the attention of our (N. Y.) Yearly Meeting. This subject, with the important suggestions of Darlington Hoopes in the *In-*

telligencer of 3d mo. 4th, might give rise to much valuable labor in our annual gathering that would result in an awakening from that lethargic state which was formerly so forcibly denounced as "neither hot nor cold." Let us remember the sentence pronounced against it, and endeavor to do what our hands find to do. E. H.

3d mo. 15th, 1871.

EXTRACT FROM "LECKEY'S HISTORY OF EUROPEAN MORALS."

It has always been the peculiarity of a certain kind of theological teaching, that it inverts all the normal principles of judgment, and absolutely destroys intellectual diffidence. On other subjects we find, if not a respect for honest conviction, at least some sense of the amount of knowledge that is requisite to entitle men to express an opinion on grave controversies. A complete ignorance of the subject matter of a dispute restrains the confidence of dogmatism, and an ignorant person who is aware that, by much reading and thinking in spheres of which he has himself no knowledge, his educated neighbor has modified or rejected opinions which that ignorant person had been taught, will, at least, if he is a man of sense or modesty, abstain from compassionating the benighted condition of his more instructed friend. But on theological questions this has never been so. Unflinching belief being taught as the first of duties, and all doubt being usually stigmatized as criminal or damnable, a state of mind is formed to which we find no parallel in other fields. Many men and women, though completely ignorant of the very rudiments of biblical criticism, historical research, or scientific discoveries, though they have never read a single page, or understood a single proposition of the writings of those whom they condemn, and have absolutely no rational knowledge either of the arguments by which their faith is defended, or of those by which it has been impugned, will nevertheless adjudicate with the utmost confidence upon every polemical question; denounce, hate, pity, or pray for the conversion of all who dissent from what they have been taught, assume, as a matter beyond the faintest possibility of doubt, that the opinions they have received without inquiry must be true, and that the opinions which others have arrived at by inquiry must be false, and make it a main object of their lives to assail what they call heresy in every way in their power, except by examining the grounds on which it rests.

FEW persons have sufficient wisdom to prefer censure, which is useful to them, to praise, which deceives them.

For Friends' Intelligencer.

NO OCCASION FOR WAR TO SETTLE NATIONAL DISPUTES.

I was much encouraged in the perusal of the address to the members of the Society of Friends, in the *Intelligencer* of the 4th ult., upon the subject of petitioning the U. S. Congress to take measures for the adjustment of national differences by arbitration. The legitimate consequences resulting from nations resorting to war for a settlement of their disputes, is conclusive proof of its unrighteousness and barbarity. Witness the late war in these United States,—the destruction and waste of property by millions, and lives by thousands, sacrificed on the field of battle. Witness the still later war between the French and Prussians, involving the still greater destruction of human life, and property, and its blight on morality, and other enormous sacrifices; and, after all, war does nothing in determining the justice and right of the question at issue.

What vast expenditures are drawn from the hard earnings of the laboring class, to keep up a military school for teaching the sons of the influential and wealthy, the art of prosecuting legalized murder; and men are extolled, and even placed in the highest office in the gift of the nation, because of their military achievements.

This influence in favor of war being general and national, how can it be removed? We answer: by the faithfulness of individuals,—those who are already convinced of the evils of war, and who are willing to use the means they are blessed with for awakening in others a due consideration of the subject; a subject in which Friends especially must feel a deep interest. If memorials from the Yearly Meetings of Friends (or their representative Committees) or others thus concerned, should be presented to the U. S. Congress, requesting that appropriate measures be taken for a final settlement, by arbitration, of all such national disputes as cannot by other peaceful means be adjusted, such a course, if not immediately successful, would tend to call forth a more general inquiry, and the tendency of such inquiry must shortly lead to a final triumph, so that "Nation shall not lift up sword against nation, neither learn war any more,"—a glorious day indeed; may it be hastened. It is to be hoped another year will not be permitted to pass before this great subject is presented to Congress for consideration. The tendency of such a movement would be to awaken an investigation into the continual and enormous burthens and evils inseparable from war; burthens and evils which, from their long continuance and general prevalence, seem to have paralyzed the sensibility of many

to their enormity. Notwithstanding the obstacles to be overcome may seem great, perseverance in a good cause seldom fails of success sooner or later. An effort for the establishment of "peace on earth and good will to men," is a Christian effort, and therefore the unbounded confidence we may have in its prosecution, if performed in a Christian spirit and by Christian means.

D. IRISH.

Duchess Co., N. Y., 3d mo., 1871.

LOOKING to others for our standard of happiness is the sure way to be miserable. Our business is with our own hearts and our own motives.

FROM UNPUBLISHED LETTERS.

My dear friend ——'s part of a letter dated 11th inst. came safely to hand a few days past. It was the more acceptable because, from thy long silence, I feared the infirmities of age, or immediate sickness, might be the cause of the interruption of our correspondence. That infirmities will be likely to increase upon us, as age advances, we may reasonably expect, and this sometimes seems to constitute the last scenes of probationary life. It is a lesson for us to learn, to manage these infirmities of body so as to promote the purity of mind or spirit—in other words, to discipline us for heaven. When the dissolution of matter, the animal body, takes place, and the soul enters on its fixed and unchanging state, who can form an idea of its mode of being, until experience teaches the reality? but to the well-disciplined mind (however human curiosity may sometimes imagine) the future mode of existence is of little moment, provided we have evidence of our union with the life Divine that never dies. It is said, "Life and immortality are brought to light by the gospel." I suppose many consider it as a kind of historical knowledge, derived from reading the New Testament, a light that we get from the experience of others. But is there not a knowledge, an inward knowledge of eternal life, and the immortality of that Divine life, given to every dedicated obedient mind, in all ages and nations, whether the New Testament has ever been read or heard of by such minds or not? If this view may be taken of mankind at large, in connexion with the sacred truth revealed to Peter and to us, that in every nation they that fear God and work righteousness, are accepted with Him, we may sometimes change the direction of our

mental telescope, and *from* the "gloomy picture" turn to the hidden seed of Divine life in the hearts of thousands, even an innumerable company of hidden little ones, scattered among the nations that inhabit this sublunary ball.

However excellent and expanding the living principles of the Gospel may be, it is plain that in our present state there are many things of which we are ignorant, or of which we may say with an apostle, "we see but in part, and we know but in part"—and that part is probably a very small part. But are there not many things which people think they see and know, of which they yet know nothing as they ought to know? There certainly are many things in the knowledge and understanding of which I am but as a child, and therefore it is no marvel if I think as a child, and speak or write as a child. The present state of society—professedly religious society—is one of those things. To me it appears that Friends have been called forward to occupy the foremost ground in the profession and practical evidences of the gospel dispensation. The *principles* professedly held by them are purer, less in the mixture, and applied to more and deeper objects of human life and conduct, than other professors of the Christian name have seen or adopted.

Thy acceptable communication two or three weeks since has occupied my feeling and close attention, and I have wanted to say a few words to thee, to encourage thee to abide in the patience under the preparing Hand for further services in the church, for it appears to me, that thy deep baptisms and strippedness, and even "great weakness," are all in wisdom, dispensed for thy preparation for what is hinted at in thy last of "a field of labor ahead." What that field in view is, my beloved daughter has not seen proper to name. Be it so. There is first the embryo blossom that has to endure the wintry season, storms, tempests, hail and rain, but the spring comes, when it expands and opens, and the tender fruit is formed within its calyx. This grows, increases and ripens in its due season for the service of man and other creatures. So in the inward. Now, my dear S., if it is and has been to thee a wintry season, be patient. "Consider the lilies, they toil not, neither do they spin." Rightly thou sayest, "Surely the hand of God must be in the baptisms" that attend thee. But as said the Master, so in their measure the servants, "I have prayed for thee that thy faith fail not." I need add no more than to adopt the sentiment, "that if

we continue to move in the simplicity and faith (or to abide in our tents) best help will be near" and will preserve.

I have read of a curious plant that flourishes in the Florida Reefs, whose blossoms are "each at maturity a young plant, with rootlets already started, and ready to take hold of the earth as soon as it shall drop." Is it not so with our words and actions, as we move around in our homes and among all we come in contact with? Unconsciously we are sowing broadcast, little seeds of good or evil, to root themselves in others, and reproduce like sentiments and habits. R. L.

FRIENDS' INTELLIGENCER.

PHILADELPHIA, FOURTH MONTH 8, 1871.

UNITY OF PURPOSE.—In looking over our exchanges which report the missionary labors of the various Protestant sects, we observe frequent allusions to the importance of *unity of labor*. The "Church Missionary Intelligencer" of last month is credited with the following remark: "Nothing can be conceived so well calculated to banish dissension and promote brotherly love as the union of so many churches under the one missionary banner; . . . for in this warfare victories are not gained, nor triumphs achieved by the peculiarities in which they differ, but by the grand and distinctive doctrines of the gospel in which they agree." What the author considers "the distinctive doctrines of the gospel" may or may not accord with our views of the living Word which absolves differences, unites in one flowing stream the love of the Father, and through which the gospel is preached in every creature.—"There is no difference between the Jew and the Greek; for the same Lord over all is rich unto all that call upon Him." (Rom. x. 12.) If the effect produced be the same, it matters but little by what name we designate the power which can alone regenerate and purify the heart. The "unity of Spirit, which is the bond of peace," is that unity which removes prejudices that prevent a coalition of labor and a full recognition of the Scripture declaration, that "one is your Master, even Christ, and all ye are brethren." We believe our own Society might be benefited by a more earnest effort to arrive at

a status wherein minor differences of opinion would be lost sight of in the earnest effort to "walk not after the flesh, but after the Spirit," that "the righteousness of the law might be fulfilled in us." We need oftener to remember, that there are "diversities of gifts but the same Spirit," and there are "differences of administrations, but the same Lord," and there are "diversities of operations, but it is the same God which worketh all in all." "The word of wisdom," "The word of knowledge," "The gifts of healing," "The working of miracles," "prophecy," "discerning of spirits," and "interpretation of tongues" are not concentrated in and upon an individual, but "a manifestation of the Spirit is given to every man to profit withal." Among all religious bodies there is discoverable a growing tendency to individual thought and action. While creeds and traditions still have a strong hold upon a majority of professing Christians, it is evident that the spirit of inquiry which is abroad in the earth is loosening the bands which have too long held in bondage the rational understanding, and prevented the acceptance of the *universal Light*.

With a cognizance of this vital force within, comes the knowledge that the word which continues to create and sustain "is nigh in the heart and in the mouth," and is the spirit of Truth which unfolds to the mind the mysteries of the celestial kingdom.

We may believe that in proportion to man's faith in the revealings of the Holy Spirit, and his obedience to the divine law written upon the heart and "placed in the inward part," his understanding is enlarged and his comprehension of spiritual things perfected. Hence the diversity of sentiment in matters not in themselves vital, yet which are esteemed important as having a bearing upon the religious life. A great good would doubtless result from an honest adherence to individual convictions, at the same time allowing others the divine right to act in accordance with the measure of light which has been given them.

If this were the prevalent feeling, there would be no difficulty in uniting efforts for the general good. For whatever might be

our views in regard to what are termed non-essentials, that which has been shown to be "good,"—to-wit, "to do justly, love mercy, and walk humbly with our God," can have no diversified meaning. The practical observance of this blessed manifestation which is both "ancient and new" would enable all people to unite in the glorious anthem: "Behold, God is my salvation; I will trust and not be afraid, for the Lord Jehovah is my strength and my song; He also is become my salvation."

WANTED, Numbers 2 and 3 of the present volume (28) of *Friends' Intelligencer*, for which six cents each will be given at office, 144 N. 7th St., Philada.

MARRIED.

DAVIS—BEIDLER.—On the 29th of Third month, 1871, by Friends' ceremony, Mordecai Davis to Hannah Mary Beidler; both of Chester Co., Pa.

WILDMAN—WARNER.—On the 16th of Third month, 1871, at the house of William Y. Warner, Penn's Manor, Bucks Co., Pa., with the approbation of Falls Monthly Meeting, John Wildman, of Attleboro', Bucks Co., Pa., to Sarah Ann Warner, daughter of Yardley Taylor, late of Loudon Co., Va.

DIED.

EYRE.—On the morning of the 27th ult., Elizabeth A., wife of William Eyre, aged 64 years; a member of the Monthly Meeting of Friends of Philadelphia (Race St.) She was of a meek and quiet spirit, which endeared her to a large circle of friends.

POTTS.—In Baltimore, on the 21st ult., of scarlet fever, Abbie C., eldest daughter of J. N. and Alice C. Potts, aged 3 years; members of Baltimore Monthly Meeting.

LIPPINCOTT.—On the 31st of First month, 1871, after a short but severe illness, Mary Ann H., wife of Isaac Lippincott, in the 62d year of her age; a consistent member and elder of Chester Monthly and Westfield Preparative Meeting. She was a devoted wife, a tender mother, and a sympathizing friend. We mourn our loss, but feel a happy assurance that it is her eternal gain.

LIBRARY ASSOCIATION.

Committee of Management will meet in the Library Room on Fourth-day evening, 4th mo. 12th, at 8 o'clock.

J. M. ELLIS, *Clerk*.

CIRCULAR MEETINGS.

Committee of Philadelphia Quarterly Meeting will meet on Sixth-day afternoon, 4th mo. 14th, at 4 o'clock, in the Monthly Meeting room at Race St.
WM. EYRE, *Clerk*.

FIRST-DAY SCHOOL ANNUAL MEETING.

The Association of Friends for the promotion of First-day Schools will meet at Woodstown, N. J., on Seventh-day next (15th inst.), at 10½ A.M. Reports from all the Schools are requested. Essays on subjects kindred to the movement will be gladly received, particularly in reference to the deficiency in suitable literature. All interested are invited. Passengers will purchase tickets for Woodstown, and

leave from upper side of Market Street ferry, Philadelphia, at 3.30 Sixth-day afternoon and 8.15 Seventh-day morning, where Friends will meet and convey them to place of meeting. The regular train returning leaves quarter before 3 P.M., and it is probable that an extra train will run, leaving about 5½, and arriving in the city about 7. Wilmington Friends will cross to Pennsgrove, and thence by stage to Woodstown.

JOS. M. TRUMAN, JR., } Clerks.
EMMA WORRELL, }

The Executive Committee will meet at same place Sixth-day evening at 7½ o'clock, and Seventh-day 9 A.M.
D. COMLY, Clerk.

THAT which is most valuable and lovely of life on earth—sanctified friendship—cannot be said to die with those we love; but through their death, it is rather raised to a higher and more influential life. By the transfer of our loved ones to heaven, our friendship becomes spiritualized and perpetuated.—*Light at Evening-Time.*

THE following extract of a letter from Albert L. Green, Indian Agent at the Otoe Reservation, is offered for insertion in the *Intelligencer*.

OTOE AGENCY, NEB., 3d mo. 9th, 1871.

Our school is doing finely, and the progress that our Indians are making, tends to encourage us very much.

The Indian Aid Association have accomplished more than they imagine, and every dollar that Friends have sent, or will send, must materially aid in the final accomplishment of this great work.

We have awakened the Indians from the lethargy of barbarism, and they are beginning to aspire to a better way of living. They are cutting logs for houses, and almost every man of influence in the tribe contemplates building one.

We are laboring to entirely break up their mode of *village* life, and I think that in another year we will have succeeded. We have now nearly finished three houses, and have the materials ready for several more; the Indians are very much pleased with them, and want to get stock, &c., as soon as possible. If a sale of land can be effected, and money raised thereby, their progress in civilization will be very rapid.

The Otoes have returned from a very successful hunt, and many of them are busily engaged in preparing logs for the saw-mill preparatory to building substantial frame houses. The Interpreter estimates the number of logs at about 600.

We are supplying the tribe with wagons, horses, oxen, &c., but as our funds are very limited, the work goes on slowly. The sum of \$1500, which was set apart from their last annuity, together with \$2400 which was our

share of the appropriation made by Congress for the Northern Superintendency, embraces the whole amount of what we have to expend to build houses, purchase implements, teams, &c.

The trading establishment, under the charge of our storekeeper, is being conducted thus far very successfully; and the Indians appreciate the advantage of the store established by a few Friends in Philadelphia.

From "The Little Things of Nature."

EXCEPTIONS.

It is well known that all substances which have been heated, as they cool decrease in size, and become of greater specific gravity; or, in other words, a little smaller, and a little heavier. Even things that are ordinarily cold, become, under the influence of severe frost, a little smaller. The strips of iron that form the path for the wheels of the railway train becomes shorter when the frost is intense; the pendulum of a clock, in a room where there is no fire, becomes under similar circumstances shorter, and the "time" is falsified; an iron rod that, while it is red hot, exactly fits an opening, is too small for it when it has cooled. The exception to these usual phenomena is, that *water*, one of the most valuable substances in nature, instead of decreasing in volume as it freezes, occupies more room when it has become ice; and instead of becoming heavier as it freezes, is, when in the shape of ice, perceptibly *lighter*. See how admirably this operates for the advantage of man! Had water been governed by the rule that applies to other substances, in winter, when the thermometer sunk to 32°, or "freezing point," the layer of ice formed on the surface would have immediately sunk to the bottom; another layer would have taken its place, and have similarly sunk to the bottom; and in a little while the whole reservoir would have been changed into a solid mass, which no subsequent summers could have thawed, and the world would soon have become uninhabitable for want of drink. As it is, the water is preserved in its fluid form, and warm enough for use; while the surface offers a play-ground for boy and man, agreeable in its novelty and in the excitement of the exercise needful to keep the body afloat. Sea-water does not freeze till it is nearly four degrees colder than fresh water needs to be before congealing, thus assisting to keep the ocean open at all seasons.

Mark, in the next place, the curious nature of quicksilver, or mercury. A very considerable degree of heat is required to melt every other kind of metal; but mercury becomes fluid with no more heat than is supplied by the atmosphere of England! In the Arctic

regions, and wherever else the temperature sinks to -39 , or seventy-one degrees below freezing point, mercury is *solid*, resembling a lump of silver, or any other white and shining metal. *There* it needs fire to bring it into the fluid condition; but in our own happy island,—

“Great, glorious, and free,

First flower of the earth, and first gem of the sea,”

and in all countries of similar and even of harsher climate, so long as the intense rigor of the frigid zone is never experienced, mercury is permanently molten. Hence, we can use it for the construction of the thermometer, measuring every delicate change in the warmth of the air, and in the temperature of substances used in the processes of arts and manufactures, which could scarcely be attempted without the aid of this wonderful instrument. Quicksilver is one of the most extraordinary substances in nature. It supplies one of the deadliest of poisons, and one of the most potent of medicines. It is the delight of children, as its globules roll prettily up and down the tea tray, chasing one another like themselves in their swift-footed sports, and reflecting every happy little face that peers into their tiny yet brilliant mirrors; man sees in it an emblem of the heavenly flock that in this present life is broken into particles innumerable, kept asunder by the dust, the hindrances, the misunderstandings, the infirmities of the life in the body, but which are yet all of one substance and purpose, spherical and bright, in their souls; and which, though the sport of the world, and called by many names,—Ephesian and Laodicean, Episcopalian and Independent,—shall yet resolve, when assembled by Him who sitteth as the Refiner and Purifier, into glorious and everlasting unity.

One other illustration from the inorganic world, and we conclude. While quicksilver melts with the first kiss of solar warmth, *platinum* defines the utmost heat of the crucible. Hence, by the art of the welder, it can be manufactured into cups and other vessels that are required to endure the intensest fire, serving purposes of recondite chemistry which without it could never be achieved.

In the *vegetable* kingdom this admirable arrangement attracts us at all points. The idea of a plant, when developed with all its parts complete, includes root, stem, leaves, flowers, and seed. But every one of these parts is at times found to be wanting, so far as palpable and visible reality is concerned; some plants being exceptionally destitute of root, others of stem, others of leaves, &c. The absence of the respective parts gives an exquisite variety and gracefulness to the face of nature, such as no poet can describe, and no

painter depict on his canvas. Were plants always anchored to the ground by genuine roots, the mistletoe would hang no golden bough amid the gray and tattered thorns and apple-trees of mid winter, a crowd of living pearls entangled amid branches that wear the semblance of death; no lichens would enrich the old tower and dismantled castle with time-stains of purple and orange that make the deep sheen of the faithful ivy yet more lustrous in its contrasted verdure; nor would orchids dwell, like birds, amid the boughs of tropical trees, adorning the vigorous one with rich hues, and scenting it with composite and warm aroma, alike foreign to its personality, and rendering the decrepit far more beautiful in decay than it stood even in the prime of its existence. The orchids are well known to the lovers of choice flowers. After the forget-me-not, the maiden-hair fern, and the pretty uncurling leaves of our own old-fashioned English ferns, comforted with brown plumage till they are strong and tall, there are none that form such links of pleasure between the giver and the receiver. It is not, however, so well known that in their native woods they are strictly *aerial* plants,—that is to say, that they perch themselves in the clefts of the boughs, deriving their nourishment from the air and from the decaying organic matter that lodges around them, and that, if planted in earth, many of them will not live.

Of *stemless* plants we have examples in innumerable field flowers, and in many flowers of the garden, such as the tulip and the crocus. They have flower-stalks, certainly, but they have no proper *stem*. To this class of plants is mainly owing the sweetly-variegated vesture that conceals the soil, providing turf in the meadow and lawn, embroidery for them when summer comes, and tapestry of moss for the flanks of the waterfall. Fancy the aspect of a country where the earth was perennially like a street, or a newly-ploughed field, or a newly-gravelled garden walk, and the figment will be that of a world without stemless plants;—the flowers and the fruits aloft, reserved for men; no sea of daisies for the tiny ones in spring; no loved small hands overflowing with bluebell and wood anemone—to a child the blossoms of paradise itself. Among the stemless plants are many *acid* ones. The herbage of the fields is by no means the exclusively sweet and juicy fodder we may deem it. Buttercups are quite the reverse of sweet. The pastoral animals eat but few of them, and then apparently as condiments to the succulent and insipid grass, just as we ourselves take pepper and salt to our meat and potatoes. How beautiful, again, the exception in regard to many of those low-growing plants, when specially and

directly serviceable to man, that, unlike the enduring Trees,—those great, grand pillars which watch the rise and fall of generations,—*they last only for a year*. Wheat, barley, peas, beans, turnips, carrots, if not annual, are only biennial. They must be sown fresh and fresh every year; so that man, instead of living without employment; thence lapsing into indolence; thence into evils, from which occupation preserves him, as he would most certainly do, did his daily bread drop off trees into his mouth, like acorns on to the pigs' refectories in the woods—instead of this, is kept continually engaged, tilling the soil, depositing the seed, reaping, threshing, grinding, baking. These occupations call others into play. The general stimulus to all the powers of the mind shows itself in inventions, art, and sciences; and to the exceptional circumstance of the staff-of-life growing upon an annual instead of a perennial plant, man may ascribe, under Providence, a large measure of his civilization, the best temporal sign of which is the neatness and completeness of his breakfast and dinner table arrangements. As the moral culture of a community may always be judged of by its treatment of women, so may the civilization of a people or nation by the mode in which it takes its food.

(Conclusion next week.)

LINES

Written after visiting the dungeon at Carlisle, in which James Parnell was convicted by Geo. Fox, in the year 1653; and afterwards reading the account of his confinement and death in the prison at Colchester, in the year 1656.

BY THOMAS WILKINSON.

When looking heavenward from my poor estate,
Where, chained to earth, my dull affections wait;
Where love and zeal at best but feebly draw
My tardy steps to duty's holy law;
Thee, righteous Parnell! I with tears behold,
In *age* a stripling, but in *service* old;
I stand reproved by thee, thou youth Divine,
A backward *child*, with years that double thine.
On thy fair mind the boundless power of truth,
Rose strong and ardent in thy tender youth;
And led thee forward, *fearless*, without guile,
To warn the sinful of this darkened isle.
Many there were in those laborious days,
Who heard the Word and gave the Maker praise,
But watchful, fierce the arm of power arose,
And struck the servant laboring in His cause.
Now bruised, benumbed, I see thee stretched alone,
A stone thy pillow, and thy bed a stone;
I see thee sitting in thy dreary cell,
No kindling fires the unwholesome damps dispel,
No friend allowed to soothe thee in thy woe,
Thy prison-floor denied a little straw;—
The cheering food that weeping friendship sent,
From thy pale lips by ruthless spoilers rent—
My spirit melts, my eyes with tears o'erflow,
To see thee stript of every hope below.
Yet, round thy dungeon shone a light divine,
The faithful Prophet's holy fire was thine;

Thy God was near thee, and thy soul found rest,
Pure as an angel's, on thy Saviour's breast;
His tender hand still sweeter food supplied
Than all thy keeper's cruelty denied;
Sustained thus—we see thy spotless mind
In fetters faithful, and in suffering kind,
Thy spirit, meek, like His whose temples found
The plaited thorns, and bled beneath their wound.
Ye blooming youth, whose feeling bosoms glow
With tender pity o'er the tale of woe,
Here like yourselves a virtuous youth survey,
Who for his faith 'mid gloomy felons lay;
Cold, hunger, insults, fetters, stripes, he bore,
Till the last pang of innocence was o'er.
But why this suffering? That a church might spring
Pure, firm, devoted to its Lord and King;
Raised by the Almighty and His servant's hands,
Amid the nations now in peace it stands;
But does that power encompass it around
Which once bore rule? that holy zeal abound?
In much external comfort now we meet,
But do we humbly sit at Jesus' feet,—
Beneath this precious canopy of love,—
And there refreshment, for our spirits prove?
Ah! what are outraged temples rising fair,
If yet the holy Presence is not there?
Bet'er in cold, damp dungeons *still* to lie
With hearts prepared, and favored from on high.
Ye rising youth! Oh, could the tender strain
But reach *your* heart, and there not plead in vain,
It would repeat: Of pleasure's gilded snare,
However bright, beware, dear youth, beware;
Its sylvan smile may fascinate the eye,
But hid beneath, the sting of adders lie.
Then turn with bosoms simple and sincere
To that best Light which shines distinct and clear;
A light from heaven to guide you on your way,
To the pure regions of more perfect day.
This to the Youth; and oh! ye aged, too,
The warm expostulating strain allow—
Yes, well I know beneath white hairs are found
Those to the law, and testimony bound;
But there are snares maturest age assail,
And even o'er the last of life prevail.
When pleasure's restless train let go their hold,
The soul in secret hugs its Idol—*gold*.
Immortal spirits, destined for the sky,
Shall they in bondage, chained to ingots lie?
It was not so, when our forefathers rose
To advocate the Christian's glorious cause.
Dependent on their God—to Him resigned,
The world hung lightly on each faithful mind;
They knew this truth, that in a worldly heart
The love of God can have but little part.
Are we their sons, who, at the Almighty's call,
Left wives and children, houses, lands, and all,
To sound the gospel through a darken'd land,
While death and perils frowned on every hand?
Father and Lord! once more, oh! make us feel
A sacred portion of their fervent zeal;
Again, oh! shake us as in times of old,
When tens of thousands gathered to Thy fold;
When such as Burrough, Fox, and Dewsberry,
Went forth devoted servants unto Thee,
And precious Parnell for Thy cause laid down
His spotless life, and met the martyr's crown.

“THE gentle courtesy of the words and ways of one living in the light of the divine countenance is as different from the polished surface of mere worldly politeness as are the beams of the setting sun to the rays of a gas lamp.”

LONGINGS.

Dear Lord ! who loves both weak and strong,
And will the erring soul forgive ;
To whom all homage doth belong,
By whom, in whom, we all do live.

Dear Lord ! come nearer, let me touch
If but Thy garment hem, 'tis well ;
Erring, I love Thee, love Thee much,
More than my feeble praise can tell.

When dark and sad the way, it seems
A long and dreary path I tread,
Illumined by Thy love, the gleams
Of heavenly light are o'er me shed.

Infinite pity, tender love,
Mercy and peace are in Thy hand,
Stoop nearer ! send Thy heavenly dove !
And guide me to that " Better Land ! "

R. L.

POWER OF A SMILE.

I sighed to do good, but I could not. My friends and neighbors were all independent, and needed no aid from me. My means were so limited that I had nothing with which to assist the poor and needy, and my health so delicate that I could be of no service to the sick and suffering. The power of doing good, I felt, greatly to my regret, had been denied me. As I walked, musing in this way, I beheld an old man approaching. His form was bent, his cheek furrowed, his hair white and thin. In one hand was a staff, in the other was a stick, which he held across his shoulder, and upon which was suspended a wallet containing, as I suppose, a few articles of apparel. He came feebly onward, and as I drew near he stepped from the walk and stood for me to pass. I glanced at him ; his whole appearance indicated poverty and want. I did not speak, but with my feelings expressed in my face, I smiled kindly upon him. " Ah, how-de-do : how-de-do ? " instantly and with strong emphasis, spoke out the old man, his whole countenance lighting up and his whole manner changing. Nothing more was said ; we both passed in silence along.

A short time after this, at nearly the same spot in which I had met with the old man, I saw a woman sitting upon the grass, by the road-side, with her elbow upon her knee and her head resting upon her hand. She did not notice me, as I passed her, for her eyes were closed, but she looked so worn and tired and her attitude was so sad and thoughtful that my sympathies were at once excited, and I turned back to address her. In my hand I carried a small basket of early apples which I emptied upon the grass, beside the woman, saying : " Madam, you are worn and tired ; these apples may refresh you—will you accept them ? " At the sound of my voice she started, looked earnestly at me and said : " Accept them, O yes, Miss, with a thousand

thanks." Conversing with her a few moments, I learned that she had been to see a poor sister, residing several miles distant, who was sick and dying. As I turned to leave, with a few words of sympathy, she thanked me again and again, and then fixing her eyes inquiringly upon me, she said : " May n't I ask, Miss, if you ain't the young lady that spoke so kindly, last week, to my poor old father ? "

" I met an old man, just about this spot, last week, and I smiled upon him, but I did not speak," I replied. " That was my father ! " she exclaimed, grasping my hand, " and I thank you, for him, for the smile. He has talked about it ever since, and tells every day how much good it did him. And now, how much good your kindness has done me, young lady," as she pressed my hand and burst into tears. And I felt, at that moment, that I would never say again that I could not do good in the world.—*Lutheran Observer.*

A GOOD conscience is better than two witnesses—it will consume your grief as the sun dissolves ice. It is a spring when you are thirsty—a staff when you are weary—a screen when the sun burns—a pillow in death.

From the National Standard.

LETTER FROM SOJOURNER TRUTH—LAND FOR THE FREED PEOPLE.

FLORENCE, MASS., FEB. 18th, 1871.

Mr. A. M. Powell, Dear Sir :—I have been making my appeal to the people of Rhode Island and Massachusetts for seven months, to get them to petition Congress to give the Freed People a grant of land so that they can be led to earn their own living, and be taken off the support of the government. I have been hoping somebody would print a little of what I am doing, but the papers seem to be content simply in saying how old I am.

I was in hopes that this would be the last winter that those poor people would suffer so much around Washington. It is a shame, while the government has so much unoccupied land in the West where they might earn their living. I have got fifty petitions printed at my own expense, and I hope you will urge the people to sign similar ones.

I am going to Kansas in hopes of finding the land there ; and I wish to finish my work here before I go. I hope you will print all that you can on this subject and so help me in my work, for it will benefit you as well as the rest of the people. The Lord is in this work. Ycurs truly, SOJOURNER TRUTH.

P. S. Rev. Gilbert Haven of Boston is kindly aiding me in getting petitions signed, and will send all of the Massachusetts petitions to Congress for me.

[The following is the petition referred to by Sojourner Truth. We hope it may receive many signatures, and be favorably considered at an early day by Congress.—ED.]

PETITION.

To the Senate and House of Representatives, in Congress assembled :

Whereas, through the faithful and earnest representations of Sojourner Truth (who has personally investigated the matter), we believe that the freed colored people in and about Washington, dependent upon Government for support, would be greatly benefited and might become useful citizens by being placed in a position to support themselves;

We, the undersigned, therefore earnestly request your Honorable Body to set apart for them a portion of the public land in the West, and erect buildings thereon for the aged and infirm, and otherwise so to legislate as to secure the desired results.

DRESSING WITH PLAINNESS.—It would lessen the burdens of many who find it hard to maintain their place in society. It would lessen the force of the temptations which often lead men to barter honor and honesty for display. It would lessen, on the part of the rich, the temptation to vanity. It would lessen, on the part of the poor, the temptation to be envious and malicious. It would save valuable time. It would relieve our minds from a serious pressure, and thus enable us to do more for good enterprises.

FROM "MY STUDY WINDOWS."

BY JAMES RUSSELL LOWELL.

THE ROBIN.

The return of the robin is commonly announced by the newspapers, like that of eminent or notorious people to a watering-place, as the first authentic notification of spring. And such his appearance in the orchard and garden undoubtedly is. But, in spite of his name of migratory thrush, he stays with us all winter, and I have seen him when the thermometer marked 15 degrees below zero of Fahrenheit, armed impregnably within, like Emerson's Titmouse, and as cheerful as he. The robin has a bad reputation among people who do not value themselves less for being fond of cherries. There is, I admit, a species of vulgarity in him, and his song is rather of the Bloomfield sort, too largely ballasted with prose. His ethics are of the Poor Richard school, and the main chance which calls forth all his energy is altogether of his belly. He never has those fine intervals of lunacy into which his cousins, the catbird and the mavis, are apt to fall. But for a' that and twice as muckle's

a' that, I would not exchange him for all the cherries that ever came out of Asia Minor. With whatever faults, he has not wholly forfeited that superiority which belongs to the children of nature. He has a finer taste in fruit than could be distilled from many successive committees of the Horticultural Society, and he eats with a relishing gulp not inferior to Dr. Johnson's. He feels and freely exercises his right of eminent domain. His is the earliest mess of green peas; his all the mulberries I had fancied mine. But if he gets also the lion's share of the raspberries, he is a great planter, and sows those wild ones in the woods, that solace the pedestrian and give a momentary calm even to the jaded victims of the White Hills. He keeps a strict eye over one's fruit, and knows to a shade of purple when your grapes have cooked long enough in the sun. During the severe drouth a few years ago, the robins wholly vanished from my garden. I neither saw nor heard one for three weeks. Meanwhile a small foreign grape-vine, rather shy of bearing, seemed to find the dusty air congenial, and, dreaming perhaps of its sweet Argos across the sea, decked itself with a score or so of fair bunches. I watched them from day to day till they should have secreted sugar enough from the sunbeams, and at last made up my mind that I would celebrate my vintage the next morning. But the robins, too, had somehow kept note of them. They must have sent out spies, as did the Jews into the promised land, before I was stirring. When I went with my basket, at least a dozen of these winged vintagers bustled out from among the leaves, and alighting on the nearest trees interchanged some shrill remarks about me of a derogatory nature. They had fairly sacked the vine. Not Wellington's veterans made cleaner work of a Spanish town; not Federals or Confederates were ever more impartial in the confiscation of neutral chickens. I was keeping my grapes a secret to surprise the fair Fidele with, but the robins made them a profounder secret to her than I had meant. The tattered remnant of a single bunch was all my harvest-home. How paltry it looked at the bottom of my basket—as if a humming bird had laid her egg in an eagle's nest! I could not help laughing; and the robins seemed to join heartily in the merriment. There was a native grape-vine close by, blue with its less refined abundance, but my cunning thieves preferred the foreign flavor. Could I tax them with want of taste?

The robins are not good solo-singers, but their chorus, as like primitive fire-worshippers, they hail the return of life and warmth to the world, is unrivaled. There are a hundred

singing like one. They are noisy enough then, and sing as poets should, with no after-thought. But when they come after cherries to the tree near my window, they muffle their voices, and their faint *pip, pip, pop!* sounds far away at the bottom of the garden, where they know I shall not suspect them of robbing the great black-walnut of its bitter-rinded store. They are feathered Pecksniffs, to be sure, but then how brightly their breasts, that look rather shabby in the sunlight, shine in a rainy day against the dark green of the fringe-tree! After they have pinched and shaken all the life out of an earthworm, as Italian cooks pound all the spirit of a steak, and then gulped him, they stand up in honest self-confidence, expand their red waistcoats with the virtuous air of a lobby member, and outface you with an eye that calmly challenges inquiry. "Do I look like a bird that knows the quality of raw vermin? I throw myself upon a jury of my peers. Ask any robin if he ever ate anything less ascetic than the frugal berry of a juniper, and he will answer that his vow forbids him." Can such an open bosom cover such depravity? Alas, yes! I have no doubt his breast was redder at that very moment with the blood of my raspberries. On the whole he is a doubtful friend in the garden. He makes his dessert of all kinds of berries, and is not averse to early pears. But when we remember how omnivorous he is, eating his own weight in an incredibly short time, and that nature seems exhaustless in her invention of new insects hostile to vegetation, perhaps we may reckon that he does more good than harm. For my own part, I would rather have his cheerfulness and kind neighborhood than many berries.

THE TRUE USE OF WEALTH.

The majority of those who have any control over money are usually much more concerned about its acquisition than its disbursement. The idea that money is hard to get and easy to spend, is so thoroughly woven into the minds of men that they are usually content to put all their serious energies into the former, leaving the latter to follow as a pleasant pastime, or, at the most, giving it but the remnants of their attention. Yet as all (excepting, perhaps, the confirmed miser) will admit that money is a means to an end, it is plainly unwise to devote excessive attention to its acquirement while the very purposes for which we acquire it remain unfulfilled, or, at best, but imperfectly accomplished. To attain any end it is not sufficient to possess the requisite means; we must also wisely adjust those means to the object in view. In the carrying out of our national

school system, the appropriation of funds, though a primary necessity, would of itself be useless, unless thought, judgment, and discretion guided their disbursement. So in every one's pecuniary affairs, the utmost industry and energy may be exerted to *obtain* money, but unless its expenditure be wisely controlled, its purposes will be frustrated, and its value comparatively lost. It is from the failure to recognize the importance of this truth, that the fallacious idea originates that money is a curse rather than a blessing. As well might water be called a curse, because it can be put to the ignoble purpose of the suicide; or food, because the vice of gluttony degrades humanity. The misuse of any blessing is no argument against its value. Its true worth to mankind can only be determined by its highest capability of producing good; and from this standpoint we can never over estimate the real value of money. Henry Taylor says, "If we take account of all the virtues with which money is mixed up, honesty, justice, generosity, charity, frugality, fore-thought, self-sacrifice, and of their correlative vices, it is a knowledge which goes near to cover the length and breadth of humanity; and a right measure and manner in getting, saving, spending, giving, taking, lending, borrowing, and bequeathing, would almost argue a perfect man."

That this blessing, however, is often abused and made the instrument of injury instead of good, and that in the large majority of instances it fails in the end to meet our expectations, are facts too patent to need assertion. Passing by the many forms of profligacy and sensual vice to which money is made to minister, and the more refined, but scarcely less degrading folly of fashionable extravagance, which, in multiplying luxuries, sacrifices all the noblest ends of life—which of us is satisfied with the results that have accrued from his expenditures? Which of us can say that even his own hopes in this direction have been realized, or that, as far as they have been accomplished, the happiness he expected has ensued? What is the secret of the disappointment that creeps in so insidiously to poison the cup of pleasure that we had hoped to earn by persevering industry, and untiring endeavors? Perhaps the chief cause of this wide-spread dissatisfaction, is, that most men fail clearly to recognize and keep in view the *ends* which they choose to accomplish through the medium of money. These are usually so numerous and varied, that they become confused and indistinct in the mind. They need to be graded in our estimation, and its proper rank assigned to each. The happiness which we may legitimately expect from money, will flow, not from the large amount we expend,

nor the variety of objects we aim at, but from their wise selection, their judicious apportionment, and a steady and courageous discipline which shall enable us to refuse to employ our means in other methods than those which our best judgment approves. Its primary objects are the health and comfort of the body; the education and improvement of the mind and the advantages of social intercourse. But few realize the smallness of the cost necessary to secure these. Emerson says, "The end sought in the hunger for wealth, is plainly to secure the ends of good sense and beauty from the intrusion of deformity of any kind. But what a train of means is used. * * * Wealth is good, as it appeases the animal cravings, cures the smoky chimney, silences the creaking door, brings friends together in a warm and quiet room. But in the exertion to remove the inconveniences, the main attention has been diverted to this object—the old aims have been lost sight of, and, to remove friction, has come to be the end."

To appreciate the true end of money we must recognize the true end of life. If we live for noble aims and high purposes, then whatever means may fall to our lot to possess, be they little or much, will be used to clear away the obstructions which hinder such a path. Into such a life wealth cannot flow too abundantly. When devoted to noble purposes, riches receive a lustre that they can never attain in the hands of the man whose objects are low and selfish.—*Ledger*.

MAKING people happy is neither a small nor an unimportant business. As I regard good nature as one of the richest fruits of true Christianity, so I regard the making of people round about us happy as one of the best manifestations of that Christian disposition which we are commanded to wear as a garment.—*Beecher*.

ITEMS.

THE LONGEST TUNNEL IN ENGLAND.—The London and Northwestern Railway, from Liverpool and Manchester to Huddersfield and the North, passes through a range of hills separating Marsden on the Yorkshire side and Diggle on the Lancashire side, the range bearing the name of Stand Edge, and it has now three tunnels running through it—one a canal tunnel, and the other two for the purposes of the railway. The first-named was commenced in 1794 and completed in 1811; length, 5,451 yards, or three miles and 171 yards; cost, £128,803; and the loss of life during its progress was serious. The first of the two railway tunnels is shorter than the Stand Edge one by about 40 yards, Stand Edge being three miles and 60 yards long. It was commenced in 1845 and completed in 1848; the cost was £171,003 12s. 3½d., of the approaches

£30,605, making a total of £201,608, and the largest number of men employed on the undertaking was 1,953. Nine fatal accidents occurred in its construction. The new tunnel was commenced in the middle of 4th mo., 1868, and was completed in the middle of 10th mo., 1860, or six months earlier than the time specified. Its exact length is 5,435 yards, one yard less than its twin tunnel; but the actual length constructed is 5,279½ yards, the difference arising from a short piece at each end having been made when the first tunnel was executed. The whole length is lined with red bricks, faced with blue Staffordshire bricks. The height of the tunnel inside the brick work is 20 feet and the width 15 feet. The total quantity of brickwork built is 52,156 cubic yards, the total number of bricks used being 16,831,149, the total weight of which amounts to 68,000 tons; 6,271 tons of coal, 472 tons of coke, 2,421 tons of lime, 140 tons of cement were consumed; and of powder 1,744 casks, equal to 174,400 pounds; fuzes, 35,853 coils, each 25 feet, equal to 170 miles; candles, 8,745 dozen pounds, equal to 104,940 lbs., oil, 6,416 gallons; and vast quantities of timber were used. The rubbish was conveyed away by means of tramways, which ran through passages under the railway, and was tipped into boats on the canal before mentioned. It was conveyed through "break-ups" or cross-headings. For the conveyance of the material used in the construction of the tunnels 25 boats and four steamboats were constantly plying, and an immense expense had to be incurred in erecting huts, providing business offices and putting down costly plant for economizing labor. Only one life has been lost during the construction, but there have, of course, been plenty of accidents of a less serious nature. The work has been pronounced satisfactory in all respects, and the line is reported as being one of the smoothest portions of railway travelling in the kingdom. The line was opened about the middle of last month for regular traffic.—*Daily paper*.

We clip from the *N. Y. Journal of Commerce* the following notice of a law now enforced in Ohio:

"Sec. 3. Every husband, wife, child, parent, guardian, employer or other person who shall be injured in person, property or means of support by any intoxicated person, or in consequence of such intoxication, habitual or otherwise, shall have a right of action against both the person who sold the liquor and the landlord who owns the premises on which the sales were made."

A great number of suits have been brought under this law, which is said to be working well. The widow of a physician has obtained a verdict of \$5,000 against the rum seller who sold the liquor which killed her husband; a mother received \$2,800 for the death of a son, and other mothers, wives and sisters have been awarded damages. It is provided in the law that a judgment obtained under it shall become a first lien upon the premises, and, in default of payment, everything—buildings, barrels, decanters and tumblers—may be knocked down at sheriff's sale.

A meteorite is reported to have been discovered embedded in the Miocene strata of Greenland. This makes it a fossil meteorite, if that term is admissible, and as such it is highly interesting as being the first of its kind. It has been offered to the British Museum for the sum of £240.

From "Reformers and Martyrs."

JOHN WESSEL.

(Concluded from page 83.)

Resuming his residence in Paris, he was soon afterward invited by Philip, Elector Palatine of the Rhine, to a position in the University of Heidelberg; which invitation he accepted about the fifty-eighth year of his age. In this same city Jerome of Prague had, about seventy years before, on publicly posting up reformatory theses, been peremptorily forbidden to call in question the prevalent dogmas. Here also Melancthon afterward studied, and Luther at a still later day kindled much ardor for the doctrines of the reformation. The elector, it seems, was desirous that he should lecture on theology; but here an obstacle soon presented itself. Wessel had never taken a degree as Doctor of Theology, and had always refused on any account to submit to the tonsure as a priest; and the faculty would by no means consent to such an innovation as to place one who was not holding such an ecclesiastical position, in that professorship. He therefore took the chair of Philosophy, in his capacity of Master of Arts. His lectures included some reference to the Greek and Hebrew languages, and afforded him frequent opportunities of freely speaking his sentiments on the defects and corruptions of the Romish system, and of what was called theological science. He continued his labors at Heidel-

berg for but a few years. "It was he," says Ullmann, "who sowed the first seeds of that purer Christian doctrine, which we find springing up here, with so rich a growth, about the commencement of the sixteenth century."

But his free teachings, so opposite to the scholastic dogmatism of those times, was not likely to make his abode in Heidelberg a couch of ease. A jealousy also ensued among the other teachers, who saw and felt his preponderating influence. The monks hated him for his determined opposition to their bigotry and superstition; and their inclination to bring him into trouble showed itself at various times in a way which convinced him that they only wanted opportunity for the commencement of persecution. About the year 1479, his friend John Ruchrath of Wesel was imprisoned, and his writings condemned by the Inquisitors, and a report reached Wessel that he was even condemned to be burned. This he looked upon as a clear indication of what might perhaps soon befall himself. He had already retired from Heidelberg into his native country of the Netherlands, being weary of the animosity which pursued him. He now appears to have taken the resolution to spend the approaching evening of his life in comparative privacy. The dreaded prosecution, however, was averted, probably owing in part at least to the known protection and hospitality

extended to him by David of Burgundy, Bishop of Utrecht and half-brother of Charles the Bold; a man who delighted in the society of men of great talent and celebrity, and endeavored to promote some reform in the ecclesiastical body. This prelate once wrote to Wessel: "I know there are many who seek your destruction; but while I am alive to protect you this shall never be."

The biographer of Wessel to whom we have so often referred, says in regard to this period of his life: "Wessel believed that the time was now come for him to direct the current of his life more into the channel of peaceful contemplation. In doing so, however, he did not cease to employ his pen and tongue as industriously as ever, but only gave to his industry a more calm and exclusive character. He frequently visited his friends, and received visits in return. It was his custom annually to repair to the scene of his early education, Zwoll and the contiguous Mount St. Agnes. Here he was surrounded with the memories of former years, especially of his paternal friend Thomas à Kempis, and in no spot of his native land did he love so much to dwell. From the abode thus endeared to him by the remembrances of youth, Wessel was wont to resort to the monastery Adwerd [about two leagues from Gröningen], where he had many friends and scholars, to whose number he was continually adding." Belonging to this monastery "there was a sort of academy, frequented by the youth from all Friesland, who, in a lower school, were taught the elementary branches of knowledge, and then promoted to a higher, where, under professors of greater learning, they prosecuted their studies in philosophy and theology. These schools had formerly been in a very flourishing condition * * * but they were now somewhat upon the decline. Wessel made great efforts to revive them, in which, at the outset, he was supported by the abbot, Henry Rees. At his death, however, hindrances were cast in his way. During his visits to Adwerd, he endeavored to operate on the minds of the monks and the susceptible youths. He encouraged them to the study of Hebrew, explained to them the Psalms, pointed out the mistakes in the Vulgate, answered the questions and solved the difficulties they proposed; and occasionally read aloud a passage from the original Hebrew text, at which all that the monks could do was to wonder at the outlandish sounds. These exertions were not unsuccessful. Adwerd, for a time, united together all the men of learning in Friesland and the surrounding countries."

"In like manner Wessel everywhere en-

deavored to operate upon the young, and sow the seeds of improvement in their souls. He directed their attention to what was defective and pernicious in the prevailing method of education * * * and prepared their youthful minds for the rise of a brighter day, which he never doubted would come at last, but of which he only caught a distant view." "Wessel used to foretell, with the most perfect certitude, the speedy and total overthrow of scholasticism. To one of his favorite pupils, who applied to him for advice about the prosecution of his studies, he said, 'Young friend, you will live to see the day when the doctrine of Thomas Aquinas and Bonaventura, and such other modern dialectical theologians, will be rejected by all truly Christian divines.'" This was literally fulfilled, Oestendorp, the student alluded to, being still living about the year 1528, at which time scholasticism had received its fatal blow from the reformation.

"Upon another occasion he declared, 'It will come to pass ere long, that these irrefutable teachers, with their hoods and cowls, both black and white, will be forced to retreat within due bounds.' In this manner Wessel guided the current into a new and better channel * * * and as they had once done to Gerhard Groot and Florentius Radewins, persons of all ages from the surrounding district resorted to the old and experienced man for advice and instruction." "In the list of Wessel's scholars, the two who, both as the oldest and the most distinguished, undoubtedly claim the highest place, are Rudolph Agricola and John Reuchlin." In this manner, as well as in his published works, did Wessel's labors serve to prepare the minds of his countrymen for the great change which took place in the next century.

"The piety of Wessel," says Ullman, "evinced itself most of all as a vital consciousness of dependence upon God, and complete devotedness to his will * * * 'All that I have,' he says, addressing the Divine Being, 'is from thee. Not by my own wisdom, or my own device, or my own labor, am I what I am; but I am this and all else because such has been thy will. Thou hast commanded, and I am here. And for this reason, I do not merely commit myself to thee with confidence, or devote myself to thee in faith, but, as is my duty, I give myself wholly up to thy will. Use me according to thy free pleasure. Created for thy sake and by thyself, out of nothing, I ought to seek and expect nothing but thy glory. Then, whatever befalls me, provided it comes from thee, will be right. * * * Let this one thing suffice for my comfort, to know that such is the will of Him, without

whose will not even a leaf drops from a tree; and in all situations let it be the firm anchor of my tossing bark, to have no other will but thine."

"And no less does his piety manifest itself as sincere and profound humility. Thoroughly as his mind was imbued with love to the Divine Being, he yet possessed that child-like modesty which considers its affection as far beneath the dignity of its object, and a consciousness that all he had to offer to God bore no proportion to what he had received from Him. 'What shall I render to Him for his gifts,' he asks, 'to whom I can render nothing which is not already his own, nothing which I have not obtained from Him, and obtained as a boon? Woe is me! I must not be ungrateful, and yet to give Him gift for gift in the least degree, is impossible. My very self and all that is mine is thine, O Lord, whether I choose or not. I received it without desert, and I possess it without the power of making any return for it. * * * With immeasurable obligations on the one hand, and total penury on the other, all that is left for me is to acknowledge and confess, and refer all to Him, and to admire, love, glorify Him, and sweetly enjoy His bounties.' And in another place: 'What can I give to Him who gives all to me? The violet of spring exhales its fragrance to the fostering sun. The winged gnat sports in its beams. But to Him who is my spiritual sun, what can I give in return? In truth, to render to Him anything of my own is impossible, and, toward such a lover, would be dreadful ingratitude and neglect of duty. * * * * The only thing which I can give is a grateful heart.'"

In another passage of the same work (*Exempla Scalar Meditationis*), he thus fervently expresses his feelings on the love of God to be perfected in heaven: "Oh, that will be a happy day, when I shall love, and not merely love, but love with all my heart, and soul, and spirit! Nor will it even suffice that I truly, and sincerely, and purely love, but the nerve and force of my affection will be unspeakably heightened by Him who was born and gave himself for me. So that my love will then be exalted as far above that which we now feel, as heaven is above the earth, the sun above a spark, and the universe greater than a grain of mustard seed. And with a love thus elevated and inflamed will I keenly and fervently long and hunger and thirst after my God, and when at last my desires shall be crowned, and I shall possess and embrace their object, who will then paint my bliss? Who can comprehend it, that has not burned with the same ardor? Blessed, therefore, yea truly

blessed that day! Its blessedness is such as no eye hath seen, nor ear heard, neither hath it entered into the heart of man to conceive."

Yet it appears that toward the close of his life his mind was permitted to be brought into some painful conflicts. To a friend who visited him in his last illness, he is reported to have said, that according to his time of life and condition he was well, but had great trouble one way; for that he was tossed to and fro by conflicting thoughts, and even began to doubt of the truth of the Christian religion. Ullman says that "even at former periods he had not been exempt from inward conflicts and scruples. But that which was the inmost and highest power of his life soon obtained the victory in the breast of Wessel. Many a time before, in a lively faith in the Redeemer, he had obtained inspiring glimpses into the eternal world, and long had he anticipated and extolled the happy day on which he would pass to an infinitely perfect life of love. And now, when the hour of his departure approached, he met it with steadfastness and joy. To the friend, when he repeated his visit, he said, 'Thank God, all the vain thoughts of which I spoke have vanished, and now I know nothing but Jesus Christ and him crucified!' * * * A peaceful death at length emancipated his spirit, on the 4th day of October, 1489, and, supposing him to have been born in 1419 or 1420, at the age of sixty-nine or seventy." He left quite a number of works on various religious subjects, many of which, probably published only in manuscript, have been lost.

LOWELL thus draws a lesson from the foot-prints and rain spots of the sandstone: "Perhaps it was only because the ripple and the rain-drop and the bird were not thinking of themselves that they had such luck. The chances of immortality depend very much on that."

EXTRACT FROM A LETTER ADDRESSED TO THE EDITORS, BY A SUBSCRIBER.

I may mention one subject that is agitating the common mind of our Society, viz.: the decrease of interest and life among us, and the method best calculated to get up a more healthy state of things.

An idea seems to have got into the minds of many well-disposed and concerned Friends, that the *seeing* this state of things existing is a sufficient warrant for some sort of action. These apparently adopt as their rule of action the proverb, "Go get thy spindle and thy distaff ready, and God will give the flax;" about which there can be no disputing, pro-

vided the *needful* preparation is of the Lord. (And of this there can be no safer rule for judging than has been given: that of examining the fruits.) This side of the case has found expression at various times in the *Intelligencer*, and to some extent in an article (Review of Editorial) in No. 2, and I would suggest whether it be courteous to deny the publication of communications from those who have a fear that these movements are superficial, with a "tendency to a superficial view of Quakerism?" Especially when it is known they proceed from Friends known to be "zealously affected always in a good thing,"—who represent faithfully those among us who firmly believe that the Lord is able to carry on His great work in the earth, and among His people; that the mountains of difficulty surround us, and the flood gates are opened to the inflowing of the great tide of weaknesses, threatening to swallow us up. The command still is, to "stand still and behold the salvation of God,"—to tarry even at Jerusalem for the endowment.

Were it desirable, I should not shrink from a discussion of this and some other subjects that seem to be opened in an especial manner for consideration at this time; for I believe it to be clearly demonstrable in the light of Truth that those who seem slow to run in the Master's cause, and careful to put not forth the hand unbidden to steady the ark, are resting upon the sure foundation whereon the Church must be established, though it does expose them to the charge of advocating a "do-nothing policy." A. H. H.

Maryland, 3d mo., 1871.

For Friends' Intelligencer.

"A POINT OF ORDER AND DISCIPLINE," AGAIN.

To some of us who have grown gray in the maintenance of the discipline, established in 1719, relative to the appointment of overseers to attend marriages, the proposition of your anonymous correspondent "to amend this rule so that the parties concerned might make their own selection among their friends, &c.," seemed strange. Nor can we accede to his position, that "the present practice proves the general sentiment in regard to the privilege, which individuals should have, in the selection of overseers at weddings." More strange still, when we found that you had fallen into the same errors, and advocated the same measures.

We can readily suppose that the presence of solid, religiously-concerned overseers, has frequently exercised an *irksome restraint*—none the less needed on that account—over the giddy and thoughtless youth, who often attend marriages. I have long believed, that it is more from a desire to escape this restraint,

than from a concern to lessen the number in attendance, that wedding parties wish to select their own overseers.

Where wealth and affluence prevail, and their concomitant fashions and follies are indulged in, we generally find a corresponding disregard for the plain and simple principles and practices which have ever characterized Friends.

Hence, we are left to infer, and I believe that proper inquiry will sustain the inference, that this "time-sanctioned usage" had its origin in the city, and among the class of citizens which has been designated. And, further, that the practice has been mostly confined to the city until a very recent period, when it has gradually extended to the neighboring districts.

I always rejoice to find a religious concern to have the attendance small; but to such I would say, you already possess a more effective means to secure this object, than by having recourse to this disorderly practice.

Friends seem to have almost forgotten, that the oversight and proper conduct of marriages is a religious concern of Society, in its collective capacity, the administration of which has been delegated to the executive department—the *Monthly Meetings*—not to the individuals specially concerned, but for their encouragement and assistance, in preserving and maintaining good order.

The proposed change of discipline would only invalidate the necessary and proper concern of Society for its members, and cover up, rather than correct, their violations of order; while the *placebo*, offered by the editors, with its significant *proviso*, would only cut the Gordian knot, by substituting an inefficient and meaningless *form*, for a deep and abiding *religious concern*.

We need not marvel, therefore, at the dissatisfaction which is acknowledged to exist among order-loving Friends. That it may continue, and greatly increase, is the desire of
Your friend, E. MICHENER.

New Garden, 3d mo. 28th, 1871.

P.S.—As you may properly remark: The *responsibility* of the overseers of a marriage is greatly enhanced by the present discipline. The Monthly Meeting is authorized, virtually, to appoint a time and place for holding a solemn religious meeting. To secure this purpose, it is required to choose four suitable Friends to attend, and see that the meeting is properly held; and to report. The responsibility is here placed *upon*, and cannot be removed *from*, the Monthly Meeting. It must, therefore, be a palpable dereliction of this solemn duty, for the meeting to allow some outside, irresponsible, and perhaps incompetent parties, to assume its functions.

DR. FUSSELL.

FROM an obituary notice of Dr. Fussell, sent us by a friend, we make the following extracts :

The life of Dr. Bartholomew Fussell, whose recent death was announced a short time since, was in many respects so remarkable as to elicit further comment.

He was born in Chester county, Pa., in 1794, his ancestors being members of the Society of Friends, principally of English origin, who arrived in America during the early settlement of Pennsylvania, some being of the number who, with William Penn, built their homes on the unbroken soil where Philadelphia now stands.

He inherited all the bravery of these early pioneers, who left their homes for the sake of religious freedom, the governing principle of his life being a direct antagonism to every form of oppression. Removing in early manhood to Maryland, where negro slavery was legally protected, he became one of the most active opponents of the system, being a friend and colaborer of Elisha Tyson, known and beloved as "Father Tyson," by all the slaves of the region, and to the community at large as one of the most philanthropic of men.

While teaching school during the week as a means of self-education, and reading medicine at night, the young student expended his surplus energy in opening a Sabbath school for colored persons, teaching them the rudiments of knowledge, not for a few hours only, but for the whole day, and frequently finding as many as ninety pupils collected to receive the inestimable boon which gave them the power of reading the Bible for themselves. To the deeply religious nature of these Africans this was the one blessing they prized above all others in his power to bestow, and the overflowing gratitude they gave in return was a memory he cherished to the latest years of his life. * * *

He was one of the most earnest workers in the anti-slavery cause, never omitting in a fearless manner to embrace an opportunity to protest against the encouragement of a pro-slavery spirit.

Returning to Pennsylvania to practice his profession, his home became one of the havens where the hunted fugitive from slavery found food, shelter and rest. Laboring in connection with the late Thomas Garrett, of Wilmington, Del., and with many others, at available points, about 2,000 fugitives passed through his hands on their way to freedom, and amongst these he frequently had the delight of welcoming some of his old Sabbath-school pupils. The mutual rec-

ognition was sometimes touching in the extreme. * * *

But it was not slavery alone which occupied the thoughts and attention of this large-hearted man. He was well known as an advocate of common school education, of temperance, and of every other interest which, in his view, pertained to the welfare of man.

Unfortunately, he was addicted to the use of tobacco from his youth. Having become convinced that it was an evil, he, for the sake of consistency and as an example to others, resolutely abandoned the habit at the age of 70. He was fond of accrediting his resolve to a very aged relative, who, in remonstrating with him upon the subject, replied to his remark that a sudden cessation from a practice so long indulged in might result in his death: "Well, die then, and go to heaven decently." * * *

He believed in woman as only a thoroughly good man can, and from early youth he had been impressed with her peculiar fitness for the practice of medicine. The experience of a physician confirmed him in his sentiments, and it became one of his most earnest aspirations to open to her all the avenues to the study of medicine. In the year 1840 he gave regular instruction to a class of women, and it was through one of these pupils that the first female graduate in America was interested in the study of medicine. In 1846 he communicated to a few liberal-minded professional men a plan for the establishment of a college of the highest grade for the medical education of women. Others, with indomitable zeal, took up the work, and finally, after a succession of disappointments and discouragements from causes within and without, the Woman's College on North College avenue, Philadelphia, starting from the germ of his thought, entered on the career of prosperity it is so well entitled to receive. Though never at any time connected with the college, he regarded its success with the most affectionate interest, considering its proposition as one of the most important results of his life.

Happy in having lived to see slavery abolished, and believing in the speedy elevation of woman to her true dignity, and in the mitigation of the evils of war, intemperance, poverty, and crime which might be expected to follow such a result, he rested from his labors and died in peace.

INDEED, it is woful when the young usurp the place, or despise the wisdom of the aged; and among the many dark signs of these times, the disobedience and insolence of youth are among the darkest. But with whom is the fault? Youth never yet lost its modesty

where age had not lost its honor; nor did childhood ever refuse its reverence, except where age had forgotten correction. The cry, "Go up, thou bald head," will never be heard in the land which remembered the precept, "See that ye despise not one of these little ones;" and although, indeed, youth *may* be come despicable when its eager hope is changed into presumption, and its progressive power into arrested pride, there is something more despicable still in the old age which has learned neither judgment nor gentleness, which is weak without charity, and cold without discretion.—*Ruskin.*

EXTRACT FROM "THE CONVERSION OF ST. PAUL."

BY G. J. GEER.

The trouble is, not that men like Saul of Tarsus persecute the Church of Christ, but that *indifference to truth prevails*.

Discussions are no evidence of earnest desire to get at the truth. Few of them reach a whit deeper than to give food to vanity, to drill, to acquire facility in argument, or to justify national, individual, family, sectional, or hereditary prejudices or sins. The old gladiatorial contests of the Grecian games have disappeared, but there has been a transmigration of their soul. Their spirit has been infused into and transfused throughout the gladiatorial games of intellectual combat, which so often serve but to perplex the mind.

Truth is a solemn, awful reality; an unspeakable gift, to be valued, loved, labored for, died for. To attain unto its possession is the greatest of blessings. To be ever laboring for it, from no desire of personal, temporal, selfish ends, but in its own cause, for its own sake, for humanity's sake, for the glory of God, is the highest of duties. There is, we may be sure, more meaning in these most significant words of our blessed Lord, than we are apt to give to them: "He that doeth His will, shall know of the doctrine, whether it be of God"—*i. e.*: He who discharges his duties as they rise up before him, with zeal and fidelity, without avoidance or neglect, shall be led on by the hand of God into the most intimate presence of those truths, which can be understood only by those who sincerely seek the knowledge of the will of the Lord. "The secret of the Lord is with them that fear Him." And to fear God truly, covers the whole ground. It comprehends, involves, and *leads* to all duty—all truth.

This indifference to truth suggests above all others one painful reflection. So long as it prevails there can be little hope of agreement—of unity. God will not, by any special act of His Providence, or by the power of His

Spirit, bring men to its knowledge, until they really desire it—and for its own sake. For then only will they prize and preserve it—labor and live for it. Men who are thinking most of everything else but the truth of God, are not the men to whom He will, in any special manner, by any special act, make His truth known. Saul was ready, the moment the true light of heaven broke in upon his soul, for any service. He was not the man to ask, "Lord, what wilt thou have me to do?" with a mental reservation to do that will or not according to his inclination or fancied interests. He would take the consequences of an answer to his prayer. He would aim to be equal to the responsibilities which it imposed. In like manner, only as any one, in full purpose of heart, turns his steps heavenward, to follow where God shall lead, will it be a glorious announcement when, as of Saul, it shall be said of him, "BEHOLD HE PRAYETH!"

A SPEAKING PORTRAIT.—There is an old Greek story of a woman of dissolute life, who was sitting one night at supper in the midst of a company of revelers, when her eye lighted on the portrait of a sage and virtuous man on the wall opposite. Its calm and thoughtful expression arrested her attention. She thought of the serene, subdued, contented mind that looked forth in those noble lineaments. The contrast of all this with her own rude life and wretched heart struck her powerfully. She rose up from that festive board, forsook her old associates and way of life, and sought peace in the path of wisdom and virtue.

When we read that story, it seemed to us to symbolize the force of example. No good life is without power. Even the face of a good man awakens and moulds to goodness those who behold it, though his lips are silent. We all know that the most powerful influence we ever felt was that which did not assert itself—did not seem even to be conscious of its own power—but swept over us, still as the breeze, penetrative as the radiations of light, vanquishing us without alarming our pride, or waking up our sleeping prejudices to arm themselves for resistance.

CHARACTER IS POWER.—It is often said that knowledge is power, and this is true. Skill or faculty of any kind carries with it superiority. So, to a certain extent, wealth is power, and genius has a transcendent gift of mastery over men. But higher, purer, better than all, more constant in its influence, more lasting in its sway, is the power of character—that power which emanates from a pure and lofty mind.

Take any community, who is the man of

most influence? To whom do all look up with reverence? Not the "smartest" man, not the cleverest politician, nor the most brilliant talker, but he who in a long course of years, tried by the extremes of prosperity and adversity, has proved himself to the judgment of his neighbors, and of all who have seen his life, as worthy to be called wise and good.

Scraps

FROM UNPUBLISHED LETTERS.

* * * * For some weeks past, thou hast been the frequent companion of my thoughts, and I have felt much sympathy towards thee, with much desire to write to thee as an evidence thereof. Yes, my daughter, it is a time of much travail of spirit, on account of the precious cause of Truth, and the preservation of the professors of it. But there is this consolation, that if we abide in our proper places, and keep to our hidden exercises, we may hope for the best of company, even though we may not always be sensible of it. For it must be so, that where the Master is, there shall the servant be. Now, why shall we give way to gloom and discouragement, when we do our best and are faithful? Every age and generation of the dedicated followers of the Lamb, have their portion of sufferings for the seed's sake, both in themselves and others. Thus, as they fill up their various portions of allotted duties, they wash their robes, and come through great tribulations. But what matter, after the race is run, and the prize obtained, whether this span of probationary existence has been passed in the sunshine of ease and prosperity, or lingered out in conflicts with affliction, pain, anxiety and deep tribulations? There are many things that we meet with, which to our comprehension seem mysterious—the why, and the wherefore, are hidden from us. But in this we may rest assured, that the righteous Judge of all the earth doeth that which is right. With Him we may safely leave the disposal of all things, and labor to bring our minds into acquiescence with the will Divine. David knew this when he said, "Cast thy burden on the Lord, and He will sustain thee, He will never suffer the soul of the righteous to be moved."

Thy acceptable letter was duly received, and gave a satisfactory though affecting account of the manner in which thy sympathies with suffering and affliction have been employed. Ah! my dear S —, amidst all

the supposed intellectual advancements and accumulations of knowledge, how little is really known of "the hand of God," or the voice of Divine wisdom in the dispensations of His providences!

The "blessings concealed" in the various trials and proving seasons allotted or permitted us to pass through, how little understood! Yet, our Heavenly Father knows our frame, and remembers we are dust. His mercies and His long suffering kindness fail not. "Oh! that men would praise Him for His goodness, and for His wonderful works to the children of men."

* * * * The economy of heaven is not wasteful, but the condescension of Divine Love often bears with human weakness, and adapts its administrations to our low estate. We know something of the patience and long-forbearance exercised toward ourselves, by our merciful Creator and Preserver. Hence, we can understand that in various ways He may adapt His dealings with others as He has towards us, and His manifestations also, according to their states and conditions. Jesus said, "In my Father's house are many mansions;" we may say, "many apartments," to make the simile plain to our common understanding. We know how various the occupancy and use of the different rooms of a house, from the garret to the cellar. We know, too, the various talents and qualifications requisite for the occupiers of these different rooms. The cook, the chambermaid, the nurse, &c., have their duties and services in their apartments and departments of the mansion house.

There are disciples now (as formerly) who have to occupy the "mansion" assigned them, in the absence of the Master; and if they are faithful in this allotment, they become prepared for a higher place. So the servant that diligently occupied the one pound, at the return of the Master, was advanced to another "mansion" or department, to have charge of "ten cities;" so also it was when Jesus said to His disciples, "I go" away, but this was that (as to them) through their faithfulness they might be prepared for a higher "place." Thus they and we have the same lesson, and she that is faithful and diligent in a little, is entrusted with more.

A GARDEN is a beautiful book, writ by the finger of God; every flower and every leaf is a letter. You have only to learn them—and he is a poor dunce who cannot, if he will, do that—to learn them and join them and then go on reading and reading. And you will find yourself carried away from the earth by the beautiful story you are going through.

You do not know what beautiful thoughts grow out of ground, and seem to talk to a man. And then there are some flowers that seem to me like over-dutiful children: tend them but ever so little, and they come up and flourish, and show, as I may say, their bright and happy faces to you.—*Douglas Jerrold.*

FRIENDS' INTELLIGENCER.

PHILADELPHIA, FOURTH MONTH 15, 1871.

THE PENN SEWING SCHOOL.—We were interested, a few days since, in attending the closing session of this excellent charity. Three years ago, a few of our young Friends, touched with a feeling of commiseration for the children, white and colored, who grow to womanhood in ignorance of the art of sewing, devised a plan for their instruction in this necessary part of female education. Those interested in the concern sought out their classes from the families of the very poor, and by much personal labor induced them to assemble to be taught the use of the needle, with the understanding that they should have the clothing they made. It was not an easy matter to awaken in children, unaccustomed to regular employment, a desire to learn an art requiring industry and perseverance; but unflinching kindness on the part of their instructors won their confidence and interest, and the little company steadily increased until it now numbers upwards of one hundred and fifty on the roll, with a corps of more than twenty teachers. The sessions have been held on Seventh-day morning of each week, during the winter season, in one of the rooms of the meeting-house, 15th and Race Sts., and the expenses are met by voluntary contributions. The improvement of the children has more than equalled the expectations of their benevolent friends, and in addition to the knowledge they have acquired of the use of the needle, they have received valuable moral instruction which we doubt not will be as good seed sown in their hearts.

The close of each session is usually celebrated by a simple social entertainment, provided by the liberality of one of the contributors.

SWARTHMORE COLLEGE.—The annual catalogue for 1870 and 1871 is now ready for dis-

tribution. Applications for admission for the next school year should be made early, to Wm. Dorsey, No. 923 Market St.; Edward Hoopes, No. 1330 Buttonwood St., Philadelphia, or to Edward H. Magill, Principal, at the College. A copy of the minutes of the Seventh Annual Meeting of the Stockholders, with a catalogue, has been mailed to each stockholder whose address was known. Any stockholder who has not received one, will please write without delay to Thomas S. Foulke, Swarthmore, Pa., giving correct name and address.

CLEMENT M. BIDDLE,
Sec'y of the Board of Managers.

WE would call attention to the advertisement of the Indian Committee of the several Yearly Meetings, for a Friend to supply the place of Asa M. Janney, who has so acceptably filled the position of Agent to the Santee Sioux Indians in Nebraska. The health of our friend, A. M. Janney, has been somewhat impaired, and he has felt it best to return to his home in Virginia.

MARRIED.

STEWART—FOGG.—On the 4th of Fourth month, 1871, at the residence of the bride's parents, under the care of Lower Greenwich Monthly Meeting, James Stewart, of Greenwich, to Rebecca, daughter of Thomas Fogg, of Salem county, N. J.

DIED.

BRIGGS.—At his residence, Duaneburgh, Schenectady Co., N. Y., on the 1st of Eleventh month, 1870, Reuben Briggs, in the 78th year of his age. Many could say of our departed friend: "I was an hungered and he gave me meat; I was thirsty and he gave me drink; a stranger, and he took me in; sick and afflicted, and he visited me." Such were the Christian acts of his unassuming life. None too poor, none too low to claim his hospitalities. A warm friend of the slave, his house was a refuge for many a fugitive from bondage; and we may add that he headed the requisition: "Deal justly, love mercy, and walk humbly with thy God."

BRIGGS.—At the same place, on the 14th of Second month, 1871, Hannah, widow of Reuben Briggs, in the 71st year of her age. Of a gentle and retiring spirit, and most amiable disposition, she beautifully fulfilled life's varied duties; fully sympathizing with her husband in his acts of benevolence, and leaving an example worthy of imitation. These friends were not members of our Society, but were with us in principle, and steady attenders of our meeting while health permitted.

FUSSELL.—On the 14th of First month, 1871, at the residence of his son Dr. M. Fussell, near Chester Springs, Chester county, Pa., Dr. Bartholomew Fussell, in the 77th year of his age.

HAINES.—On the 28th of Third month, 1871, at the residence of her son William Haines, Cedar Lawn Farm, Upper Greenwich, N. J., Ann Haines,

in the 88th year of her age. She was an elder of Woodbury Monthly Meeting, having filled that station for more than forty years.

THORN.—At Mount Kisco, N. Y., on the 6th of Fifth month, 1870, John Thorn, aged 75 years; an elder of Chappaqua Monthly Meeting. The many excellent traits in this dear Friend's character cannot be delineated in a short notice. He was a man of integrity and uprightness in his every-day life, and when the summons came, "Steward, give an account of thy stewardship," he was prepared cheerfully to obey, and permitted, as we reverently believe, to enter into the joy of his Lord.

THORNE.—Suddenly, of heart disease, on the 3d of Fourth month, 1871, at the residence of his sister Rebecca Sleeper, Dr. Joseph Thorne, in the 63d year of his age. He was for many years a member of Philadelphia Monthly Meeting, held at Cherry St. He had had several warnings, and expressed his willingness to go whenever his Master called, to that better world where all is joy and peace.

TOWNSEND.—After a short illness, on the 4th of Third month, 1871, at his residence in Lagrange, Dutchess Co., N. Y., Moses Townsend, aged 76 years; a member of Oswego Particular Meeting of Friends.

WEEKS.—At Mount Kisco, N. Y., of consumption, on the 1st of Twelfth month, 1869, Hannah, wife of Daniel Weeks, and only child of John and Phebe Thorn, aged 48 years; a member of Chappaqua Monthly Meeting. Her illness was protracted and suffering, yet her Christian patience was an unmis-takable proof of the all-sufficient Arm of power on which she had long relied. As the final close was approaching, her faith in her Redeemer was strong and unwavering. Her heart seemed to overflow with love to her Father in heaven and all around her, independent of name or sect. Her dying message was a rich legacy to many besides her own immediate family. Her affectionate heart clung with tenderness to those dear ones, whom she must soon leave; yet in firm faith she could commend them to God, feeling assured He would be with them to the end.

VAIL.—At the residence of his son-in-law Isaac Zavi'z in Lobo, Ontario, Canada, on the 12th of Third month, 1871, Moses Vail, aged nearly 75 years; a member of Norwich Monthly Meeting. Through a long, protracted illness he was very patient and cheerful, and passed quietly away, leaving the consoling evidence that all was peace.

WALTON.—At her residence, Norristown, Montgomery Co., Pa., on the morning of the 27th of Second month, 1871, Margaret, wife of Seth Walton, in the 77th year of her age; a member of Gwynedd Monthly Meeting.

CIRCULAR MEETINGS.

- 4th mo. 16. Merion, Pa., 3 P.M.
- " Roaring Creek, Pa., 10 A.M.

FREEDMEN'S ASSOCIATION.

Friends' Freedman's Association will meet at 1516 Vine St., on Fourth day evening, Fourth month 19th, at 8 o'clock. Being the last meeting before the Annual Meeting, it is very much to be desired that there should be a good attendance of Friends.

From "The Little Things of Nature."

EXCEPTIONS.

(Concluded from page 92.)

Further, it is noticeable among these little plants of the fields, that, while most of the members of the vegetable kingdom give out such odor as they may have power to *during life*, the vernal-grass, the woodruff, and others, are not fragrant till they have been torn away from their roots, and have begun to get dry. The rose, the lilac, the Daphne, and the acacia, pour forth their perfume as a part of their day's duty. The woodruff, that holds up handfuls of little white crosses in the pleasant woods and shady glens, yields no scent till its life has ebbed—beautiful emblem of those who delight us while they live, out of the serene abundance of their kindly hearts, but whose richer value we only begin to know when they are gone away, and of whose white souls we then say inwardly, "He, being dead, yet speaketh." So the hay-field, that rolls like sea waves, is scentless when we pass it uncut; we hear the measured *sweesh* of the scythe, death lays each green head low, and odor rises like mist.

The tall trees have their exceptional brethren no less than the dwarf plants. Some, instead of denuding themselves when autumn comes, keep their leaves all through the winter. We call them "evergreens," and at Christmas decorate our houses with their cheerful branches. Save for their green so-lace, the world would look very bleak and bare; as it is, the exception passes us comfortably through the sense of winter, and we feel over again that no deluge is ever so dreadful but that some little ark still floats upon the water, and keeps life and hope intact. Look at that venerable lime-tree! All other trees spread their branches far and wide, and, as long as they live, if we go under them, and cast our eyes upwards, we can see more or less of the sky, or at least there is plenty of room for us to climb; but the interior of an aged lime-tree is filled with little twigs, that form quite a brushwood. This impervious labyrinth offers a secure asylum for the smaller birds, when pursued by hawks; once inside, they can never be got at, and can rest, and go forth at will to renew their minstrelsy. Thorny trees and bushes, which also are exceptional to the general structure of plants, offer similar asylums to little birds.

The *rule* is that leaves shall be *green*. Wherever we cast our eyes, the prevalent hue is that of the grass, unless when burned up by the scorching heat of summer, or concealed by the white snow-mantle of Christmas, and even then we are reminded of it by the laurel, the holly, and other trees which are not forsaken by their foliage in October. But the leaves of some plants and trees are *not green*. When, for instance, the garden amaranths creep out of the ground, they are of a fine, lively red; and this color they retain in every part of their fabric till they die. In good green-houses and conservatories there are many such plants, *i. e.*, plants dyed of some strange rich hue which quite upsets the definition of a plant as "a *green* thing." Nature will not allow herself to be defined. When we think we have constructed our definitions so carefully that they are accuracy itself, and have marked out our boundaries and dividing lines, and then, quitting our chairs, go abroad into living nature, the work is found to have been vain; some odd plant or animal, as the case may be, is sure to be detected walking through the fences; we invariably discover that we only "know in part;" and when the larger knowledge has been obtained, and we again compare our schemes with nature, still it is the same,—mystery within mystery, hill behind hill, more and yet more islands in the infinite archipelago of truth and wonder.

Among the most beautiful of these painted-leaf-plants are the various kinds of Begonia, which upon the under side are often of a deep claret color, while the upper surface is marked with silvery spots and arches. Some kinds of Caladium have their leaves exquisitely dyed in the centre with crimson; others have crimson spots and blotches. The young leaves of the Dracæna are rose-color; those of certain Crotons are variegated with rose and yellow. All this is quite exceptional, and the peculiarity is accompanied in most cases by another, namely, the comparative insignificance of the flowers of these painted-leaved plants. It would seem that the grand principle of equal gifts to every living creature was here intended to be palpably illustrated. Where the foliage is plain and simple, green without inlay of purple or other tint, the flowers are in most cases showy and ornamental; where, on the other hand, the foliage is so deeply enriched that it looks more like flowers, then the actual blossoms are ordinarily of little pretension. Everywhere in nature is this kind distribution maintained. The man who is clever in languages is often inapt for physical science; when the hand can execute beautiful drawings, or make dull wires and woodwork give

forth delicious music, there is often inaptitude for metaphysics. Every one has something bestowed which, if faithfully and honorably cultivated and diffused, shall be the admiration of another: no one need *envy*, for he has that in himself which is also enviable, if he will only be true to his own powers and duties. These pretty plants with their deep-hued leaves, need not sigh for the blossoms of the camellia or the tulip; they are in themselves, though relatively flowerless, a banquet for all taste and capacity of delight.

Lastly, a few words upon remarkable exceptions in connection with animals. Most creatures reside permanently in their native countries; but some kinds change their quarters every spring or autumn, going to warmer or cooler regions, according as their instinct of self-protection prompts them. Hence, in early summer, our ears are saluted with the sweet cry of "Cuckoo!" Hence, in winter, we see birds of northern origin, Scandinavian strangers, little claws that have clung to Lapland birches, and wings that have flapped near icebergs. What tales of travel, were they gifted with words! One of the most useful of birds gives us *eggs*. When these are boiled, the contents coagulate, and become pleasant food; all other things, when boiled, become *soft*.

When we contemplate the organic provision made for the nourishment of her young by the female animal, we find it numerically proportioned to the number of her offspring at a birth, or to the occasional number. Woman has two breast-fountains, the cow has *four*; yet the progeny of the cow is rarely increased by more than two at a time, and usually by only one. The exceptional excess is, apparently, for the use of man; for whose service also the bees store a larger quantity of nectar than they require for their own consumption; and the law, "flowing with milk and honey," is shown to be a far-thought-of gift of the Divine Benevolence. Woman is exceptional to all other animals in her matchless capacity of nurse to her young. All other creatures that give suck, soon wean their offspring, and leave them to shift for themselves. Not so the most sacred servant of God. In those long yet patient hours when we lie, poor, helpless, thankless little things, wailing in the darkness; loved the more tenderly, pressed the more closely to our infant home, white as a snow-drop, and warm as the heart's best life-blood—ah, what a river of affection bursts from its heavenly spring, pouring on past all the years, believing all that is good and noble, and ever listening for it—forgiving all that is weak and erring, pleading till the heart well nigh breaks that the disobedient may be turned to the wisdom of

the just ; for it is love that would surrender life itself rather than enter heaven desolated "because they are not." A mother's love is distinguished from all others in this, that it overruns, from the beginning, time and the world, and looks to the eternal home where both shall live forever.

EARLY RAILROADING.

The Oldest Conductor in Pennsylvania.

Captain William Hambright, one of the passenger conductors on the Pennsylvania Central Railroad, is at this time the oldest employe in that capacity, having been in active service longer than any other conductor in the State.

Mr. Hambright commenced his career as conductor by taking the first train (horse cars) out of Lancaster, in 1833, after which time he run regularly, and has been employed nearly all the time since, as passenger conductor on the Pennsylvania Central Railroad. He then acted as conductor, brakeman, and greaser, his compensation being \$18 per month, which was considered good wages at that time. His train of horse cars would leave Lancaster at five o'clock P. M., and arrive in Philadelphia at five o'clock the next morning, making twelve hours for the journey; and the fare charged was \$3.50. Stoppages were frequent, fresh horses being employed every fifteen or twenty miles. At times they would be greatly detained by the severity of the weather, the winters in those times being much colder than at the present day. There was no fire in the cars, and when a stop was made to change horses, the conductor would make for the nearest hay stack or barn for the purpose of procuring straw or hay to strew over the floors of the cars in order to make his passengers more comfortable, himself riding outside, the cars generally being packed so full that he could scarcely gain admission. Down grade the horses were always kept at a full run. Horse flesh was very cheap then; sometimes five good animals could be purchased for \$100. In the year 1835 a locomotive, built by Norris, was brought from Philadelphia to Lancaster in wagons (why it was not brought by rail we did not learn); however, the wonderful machine was put upon the track, and fired up in presence of an immense assemblage of spectators. It appears the enterprise was not very successful, as it would run a short distance and then halt; then a number of muscular men would lend their assistance by pushing. Every device was resorted to to make the critter go, but all to no purpose. Sometime after this three small engines were purchased in England and sent over, which answered all purposes

for which they were intended, one of which is in use at the present time in York, Pa., sawing wood.

The Harrisburg and Portsmouth Railroad, as was then called, being laid on strong pieces of wood, using flat bar iron fastened down with spikes, it was necessary to carry hammer and spikes on the engine. Very often spikes would come out from the end of the bar, causing the ends of the same to stick up, which were termed "snake heads," and the engineer would be obliged to stop and spike down before attempting to pass over. Information had to be given the engineer before starting where stops were to be made. Our informant thought that method of stopping the train entirely too troublesome and inconvenient. [Here we may state that to Mr. Hambright belongs the credit of inventing the bell and rope system for signaling engineers.] He got permission from his "boss" to put his idea of the thing into practicable shape. Procuring a rope and common door-bell, he attached the latter near the engineer, (no house being over the locomotive at that time), then stretched the rope over the top of the cars. Ever after that and up to the present time bell-ropes have been in vogue, though in a more approved style than the one just described.

Conductors were not required to make reports at the end of each trip, as is now practiced; they would hand over the gold and silver—perhaps two or three hundred dollars or more—to the clerk, who would enter it in a book provided for the purpose, somewhat in this wise: "Conductor Hambright, so many dollars," and that was all the formality about it. Checks for baggage were not used, but when the cars arrived in Columbia or Philadelphia the conductor would open the car-door for the delivery of baggage, &c., to the passengers, who crowded around and secured their parcels by answering "Mine" to the conductors interrogatory, "Whose trunk is this?" which was kept up until all disappeared. If a trunk was marked "B" it was to go by boat; if "S" it was to go by stage line. Strange to say, there was not as much baggage lost then as now.

Very often the conductors would help the proprietors of the lines during harvest, and assist at other labor when off duty.—*Columbia Courant.*

OBSERVE a dog or a cat turning and twisting about, and perhaps beating with its paws before it can make up its mind to lie down, even upon the softest cushion. This, naturalists tell us, is a reminiscence of its former state when a wild animal, and when it had to make its bed for itself. Thousands of years

of domesticity have not obliterated this habit derived from its ancestors, the dwellers in the forest. See the force of ancestry. There is doubtless the same thing to be seen in the ways and habits of men; and probably his most distant ancestors still live, in some extent, in each individual man.—*Arthur Helps.*

RECONCILIATION.

O, let not thoughts of sullen hue,
The hearts that were in union part;
But question straight, and answer true,
And clear them with a sunny heart.

The rain-blue wreaths that arch the dell
And sweep the mountain's grassy sides,
Would slay its glory did they dwell
Forever on the darkened sides;

But sunbeams come, and breezes blow
The sluggish folds to snowy shapes,
Till leaves and dew-wet flowerets glow
On all the green and glistening capes.

And so, when friendship scatters pride,
How gaily heart to heart awakes,
Like two fair sails that fogs divide,
When suddenly the sunshine breaks.
—*Chamber's Journal.*

HOPE'S SONG.

I hear it singing, singing sweetly,
Softly in an undertone,
Singing as if God had taught it,
"It is better farther on!"

Night and day it sings the sonnet,
Sings it while I sit alone,
Sings so that the heart may hear it,
"It is better farther on!"

Sits upon the grave and sings it,
Sings it when the heart would groan,
Sings it when the shadows darken,
"It is better farther on!"

Farther on? But how much farther?
Count the mile stones one by one.
No! no counting—only trusting
"It is better farther on!" —*Anon.*

From the Leisure Hour.

EASTERN WORDS IN THE ENGLISH TONGUE.

Some words are very long lived, and some are great travellers; some win their way to popular favor at once, and others continue for a considerable period in obscurity; some are speedily thrown aside for the new favorites of fashion, and others hold their ground against all comers.

Words may undergo strange vicissitudes of form and also of meaning, and they are very likely to be modified in one or other of these respects in accordance with the character of the language and nation to which they are introduced. As soon as a word has fairly settled down in a country, and adapted itself to the grammar and pronunciation of the people, it may be said to be naturalized. This naturalization, however, can hardly take place until the word is in common use. Now,

since grammar and pronunciation and modes of representing certain sounds differ in different countries, a word which has passed into several languages will exhibit frequently much diversity of form. In fact, a word may be so altered in appearance and pronunciation, that it requires careful attention and some knowledge to identify it in its many metamorphoses.

The preceding remarks suggest a curious and interesting branch of study, but one to which we do not now intend more than a passing reference. Those who have learning and leisure may employ themselves agreeably in searching out the origin and history of words, and in ascertaining the countries from which they come to us. To illustrate the manner in which strange words have obtained a place in our language, and to point out some of their sources, is the immediate object of this paper. Inasmuch, however, as these words are very numerous, we shall select a few which have reached us from Turkey, Arabia, Persia, and the adjacent lands. We will take them in something like alphabetical order, reminding our readers that these words are not all directly borrowed by us from their native countries, but that some of them have reached us through other intermediate channels.

The word *abbot* or *abbat*, and its relatives *abness* and *abbey*, all come from the Hebrew *ab*, or the Syriac *abba*, meaning "father." For reasons which it is needless to explain, priests and monks came to be called "fathers" in the East, and when monastic institutions travelled westward, the old Oriental names were retained in substance in Greek and Latin, as well as in modern European languages. The terms "monk," and "monastery," go no further than the Greek language, but *abbat* and *abbey* point to the East as the place where such things were invented. They say the word "nun" came out of Egypt, but "convent" is merely Latin.

The ancient Arabs, or rather the Mohammedans who used the Arabic language, were zealous in the pursuit of science. Hence it comes to pass that sundry terms relating to chemistry, astronomy, and mathematics are derived from the Arabic. We may specify alchemy, alcohol, alembic, alkali, algebra, almanac, azimuth, algorithm, nadir, zenith. The first of these words is said to be composed of the Arabic article "*al*" and a Greek word; it therefore means much the same as "*the chemistry*," because it denoted the real or pretended art of preparing remedies for prolonging life, and that of transmuting metals of inferior value into gold. Its adepts do not seem to have been very successful in the former, and it is certain they never accom-

plished the latter. As for the word "*alcohol*," it properly denoted a very fine mercurial powder used by eastern women for painting their eyes. The application of the term to distilled spirits seems to have been unknown in the East, and is said to have been introduced by Arnold, of Villanova, who was an eminent alchemist at Montpellier, where he discovered the art of distilling spirits in the thirteenth century. The *alembic* was a vessel used in distillation, and its name seems to be partly Arabic and partly Greek. *Alkali* means soda, but we use the word for other substances with corresponding qualities. The name of *algebra* indicates the process of combining various elements and figures. There is some doubt about *almanac*, which signifies "a present," according to some, because it was an ancient practice in the East for friends to present one another with a calendar as a new year's gift. Others suppose the word signifies "a computation," but all agree that it reached us from the Arabs. *Azimuth* literally means "the path" (compare Latin *semita*), but is applied to an imaginary circle reaching from the zenith to the horizon, in astronomical science. *Algorithm* is a spurious mixture of Greek and Arabic. Here *al* is the article ("the"), the letter *g* is a supernumerary, and the rest of the word is from the same source as "arithmetic," namely, Greek. *Nadir*, meaning "opposite," is the point in space exactly beneath us, and contrary to *zenith*, which is the point exactly above us. Although few would suspect it, *zenith* is the same word as *azimuth*, without the Arabic article. In its complete form the Arabic expression denotes "the way of the head;" that is, in the direction of or precisely above our head.

But if science and religion have supplied us with words from the East, trade and commerce have been even more abundant in their gifts. Merchants have returned with all sorts of commodities, and in some cases they brought us the first specimens of plants and fruits, which are now familiar to us all. M. Pihan, to whose curious book on our subject we are greatly indebted, furnishes us with numerous examples, from which we select a few. The *apricot*, or, as we have seen the name written in old books, "*abricock*," is a Persian fruit, which the Persians call *berkuk*. The Spanish Moors prefixed an Arabic article to the Persian name, and in course of time the compound has assumed the form in which we see it. But in this, as in other heterogeneous compounds, there is history. The Persian fruit was taken to Spain by the Mohammedans, and has spread from thence over the rest of Europe. M. Pihan does not observe the fact, but we be-

lieve the word *peach* is, like the fruit, of Persian origin, and that it is all we have of the ancient Latin name *Malum Persicum* (Persian apple), by which it was first introduced into Europe. There is another word, "*aloes*," which is very interesting. It is found four times in the Bible (Num. xxiv. 6; Prov. vii. 17; Song of Sol. iv. 14; Ps. xlv. 9), and the Hebrew forms (*ahalim* and *ahaloth*, both plural) are not very different from our own. We must recollect, however, that *aloes* is the name of an odoriferous wood, of a plant or shrub, and of the drug called *aloes* in commerce. In the Bible, the fragrant wood only is meant. This wood was accounted most precious among the ancients. There are two kinds: one of them is found in Siam, Cochin China and China, and considered too valuable to be exported. The other is found in the East Indies and Moluccas, and is not so good. The estimation in which this commodity was held is shown by the resemblance which its name bears in Greek to that given it in the Molucca islands, and among the Hebrews. In the remotest ages it was almost certainly an article of commerce conveyed from the distant East to the luxurious cities of Greece. The name given by the Persians and Arabians to the drug and the plant which produces it resembles yet more closely our English word *aloes*, and has also found its way into Greek and Latin. The Greeks and Latins were therefore acquainted also with the *aloes* of commerce.

Amber is another Arabic term, and the *ambergris* is held in high repute by Arabs, Persians, and Turks, who use it along with musk and *aloes* in their perfumes. The word *artichoke* is supposed by some to be Arabic, and M. Pihan is of that opinion, but we cannot speak positively about it. With regard to *balsam* and its contraction *balm*, there is no doubt. With some variations of form it is found in several Oriental languages. The Greeks probably became acquainted with it through the Phenicians from Tyre and Sidon, and from them the word passed into Latin and other European tongues. The Hebrew word *basam*, which occurs in "Solomon's Song" (v. 1), is the same, and signifies "the fragrant," or simply "perfume," very well describing its character. The true balsam was cultivated in Judea, and, indeed, is said to be still found there. Ancient writers celebrate this product of the Holy Land, and it has always been esteemed among the Orientals. The Greeks not only called it balsam, but *opobalsam*, because *opos* in their language denoted the juice, sap, or gum of a plant: hence, *opodeldoc*, *opopanax*, etc. Speaking of names, it may be observed that although balsam was so called as "the per-

fume" by way of eminence, the Hebrews had another name for it, and especially for the "Balm of Gilead," to which there are several references in Scripture. This balm of Gilead was celebrated from the most ancient times, both for its fragrance and for its use as an external remedy. It was an article of merchandise with the Ishmaelites who bought Joseph, and it was one of the presents which Jacob sent into Egypt (Gen. xxxvii. 25; xliii. 11). Jeremiah mentions it (Jer. viii. 22; xlv. 11; li. 8); and Ezekiel speaks of it as a commodity in which Judea traded with Tyre (Ezek. xxvii. 17). Among the secular authors who allude to it we may refer to Pliny, Josephus, Justin and Tacitus. Pliny says balsam was preferred to all perfumes, and was found in Judea only, and there in but two gardens. He adds that it was carried in triumph at Rome among the spoils of Judea. Tacitus enumerates balsam among the products of Judea. Josephus records that the best balsam was produced near Jericho and the Dead Sea. Justin declares that the nation was enriched by the revenues from balsam which only grew in that country. Other authorities might be adduced, but we will only add, that according to a common story the balsam was destroyed in Palestine, and only preserved in Egypt. Singularly enough, the identification of the plant which produced the balsam or opobalsam of the ancients has been found very difficult. At present the words balm and balsam are applied to sundry plants and drugs which have no connection with the one mentioned in Scripture.

Bergamot, a valuable tree from which a fragrant essence of the same name is procured, is commonly thought to be named from Bergamo in Italy. Others maintain with much probability that the name is really Turkish. In that language *beg* (a name which we sometimes meet with, also written *bey*) signifies a local or provincial governor or lord; and *armudi* means a pear. *Beg-armudi* is easily corrupted into *Bergamot*. M. Pihan, to whom we owe this explanation, quotes three lines from an Italian poem by Caporali (born 1531, died 1601) on the gardens of Mæcenæ, to the effect:—

"Qui dunque il Bergamotto avea 'l primiero
Luogo: e gli conveniva, poiche il Turchesco
Bergamotto vuol dir il *Signor pero*"—

that is to say, "There then the bergamot held the first place; and rightly so, for the Turkish *bergamot* means 'the lord-pear.'"

We are indebted to the French, as they to commerce, for the word "bougie" as the name of a wax candle. The truth is that a town in North Africa is so called; it lies to the east of Algiers, and was once famous for

the wax it supplied. Hence it comes to pass that the name of a particular kind of wax has had its meaning extended until the original intention of the word is forgotten. There is another French word in common use among us, *bouquet*, which also appears to come from the East, if, as M. Pihan says, *baqut* in Arabic means "a bundle of sweet flowers."

THE GAS WELLS OF ERIE.

Nature's own illuminator—Light and heat for nothing.

A letter from Erie, Pa., to the *Cleveland Leader* contains the following:

The coal, the iron and the petroleum have long since become matters of such familiar, every-day association as to have passed definitely out of view as topics for discussion, but the gas wells have yet the savor of newness, and in deference to the interest recently drawn to the subject a brief glimpse of the matter, with especial reference to the Erie district, is here attempted.

For nearly half a century springs in the vicinity had yielded a viscid iridescent scum that later wisdom showed to be petroleum. Forty years ago some men digging a well for a potash mill, on the banks of Mill Creek, north of the present Sixth street, had struck a vein of gas which nearly suffocated the diggers before they could escape from the well. The hole was filled up and another dug a few rods nearer the creek, but with a similar result. Since then it has been a standard diversion among the Erie youth to thrust elder tubes into the soft mud of the stream near that point, crown the top with a hollow clay point and light the jet of gas at the end.

Among those whose faith in petroleum took the form of an actual experiment was Mr. G. F. Brevillier, a bright, intelligent German, whose energies up to the winter of 1865 had been exclusively devoted to the candle and soap manufacture. Joining with three or four neighbors, Mr. Brevillier formed a company, and to this new corporation leased the privileges of boring a well in a corner of his back yard. The corporators were all working men, and their anger descended rapidly. A slight trace of oil had been found at a depth of 400 feet, but only a trifle—the well was a failure, and as such was abandoned. Mr. Brevillier now endeavored to secure the privilege of using the gas as a fuel in his manufactory, but failing to make any satisfactory terms with his partners the well was left to wheeze and blow for three years, when the company's lease expired, and the property reverted to its original owner, who at once laid pipes for conveying it to his own house and soap works, where it has since been used. For three years not a single pound of coal has been used on the premises, but the

various processes of melting fat, rendering and soap boiling are carried on with gas, the building is illuminated, and a friendly beacon burns from the top of the establishment and lights that quarter of the city. With all this, and what he uses for cooking, warming and lighting his house, Mr. Brevillier is enabled to use about one-sixth of the gas furnished by his well. The other five-sixths are wasted through the safety valve attached to the receiver. The successes of this enterprise led to others of a similar character, and since 1868 the subject has been rapidly growing in interest. During this period thirty wells have been sunk within the city limits, in all of which gas has been discovered. Of the thirty wells four or five have failed, but in every case the failure has resulted from defective management in tubing the orifice, rather than from any want of gas.

Just across the creek from the establishment of Mr. Brevillier, already described, stands the Conrad Brewery, in connection with which a gas well was opened barely two weeks ago. Here may be seen vats boiling with incipient lager within an inch of their top, but never boiling over; malt ovens working from hour to hour without becoming a degree too hot or too cold, and the dial of the steam gauge pointing to 75 without the change of a pound in a day, and all this without the slightest care from any one. The perfect uniformity of the pressure keeps the stream of flame under the boiler or kiln at an exact, unvarying strength, which supplies the most perfect heat ever known to a brewer. Mr. Conrad uses about one-fourth of the gas supplied by his well.

The flouring mill firm of Oliver and Bacon was one of the pioneers in utilizing the gas for steam purposes. Their well was commenced not quite a year ago, and was finished in June of last year.

It may be doubted, however, whether any enterprise of the kind in Erie has been more entirely felicitous in its results than the opening of a well by the City Gas Company. The well was put down near the main reservoir of the company, and its completion has yielded a uniform daily supply of 24,000 cubic feet. This the judicious managers pour at once into their reservoir, and add to it 12,000 feet of manufactured gas, thus securing the 36,000 feet required for a day's supply for the city. As an example of the comfort and economy that can be secured to a family by the possession of a gas well we shall venture to describe briefly the heat and lighting arrangements of a single dwelling in Erie, that of ex-Senator Lowry. From the well, pipes lead to every grate in the house, to the kitchen range and to the smaller tubes which supply

the chandeliers. In the fire places are laid hollow French imitations of hickory wood cast in *kaolin*, and pierced with minute holes to permit the escape of the gas. An inch pipe supplies the apparent firewood with gas, and a small bronze wheel, turned to the right or left, regulates the supply. An instant is sufficient to light the gas, and half a turn of the wheel increases the blaze from a tiny flickering taper to a bright generous flame which fills the grate, lights the remotest corner of the room, and rolls with a cheering roar and sparkle up into the broad chimney. With fourteen fires thus alight, with not less than sixty gaslights burning in his house and about his grounds, Mr. Lowry has lived during the past winter in a constant atmosphere of summer. Midnight is to him no darker than a summer noon, and he snaps his fingers at the terrors of January. He even warms his cellar as a comfort to the domestic, who dries the family washing down there in preference to hanging them in the open air.

It would be easy to describe other establishments in Erie at which this new illuminator has been utilized, but the foregoing will suffice to indicate its value. The questions which remain are:

1. Is it permanent? This can, of course, only be decided by long experience. Up to this time there is every possible indication that the wells now opened may yield an uninterrupted supply for centuries. The Brevillier well is now in its seventh year, and its yield has been steady and undiminished. In most cases the first opening of the vein has been followed by an extraordinary rush of gas, which has lasted from three days to a month, when the well would reach its natural condition, and yield from that time a steady, uniform supply. In some cases, as at the Erie Car Works, the supply has increased with the lapse of time.

2. Is success certain? With proper management it is believed that not more than one well in ten should fail. Of the three or four useless wells now in Erie, the failure of each is traced to some specific neglect or misfortune. In one case a strong vein of salt water interfered to prevent success; in another, heavy surface water and defective tubing have cut off the gas supply after it had commenced to flow. To drill successfully requires care and experience, but with these every citizen of Erie who has a square rod of ground and \$1,500 to invest in a well, may henceforth set cold and darkness at defiance.

As would readily be supposed, much depends upon the character of the rock to be overcome, and the depth which is required to reach. The average depth of the Erie wells is 600 feet, and their average cost \$1,500.

They each yield from 10,000 to 30,000 feet of gas per day, and in some cases have repaid their entire cost within three months.

For Friends' Intelligencer.

REVIEW OF THE WEATHER, ETC.,

THIRD MONTH.

	1870.	1871.
Rain during some portion of the 24 hours.....	3 days.	11 days.
Rain all or nearly all day....	2 "	3 "
Snow, including very slight falls,.....	9 "	4 "
Cloudy, without storms	8 "	5 "
Clear, as ordinarily accepted	9 "	8 "
	31 "	31 "
TEMPERATURES, RAIN, DEATHS, ETC.	1870.	1871.
Mean temperature of 3d mo., per Penna. Hospital,	37.87 deg.	48.70 deg.
Highest point attained during month.....	62.00 "	73.00 "
Lowest do. do. do.	24.00 "	34.00 "
RAIN during the month, do.	4.06 in.	5.81 in.
DEATHS during the month, being for 4 current weeks for each year	1425	1169
Average of the mean temperature of 3d month for the past <i>eighty two</i> years....		39.20 deg.
Highest mean of temperature during that entire period, (THIS YEAR, 1871).....		48.70 "
Lowest mean of temperature during that entire period, (1843),.....		30.00 "
COMPARISON OF RAIN.	1870.	1871.
First month,	4.07 inch.	3.46 inch
Second month,	2.53 "	3.08 "
Third month,	4.06 "	5.81 "
Totals,	10.66 "	12.35 "

In reference to *temperature* as above set forth, we are usually so skeptical as to any "*unprecedented*" feature of the weather as almost to hesitate announcing the third month of *this year* to be entitled to be so designated. The year 1859 came so near it that the two may be placed side by side, the mean temperature of the same month having then reached 48.25!

Our clippings of the 9th instant inform that "Peach trees are in full bloom and the thermometer up to 78 degrees in Little Rock, Ark."

Also that "The Atrato river, Darien, is spanned by a floating bridge of grass, two feet thick, with roots curiously interlaced."

The increase in the *number* of rainy days this year did not produce a corresponding increase in the *quantity*, although in excess of last.

The continued *decrease* in the number of *deaths* is worthy of note. If we take the *thirteen* consecutive weeks of the present year and compare with last year, we find the figures stand:

For the year 1870,	4317
For the year 1871,	3751

We have again been favored by our valued correspondent, George S. Truman, with a minute statistical account of the weather at the Santee Indian Agency for the Second month, showing the same kind of sudden and variable changes as were delineated in our last; the *extremes* being from 22 degrees *below* to 58 degrees *above* zero, the last

named occurring on the 12th and the first on the 4th of the month.

He also remarks: "The change from a dead calm to a perfect gale and the reverse are some of the peculiarities of this country, and are considerable drawbacks to its settlement." We hope to hear from him regularly, as his items possess considerable interest.

J. M. ELLIS.

"A NEEDLE is a very little thing, but how much may be done with it by patient industry! Strong garments for daily use, and delicate intricate workmanship, which the loom can but imitate."

ITEMS.

A PNEUMATIC tube has been laid in London in connection with the postal telegraph, and is found to work well. The system consists of a three-inch tube, which makes a bend at the terminus, and the carriers, or cylinders, containing the parcels bend with the tube and return by the same force which starts them. But one engine is therefore required to send out and bring back a carrier. There are stations along the line where the carriers may be stopped. For this purpose, a short piece of the tube is cut out and a double tube is substituted. If there is to be no stoppage, the piece of tube inserted is clear and the carrier passes through, merely touching a stud and ringing a bell. Otherwise a cage is substituted, which has a glazed lid, permitting the carrier to be seen when it has been stopped. On a recent trial, the carrier passed from Telegraph St. to St. Martin's le Grand, nearly half a mile, in one minute and forty seconds; and from Telegraph St. to Temple Bay, considerably over a mile, it went in four minutes. The tube works both by pressure and vacuum, but either alone is sufficient to drive the carrier, though not so rapidly.

The Rothschilds of Paris are said to have clothed during the siege forty-eight thousand children, thirty-two thousand women, and twelve thousand men with woolen garments, at an expense of three hundred thousand francs.

Some notes on the geology of Santo Domingo are furnished to the *Journal of Science*, of New Haven, by Wm. S. Gabb. They are founded on the geological survey which has been in progress two years. The area of the republic is about 2,000 square miles and in a triangular shape. Running through the middle is a chain of mountains, some of whose peaks rise to a height of 9,000 feet. North of this, along the coast is a subordinate range, much inferior in its proportions. The valley between averages ten or fifteen miles in width, and is divided about the middle by a water shed about five hundred feet above sea level. The central mountain chain is an immense mass of syenitic rock. The overlying rocks which were uplifted by the first named are conglomerates and slates, which have been so metamorphosed as to have lost all traces of their original character. In some places they give rise to salt springs, but are not fossiliferous. There were a few fossils found, however, which indicate the oldest stratified rocks of the Island to belong to the Cretaceous Age. Tertiary deposits with abundant fossils form the leading geological characteristic of the Island. In the syenite are occasional veins of gold bearing quartz, and also some of copper and iron. The coal spoken of in Santo Domingo is only lignite in the Tertiary deposits. No volcanic rocks have been encountered, except a single dike of black porphyry.

FRIENDS' INTELLIGENCER.

We propose giving as the leading article for a few numbers, a few of the many interesting biographical sketches contained in S. M. Janney's *History of Friends*.

In reading these sketches, some will be able to trace in them an experience similar to their own, and from the many evidences given that Divine power has always been sufficient to sustain, there is encouragement still to trust and not be afraid, even though many difficulties may beset us, and heavy clouds overhang our paths.

This work is doubtless familiar to very many of our readers, but we know there are also many who are unacquainted with its interesting and instructive contents, and we hope this introduction to it will stimulate some of our young Friends to procure the volume.

MEMORIALS OF JOSEPH PARRISH AND JOHN COMLY.

Joseph Parrish was born in Philadelphia, on the 2d day of the Ninth month, 1779. His parents, Isaac and Sarah Parrish, were exemplary members of the Society of Friends, and endeavored to educate their numerous family in accordance with its principles. Joseph was the youngest of eleven children.

At an early age, he experienced the tendering visitations of heavenly love, and was led to place his dependence upon the Author of his being for strength and preservation. Conscious of his own frailty, he was induced to seek opportunities for inward retirement, and thus becoming a devoted follower of our Divine Master, he was, among his young associates, an example of fidelity to the teachings of Divine light in the soul.

During his minority he remained under the parental roof, and learned from his father the trade of a hatter; but when he reached his twenty-second year, he engaged in the study of medicine, for which he had from his youth felt a strong predilection. In this profession he became eminent for his skill, and a wide field of usefulness was opened to him, which he successfully occupied; ministering not only to the health and comfort of the body, but soothing, by his gentle manners and Christian deportment, the sorrows of the afflicted.

In the year 1808 he was married to Susanna, the daughter of John and Ann Cox, of Burlington, N. J. They were blessed with a numerous offspring, whom they endeavored to lead in the path of simplicity and Truth; instructing them by example and precept in the duties of a Christian life.

The high reputation attained by Doctor Parrish in the line of his profession, and the remarkable urbanity of his manners, exposed

him to the temptations that always attend on public favor; but having taken up the cross of Christ, he was enabled to resist the allurements of worldly ambition. In a letter to a friend he said: "I have a love for the Truth, but have not been without my temptations to desert it; for I have known the day when the allurements of wealth and honor held out strong inducements to embark as a man of the world. A public station with which a large income was connected was, I believe, within my reach. Ambition whispered, that in thus pursuing the natural bent of my genius, I could fill the station with honor. It was an important era in my life. I had arrived at the fulness of manhood, and the language was,—Choose this day whom thou wilt serve. When I cast my eyes on our tender offspring, and felt the influence of a father's example upon them,—and when I could appeal to the Searcher of hearts, that I had no greater joy than to see my children walking in the Truth;—then it was that I cast the temptation from me,—and I humbly trust, renewedly chose the Lord for my portion and the God of Jacob for the lot of my inheritance."

He was a diligent attender of religious meetings—warmly attached to the principles and testimonies of Friends, and, for several years previous to his decease, he occupied the station of an Elder in the church,—showing forth in his life and conversation the efficacy of Divine Power and Love to purify the soul.

Feeling a lively interest in the aborigines of our country, he watched with deep concern those measures which affected their rights, and was frequently engaged in efforts to shield them from injury or promote their welfare.

To the people of color he was a steady friend and protector; occupying among his fellow-citizens a prominent place as one of the advocates of universal emancipation. To the poor, the ignorant, and the oppressed, he extended sincere sympathy and liberal aid, exhibiting through life a beautiful example of practical piety.

In his last sickness he said, "I have seen the great beauty of the Principle which we as a Society profess. It has been my stay and solace from my early childhood; and the more we know of it the more shall we be satisfied that it is founded on the Rock of Ages." At another time, in which he had evidently been engaged in silent supplication, he remarked, "I have not been permitted to see how this illness will terminate. I have nothing to boast of; I have been an object of Divine mercy from my very childhood; and upon that I depend now. It is an unspeakable

consolation to be permitted to see that an immortal crown is prepared for me." After these expressions, his countenance was clothed with a sweet solemnity, and being asked whether he had been asleep, he replied, "Oh, no! I have been in a far more delightful state than sleep." A few hours before his close he repeated the declaration of our blessed Lord, "Lo, I am with you always, even unto the end of the world;" and then added, with emphasis, "It is a truth; it was declared by the Minister of ministers." And soon after he said, "His arm is not shortened that it cannot save,—nor His ear grown heavy—" here his voice faltered, and he was unable to complete the sentence.

He quietly departed this life the 13th of the Third month, 1840, in the sixty-first year of his age.

John Comly was born in Byberry, Philadelphia County, Pennsylvania, the 19th of the Eleventh month, 1773. His parents, Isaac and Asenath Comly, were members of the religious Society of Friends. In the interesting and instructive Journal of John Comly, he mentions the care of his excellent mother in taking him, in childhood, to meetings for Divine worship, and the good impressions he then received while sitting by her side in solemn silence, or listening to the baptizing ministry of James Thornton.

On this subject he remarks, that "The incalculable advantage of taking little children to meetings and of habituating them early to the discipline of stillness, can never be fully appreciated. It may be the means of laying a foundation, very early in life, for the most exalted virtues. The seeds of Divine goodness thus planted, or that germinate in good wishes and good desires, when the infant mind is thus retired, may take deep root and bring forth early fruits of genuine religion—of love and obedience to parents—of sincere affection towards brothers and sisters and relatives. Under these solemnizing, tender feelings, the pure, innocent, uncontaminated infant mind worships in spirit and in truth. It learns to love such opportunities—it delights to feel such a calmness and quietude—and it enjoys a heaven within."

One of the chief occupations of John Comly in his youth, was ploughing on his father's farm, which he found favorable to purity of life and religious contemplation. Heavenly goodness, light and love, often visited him while thus engaged, and he found in the silence and solitude of the fields seasons of heavenly enjoyment unknown in the bustle of life. He found that agricultural employments, while favorable to purity of mind and religious growth, did not prevent the cultivation of his intellectual powers and the in-

crease of knowledge. He remarks in his Journal: "Oh! how many involve themselves in difficulties, expose themselves to temptations, and sacrifice their own mercies, by leaving the calm and quiet life of agriculture, and going to cities and villages to trades and business in which there are perplexities and anxieties, noise and unprofitable company, that tend to divert their attention from the one thing needful."

His relish for reading and thirst for knowledge induced him to peruse with care the few books within his reach; but he often felt the want of a large supply of literary and religious publications. The improvement of the mind is not only productive of innocent enjoyment, but conducive to virtue and religion, by opening a wider field of contemplation in which may be observed on every hand the evidences of Divine power and goodness.

About the fifteenth year of his age he felt a concern to attend week-day meetings, for although his mother was a diligent attender of them, his father seldom went, and generally kept his son at home to assist him on the farm. As this desire increased, he at length asked permission to attend, which being granted, he became diligent in the performance of this religious duty, and had the satisfaction, some time after, to see his father adopt the same practice. His heart was deeply affected by the ministry of Job Scott, who visited Byberry Meeting in the First month, 1790. Describing the effect on his feelings, he writes: "Never before had I any recollection of such an instrumental visitation of Divine love. His ministry had a baptizing influence that immersed my soul into a holy feeling of good. The savor and sweetness thereof rested with me for a number of days. It was the gospel of Christ and glad tidings to the poor in spirit. It was the power of the Highest overshadowing my visited mind. The seeds of the kingdom of God were watered in my heart, and encouragement administered to advance forward in the work of renovation."

In the ensuing spring, while following the plough, the mind of John Comly was powerfully arrested by the overshadowing of Divine love, and he was given to see the propriety of a practice which had not then been introduced in his father's family,—it was that of observing "a solemn silent pause at table, in which the mind might feel reverently thankful before partaking of the blessings of Heaven in the provision made for these bodies." Being faithful to his convictions of duty in this respect, he saw that his example had an influence on the other members of the family, and it became their common

practice on sitting down to partake of their meals to observe a reverential pause.

In the spring of 1801, John Comly became one of the teachers at Westtown boarding-school, a situation that he accepted under a sense of religious obligation, and with a full appreciation of its responsible duties. His mind was often brought under religious exercise, and sometimes found relief in tender exhortations addressed to the pupils.

Near the close of the year 1802 he resigned his situation at Westtown, and having while there formed an acquaintance and engagement with Rebecca Budd, one of the teachers in the girls' department, they were united in marriage the following year. They settled at Byberry and opened there a boarding-school for girls, which was continued, with general approbation, six years, and then changed to a school for boys and young men. This was done in order to furnish young men with an opportunity to qualify themselves for school-teachers. The school was continued until the year 1815.

While engaged in teaching, his attention was turned to the improvement of school-books, and he compiled an English Grammar and Spelling-book, which through a long course of years were highly appreciated by teachers, and adopted in a vast number of schools, in the Middle, Southern, and Western States.

Possessed of a vigorous mind and benevolent heart, he was assiduous in attending to his domestic and social duties, illustrating in practice the course of life recommended by John Woolman, of "serving the Lord in our temporal business."

"Although frequently engaged in religious labor, he was not called to the *public* exercise of the ministry until the latter part of the year 1810. His first communication in a meeting for worship was at Byberry, when, under a very solemn covering, he appeared in a testimony of considerable length. He continued to occupy his gift to the satisfaction of Friends, and in the Seventh month, 1813, he was acknowledged by his Monthly Meeting as a Minister in unity therewith."

He travelled much in the service of the gospel, and was eminently qualified both for public ministry and the administration of Church discipline, being remarkable for the clearness of his views, the perspicuity of his language, and the depth of his feelings. In meetings for discipline, his remarks, being wise and temperate, "seasoned with grace," gave him great influence in the Society.

In some of the proceedings connected with the separation of Philadelphia Yearly Meeting in 1827, John Comly took an active part. The purity of his motives cannot be ques-

tioned, and the meekness of his conduct during those trying scenes was in accordance with his well-known character. In relation to the animadversions and false charges made against him, he has left on record the following remarks: "I had intended to reply to the several unfounded and untrue charges and insinuations preferred against me in that pamphlet, in order to clear my character of them and attest my innocency. But pausing a little, I remembered, that when He whom I have called my Lord and Master, our great pattern, was accused by the chief priests and elders, 'He answered nothing;' and therefore why should I attempt a defence of my innocency, when heaven is my witness that I am not guilty of what is laid to my charge. So I laid down my pen, and committed my cause to Him who judgeth righteously and is a refuge of the oppressed."

After the separation he continued to be highly esteemed as a Minister, and eminently useful in the administration of church discipline. He devoted much attention to the compilation and publication of Friends' writings, and, in conjunction with his brother, Isaac Comly, edited "Friends' Miscellany," a valuable collection of historical and biographical writings, relating chiefly to our religious Society.

His life of dedication and usefulness was closed in calmness and peace the 17th of the Eighth month, 1850, in the seventy-seventh year of his age.

MISSION LABOR.*

How can we best help the poor to help themselves, is a question which is daily growing in importance. The secret of true benevolence lies in the care taken that the manner of doing it shall not lessen self-respect. The tendencies of present social conditions are to widen the breach between the rich and the poor, so much of human success depends on individual exertion, the lack of which is mainly the cause of much destitution and want.

A large number of nearly every community have no knack (if we may use the word,) of getting along. They mean well enough, are honest to everybody but themselves, are entirely reliable when under the supervision of a master intellect, but when managing for themselves are lost in the meshes of their own weaving. This comes not from lack of education, neither is it the offspring of a shallow understanding. Men and women of profound learning, are often entirely at sea in cent. per cent. and all the minutia pertaining thereto, while an ignorant braggadocia,

who never could learn anything beyond how to get the best end of a bargain, bears off the palm of worldly good, and lines his path with gold. Through all the gradations of society we observe the same divergence, until we reach the sub-stratum of our social structure, which, like the base of the imperishable pyramid, is exceedingly broad. It represents the bone and sinew, the toil and sweat, by which those who rise higher are upheld, and whose weight is often the pressure that keeps them down; now and then the homely saying of the farmer is verified, and "the bottom rail becomes the rider."

But it is for the masses living from week to week on the scanty earnings of toil that we should feel most concern; for the wife and children, forced to subsist on meagre fare, and to live in crowded, ill-ventilated apartments, not because the husband and father is neglectful or unwilling, but for the simple reason that his earnings are not sufficient to provide better. Then the want of attention to order and cleanliness, so often the attendants of poverty, the lack of contrivance among the women in regard to making the most of everything, the absence of anything like management in the little details of house-keeping—providing meals punctually, attending to the apparel, keeping it clean and tidy,—all drag down the overburdened father, who too often turns from the discomfort of his home to the drinking saloon or the beer garden, and spends his leisure hours and his money, flattered by the obsequious attentions of the landlady, and allured by the attractions of order and cleanliness which he fails to find in his own home.

It has been impressed upon my mind for a long time that Christian women of leisure have a work to do among this class, which is to be found in every considerable community.

Since the organization of First-day schools and adult classes among us, there has appeared to be an element of active, working power connected therewith, that might be used to the accomplishment of great good in this direction.

There are many lanes and alleys where the homes of the laboring class are located in the immediate vicinity of our Philadelphia Meeting houses. We have flourishing First-day schools in two of these. Let such of the teachers and members of the adult and other classes, both male and female, who are willing and have the leisure, unite in an organization to be called by some hopeful, pleasant name, and invite the co-operation of such wives and mothers in the vicinity as are willing to be encouraged and assisted, and who will open their homes at stated times for social and industrial gatherings.

[* Essay read at the First-day school meeting, Philadelphia.]

Thus, instead of calling them and their children away to some place designated by us as an industrial meeting or sewing school, we hold such right in their midst, going into *their* homes, not minding for the present how poor and uninviting they may be, but sitting down with the two or the three who may be induced to enter with us into the labor of self-help and improvement.

The plan by which it is proposed to accomplish this might be somewhat as follows: Let those as before said, both male and female, who are willing to engage in the work form a society; the members to be divided into canvassers, readers and instructors—the younger girls and the men and boys at first to take the part of readers, those of mature age to be the instructors.

The duties of the canvassers will be very important. They should be selected with great care, as just here wisdom and caution will be most needed. It will devolve upon them to go from house to house, and, as way opens, converse with heads of families as to their welfare, not in a prying, but a friendly and kindly manner feeling their way, and offer to hold a sewing and reading sociable with them and such of their neighbors as are willing to join, at their own homes, on any afternoon or evening that will be most convenient, inviting them to have ready any new or part worn material they may have in the house, that they have not time to make up and are not able to pay for the making of, or any garment that they wish to have cut out, any patching and darning, stipulating that all the material shall be clean and well ironed. Information should also be given that there will be present at each gathering one or more readers, who will bring interesting books and occupy part of the time in reading.

The instructors will provide themselves with patterns, scissors, a few needles, pins and spools of cotton, be prompt and cheerful, seeing more than they seem to observe, and, in an unobtrusive way, finding out where they can assist and making occasions for such help.

Those thus engaged should be patient, courteous and obliging, infusing into the rude society with which for the time they are associated, something of that refinement which is the unmistakable evidence of good breeding.

The readers will be expected to select such useful and entertaining books as will be stepping stones in the advancement of their hearers, and to read slowly and clearly, giving such explanation as the text may require. In this way it is believed young men and boys who now stand at the corners of

the streets may be induced to spend some of their evenings at home.

A class of such might in a little while be started in each court and alley for instruction in writing, drawing, and arithmetic. All that is wanted is for us to feel that the work is feasible, and that we are willing to attempt it. Our First-day schools will thus be made not only a blessing to ourselves, but to the communities in which they are located. From them will go forth an influence that will be felt *beyond* the narrow limits that now circumscribe their labors, and mothers and children who are now living in squalid misery and destitution will be encouraged and strengthened by our example of cheerful industry and self-denying labor. Such an organization involves no pecuniary outlay beyond the purchase of a few trimmings. It gathers up waste products, economizes latent energies, vitalizes dormant faculties, and develops talents in both helper and helped that can in no other plan which has, as yet, been attempted, be fully accomplished. Help the struggling to help themselves! Thus we may save their lives from failure and the city from the possible burthen of their support. In this way we may also show our desire to walk in the footsteps of our Blessed Master, who while on the earth went about doing good to the *bodies* as well as the souls of men.

L. J. R.

First mo., 1871.

From Hedge's Primeval World of Hebrew Tradition.

THE PRESERVING POWER OF RIGHTEOUSNESS.

"And the Lord appeared unto Abraham in the plain of Mamre." Gen. xxviii. 1.

The crowning beauty of this Hebrew narrative is Abraham's plea for the city of Sodom. To his intercession it is promised that if ten righteous be found within its gates the city shall not be destroyed for the sake of those ten. Here the story assumes an allegorical character, and, under the guise of a special local application, shadows forth a universal moral truth,—the saving influence of moral worth in human society. Cities and nations are saved by the righteous that dwell in them, not by arts or arms. The health of a country is not its commerce nor its agriculture, not its exports nor its imports; neither its military organization nor its civil constitution, its legislation nor its judiciary, but its conscience; *i. e.* the moral elevation of its citizens. A recent historian is at pains to prove that the progress of society is due to the intellectual rather than the moral powers. Be that as it may, it is very certain that the *preservation* of society depends on the moral rather than the intellectual. Suppose a community in which activity of mind has

reached its maximum, in which all the faculties are at work, all the arts that minister to human well-being duly cultivated and successfully practised, in which intellectual development is more advanced and more universal than the world has yet known it at its best estate. But while the material prosperity attendant on this intellectual development is at its height, suppose a sudden stagnation of the moral life, a general corruption of the moral sense; suppose the conscience of such a community paralyzed; suppose a consequent decline and final dying out of all the virtues, a state in which probity, fidelity, continence, sobriety, brotherly kindness, and charity are extinct, and where unqualified selfishness and unbridled lust universally prevail. How long in such a state would material prosperity endure? How long would mental activity continue to advance or refuse to recede? How long would arts and laws, how long would the state itself survive the dissolution of the moral life? Who does not see that moral qualities are the only sure guarantees of intellectual progress, that the virtues of society are its ultimate bondsmen, and righteousness the bulwark of the state? On the other hand, the conservative power of righteousness exceeds its diffusion. It is not to be measured by the number of those to whom that character may be ascribed. The number of such in any community is comparatively small, but society survives through their saving power. The Swedish statesman was surprised to find with how little wisdom the world is governed. The Christian moralist has equal cause for wonder when he thinks with how little virtue the world is saved,—with how few examples of supreme worth; when he thinks how small the number of the moral heroes of history compared with those who have made themselves a name and won enduring renown by secular enterprise, by military prowess or intellectual gifts. But to these it is due that the latter have found opportunity of action and had their place in the world. To the moral heroes of history it is due that there ever was a history of human kind to be written, that there is a history now to be read, that human society continues to this day. Without these it had perished long ago through utter corruption, whelmed in its own ruins, leaving no trace of itself in a world dispeopled of civilized kinds and abandoned forever to savage tribes. There never was an age and never a city or state in which moral corruption was not too rife. In such as survive the ever-threatening destruction and death it is the more prevailing virtue of the few which overcomes the abounding vice of the many, and rights at last the sinking

world. In every age those "ten righteous" have been the saviors of their time. They have saved it with their excellent works and the more excelling beauty of their lives. Without ostensibly combining for that end, with no visible conspiring, without art or device, or shrewd organization, or policy or plot; by being what they are, and living what they are from the heart of faith, by walking uprightly, doing justice, and loving mercy, in their several spheres; with the still conservatism and counter-attraction of miraculous goodness, they have kept the world from going to pieces with the wear and tear and centrifugal strain of disintegrating vice.

Those "ten righteous" are the secret and immortal cabal which unconsciously plots the preservation of the state, as selfishness and low chicanery and political intrigue are forever plotting its destruction.

BUT.—Though *but* is a short word, it is nevertheless often very expressive and forcible—has a very important connection with what precedes and follows it. As for example in these passages:

"Ye thought evil against me, *but* God meant it for good."

"The rulers take counsel against the Lord, *but* He shall have them in derision."

"Weeping may endure for a night, *but* joy cometh in the morning."

"They laid hands on the apostles and put them in the common prison, *but* the Lord opened the prison doors and brought them forth."

"If this counsel or this work be of man it will come to naught, *but* if it be of God we cannot overthrow it."

For Friends' Intelligencer.

A VOICE FROM NEW YORK.

On a late First-day morning, at Rutherford Place Meeting, New York, there was delivered by a Friend from another city a practical address, and to the mind of the writer it was purely apostolical. It was closely listened to, and the words as they fell appeared to be gathered carefully up by all who were favored to be present.

A silence ensued, nearly as deep and profound as could have dwelt in a catacomb, and in due time the Meeting dissolved.

The gathering was not large, and was rendered less than usual by the unpleasant state of the weather; but to all who were present, it must have been a highly favored season.

Wending his solitary way home, the writer was brought to ponder on what he had heard, and also on the great change which time brings to us all, and to everything around

us; and a feeling of deep regret came over him, that with the enormous growth of the city, the meetings should be actually smaller than they were wont to be of yore. The hundred-fold increase in the facilities for travel, by the formation of the iron road, and the introduction of the iron horse, decentralizing the population to such an extent, that it is now no uncommon thing for people to repose at night, and to spend First-day from thirty to sixty miles from their place of business in the city.

The prevalence of wickedness and crime in the urban district also tends to make many people who are of a moral and peaceful tone prefer to dwell away from it.

The main cause of the thinness of the meetings, however, is the inertia that exists in the matter of attendance, which is not by any means confined to Friends, as it is estimated, after careful investigation, that but one-sixth of the whole Protestant community in this city are habitual attendants of places of worship. The excuse for absenteeism that might be made in regard to other Societies, that a paid ministry, a hired choir and organist, and a gorgeously finished and furnished place of worship, put it beyond their means to participate, does not hold good with that of Friends.

There are doubtless residing in this city quite enough persons, male and female, in perfect health, who are capable of walking, and who would be benefitted by the walk, who were brought up in the practice of attending Friends' meeting, and who fervently believe it a system of religion more in consonance with the teachings of the great Pattern of mankind than any other, to fill to overflowing all the meeting-houses here; and who yet from thoughtlessness, indolence, or from drifting in other directions, never attend meeting at all, merely because they can go at any time.

Would it not be well for all such to ponder deeply whether remorse might not be mingled with their reflections, if from carelessness and want of sympathy on their part, the meetings of Friends in this city should by any possibility perish out of sight, and they, and their children, and their children's children, be deprived of the privilege of attending any place for worship, except where the chain of dogmas and creed are the rule, where ceremonials and commotion are everywhere, and sweet solemnity and silent waiting nowhere.

D. D. W.

THE FUTURE LIFE.—It may seem strange that our Lord says so little about the life to come, as we call it; though in truth it is one life with the present, as the leaf and the blos-

som are one life. Even in argument with the Sadducees he supports his side upon words accepted by them and upon the nature of God, but says nothing of the question from a human point of regard. He seems always to have taken it for granted, ever turning the minds of his scholars toward that which was deeper and lay at its root—the life itself—the oneness with God and His will, upon which the continuance of our conscious being follows of a necessity, and without which, if the latter were possible, it would be for human beings an utter evil.

When he speaks of the world beyond, it is as *his Father's house*. He says there are many mansions there. He attempts in no way to explain. Man's own imagination, enlightened of the spirit of truth, and working with his experience and affections, was a far safer guide than his intellect, with the best schooling which even our Lord could have given it. The memory of the poorest home of a fisherman on the shore of the Galilean lake, where he as a child had spent his years of divine carelessness in his father's house, would, at the words of our Lord, *my Father's house*, convey to Peter or James or John more truth concerning the many mansions than a revelation to their intellect, had it been possible, as clear as the Apocalypse itself is obscure.—*G. Macdonald.*

Scraps

FROM UNPUBLISHED LETTERS.

I read with interest your editorial on "Our Paper," in No. 1 of current volume, in regard to original contributions for the *Intelligencer*. It came close home to me, and awakened the inquiry, What is the impediment as regards myself? and I will candidly say, It is the belief that a writer for the *Intelligencer* may not express his highest thought, or the deepest convictions of his soul, should these not be in harmony with the accepted and recorded thoughts of "early Friends," if he expects his article to be published. This checks all progress in spiritual truths. It throws distrust over progressive humanity—over the capacity for that improvement and development of the race, "till righteousness shall cover the earth, as the waters do the sea."

Now I think, when a writer puts his name to an article, if it contain an honest, rational thought, even if it be one not recorded by any previous Friend, it might safely be published, letting the responsibility rest upon the author.

The highest and purest convictions of right, truth and love that are revealed to any soul,

are the voice of God to that soul. This is true in all time. God is a spirit, and unchangeable. He speaks to *us*, as he did to the prophets, which was the basis of their frequent declaration, "Thus saith the Lord." The communication is the same in kind, but probably there was to them a *higher degree* of illumination, from their greater devotedness.

I am much obliged to thee for affording me the opportunity of reading the copy of the [London] *Friend* of 1st ult. It gives interesting evidence of the earnest devotedness of our British Friends, in a wide field of missionary labor; and although their influence in drawing the hearts of those distant and differently-educated peoples, into closer harmony with the Spirit of God, may be less than is supposed, or could be desired, yet the effort to do good is doubtless blessed to those who make the effort, and to those whose hearts are touched with kind liberality to contribute pecuniary aid.

This stirring up of the benevolent feelings to active personal sacrifice and practical liberality, in promoting what is *believed* to be a righteous cause, has a very salutary influence in promoting the soul's progress. "It is more blessed to *give* than to *receive*." To those who accept the Bible as unqualified authority, the declaration, injunction and promise of the Blessed Jesus to His disciples, after His resurrection, viz.: "All power is given unto me in heaven and in earth. Go ye, therefore, and teach all nations. And lo, I am with you always, even unto the end of the world,"—must be very encouraging and sustaining. This, no doubt, is their great support and trust, under much personal hardship and sacrifice; and, although my present view of things would not permit me to join in their labor, yet I can say from my heart, they have my best wishes for the Divine blessing on the sacrifices they are making, and that they may reap the reward of true peace.

. . . But, my friend, thou hast known a shelter in many storms:—oh! mayst thou still repose thy confidence in that munition of Rocks which has hitherto been thy protection and thy shield of defence. Here, in quietness and in confidence, shall be thy strength. Here thou mayst say with the Psalmist, "Though an host should encamp against me, my heart shall not fear:—though war should rise against me, in this I will be confident: one thing have I desired of the Lord, and that will I seek after, that I may dwell in the house of the Lord all the days of my life, to behold the beauty of the Lord, and to inquire in His temple. For, in the time of trouble, will He hide me in His pavil-

ion, in the secret of His tabernacle will He hide me, He will set my feet upon a Rock."

My mind is often with thee in a travail of spirit for thy preservation, and in near sympathy with thee in the trials, afflictions and cares that have been thy lot of latter time. My desire is, that in all, and through all, thy mind may be attentive to the pointings of the Divine Guide, and know Him to be thy Centre. He who cares for the sparrows, extends His Fatherly and providential care to the lambs of His flock, now as much as ever. Fear not, therefore, nor be dismayed; cast thy burden on the Lord, and He will sustain thee—He will never suffer the souls of the righteous to be moved.

FRIENDS' INTELLIGENCER.

PHILADELPHIA, FOURTH MONTH 22, 1871.

GUTENBERG AND THE ART OF PRINTING.—By Emily C. Pearson. (Noyes, Holmes & Co., Boston.)—A pleasant, instructive work of mingled fact and fancy, depicting to us the life of the ingenious and thoughtful man who, under Providence, was so instrumental in dispelling the darkness of the middle ages,—John Gutenberg.

The author contrasts the present perfection of the art of book making and the abundance of books, with the scarcity which prevailed in the 15th century, when the slow and toilsome process of copying was the only means for the multiplication of volumes.

"The Cathedral of Notre Dame, at Strasbourg, was famed, in those days, for its splendid collection of five hundred volumes. The Countess of Anjou bought a book of Homilies, paying for it two hundred sheep, five quarters of wheat, and the same quantity of rye and millet. Henry V., King of England, borrowed a book from the Countess of Westmoreland; and not having returned it at his death, the Countess petitioned the Privy Council that it might be restored to her by an order under the privy seal, which was done with all formality."

Many difficulties and trials beset the pathway of the inventor, and these were met and overcome with sublime faith and patience.

From the first device of printing from solid wooden blocks, to that of the movable wooden type, thence to leaden, and then to the alloy of antimony and lead, which possessed

the requisite hardness, without being so hard as to cut the paper, was a difficult ascent. Patient experimenting, amid the trials of poverty, at length succeeded in establishing the new art as one of the profitable industries of the world.

Says our author: "Interesting it has been to trace step by step the passing on of this art to perfection. Long were the genius and industry engaged in its study, and never was there so rich and glorious a harvest from human efforts. The nurse and preserver of the arts and sciences, of religion and civilization, was not the work of one brain solely, neither did the gift bring peace at once, but rather strife and opposition. Ignorance fled before it as darkness from light; the priests and copyists were disturbed, and the way was made ready for the bringing in of the Reformation."

Our readers will find in another part of the paper the concluding pages of the work.

DIED.

MIDDLETON.—At Vineland, N. J., on the 7th inst., Furman Middleton, son of Sarah F. and the late Mordecai S. Middleton, aged 36 years; a member of Green St. Monthly Meeting, Philada. Death had no terrors for him. Through great physical suffering he was made ready and willing to depart for his "heavenly home." He was buried at Vineland on the 9th inst.

COX.—In Willistown, on the 13th of Third month, 1871, of membranous croup, Susanna M., eldest daughter of William G. and Sarah J. Cox, aged 6 years; a member of Goshen Monthly Meeting.

PINE.—On the 14th inst., Hannah B. Pine, in the 77th year of her age; a member of Philadelphia Monthly Meeting (Race St.)

THE Indulged Meeting which has heretofore been held in Mechanic Hall, Brown Street above Broad, will meet hereafter in the Hall, corner of Vineyard and Poplar Sts.

From "The Universe"

THE INSTINCT OF CHEMISTRY.

Mountain Builders and Gleaners.

Some birds attract attention by the size of their constructions, and by the innate notions which they seem to have of certain chemical phenomena, which we see them make exactly the right use of.

A little hill in an English garden astonishes us by its dimensions, and the labor which it demands. Many hands and much time have been occupied with it, and yet, if we compare the work with the means of him who orders it to be formed, this mass of earth seems but a little matter. A bird, the

mound-building *Megapodius*, accomplishes by itself a task a thousand times greater.

This bird has the carriage and size of a partridge, and its modest brown robe recalls the sombre colors of almost all the birds of its country, Australia, that land of zoological marvels, but its labors and its intelligence soon make us forget the mournful aspect of the workman. The modification of this species is a truly herculean work, and one would not credit it were it not attested by the most authentic evidence.

The immense structure built by the *Megapodius* rests on the ground. It begins by getting together a thick bed of leaves, branches and plants; then it heaps up earth and stones, and strews them round about in such a way as to form an enormous crater-like tumulus, concave in the middle, the place where alone the materials first collected remain uncovered. One of these nests, the dimensions of which are given by the illustrious ornithologist Gould, was 14 feet high, and presented a circumference of 150 feet. Compared to the size of the bird, the dimensions of such a mountain are almost prodigious, and we ask how, with its beak and claws only for pickaxe and entire means of transport, it contrives to get together such a mass of materials.

Were we to try to establish a comparison between the work of the *Megapodius* and that which a man could execute, we should really be astonished at the results. The comparative size of the animal being very difficult to arrive at on account of the variety of its attitudes, if then we take the weight as a standard, we find that a *Megapodius* weighing rather above 2 lbs. sometimes raises its tumulus more than 10 feet in height*. Now, as a man weighs on an average about 130 lbs., he must, in order to build a structure corresponding to the nest of the bird, accumulate a mountain of earth which would be almost double the height and bulk of the great pyramid of Egypt.

The mighty task completed, the workman confides its eggs to it. The female usually lays eight, which she disposes in a circle in the centre of the nest among the herbs and leaves which lie heaped up at this spot. They are placed at exactly equal distances from each other and in a vertical position. When the laying is completed, the *Megapodius* abandons its master-piece and its offspring, Providence having revealed to it that henceforth it is no longer useful to them.

* One measured by Mr. Jukes was 150 feet in circumference, the slope of the sides 18 to 24 feet, and the perpendicular height 10 or 12 feet. The eggs are as large as those of a swan, and are considered a great delicacy.

Endowed with a marvellous chemical instinct, this bird only collects such a mass of vegetable matter that it may commit the hatching of its eggs to the fermentation they produce. It is in fact on the heat so engendered, that the bird relies for supplying her place; the mother thus substituting a chemical process for her own cares.

Réaumur proposed to leave the incubation of our hens' eggs to the heat of dung, but they were poisoned by its mephitic vapors. The Megapodius, more judicious than the celebrated academician, employs the fermentation of grass and leaves, which is not attended by the same inconvenience.

Every thing in the history of this animal is extraordinary. Instead of being born naked, or covered with down, and of issuing from the egg incapable of procuring its subsistence, the young Megapodius, when it breaks its shell, is already provided with feathers fitted for flight. It is scarcely free ere it aspires to seek the light and air, throws off the leaves which surround and stifle it, mounts on the crest of its tumulus, dries its yet moist wings in the sun, and tests them by a few flaps. Lastly, quickly becoming confident in its strength and fortune, and having cast a disturbed and inquisitive look upon the surrounding country, the feeble bird takes its flight into the atmosphere and quits its cradle forever. It knows how to nourish itself so soon as it is born.

Another Australian bird possesses the same instinctive foresight as that of which we have been speaking; but instead of building mounds it is a sturdy gleaner. The Talegalla Lathamii, for so it is called, is of the size and has the look of a fowl, and builds its nest with grass, which it gleanes in the fields and of which it gathers an enormous heap, comparable, indeed, to the cocks, which our hay-makers form in the meadows. But it is not with its beak, it is with its claws that it works. By means of one of them it collects a little bottle of hay, which it grasps in its toes; this it carries to its nest, hopping along upon its other foot. When, as the result of innumerable journeys, the heap has grown large enough, the female lays its eggs in it. Knowing as well as we do, that hay heats by drying, it relies upon the warmth for the incubation of its brood, which it abandons immediately after laying. The young Talegallæ are also born as completely feathered as the others, and just as able to shift for themselves when they issue from the egg. Hence, a few minutes after having scattered about the quilting which surrounds them, they take flight.

to spend one's life in hoarding up millions of wealth, which the possessor can never enjoy, as it would be to collect and lay up in a storehouse 60,000 mahogany chairs which were never intended to be used for the furniture of apartments, or 80,000 pairs of trowsers which were never intended to be worn."

EXTRACT FROM "THE ART OF PRINTING."

The invention had its enemies, and printing its martyrs; but its glory could not be dimmed, nor its progress arrested. Kings and queens turned engravers and compositors, glorying to labor with their own hands in the wonderful art. The wife of Henry IV. designed and printed cuts for some royal publications, and engraving with her own hand a figure of a young girl, presented it to "Philip de Champagne." Louis XV. in his youth, printed in his own palace a "Treatise on European Geography." The chief printers of the times succeeding that of Gutenberg were often the artists, the learned men, the writers. They not only reproduced the buried works of antiquity, but were able to explain and interpret them.

The Emperor Maximilian ennobled the printers and compositors of the new art, authorizing them to wear robes braided with gold and silver, such as the nobility only had the right to wear, and giving them, for a coat of arms, an eagle with wings extended on the globe, symbol of free and rapid flight and universal conquest. Deserved honor! fitting symbol! What marvels has printing wrought. It has given elementary instruction to the masses,—putting into every hand, however humble or toil-worn, the printed page, multiplying books to teach, amuse, and elevate even the little child. It has reformed corrupt religions, fashioned and developed philosophy anew, and permeated laws with their true spirit. Before its magic touch, the old feudal despotisms of the dark ages have fallen, and later and no less oppressive systems have wasted away. By its aid time and space seem annihilated, as "railways open to it routes, steam lends to it wings, and the electric telegraph gives to it the instantaneousness of powder!" The "preserver of all arts," it broods over and perpetuates all useful institutions and discoveries; and trade and commerce are stimulated, guided, systematized, enlarged, and furnished with boundless facilities. But this mighty engine can be used for evil as well as for good, and strike like the thunder-bolt the best interests of man. The poet-historian from whom we have before quoted, illustrates this by a dream of Gutenberg's, which he is said to have related to his friends, and to

A POPULAR writer says: "It is as absurd

have been translated from the German, at Strasbourg, by Mr. Garaud.

Gutenberg had succeeded in an important experiment. His success filled him with such enthusiasm that he scarcely slept the night following. In his troubled and imperfect rest he had his dream,—a dream so prophetic, and so near to the truth, that one questions, in reading it, if it be not the reflecting presentiment of a wakeful sage rather than the fevered dream of a slumbering artisan. This is the account or legend of this dream as it is preserved in the library of the counsellor Anlique Beck:—

“In a cell of a cloister of Argobast sits a man with a wan forehead, a long beard, and fixed look, before a table, supporting his head with his hand. Suddenly he passes his fingers through his beard with a quick joyous movement—the hermit of the cell has discovered a solution of the problem he sought! He rises and utters a cry; it was as a relief to a long pent up thought. He hastily turns to his trunk, opens it, and takes therefrom a cutting instrument; then, with nervous jerking movements, he sets himself to carve a small piece of wood. In all these movements there was joy and anxiety, as if he feared that his idea would escape,—the diamond he had found, and which he wished to set and polish for posterity. Gutenberg cut roughly and with feverish activity, his brow covered with drops of sweat, while his eyes followed with ardor the progress of his work. He wrought thus a great while, but the time seemed short. At length, he dipped the wood in a black liquid, placed it on parchment, and bearing the weight of his body on his hand in the manner of a press, he printed the first letter which he had cut, in relief. He contemplated the result, and a second cry, full of the ecstasy of satisfied genius, burst from his lips; then he closed his eyes with an air of happiness such as would befit the saints in paradise, and fell exhausted on a joint stool; when overcome of sleep, he murmured, ‘I am immortal!’

“Then he had a dream which troubled him. ‘I heard two voices,’ said he, in relating it; ‘two unknown and of a different sound, which spoke alternately in my soul. One said to me, “Rejoice, John; thou art immortal! Henceforth, light shall be spread by thee throughout the world. People who dwell a thousand leagues from thee, strangers to the thoughts of our country, shall read and comprehend all the ideas now mute,—spread and multiplied as the reverberations of the thunder, by thee, by thy work. Rejoice, thou art immortal! for thou art the interpreter whom the nations await that they may converse together. Thou art immortal;

for thy discovery comes to give perpetual life to the genius which would be still-born without thee, and who, by acknowledgment, shall all make known in their turn the immortality of him who immortalized them!’ The voice ceased, and left me in the delirium of glory. But I heard another voice. It said to me, “Yes, John, thou art immortal. But at what a price? Thought not unlike thine, is it always pure and holy enough to be worthy of being delivered to the ears and eyes of the human race? Are there not many—the greater number it may be—the greater merit rather a thousand times to be annihilated, and sink to oblivion, than to be repeated and multiplied in the world? Man is oftener perverse than wise and good; he will profane the gift that you make him; he will abuse the new faculty that you create for him. More of the world, in place of blessing, will curse thee. Some men will be born with souls powerful and seductive, and hearts proud and corrupt. Without thee, they would rest in the shade; shut in a narrow circle, they would be known only to their associates, and during their lives. By thee, they will bear folly, mischief, and crime to all men and all ages. See thousands corrupted with the disease of one! See young men depraved by books whose pages distill soul poison! See young women become immodest, false, and hard to the poor, by books which have poisoned their hearts! See mothers mourning their sons! See fathers blushing for their daughters! Is not immortality too dear which costs so many tears and such anguish? Dost thou desire glory at such a price? Art thou not appalled at the responsibility with which this glory will weigh down thy soul? Listen to me, John: live as if thou hadst discovered nothing. Regard thy invention as a seductive but fatal dream, whose execution would be useful and holy, if only man was good. But man is evil. And in lending arms to the evil, art thou not a participator in his crimes?”

“I awoke in a horror of doubt! I hesitated an instant; but I considered that the gifts of God, though they were sometimes very perilous, were never bad, and that to give an instrument to aid reason, and advance human liberty, was to give a vaster field to intelligence and to virtue,—both divine. I pursued the execution of my discovery.”

Thus has the art of printing come down to us consecrated by the martyr struggles of a heroic soul. He died poor, able only to leave a few books to his loving sister, yet enriching all mankind by the fruits of his genius. “I bequeath to my sister,” said he

in his will, "all the books printed by me in Strasbourg."

But which of the voices that the legend represents as speaking to Gutenberg in his dream, shall prove a true prophet of the art? Shall its resistless power blast the world with error and crime, or bless the ages with truth and purity? "The first cries of the press," says a historian, "were praise and prayer." Let its utterances be for religion and learning, God and humanity; then welcome the hour when the earth shall be covered with its swiftly multiplying issues, "the leaves of the tree which are for the healing of the nations."

THE heart is, as it were, the pasture in which multitudes of thoughts are fed every day: a gracious heart diligently kept feeds many precious thoughts of God in a day.

From Alger's Oriental Poetry.

THE NINTH PARADISE.

In the nine heavens are eight Paradises;
Where is the ninth one? In the human breast.
Only the blessed dwell in the Paradises,
But blessedness dwells in the human breast.
Created creatures are in the Paradises,
The uncreated Maker in the breast.
Rather, O man, want those eight Paradises,
Than be without the ninth one in the breast.
Given to thee are those eight Paradises,
When thou the ninth one hast within thy breast.

LIFE AFTER DEATH.

BY JOHN W. CHADWICK.

Soft was the air of Spring, and, at her feet,
The turf full swift, was turning green and sweet,
As from the city Rabbi Nathan passed,
Musing on Him who is the first and last.

The tuneful birds he heard in woodlands dim,
 wooing each other with that vernal hymn,
Which, flowing first from the great Heart above,
Keeps fresh the world with its perpetual love.

Anon he came to where with eager toil
An aged man, fretting the fragrant soil
With his sharp spade, did make a space to set
A Cobar tree—the greatest wonder yet!

For seventy years the Cobar tree must grow,
Full seventy years leaves bear and shadows throw,
Ere to fair fruit its fair sweet blossoms turn,
For all the day-god's ever-flowing urn.

"What madness this!" doth Rabbi Nathan cry;
"Thou workest here as one not born to die;
As if thyself didst hope that of this tree
Fruit yet should come to be a joy to thee."

Then turned the aged man and gently said,
"This tree shall grow long after I am dead;
But though its fruit my hands may never gain,
My planting, Rabbi, will not be in vain.

"Have I not eaten of the Cobar tree?
My father's father planted it for me.
So plant I this, that in the coming days
My children's children may my labor praise."

"Thou fool!" the Rabbi said, "to work for those
Who may or may not be, Heaven only knows.
All earthly things full soon must pass away;
'Tis only work for Heaven that will pay."

He wandered on, and as the sun, now low,
Rushed to its setting, and a sudden glow
Filled all the West, he laid him down to sleep,
Nor guessed how long the charm its power would
Keep.

For many a moon did wax and wane again,
And many a year did bring its joy and pain,
Ere he awoke; and, not far off, behold
What seemed the tree that he had known of old.

But now it was full grown, and at its root
A man full-grown was eating of its fruit,
Who said, when asked how came it thus to be,
"My father's father planted it for me."

Then Rabbi Nathan knew that seventy years,
With all their precious freight of smiles and tears,
Had fled since he had lain him down to sleep,
And felt the slumber o'er his eyelids creep.

He wandered back into the city street,
But saw no friend with voice of love to greet;
Yet in the schools where he of old did teach,
The sages still did quote his silver speech.

And there he saw, that not in Heaven alone,
But here on earth we live when we are gone.
Too late he learned the lesson of to-day:
The world goes on when we are gone away.

The world goes on; and happiest is he
Who in such wise wins immortality,
That should he sleep forever in the grave,
His work goes on and helps the world to save.

—The Golden Age.

A TRAVELER once visiting the lighthouse at Calais, said to the keeper, "But what if one of your lights should go out at night?" "Never—impossible!" he cried. "Sir, yonder are ships sailing to all parts of the world. If to-night one of my burners were out, in six months I should hear from America, or India, saying that on such a night the lights at Calais lighthouse gave no warning, and some vessel had been wrecked. Ah, sir! sometimes I feel when I look upon my lights, as if the eyes of the whole world were fixed upon me." No one knows how much sorrow and suffering may ensue from a single neglect of duty.—
The Golden Age.

From "Good Health."

DREAMS.

Whether our views are materialistic or spiritual, we must adhere to the principle that mental activity is inseparably connected with the brain. It is the instrument by which the soul manifests its activity, and, as from an imperfect instrument the most skilful performer can produce only imperfect music, so the capabilities of the mind are dependant upon the state of the brain. As in sleep its nourishment is considerably lowered by the diminished supply of blood, so also, as Durham's experiments upon sleeping animals

whose skulls he partially opened, have shown, the arterial, that is, the oxygen bearing vessels, are more contracted and less abundantly filled than in the waking condition, and, consequently, the capability of the brain is much less. Mental activity is reduced to a minimum; and especially must all complicated processes, above all things the judgment, come to a pause. Still our thoughts and ideas continue to spin themselves out even in sleep, according to the same indestructible law as they do when we are awake, but they lack the regulating and limiting conduct of the judgment, and the understanding. This partial activity of the brain is to dream.

The dream is not a dark and inexplicable something of whose origin we are ignorant; it is a product of the same brain function which is active in our waking state. Our thoughts in dreaming depend as much upon the association of ideas as they do when we are awake. In accordance with this law every idea immediately on its rise calls up a series of other ideas connected with it by resemblance of circumstance, similarity of sound in the words which express it, or agreement in the order of time, &c.

In the waking state the judgment always exercises a restraining influence upon the play of our fancy, and prevents us from joining together the unusual and incongruous: but in sleep our ideas are associated in the lowest manner. When we are awake one idea follows another; but when we are asleep, several ideas simultaneously present themselves, and, uniting together, form themselves into one complex whole; or, from the rapidity with which they follow each other, and the indistinctness of their connection, one idea unobserved takes the place of another.

In the waking state we can call up ideas by an effort of the will. We can think of what we wish. This, however, is not always the case. Very often it happens, as if by accident, that ideas spring from the treasure of our memory to which we voluntarily give further entertainment, or by which we are unwillingly led to other ideas distasteful to us. So also in dreams, where the voluntary calling up of any given idea is impossible, the mind is led to involuntary activity by means of ideas stored up in the memory. Most frequently the first impetus to a series of dream-pictures is given by some marked and striking impression which has been made upon us during the day, or by thoughts which have occupied our minds shortly before falling asleep. These ideas are often uninterruptedly continued; but not less often we are rapidly led to other ideas, and we are then unable to detect the connection between the two.

When we are awake the impression of the senses are by far the most prolific source of mental activity. But in sleep, as we have seen, the senses have ceased to exercise their functions, though still, to a certain extent, capable of excitement. Under strong impressions the senses of hearing and of feeling are susceptible even in deep sleep, but the resulting idea is almost always confused, and often an entirely different image is presented; just as in the twilight we sometimes take the trunk of a tree for a man sitting by the wayside. The indistinctness of the impression made upon the senses allows the fancy to fill it up in its own colors, and so it comes to pass that any excitement of the senses of hearing or feeling in sleep gives occasion for dreams, of which only the most general outline originates in external conditions. There are many examples of this on record. Meyer narrates that he once dreamed that he was attacked by robbers, who laid him full length on his back upon the ground, into which they drove a stake, passing it between two of his toes; but on awaking he found that these two members were only separated by a straw!

Another relates that, having a bottle of hot water placed at his feet, he dreamed that he had reached the top of Etna, and was treading on burning lava. In a similar manner, if we are uneasy in bed and throw off the covering, we dream that in the cold of winter we are wandering half-clad through the streets; or if there is a strong wind blowing, we dream of storms and shipwreck; or a knocking at the door produces dreams of an attack by thieves. It is very seldom that words spoken in sleep are distinctly understood, and equally seldom that they call up in the mind of the sleeper the idea they represent. I may mention an instance or two in which dreams could be controlled in this way. Dr. Abercrombie relates that an English officer who accompanied the expedition to Ludwigsburg in 1758 dreamed, to the great delight of his comrades, any kind of dream they chose, according to the words they whispered in his ear.

The excitement of the internal susceptibilities gives occasion for dreams almost more frequently than the external senses. By internal susceptibilities I mean those sensations which indicate to us the position of our internal organs, and which are usually known as general feelings, and to which belong the condition of being well and unwell. These sensations come within our consciousness during sleep, but, as might be expected, darkly and indistinctly. Connected with them in a similar manner as with the impressions of the external senses, are certain symbolic dream-pictures, the most common of which is night-

mare. This originates in a cramped condition of the respiratory muscles, and a consequent difficulty of breathing. Similar results will follow if the stomach be overloaded, for it then presses upon the diaphragm, and thereby confines the lungs. When we are awake we trace this disordered respiration to its correct cause—namely, a local affection of the organs of the chest, and there it ends; but in sleep we are incapable of this reasoning, and therefore, in harmony with the law of association, there arises from the feeling of oppression the idea of weight and the image of a superincumbent object. We also dream of heavily laden wagons passing over us, or of dark, shadowy apparitions emerging from the ceiling and gradually settling down upon us.

Not unfrequently we find that, instead of this, we dream of some great trouble or sudden fright, for in the waking state experiences often render respiration difficult. We then dream, for example, that we are attacked by robbers; and when we endeavor to secure our safety by flight, we find, to our consternation, that our feet refuse to serve us, and we remain, as it were, rooted to the ground. We try to call for help, but find that we are unable to produce a single sound, until at last, after long struggling, the muscles of respiration are released from their restraint, and we awake—sometimes with a loud cry.

In a similar manner is experienced the dream of falling from a great height. It usually happens while we are falling asleep, and depends upon the circumstance that the gradual relaxing of the muscles caused by sleep is, by some momentary excitement, reversed, and the result is a shrinking back of the body similar to that experienced in falling from any lofty position. Somewhat different from this is the dream of flying. According to Scherner it depends upon our consciousness of the action of the lungs, their rising and falling motion giving to us in our dream the notion of flight. There are a great many more conditions of the body, which, if they come into our consciousness during sleep, awake in us, in harmony with the law of the association of ideas, a certain kind of dreams. The emotions also produce a definite impression upon their character. "Great joy," some one has written, "originates a different class of dreams than great sorrow; and ardent love gives rise to dreams not produced by hatred, deep repentance, or an accusing conscience."

If we accustom ourselves attentively to notice our dreams, we shall easily perceive the confirmation of the law laid down. But we shall also find that it is exceedingly difficult to reproduce a dream correctly. It is so for two reasons. The imagery of dreams, in by far the greater number of cases, is so in-

distinct and shadowy, and in its particulars so inadequate, that by the effort to recall them, we involuntarily bring to our help the imaginative power of our waking moments, and thereby give to them definite color and outline. The other reason is, the innate tendency of the human mind to look at all things in their logical connections. When our dreams consist of a series of pictures, often connected only by the very loose bond of the association of ideas, we bring to them by their reproduction, unintentionally of course, a logical connection and correspondence with the real life which originally they did not possess.

During the period of deepest sleep the function of the brain is so weakened that we retain no recollection of it, and sound sleep has, therefore, come to be called a dreamless sleep. Sometimes we know that we have dreamed, but are wholly unable to recall a single trace of that which has engaged our sleeping thoughts. But shortly before we awake, when the oxygen stored up in the blood corpuscles begins to bring the process of waste and repair in the brain into more energetic operation, our dreams become more lively and connected, and, for this reason, are more easily retained by the memory. The cases are very few in which dreams are so vivid that we are unable to distinguish them from real events. Professor Jessen, a celebrated physician to the insane, gives a striking example, in the following words:

"One winter morning, between the hours of five and six, I was awake, as I believed, by the head keeper, who informed me that the friends of a patient had come to remove him, and at the same time he inquired whether anything required mention. I replied that he might permit the patient to depart, and immediately lay down again to sleep. I had no sooner done this than it occurred to me that of the intended removal of this patient I had heard nothing, but that it was of the departure of a woman of the same name I had been advised. I was compelled, therefore, to seek further information, and, having hastily dressed myself, I went to the dwelling of the keeper, whom, to my astonishment, I found only half clad. Upon my asking him where the people were who had come to fetch away the patient, he replied, with surprise depicted in his countenance, that he knew nothing of it, for he had only just risen, and had seen no one. This reply did not undeceive me, and I rejoined that it must have been the steward who had visited me, and I would go to him; but as I was descending the steps which led to his house it struck me that the whole affair was a dream—a fact, however, which I had not until that moment suspected."

This example is particularly interesting from the length of time which elapsed after the professor awoke, and during which he had been thoroughly aroused by the act of dressing and going to the keeper, yet the delusion which regarded the dream as a reality continued, and at last, without any apparent cause, suddenly vanished.

Proportionately more frequent are the cases where the awaking is imperfect, but still sufficient to induce a course of action corresponding with the supposed realities of the dream. There are instances on record where people, deceived by the alarming imagery of a dream, have committed acts of violence for which they could not be considered responsible.

FAMILY PEACE.—It is recorded that an emperor of China, once making a progress through his dominions, was, by chance, entertained in a house in which the master, with his wife, children, daughter-in-law, grandchildren, and servants, all lived together in perfect peace and harmony. The emperor, struck with admiration at the spectacle, requested the head of the family to inform him what means he used to preserve quiet among such a number and variety of persons. The old man, taking out his pencil, wrote these three words: *Patience—Patience—Patience.*

MISERY OF WAR IN WINTER.

The *Times* (Dec. 29) contains the following account of the miseries of the French at Beaugency and elsewhere, this winter:—"The scene at Beaugency, described by 'A Military Correspondent,' is a prolonged scene of agony. In a house which had once been a *Pension de Jeunes Filles*, every room from cellar to roof was crowded with dead and starving men, lying so thick it was impossible to move among them. It was Saturday, and many of them had been there since the Wednesday, some since the Tuesday. All that time 'not one drop of water, not one atom of food, had passed their lips,' nor had any comforting hand approached them. If a broken-legged sergeant had been able to throw his own coat over his more severely wounded officer, that was the utmost relief any of them had obtained.

"Moreover, the windows of the house were all broken, and all these days and nights of almost Arctic cold they had been lying on the bare floor, with their wounds undressed. All the agonies of wounds, of cold, of hunger and thirst, with all the horrors of death, were endured for days together by these helpless sufferers. The battle, in fact, had been raging for three days around Beaugency, neither side gaining such undisturbed possession of the town as to be able to think of the wound-

ed. Even on the second day, German shells burst in hospitals where French volunteers were tending German wounded.

"That night there was only one doctor in the town capable of performing amputations, and there were 200 desperately wounded men in one building alone. The dead lay thick among the dying, and as the former were dragged out their places were instantly filled. Miserable objects, with broken jaws or faces half shot away, wandered about, pointing to their dreadful wounds, and making piteous signals for water, which it was impossible for them to swallow. Officers and men, veterans and boys, all lay in one undistinguishable mass of misery. Every moan that the human voice can utter rose from that heap of agony. This was on the Thursday.

"How many more scenes like the one we have just described might there have been seen in Beaugency on Saturday? And how many more in the numerous villages over which the storm of conflict has passed between Beaugency and Vendome?"—*Herald of Peace.*

GERMS OF SCARLET FEVER.

In everybody affected with scarlet fever there is produced poisonous matter, which, passing from the diseased body, is capable of generating anew the same disease as that which affects the body from which it is derived. The proofs of this are so abundant that we cannot for a minute admit that the question is open to discussion. The point of most importance here is to know how long the "poison germs" of scarlet fever retain their vitality—the terrible power of starting anew the changes of which they are the offspring. With regard to scarlet fever, we have more evidence of these "poison germs" retaining their vitality than with any other contagious diseases. Sir Thomas Watson, in his classical lectures on the "Practice of Physic," mentions a case in which a piece of flannel worn round the neck of a scarlet fever patient, being accidentally discovered two years after, and applied to the person of a servant in the family, produced an attack of scarlet fever. Were it necessary, I could mention several instances, coming within my knowledge and reading, of the scarlet fever poison lying dormant in woolen clothes for years, and not having lost its vitality or power of communicating the disease.

Another point of importance with regard to the scarlet fever "poison germs" is the length of time which a person once affected with scarlet fever is capable of communicating the disease to others. When a person has got well of scarlet fever, as far as general health goes, it is by no means the case that he is no longer capable of communicating

the disease, but many days after he is strong and apparently healthy, he is capable of disseminating "poison germs" from his body.—*Herald of Health.*

I T E M S.

A VALUABLE railroad train signal-light has been invented. In the centre of the roof of the rear car of the train, over the rear axle, is placed a square lantern, with alternate panes of red and white glass. The lantern is connected by means of a shaft with one of the axles in such a manner that eight revolutions of the axle produce one of the lantern. When the car stops the lantern of course ceases to revolve. Upon each side of this main lantern are two others, also connected with the axle in such a way that when the train is moving forward a solid red light is displayed, and if backing, a solid green light. The engineer of a train coming up in the rear can thus tell, by observing these lights, whether the train before him is moving or at a stand still; and if moving, in which direction.

THE EFFECT OF STRIKES, in Great Britain, it is asserted, has been to drive business away from that country, and many manufacturers, it is stated, have closed their establishments in England, and have organized others in Belgium, where the men will work on acceptable terms. English capitalists, it is reported, now contract with the establishments on the continent of Europe, for machinery and iron work, of which ten years ago England enjoyed the entire monopoly. The committee of a new hospital, now erecting in London, it is stated, recently contracted with a firm in Norway for the entire wood work of the building, and the window sashes, frames and shutters are fitted and put together abroad, and brought over to England ready to be inserted in the brick work. The cause of this unusual state of affairs is attributed to the fact that none of the English builders could be induced to send in proposals for the work, in consequence of the uncertain condition of the standard of wages.

The street cars running in London, it is reported, were manufactured in Copenhagen, from models brought from New York. In the coal and iron districts of the middle counties of England, a large iron bridge just erected, was constructed in Belgium, the estimates for the work being lower than those of the manufacturers in the neighborhood.

In England they have courses of scientific lectures for workingmen at a penny each; and printed reports of the lectures, revised by the authors, are sold at the same price. A "second series" of these lectures in the Hulme Town Hall included one by Huxley on Coral and Coral Reefs, and one each by Rescoe and Huggins on Spectrum Analysis.

W. S. JEVONS contributes to *Nature* the result of a series of experiments which he made to ascertain how many objects the human mind can count by an instantaneous and apparently single act of attention—that is, without being conscious of changing attention from one to another. He found that the estimate was infallible for as many as three objects; that failure was extremely rare with four objects; but when five objects were taken into consideration the estimate became uncertain.

DR EDWIN McCracken, who has maintained an electric light every night for ten consecutive months, in the service of the Erie Railway, has found that a battery, if relieved from duty every five minutes, will keep in action for months at a time, while with continuous work it will run out in half an hour. Improving the discovery, he used two batteries, with an adjustment by means of a clock, so that they alternate every five minutes in doing the work. The change of connection is made so exactly that the light is undisturbed except that it flares up with increased brightness when the fresh battery is turned on, and the delicate galvanometer hardly notices the transition. By this device the two batteries can work an indefinite length of time. He compares the phenomenon to the carrying of a load. If one man carries 100 pounds without relief, he will soon give out. If he alternate every five minutes with another man, the two can carry it many miles without difficulty. Various explanations are offered, and it seems to be the impression that during the time of activity, while chemical decomposition is going on in the cells, some of the products collect and stand in the way; but when the activity is suspended for a few minutes these are dissolved or removed, and the battery is again ready for its full action. Dr. McCracken uses what is known as the chromic-acid battery, and by a curious calculation he shows that the chemical products can be so utilized as to make the light cost nothing but the labor in taking care of it. These products are sufficiently useful in the arts to bring a price equal to the first cost of materials.

THE HOLY GRAIL.—This title of Tennyson's recent poem has been the subject of earnest investigation among antiquaries—the legend being, that the "Holy Grail" was the chalice, made of a single emerald, with which our Saviour celebrated the last supper, and, which being lost, was the object of the search of the "Knights of the Round Table." At a recent meeting of the British Philological Society, a paper was read by Dr. Oppert, advancing the theory that the "Grail" was originally nothing else than the "coral," which in times of heathenism was supposed to possess the miraculous powers ascribed to grail.

FRIENDS' INTELLIGENCER.

"TAKE FAST HOLD OF INSTRUCTION; LET HER NOT GO; KEEP HER; FOR SHE IS THY LIFE."

VOL. XXVIII. PHILADELPHIA, FOURTH MONTH 29, 1871. No. 9

EDITED AND PUBLISHED BY AN ASSOCIATION OF FRIENDS.

COMMUNICATIONS MUST BE ADDRESSED AND PAYMENTS MADE TO
JOHN COMLY, AGENT,

At Publication Office, No. 144 North Seventh Street.

OFFICE OPEN from 9 A. M. to 4 P. M.

TERMS:—TO BE PAID IN ADVANCE.

The Paper is issued every week.

The Twenty-eighth Volume commenced on the 4th of Third month, 1871, at Two dollars and fifty cents to subscribers receiving it through the mail. To those receiving it through our carriers, THREE DOLLARS.

SINGLE NOS. 6 CENTS.

It is desirable that all subscriptions should commence at the beginning of the volume.

REMITTANCES by mail should be in CHECKS, DRAFTS, or P. O. MONEY-ORDERS; the latter preferred. MONEY sent by mail will be at the risk of the person so sending.

MEMORIALS OF ELIAS HICKS, EDWARD STABLER AND THOS. WETHERALD.

(Continued from page 116.)

Elias Hicks, son of John and Martha Hicks, was born in the township of Hempstead, Queens Co., Long Island, on the 19th of the Third month, 1748. His father was a grandson of Thomas Hicks, who is honorably mentioned by Samuel Bownas, in his Journal, as having given him much comfort and encouragement, when imprisoned, for his religious testimony, at Jamaica, on Long Island.

About the seventeenth year of his age, Elias Hicks was apprenticed to learn the trade of a house-carpenter and joiner. Being required to go from place to place in pursuit of his business, he was exposed to much unprofitable company, and the tender impressions of Divine grace, which had visited him in his early years, were, in some measure, effaced. But the heavenly Monitor did not forsake him, though he often strove to stifle its convictions; it followed him in judgment and in mercy, until a willingness was wrought in him, to give up all to follow Christ in the regeneration. On one occasion, when preparing to join in the dance, and surrounded by his jovial companions, the pure witness rose so powerfully in his mind, and so clearly set before him the evil tendency of the course he was pursuing, that he reasoned

not with flesh and blood, but gave up to the heavenly vision, and in deep contrition and prostration of soul entered into covenant with the God of his life, that, if he would be pleased to furnish him with strength, he would endeavor not to be again found in the like disobedience; which covenant, through mercy, he was favored to keep inviolate. His father was a slaveholder, and on that account was visited by a committee of Friends who endeavored to convince him of the evil of the practice. Elias, being then a young man, and possessed of the prevailing ideas on that subject, resented the labors of the Friends as an unwarrantable interference with the rights of property. After he had stated his objections, the committee, in a feeling manner, exposed the unchristian practice of holding in bondage and making merchandize of our fellow-creatures; they appealed to his sense of justice, his feeling of humanity; and such was the power of their address, that his judgment was convinced and his conscience enlightened, so that he became himself an advocate for freedom. He was the guardian of the freedmen liberated by his father, attending to their wants, supporting them in their old age, and leaving a bequest to the survivors for their maintenance.

In the twenty-sixth year of his age, he was brought, through the operation of Divine grace, to see, that although he had ceased from many of the vanities of his youth, yet

there was much evil still remaining, for which he felt the righteous judgment of God to rest upon him. He cried earnestly to the Most High for pardon and redemption, which he believed was mercifully granted, and as he abode in watchfulness and humility, the light broke forth from obscurity, and his darkness became as noonday.

In the year 1775, he was constrained by a sense of duty to utter a few words in a meeting for worship, which brought the reward of peace; and as he continued watchful and obedient, he grew in the exercise of his gift and became eminent as a minister of the gospel.

At the time he was acknowledged as a minister, the war of the American Revolution was in progress; the British forces held Long Island, and the American army was in possession of the main land adjacent. Meetings on the Island were steadily kept up, and such was the confidence reposed in Friends by the officers of both armies, that ministers visiting the meetings were permitted to pass through the lines. Elias Hicks writes in his Journal: "I passed through the lines of both armies six times during the war without molestation, both parties generally receiving me with openness and civility, and although I had to pass over a tract of country, between the two armies, sometimes more than thirty miles in extent, and which was much frequented by robbers, a set in general of cruel, unprincipled banditti, issuing out from both parties, yet, excepting once, I met with no interruption, even from them."

After he became engaged in the gospel ministry, he attended the meetings that were held under the direction of the Monthly Meeting for the benefit of the colored people, and was eminently serviceable therein. He also appointed meetings among them for Divine worship; and when he was engaged in performing religious visits to families, he was careful to have the colored people called in to enjoy the privilege of social worship. During the inclemency of winter he was very thoughtful of the poor, visiting them in their dwellings, and contributing to their comfort. This he did without respect of color; but for the poor ignorant blacks his commiseration was especially excited, with an earnest desire that they might enjoy the benefits of education. When he opened his views on this subject to his friends, showing the justice and necessity of providing means to educate the colored children, they concurred with him, and a fund was raised, the interest of which has been yearly appropriated to that purpose. This fund was placed under the control of a benevolent association, and hundreds have reaped the benefits of their liberality.

Having married the daughter and only child of Jonathan Teaman, he came into possession of a valuable farm at Jericho, L. I., where he resided the residue of his life. The estate had consisted in part of slaves; and when the funds came under the control of Elias Hicks, he separated that part which had been derived from the sale of slaves formerly held, and applied it to their redemption and liberation.

He was scrupulously just in his dealings, and so conscientious that in times of scarcity he sold the products of his farm to his poor neighbors, at rates much below the market-value. During the war of the Revolution, when wheat was three dollars per bushel, he reserved his to sell to the poor around him at a much lower price, and refused to sell to speculators.

He was remarkably plain and simple in his dress and in the furniture of his house, and he felt it required of him to inculcate this practice as a religious duty. At one time he carried his views on this subject to such an extreme that he did not approve of the female members of his family cultivating flowers, deeming it far better to employ the time in reading or some profitable employment. It is said, that towards the close of life, his views on this subject were considerably modified. During the severe convulsion through which the Society passed at the time of the separation, he saw that mere plainness of dress was no certain indication of a Christian character, and that the most sanctimonious exterior was sometimes the covering of a bitter and censorious spirit.

He was an indefatigable laborer in the cause of righteousness, travelling frequently and extensively to visit the churches, and his services during a period of thirty five or forty years met with very general approval in the Society of Friends. His doctrinal views afterwards became a subject of controversy among Friends.

In declaring what he believed to be the counsel of God he was fearless, and his ministry, though unadorned with the embellishments of human learning, was clear and powerful.

The following description of him is from the "Christian Examiner and General Review":

"Elias Hicks was a most remarkable man. Though more than eighty when we had the pleasure of listening to him, few men have ever made so deep an impression upon us. His figure was tall, his proportions muscular and athletic, his face of the Roman cast, intellectual and commanding, his voice deep, his gesture dignified and graceful. He had perhaps as much of what is called *presence* as

any man who could be named. The knowledge that he was to speak had drawn together a large assembly, which was sitting, when we entered, in the most profound silence. Stagnary could not have been more still. Not a limb stirred, not a garment rustled, not a breath was heard. At length this venerable figure rose like an apparition from another world, and poured forth a strain of natural eloquence that is not often surpassed."

He spent a calm and peaceful old age in the full possession of his faculties. So greatly was he respected for his integrity and sound judgment, that he was often called upon to reconcile differences among his neighbors, and his salutary counsel was seldom rejected. In the years 1828 and '29, when upwards of eighty years of age, he performed an extensive visit to Friends and others in parts of the Yearly Meetings of Philadelphia, Baltimore, Ohio, Indiana, and New York. His gospel labors during these arduous and extensive journeys were productive of peace to his own mind, and were peculiarly seasonable and acceptable to his friends.

In the year 1829 he met with a severe affliction in the decease of his beloved wife, with whom he had lived in near union and affection for fifty-eight years.

On the 14th of the Second month, 1830, just as he finished writing a letter to his old friend, Hugh Judge, he was paralyzed in his right side and nearly deprived of the power of speech. Being assisted to a chair near the fire, he signified by signs his desire that all should sit down and be still. The solemn composure at this time manifest in his countenance was very impressive, indicating that he was sensible the time of his departure was at hand, and that the prospect of death brought no terrors with it. Near the close of his last letter he said: "If we are favored to gain an inheritance in that blissful abode, where the wicked cease from troubling and the weary are at rest, we must ascribe it all to the unmerited mercy and loving-kindness of our Heavenly Father, who remains to be adored over all, blessed forever."

He lingered nearly two weeks, growing gradually weaker; and it was remarked that one of his last efforts was to signify he wished his attendants to remove from his bed a cotton coverlet that had inadvertently been placed there; for he had during many years conscientiously opposed to the use of all goods produced by slave labor. On the 27th of the same month he quietly passed away, and doubtless entered the realms of everlasting joy.

Edward Stabler was born at Petersburg,

Virginia, on the 28th of the Ninth month, 1769. Having early in life yielded obedience to the Divine law written in the heart, he was enabled to escape, in a great measure, the contamination of evil example, and was led into secret communion with the Author of all good. In his twentieth year he became an assistant of his brother William in the apothecary business, in Leesburg, Loudoun Co., Va. His leisure hours were mostly employed in the acquisition of knowledge, for which he had a keen relish, and his reading on literary and scientific subjects was extensive.

In the year 1792 he settled in Alexandria, where he opened an apothecary and drug store, and boarded in the family of John Butcher, a worthy Friend and minister, who exercised a paternal care of the young men that were members of his family. In 1798, Edward Stabler was appointed an Elder of Fairfax Monthly Meeting, of which the Friends in Alexandria were at that time members. As their number had much increased with the growth of the town, and as Fairfax Monthly Meeting was held at the distance of forty-five miles, they applied for the establishment of a Monthly Meeting in Alexandria, which being granted, it was opened in the Ninth month, 1802.

In the latter part of 1804, Edward Stabler spent some months as care-taker and companion of Ann Alexander, a minister from England, who, with her female associate, paid a religious visit in the Southern States. The hold which religious impressions had taken upon his mind was strengthened by the occurrences of this journey. The travellers, as they passed through the slaveholding States and mingled with the people, were burdened with a sense of the spiritual darkness and hardness of heart that prevailed, which they attributed to the oppression inflicted upon the colored people held in degrading bondage.

In the Sixth month, 1806, Edward Stabler made his first appearance in the ministry. To prepare him for this service, he had passed through many deep baptisms. To these were added, soon after, a severe bereavement in the decease of his wife, who had been a faithful and sympathizing companion.

He subsequently married Mary, the daughter of Wm. Harshorne, who proved to be like the virtuous woman described in the Proverbs: "She openeth her mouth with wisdom, and in her tongue is the law of kindness." The ministry of Edward Stabler is described, in the memorial concerning him, by Alexandria Monthly Meeting, in the following language: "There is a cloud of living witnesses who can testify to the pure and

evangelical value of his ministry; calling the people from *names* to *things*,—from the empty *shadow* to the living *substance*. Actuated by the spirit and love of the gospel,—the distinguishing mark of true discipleship, which knows no distinction of sects and parties,—he was induced frequently to leave his temporal concerns, and travel extensively in the ministry; in which service his labors were very acceptable to those for whose sake they were undertaken."

His colloquial powers were very remarkable, and his mind being stored with knowledge, his company was highly prized by all, but more especially by reflecting minds among the young, whom he loved to draw around him. Whatever might be the subject of conversation, he generally imparted useful information in eloquent language; but almost invariably before he closed his remarks, he had led his hearers to the consideration of some important religious principle.

During that painful controversy which agitated and finally divided the Society of Friends, he remained calm and unruffled, manifesting at all times the meekness and forbearance of a Christian spirit.

He died in peace at Alexandria, the 18th of the First month, 1831, in the sixty-second year of his age.

Thomas Wetherald was born in Bainbridge, Yorkshire, Eng., on the 14th of the First month, 1791. He had a birthright and education in the Society of Friends, but in his youth, it appears, from his own account, that he wandered far from the Heavenly Father's house, led astray by the allurements of the world, and the delusive promptings of an unrestrained imagination. Through the adorable mercy of Infinite Goodness, he was not permitted to rest in this state, but was closely followed by "the reproofs of instruction which are the way of life;" and being at length met with as "in the cool of the day," he was brought under deep condemnation on account of his transgressions. In this situation, under much humiliation of spirit, being reduced to a state of great mental conflict and self-abasement, when, as he himself expressed it, "the heavens appeared as brass and the earth as iron," he was taught by the things which he suffered, and felt desires to return to the Father's house. He essayed to approach the throne of grace, saying, "If I perish, I will perish at Thy footstool begging mercy." When he became thus willing to submit to the Divine government and to endure the fiery baptism, he received an assurance of pardon and acceptance, and became qualified to warn others, and declare unto them what God had done for his soul.

In the year 1819, with the concurrence of Friends, he removed with his family to the United States of America, and settled in Trenton, N. J. His gospel communications being accompanied with a lively demonstration of the life and power of truth, he was in due time recommended as a minister.

After a few years' residence in Trenton, he removed to the city of Washington, where his ministry was highly appreciated, being very eloquent, solemn, and impressive. In his business as a butcher, he evinced, by the uprightness of his dealings, that the true disciple of Christ may in any station be a preacher of righteousness, and that every useful avocation is compatible with a religious life. Having resided some years in Washington, he removed and settled on a farm near York, Pa., where his exemplary life and religious services endeared him to his friends and gained the respect of all.

Near the close of life, he expressed his unshaken confidence in Divine goodness, saying, "Shall not the Judge of the whole earth do right?"

After patient endurance of much bodily suffering, he quietly departed this life, on the 1st of the Fifth month, 1832, in the forty-second year of his age.

For Friends' Intelligencer.

HANNAH STEPHENS.

The recollections of my dear departed aunt Hannah Stephens (a valued minister in the Society of Friends), and her example, so worthy of imitation, often arise vividly in my mind.

She had long practised "the fortunate habit of being contented;" and even in the winter of life, her sympathetic kind heart and her cheerful temperament made her presence welcome to every one. She considered it a religious duty to maintain and cultivate this disposition, as best calculated to carry out the true Christian principles. So beautiful was the radiance which seemed to encircle her, that she well merited the name of *Sunshine*, which her intimate friends significantly called her.

In her ardent love of nature, her feelings were poured forth in admiration of the beautiful trees, the singing birds and sweet flowers, all which she regarded as wayside blessings, sent to refine and purify the heart of man,—and in the language of her favorite poetess would often exclaim:

"There's beauty all around our paths,
If but our watchful eyes
Can trace it, 'midst familiar things,
And through their lowly guise."

Not only in her own mind was she happy, but she desired to make others so, by leading

them to appreciate their surroundings, even the most humble, rather than to mourn over what was not in their possession.

Illustrative of this, an incident is related of her having paid a charitable visit, in company with one of her friends. The abode was one of wretchedness,—a *stove* the only furniture of the room,—very little could be found here to make this home attractive; but in her characteristic comforting way, she pleasantly remarked, "What a nice little stove thee has!" At another house, which they visited on the same errand of kindness, a still more deplorable scene presented; everything was absent, but *rags*. Now, thought her companion, what can this Christian woman find here, in this wretched hovel, that will be comforting? Ever ready, from her full heart came the expression: "How beautifully the sun shines in thy room!"

While on a social visit to a near relative, the death of my dear aunt occurred very suddenly; but she had obeyed the Divine command to "Watch!" Her life was consistent, and in her devout communings she earnestly desired "to know what the will of the Lord concerning her, was." She never lost sight of the great change to a higher life, and in speaking on this subject only two days previous to her removal, she remarked to me, "Death has no terror for me; I am entirely resigned to leave my case to Him who doeth all things well."

Gently did her sweet spirit waft its way heavenward, leaving the full assurance that all indeed was well with her,—and to us, the example of her *cheerful, religious* life.

A. E. T.

For Friends' Intelligencer.

ORDER AND NOT DISORDER.

A proposition made in the *Intelligencer* a few weeks ago relative to "the method of appointing overseers to attend marriages accomplished under the care of Monthly Meetings," appears to have been so *greatly* misunderstood by some Friends, that there is but little room to suppose that success will attend an attempt to remove the impression that there was a disposition to lessen the responsibility of a Meeting, or the dignity of the appointment of overseers on marriage occasions. But as the editors, in their just conception of the simple change proposed, have fallen under censure for endeavoring to allay the fear that some serious innovations were contemplated, I feel it right, in as concise a manner as I can, again to allude to the cause of my concern, and at the same time repudiate the idea of lessening in the least degree the religious care and obligation of either meetings or individuals, in the solemnization of the marriage

covenant. It is well known that in the Monthly Meetings of this city, as well as in *many* country places, it is the practice for those interested in the marriage about to take place, to request a friend, or friends, to name such individuals as they would wish to be present,—having a care to select suitable Friends. The reasonableness of the plea, in many instances, not to enlarge the company unnecessarily, no doubt has been the principal cause for the prevalence of the custom. My observation does not lead me to the same conclusion with our friend E. Michener, "that it is more from a desire to escape an *irksome restraint*, than from a concern to lessen the number in attendance, that wedding parties wish to select their own overseers."

But to the point of my concern, which is simply this: that our discipline and practice may accord,—that there should not be even the *appearance* of dissembling, or that a Monthly Meeting should not claim to do what, in reality, it does not do.

The inconsistency of the practice in question has been seriously felt by some Friends, and it was for the relief of those that are thus "burdened," that my former suggestion was made. I claim to be among the "*order-loving*," but cannot conceive wherein the change would in the least degree "invalidate the necessary and proper concern of Society for its members," or "cover up rather than correct their violation of order." It is not supposed that the Monthly Meeting would relinquish its discretionary power. *If* persons were named who were unsuitable for the appointment (which is no more likely to occur than in the state of things as they now exist), why should there not be the same freedom of expression? Far from forgetting "that the oversight and proper conduct of marriages is a religious concern of the Society, in its collective capacity," and also believing, as the editors have remarked, that it is not easy to do away with a long established custom, I felt a desire that "the body" should consider the subject, and by wise legislation remove the difficulty. It appears to me that the prevailing custom renders the discipline on this point "an inefficient," if not a "meaningless form," as it now stands; and that there is a *necessity* to meet the case by a change which shall in no wise detract from its weight and religious bearing. The alteration as proposed would involve only a few words, and would make no difference in the care to be exercised by the Monthly Meeting. I regret that it should have been capable of being misinterpreted as it has been by our friend E. M.

I am not tenacious as to the manner by which the inconsistency complained of may be remedied. My regard for many dear

friends "who have grown gray in the maintenance of the discipline," as well as for the code itself, would prevent me from wishing or promoting any change that would not be of essential benefit to the Society. ***

Fourth mo. 20, 1871.

FRIENDS OF BOSTON.

A "Topographical and Historical Description of Boston," recently published "at the request of the City councils," gives the following account of the meeting-houses and graveyard occupied by Friends there.

"The cemetery that belonged to the Society of Friends, and which was called the Quaker Burying Ground, was the fourth in point of antiquity in Boston. This religious sect, although it has never been very numerous in Boston, yet had, very early in the history of New England, a respectable number of firm and conscientious adherents in the metropolis, the first of whom made their appearance in 1656, about twelve years after the rise of the denomination in Leicestershire, England. The first who came to Boston were imprisoned immediately on their arrival, and at the earliest opportunity were sent back to Barbadoes and England, whence they came. For many years this people were subjected to the most humiliating treatment, and to punishments of the greatest severity. Some had one of their ears cut off, some their tongues bored with hot irons, and others were publicly executed by hanging. This barbarity will forever cast a stigma upon the administration of Governor Endicott, who as John Hull, the mint master, tells us, 'had very faithfully endeavored the suppression of a pestilent generation, the troublers of or pease, civill and ecclesiastick.' The persecution of this sect, however, excited in some a sympathy; on the execution of the Quakers in 1659, one of the persons in attendance, Edward Wanton, a person of considerable consequence, became so affected that he soon afterwards was converted to the Quaker doctrines, and was subsequently one of the most influential and enthusiastic of their number.

"During the Colonial government of Massachusetts, the Society of Friends had no regular place of worship, although meetings for religious worship were held as frequently as the defenceless condition of the Society would allow, the earliest of which any account has been preserved being on the 4th of May, 1664, about ten months previous to Governor Endicott's decease. On the adoption of the Provincial Charter, which passed the seals on the 7th of October, 1691, and which was brought to Boston on the 14th of May, 1692, by Governor William Phips, the Society was placed nearer on an equality

with the other sects of Christians; and was so much relieved from oppression, that its principal men set themselves about providing a permanent place of worship.

"The first lot was obtained by William Mumford, a Friend of Boston, and a building was erected on it about the year 1694. It was a part of the 'Brattle close or pasture,' and the 'estate now covered with the building at the corner of Brattle street and Brattle square, called the "Quincy House." This lot and house were disposed of in 1709, another location having been obtained for the use of the Society."

"The second venture of the Society was the purchase of the Congress street estate, so well remembered by many persons now living. Here was established the first Quaker burying ground in 1709." "The estate was held by trustees or overseers until 1828, when several persons of Lynn, Danvers and Salem, as overseers of the Salem Monthly Meeting, conveyed the estate to Dr. Edward H. Robbins, and the Society styled the Yearly Meeting of Friends for New England, released all right to the same."

"The lot was situated in Leverett's Lane (now called Congress street) opposite Lindall street, and by the original deed of conveyance, measured about fifty feet in front, sixty in the rear, and one hundred and forty on the north. In the course of little over a century the length of the lot shrunk nearly thirty feet by the widening of Congress street and other causes.

"On the front part of the estate, the Quakers in 1709 erected their meeting-house, to take the place of that in Brattle square, which they left the same year. The new building was of brick, covering a space thirty feet by thirty-five, and setting back sufficiently to allow of a high wooden fence in front, the large gate of which was seldom opened between the years 1709 and 1808, except for a portion of the small Monthly Meetings of the brethren, which were held alternately within its walls, and at Salem and Lynn, and now and then for a burial. By the great fire which occurred in 1760, this building was much injured, but was repaired the same year. The meetings having been discontinued in the year 1808, the building became of very little use, and the Society, in 1825, sold it for the value of the material, the whole edifice bringing only \$160, and it was soon taken down."

"The rear part of the lot appears to have been used for burial purposes from the time of the purchase in 1709 until 1815, although the interments were of very unfrequent occurrence. On the 15th of May, 1826, the following order was passed by the Board of Aldermen, on the petition of Estes Newhall of

Lynn, and others: 'Ordered, that the petitioners be permitted to take up all the remains of the dead from the burial ground in Congress street, commonly called the Quaker Burying Ground, and to re-inter them in their burying ground in Lynn; the same to be done under the direction of the superintendent of burial grounds.' This duty was performed between the 28th of June and 7th of July of the same year, and the remains of 72 adults and of 39 children were removed to Lynn."

"Soon after the sale of the Quaker lot in Congress street, the Yearly Meeting of Friends for New England purchased another estate in Milton place, bounded about sixty feet easterly on the place, about thirty-nine in the rear, and a little over eighty in depth. Upon this the Friends erected a substantial brick building, with a stone front, measuring about thirty-nine by seventy five feet, where they occasionally held meetings; but it being of very little use to the Society, it was sold at auction, and on the 30th of May, 1866, the Quakers ceased to be owners of a meeting-house in Boston."

[We have been kindly favored by a descendant of Edward Wanton, mentioned in the foregoing sketch, with the following interesting incidents.—EDS.]

Edward Wanton was a conspicuous merchant of Boston at the period when the persecution of Friends was most virulent. At the time of the execution of Mary Dyer, in Boston, he attended at the execution in an official capacity, whether as sheriff or captain of the train band, I never ascertained.

He was very deeply touched by her language and deportment, and on returning to the house he removed his sword, saying to his mother he "should never wear it again, as they had been killing the people of the Lord."

He suffered great mental anguish for a long time, but at length he found peace, and became a member and a minister in the Society of Friends. He underwent severe persecutions in Boston which cannot be detailed within the limits of this brief article, but he at length removed to the town of Scituate, and was instrumental in gathering a large and flourishing Friends' meeting in that place, chiefly from those who had been members of the Congregational Church. This was quite sufficient to bring upon him the hatred of the minister of the place, who lost no opportunity of persecuting him, and he was made the constant object of reviling both in the pulpit and in social life. On the occasion of his second marriage, which was celebrated after the manner of the Society of Friends, the priest instituted a suit against him, and

obtained a very large verdict in a court which was deeply prejudiced. This fine he refused to pay, and it was collected from him by distraint, which caused a loss of property to at least double the amount of the fine. I have a manuscript account of these fines written with his own hand. He built the meeting-house at Scituate with his own money, and by will left means to keep it in repair.

He attended the Yearly Meeting at Newport as a representative in his eighty fifth year, and its records show that he was in its service on all the most important committees that were appointed that year. He was a bold and eloquent minister, and had a great power of convincing men's reason by clear and glowing exhibitions of the Truth. He was not only instrumental in gathering a large meeting in Scituate, but several neighboring meetings were greatly aided by his ministerial labors, as well as by counsel and advice.

His sons, John and Joseph, removed to Rhode Island, and both became very eminent ministers. The former was for many years Governor of the Colony. He was a man of excellent education and address, and his ministry was attended by large crowds of people as long as he lived. He was summoned to England in the reign of Queen Anne, and became a great favorite with her. She offered to confer upon him the honor of knighthood, which he declined, but she did give him a coat of arms and a magnificent silver gilt bowl as a memorial of her esteem.

No less than seven of Edward Wanton's descendants filled the gubernatorial chair of Rhode Island, and most of them were worthy and consistent members of the Society of Friends. J. S. G.

For Friends' Intelligencer,

HONESTY OF PURPOSE.

In reading the *Intelligencer*, I have several times felt like adding my mite by way of comment on the subjects under discussion, but being remotely situated, the time that would elapse between the subject and the comment would be so long, that it would lose its force. The fact that any Friends should think that the choosing of Overseers for weddings, *out of meeting*, is an exception to the general rule, astonished me greatly, as my observation for the past thirty years (not confined to city meetings by any means) has led me to believe with the editors, that the exception was on the other side. I well remember being present on an occasion of this kind, when the father of one of the parties rose after the reading of declaration of intentions, and stated to the meeting that if satisfactory to Friends, he wished to have

such and such persons as overseers of the wedding. The meeting united with the proposition, and it was very gratifying that the Friend had been induced to use plainness of speech, in an honesty of purpose for which our early Friends were so eminently distinguished. Perhaps it is for want of keeping up to this standard that the Society languishes.

A CORRESPONDENT.

Scraps

FROM UNPUBLISHED LETTERS.

. . . How little the *natural* man knoweth of Divine things! Heaven has wisely interposed an impassable gulf between the efforts of human wisdom and contrivance, and those divine mysteries which are revealed, that is, made plain to *babes*. The present is an age in which the world—yes, and those who would fain be thought to be redeemed from the world—are seeking to climb up into the knowledge of Divine and natural things, on one and the same ladder—the nicely constructed ladder of human ingenuity, human learning, intellectual culture, science—and all this without becoming a poor little helpless, ignorant though innocent babe. Theology, the science of Divinity—or a knowledge of Divine and spiritual things! How can it be, that after more than eighteen hundred years since the plain, simple Nazarene of Judea proclaimed the doctrine of the kingdom of God in the soul of man—this simplest of all religions has made so little progress in the human family? Where is simple Christianity to be found among the professors of the Christian name, unmixed and unadulterated? Alas! if we measure the progress of the future by the past, thousands of years must elapse before the kingdoms of this world will become the kingdoms of God and of His Christ. But there has been, there still is a progression in the human mind. Many customs have been changed for the better in the lapse of ages and centuries. There is no doubt that the simple religion of Jesus is silently advancing in hidden and obscure minds. These are lights in the world; their light may often shine but a very little way around them, yet it is not lost—it is not hid. But ah! how the cunning devices of priestcraft have led people astray! How many thousands and millions of mortals are now bewildered and hoodwinked by the craftiness of selfish designing men, or by the trade of theology! Indeed, I am almost ready to exclaim: Who is clear of these trammels and skackles?

But our Father sees all His children everywhere. He pities them, and deals with them in perfect wisdom and goodness. Man seems often to act, and think, and speak, as if he conceived he would do better, had the power been in his hands, and the disposal of things left to him. Ah! how blind we are—how short sighted! But with all our toils and the spinning out of our schemes, we can effect nothing without the Divine blessing.

FRIENDS' INTELLIGENCER.

PHILADELPHIA, FOURTH MONTH 29, 1871.

CIRCULAR MEETINGS.—A correspondent under date of Fourth month 16th, 1871, asks:

“Would it not be encouraging to hear occasionally, through the *Intelligencer*, from Circular Meetings in different localities, particularly when held in neighborhoods where there are but few Friends? We attended one last First-day, held at Pedricktown, N. J. The meeting was mostly composed of those who knew but little of Friends; yet their solemn, interested countenances evinced something of the spiritual labor R. Barclay speaks of, when he says, ‘When I came into the silent assemblies of God’s people, I felt a secret power among them which touched my heart, and as I gave way unto it, I found the evil weakening in me, and the good raised, so I hungered more and more after an increase of this power.’

“This meeting is kept up by a few Friends, with seldom any vocal ministry; the great Minister of ministers comforting them when they feel discouraged, and long for the companionship of those who unite with them in the belief of the ‘Indwelling Light.’”

It is pleasant to receive such evidences of interest. In localities in which there are many of our profession, and but few who usually assemble for social worship, the concerned members are doubtless at times discouraged, and the feeling is “by whom shall Jacob arise, for he is small?” We sympathize with those who meet under such circumstances; for “as iron sharpeneth iron, so doth a man sharpen the countenance of his friend.” It is encouraging to see all who bear the name of Friend, coming up to the maintenance of the “law and the testimony,” and one evidence of this is, the attendance of our religious meetings.

In places where but few of our name reside, large collections in our houses for wor-

ship are not to be expected. But though in these small, silent gatherings, the word is seldom spoken "to stir up the pure mind by way of remembrance," yet if there is a rallying to the Watch-tower for a renewal of spiritual strength, these opportunities may be "as times of refreshing from the presence of the Lord."

The late action of many of the Quarterly Meetings in appointing meetings to be held at stated times in the different neighborhoods, is acknowledged to have been attended with good results. Though the particular meetings in these sections may not have been perceptibly increased, the interest manifested in them by others than Friends, has been encouraging. The silent, spiritual travail on these occasions, has prepared the minds of the people for the reception of the truths promulgated, and in many neighborhoods an interest has in consequence been awakened in our principles and testimonies.

We unite with our friend in believing that it is encouraging and profitable to hear from these meetings. The Circular Meetings of Frankford and Merion, Pa., recently held, were interesting:—the latter not as well attended as on some previous occasions; the former unusually large, and both were regarded as seasons of favor.

"THE JOURNAL OF JOHN WOOLMAN, with an Introduction by John G. Whittier." Published by James R. Osgood & Co., Boston.

We have received from J. G. Whittier a copy of this work: and for his "labor of love" in editing a new edition of the Journal of John Woolman, he has our warmest thanks. We have read the Introduction of 8 pages, with unmixed pleasure.

In its new and attractive form, we trust the work will have an extensive circulation, and that the spirit of quiet, gentle truthfulness which it breathes, may steal in healthfully upon the feverish excitement which characterizes the present age.

In regard to John Woolman's peculiar diction, J. G. W. says:

"The style is that of a man unlettered, but with natural refinement and delicate sense of fitness, the purity of whose heart enters into his language. There is no attempt at fine

writing, not a word or phrase for effect; it is the simple, unadorned diction of one to whom the temptations of the pen seem to have been wholly unknown. He wrote as he believed, from an inward spiritual prompting; and with all his unaffected humility he evidently felt that his work was done in the clear radiance of

'The light which never was on land or sea.'

It was not for him to outrun his Guide, or, as Sir Thomas Browne expresses it, to 'order the finger of the Almighty to his will and pleasure, but to sit still under the soft showers of Providence.' Very wise are these essays, but their wisdom is not altogether that of this world. They lead one away from all the jealousies, strifes, and competitions of luxury, fashion and gain, out of the close air of parties and sects, into a region of calmness,—

The haunt

Of every gentle wind whose breath can teach
The wild to love tranquility,"—

a quiet habitation where all things are ordered in what he calls 'the pure reason;' a rest from all self-seeking, and where no man's interest or activity conflicts with that of another. Beauty they certainly have, but it is not that which the rules of art recognize; a certain undefinable purity pervades them, making one sensible, as he reads, of a sweetness as of violets. 'The secret of Woolman's purity of style,' says Dr. Channing, 'is that his eye was single, and that conscience dictated his words.'

We would not, even if at liberty to do so, make long extracts; for we want our readers to get the book, and therefore conclude after giving one of the editorial notes, the occasional introduction of which add much to its interest:

"He (John Woolman) seems to have regarded agriculture as the business most conducive to moral and physical health. He thought 'if the leadings of the Spirit were more attended to, more people would be engaged in the sweet employment of husbandry, where labor is agreeable and healthful.' He does not condemn the honest acquisition of wealth in other business free from oppression; even 'merchandizing' he thought *might* be carried on innocently and in pure reason. Christ does not forbid the laying up of a needful support for family and friends; the command is, 'Lay not up for YOURSELVES treasures on earth.' From his little farm on the Rancocas, he looked out with a mingled feeling of wonder and sorrow upon the hurry and unrest of the world; and especially was he

pained to see luxury and extravagance overgrowing the early plainness and simplicity of his own religious Society. He regarded the merely rich man with unfeigned pity. With nothing of his scorn, he had all of Thoreau's commiseration, for people who went about bowed down with the weight of broad acres and *great houses* on their backs. ¶

The work may be had of J. B. Lippincott & Co., 715 and 717 Market St., and at the office of *Friends' Intelligencer*, No. 144 N. 7th St. Philada.

THE ANSON LAPHAM REPOSITORY.—Through the liberality of Anson Lapham, of Skaneateles, N. Y., a room with the above title will soon be opened in the Swarthmore College building, the object being to make a library of Friends' books, manuscripts, &c., and a place of deposit for such relics, or objects of interest, as have a history attached relative to the Society of Friends.

The books, manuscripts, &c., are to be consulted in the Repository, and not to be taken out of the room when used. This is to prevent loss and scattering.

The Managers of the College, by minute, have appropriated one of the fire-proof rooms on the second-story for this purpose, and have named it "The Anson Lapham Repository."

There are many Friends' books, and doubtless some ancient manuscripts and memoranda, in the hands of Friends, which may be indifferently cared for, and perhaps are nearly lost sight of, which, if collected, and placed on the shelves of this Library, and in its drawers, would be valuable matter for the historian, and would furnish information to the young student who may be enquiring as to the origin, progress, principles and testimonies, of the Society of Friends.

Any book, manuscript and memoranda of the kind alluded to, will be gladly received, and may be forwarded to EDWARD H. MARGILL, Swarthmore College, Delaware County, Pa.; or, if more convenient, (*and the packages are small*) to DR. GEORGE TRUMAN, No. 142 North Seventh St., Philada., who will take the necessary care to have them properly deposited.

Each one donating books, manuscripts or other matter, will please forward name and address.

DIED.

FRENCH.—On First-day morning, the 2d of Fourth month, 1871, Julia A. French, daughter of William S. and Elizabeth Shaw Abbott, and wife of Richard French in the 34th year of her age; a member of the Monthly Meeting of Friends of Philadelphia (Race St.).

SWIGGETT.—Of pneumonia, at the residence of her nephew Henry Wilson, in Tuckahoe Neck, Caroline Co., Md., on the 31st of Twelfth month, 1870, Mary Swiggett, aged about 70 years; a member of North-west Fork Monthly Meeting.

WOODNUTT.—On Second-day morning, the 21st of First month, 1871, at his residence in Salem, N. J., Jonathan Woodnutt, in the 87th year of his age.

THE INDIANS.

The Indian Committee of Philadelphia Yearly Meeting will meet in the Monthly Meeting Room, Race St., on Sixth-day afternoon preceding the Yearly Meeting, Fifth month 12th, at 3 o'clock. Punctual and full attendance is requested.

JACOB M. ELLIS, Clerk.

FRIENDS' PUBLICATION ASSOCIATION.

Executive Committee meeting in the Monthly Meeting room at Race Street, Sixth-day afternoon next, Fifth month 5th, at 3 o'clock.

W. M. LEVICK, Clerk.

KINDERGARTEN.

An American Woman's Work.

One of the most interesting events of the season to the friends of education, is the presence here (Washington) of Elizabeth Peabody and her lectures on Kindergarten culture. Her report upon Kindergarten, which the Commissioner of Education considered of sufficient importance to publish in connection with his own, has attracted the attention of educators in all parts of the country; and she was invited by the trustees of the common schools of Washington to deliver a lecture upon the subject. So great is the interest awakened that this lecture has been three times repeated by special invitation. A desk in the office of the Bureau of Education was placed at her disposal, and there she may be found daily, endeavoring to answer the inquiries which pour in upon her. Quite as interesting as either her report or her lecture is her relation of her own experience in this comparatively new and imperfectly understood department of education.

Her interest was first aroused, and her attention drawn to the subject from seeing the children of Senator Schurz, who had been trained by their mother after the Kindergarten method.

Mrs. Schurz, when a young lady at home in Germany, with no occupation for her leisure hours, was induced, partly for amusement, partly by her love for children, to study thoroughly Froebel's Kindergarten method; and, in after years, with her own children around her, she turned to solid profit the pastime of her girlish days. Her success incited Miss Peabody to study the subject, and finally to open a Kindergarten in Boston. This, though eminently successful, did not reach all the results which she desired, and which Froebel declared attainable; and, determined to be satisfied with nothing short of perfection in her work, she went to Germany to seek further knowledge at the fountain head; and after travelling extensively, and conferring with the most distinguished educators of Europe, returned to devote herself to the work of helping on a reform in education, for which future generations of mothers and children will "rise up and call her blessed."

It is exceedingly important, says Miss Peabody, that Froebel's method should be carefully studied and fully understood; because many of the schools called Kindergartens are only parodies of the true Kindergarten, and their faults and failures must not be allowed to disgrace the true principle. Froebel took his first lessons from the mother's talk and play with her child, and making this his model, returned it to her, broadened and systematized. "The instinct that makes a mother play with her baby is a revelation of a first principle, giving the key note of human education," and upon it Froebel modulated his whole system. The children are taught to play, not "restrained from play, and given lessons to learn," as many think, and pronounce it barbarous cruelty; but taught, unconsciously to themselves through their plays. Froebel's idea is to follow the plan of nature in all her works, and develop the child gradually, as a plant or a flower is developed. Children are plants. Hence the name Kindergarten, child's garden; and the beautiful word Kindergarten, child's gardener, instead of the old harsh, much abused, time worn teacher.

A Kindergarten course covers four years, between the ages of three and seven. Persons who have given the subject no attention exclaim at once at the idea of "sending a child only three years of age to school." If what were really done, it would certainly be a proper case for the investigation of Mr.

Bergh. But it is not school, in the ordinary sense of the word. It is simply a large play-house, where the activity, the exuberance of childhood, which of necessity knocks down, tears up, pulls to pieces, in the person of the "irrepressible infant," the "perfect pest," who destroys the comfort of many a home, is directed, guided, assisted into harmonious development, making it a source of happiness to himself and others, so that the child becomes literally the "angel in the house," the "well-spring of pleasure" that God intended it to be. In brief, the aim of the Kindergarten is, instead of crushing or paralyzing the child's activity, to utilize it. And just here lies its immeasurable superiority to ordinary primary schools, which are a perpetual antagonism and struggle with nature, because all the natural activity and individuality of childhood is repressed instead of developed.

A lady who travelled in Europe to study Froebel's method, brought home from Dresden the whole series of work done by a class of children who began at three years of age and continued till seven; and no one has seen it without being convinced that it must have educated the children who did it to habits of attention and keenness of observation, and quickness of perception that would make the learning to read and write and cipher a much easier matter than it ever is under ordinary teaching. You doubt it! Well, "facts are stubborn things," so now for facts. Rather more than a year since a young lady, educated in Froebel's method, opened a Kindergarten in a town in Massachusetts. A majority of the children sent to her were six years of age, as parents could not be induced to send them younger. In the course of a year it was desirable that they should learn to read. The lessons marked for so many weeks they completed in as many hours, and in three weeks could read fluently. The previous training had given exquisite delicacy and keenness to their perceptions, and they did the work. And these results are attained by means of blocks, sticks, balls, colored papers, and children's games and plays. The "object lessons" of our primary schools do not reach anything like the same results, for the reason that they present separate and disconnected facts; while Froebel's system is a gradual building up, a symmetrical joining together of cause and effect, making "clear impressions that become the basis of clear ideas."

"The indispenable preliminary of this work is competent teachers;" and they can be had only by special training. The great necessity now is for Kindergarten normal schools. Miss Peabody is now especially in

terested in procuring the establishment of a free national normal school. "Those who have had our normal or high school education, can obtain the special training in a six months' diligent course." There is now but one Kindergarten normal school in America—a private one in Boston kept by Mrs. Kriege and her daughter, both graduates of the normal school at Berlin, founded by the Baroness Marenholtz Bulow, and considered "the best in the world." The Baroness, who was a pupil of Froebel, lectures regularly in the school. Mrs. Kriege and her daughter are shortly to be connected with the public normal school of New York city. Preparations are making for the establishment of model Kindergartens and professorships connected with them, at several of the normal institutions of the West. "They would be in place," says Miss Peabody, "in every school for girls; the training not only insuring a pleasant profession, but making the best preparation and education for mothers."

There is in training at Mrs. Kriege's school in Boston a lady who proposes to make a model Kindergarten at the colored normal school at Hampton, Va., as a basis for training the freedmen. "The lyrical and artistic nature of the colored race will make them apt scholars." This may also become a place for training children's nurses in Froebel's "nursery art." This great reformer in 1850 founded a school for this purpose in Hamburg, to which place he had been drawn a year or two previous by the invitation of Madame Goldschmidt, the mother-in-law of Jenny Lind. There is a constant demand from all parts of England and Germany for nurses from this school. Some American mothers travelling in Germany have also procured for themselves this novel blessing of "educated help." It would be "Paradise Regained" for the children if education and intelligence could be substituted for the ignorance and stupidity, and often worse, that now control our nurseries and blight many a "bud of promise."

Successful as Kindergarten culture has everywhere proved, Miss Peabody is firm in her belief that its greatest results will be achieved in this country, owing to its peculiar adaptation to national feelings and customs. An extract from her report will best convey her idea: "Within the last twenty years it has spread over Germany and into Scandinavia and Switzerland, and been introduced into Spain, France, Italy, and Russia; but to no country is it adapted so entirely as to America, where there is no hindrance of aristocratic institution, nor mountain of ancient custom, to interfere with a method which regards every human being as

a subject of education, and as the heir of universal nature in co-sovereignty with all other men, endowed by their Creator with equal right to life, liberty and the pursuit of happiness." ELIZABETH KILHAM.

MEN'S happiness springs mainly from moderate troubles, which afford the mind a healthful stimulus, and are followed by a reaction which produces a cheerful flow of spirits.

DIVINE SUPPORT.

Child of my love, "lean hard,"
And let me feel the pressure of thy care.
I know thy burden, child. I shaped it;
Poised it in mine own hand, made no
Proportion in its weight to thine unaided strength,
For even as I laid it on, I said:
"I shall be near, and while she leans on me
This burden shall be mine, not her's;
So shall I keep my child within the circling arms
Of mine own love." Here lay it down.
Nor fear to impose it on a shoulder which
Upholds the government of worlds.
Yet closer come. Thou art not near enough;
I would embrace thy care, so I might feel
My child reposing on my breast.
Thou lovest Me,—Well I knew it:
Doubt not, then,
But, loving Me, lean hard.

THE ROBIN.

BY ALMEDA EVANS MACDONALD.

Thou black-eyed bird, thou winged courier
Of happy days of summer cheer,
Who tellest thee that the roots are stirred
Within the mold, thou merry bird?

Who is thy leader, who thy guide,
Who taught thy warble to divide,
The changeful days that roll between
The days of snow and days of green?

The snow that beats pale April's face
Finds our gay warbler out of place;
In all the storm he does not know
Where for his daily fare to go.

But that sweet sympathy that binds
Children to birds, poor robin finds;
For many little fingers throw
Crumbs to poor birdie through the snow.

Not undisturbed his homely joys;
Sometimes audacious elfin boys
Shut up within a narrow cage
Spring's romping, pert, and merry page.

And selfish men and sordid quite
Hint at the Robin's appetite.
How can this pensioner of the land
Man's narrow boundary understand?

Bobby has trials, wise men say,
He stays, and does not go away.
But ah, gay Robin, 'tis not so—
You stretch your wings away from snow,

And go where endless roses blow;
Thy paths the wise men do not know;
You come and go a winged page,
Fearing the snow, scorning the cage.

—The Golden Age.

BIRDS AND THE THOUGHTS THEY SUGGEST.

BY L. M. CHILD.

I wonder whether anybody ever becomes too old to feel the heart leap at sight of the first robin. Two couples of these pleasant little creatures arrived on our premises to-day, and have been busily at work inspecting the old elm in search of a desirable building-spot. Their pretty little hop-i-ty-skip walk, their ruddy-brown breasts glancing in the sunshine, and their graceful frolics in the air, made me feel as young as a school-girl. The blackbirds came a fortnight earlier, settling down on the trees in flocks, and pouring out their liquid notes like the trickling of many waters. Jays also had flitted about, looking like bits of the deep blue sky come down to earth, with voices as full of sunshine as the blackbird's is of flowing rivulets. But robin-redbreast, with his little "peert," familiar ways, is the darling bird of all.

It cannot, indeed, be denied that these popular favorites are somewhat addicted to petty larceny; but never having had any law-giving Moses to instruct them, they are delightfully unconscious that stealing is a sin. If I tie up a flower while they are weaving their nests, they will pick and pull at the string till they succeed in carrying it off, altogether unmindful of the plant left prostrate on the ground. Their tempers are greatly tried with a flag which I sometimes fasten on the gate as a signal agreed upon with a neighbor. They covet the threads of which the cloth is composed; and their great ambition is to pull the flag out of its socket and carry it off to their nests. They tug at it from above, they tug at it from below, they whirl round it, and peck at it in the prettiest rage imaginable; and they return to the onset again and again, renewing their vigorous efforts with wonderful pertinacity. Last spring I placed a night-cap and a long strip of narrow lace on the grass to whiten. In the course of the day I observed a long white streamer floating by the top of the window, and looked out to ascertain what it might be; but it had disappeared, and I concluded it was a fragment of white paper whirled aloft. At sunset, when I went out to turn my cap and lace, I found them gone. Having searched for them in vain, I supposed some passer-by had stolen them. A week afterward I spied something white in the cherry-tree, and placed a ladder to go up and examine it. In a crotch of the tree I found my cap bedded in clay, and so arranged as to support a nest, into the edge of which my lace was woven. Thinking I could put the articles to better use, I took back my stolen property, but not without regret at thus dis-

turbing their nice arrangements for house-keeping. I carefully replaced the nest, but the change excited their distrust, and they chose to make another nest on a neighboring tree. I made all the reparation I could by carrying out plenty of threads and soft twine, which they seized at once as things that grew on purpose for their use.

How totally unconscious the little creatures were that I watched their labors, smiled at their frolics and caresses, and placed materials for their nests! They knew many things, those little birds, and understood how to manage their own affairs much better than I could teach them; but how impossible it was for them to receive the ideas that the cotton-plant grew from seed, and twine was made from it, being spun and twisted by mechanical contrivances, invented by such a being as man!

Are there superior intelligences that look down upon *us* and watch *our* ways, as we do the birds? Are we surrounded by results, which they have produced by methods as far above our comprehension as the process of twine manufacture is beyond the intelligence of the birds? Do they smile to see us appropriate some of their spiritual lace to very small and unfitting uses? We, who are prone to think that earth, sun, moon, and stars, were made for our especial accommodation, may appear to them as short-sighted and self-absorbed, as to us seem the birds, all unconscious that the mighty elm-tree grows for aught but to sustain their nests.

A denser medium than the air is the sea, of which fishes are the birds, floating through it, or darting up and down at will by motion of their fins, as birds fly through their aerial medium by motion of their wings. The bird knows nothing of the fish, the fish knows nothing of the bird. They could not live in each other's elements. Above the air is ether, a still lighter medium. Is that also filled with beings, whose modes of operation are adapted to ethereal laws, as much above our comprehension, and as unfitted to our mode of existence as the air is to fishes? It may be so. Analogy renders it not improbable. The universe swarms with life in an infinitely descending series below us; why should there not be an infinitely ascending series above us? If so, I do not believe they can be entirely separated from us, however far removed! In some way or other, they must affect us, and we must affect them. For nothing in the universe stands alone; one thing is evolved out of another, rising in ascending spiral, forming a continuous whole.

Do intelligences above us know as little of us as birds know of the fishes? Or do they know more of us than we know of the birds?

Do they, metaphorically speaking, furnish us with twine and threads wherewith we weave our mental structures, all unconscious whence the materials come?

I began with the hop-i-ty-skip of a little robin, and he has sent the balloon of thought up, up, till it has got lost among the stars.—*The Golden Age.*

EARLY INVENTIONS OF THE CHINESE.

Other nations have outstripped the Chinese in the career of material improvement, but to them belongs the honor of having led the way in many of the most remarkable inventions, and of anticipating us in the possession of some of those arts which constitute the boast of our modern civilization. We shall briefly notice a few of those discoveries by which they have established a claim to our respect and gratitude. Tea deserves to head the list, as a substantial contribution to human comfort, and the leading staple of an immense commerce that has resulted in drawing China out of her ancient seclusion. Discovered by the Chinese about A. D. 315, it was introduced to the people of the West about two centuries ago as an uncertain venture. The elegant ware in which our tea is served preserves in its name the evidence of its Chinese origin. "China-ware" came originally from China; and the name of "porcelain," given to it by the early Portuguese merchants, may be taken as proof that nothing of the kind was at that time manufactured in Europe. They called it *porcellana*, because they supposed it be a composition of egg-shells, fish-glue and scales. The silks that glisten in our drawing rooms and rustle on our sidewalks, if not imported directly from China in the woven fabric or raw material, remind us of an obligation of an older date. It was the Chinese who first learned to rear the insect spinner and to weave its shining web—an art which they ascribe to their famous Empress Yuenfei, B. C. 2637. Gunpowder, which has not only revolutionized the art of war, but proved a potent auxiliary in the arts of peace, literally removing mountains from the pathway of human progress, was discovered by the Chinese many centuries before it was known in the West. Roger Bacon was acquainted with its composition in A. D. 1270, but he speaks of it as already known earlier. The current opinion refers it to the Arabs, but there is reason to believe that they were not the authors of the invention, but merely the channel through which it was transmitted—in a word, that it found its way from the remote East along with the stream of Oriental commerce.

The heaviest item in the bill of our in-

debtedness to the Chinese is for the discovery of America. On the alleged voyage of a party of Buddhist priests to the shores of Mexico we lay no stress; but it is not difficult to show that the discovery of the New World by Christopher Columbus was directly due to the influence of China. China supplied at once the motive for his voyage and the instrument by which it was effected. It was the wealth of China, which, like a magnet, attracted him to the westward: and it was the magnetic needle, which originated among the Chinese, that directed his adventurous course.

As to that mysterious instrument which has unlocked to us the treasures of the ocean, and proved itself the eye of commerce, its origin is certainly not due to the Neapolitan Flavio Gioja, who is reputed to have invented it in A. D. 1302. The French, the Swedes and the Syrians all possessed it before that date, and there is unquestionable evidence that the Chinese had then been acquainted with it for more than two thousand four hundred years. The Chinese first employed the mariner's compass on land, as we may infer from the name by which they describe it, and at the present day it is still the custom for a mandarin to carry one in his carriage or sedan-chair, though he may not be going beyond the gates of his native city. It is inconceivable that the Polos and other mediæval travellers should have returned from China across the deserts of Central Asia without providing themselves with such an unerring guide.

Paper-making and printing, two arts more characteristic of our modern civilization than even steam and electricity, there are strong reasons for ascribing to a Chinese origin. The former they invented in the first century, and the latter at least eight hundred years before the time of Gutenberg and Faust.

Inoculation, which, prior to the great discovery of Jenner, was regarded as the best protection against the horrors of the small-pox, was practised in China at a very early period, and probably found its way to Europe by the same secret channels as those other arts whose footsteps are so difficult to trace. Western Europe obtained it from the Turks, Lady Mary Wortley Montague having made the first experiment of its efficacy, by inoculating her son while residing at Constantinople.

Like the modern Greeks, the Chinese of the present day, content with the legacy of the past, have ceased to invent; but without doubt they were once among the most ingenious and original of the inhabitants of the earth.

The Chinese have not gone back, and that is saying a great deal in their favor; but in respect to material progress, for ages they have made no advancement. Four centuries ago they were in advance of Europeans in everything that contributes to the comfort or luxury of civilized life; but where are they now? Authors of the compass, they creep from headland to headland in coasting voyages, never venturing to cross the ocean, or to trust themselves for many days out of sight of the shore. Discoverers of gunpowder, they supply the world with fire-crackers, while their soldiers fight with bows and arrows, wooden spears, and match locks. Inventors of printing, they have not yet advanced to the use of metallic type and the power press, but continue to engrave each page on a block of wood, and to print it off by the use of a brush. Sufficiently versed in astronomy to calculate eclipses, two thousand years before the Christian era, they remain to this hour in the fetters of judicial astrology; and amongst the earliest to make advances in chemical discovery, they are still under the full sway of alchemy and magic.—*Commercial paper.*

Report of the Sewing School held at Race St. Meeting house for the winter of 1870-71.

At the close of our fourth winter's work, we are glad to report that the interest in our Charity school is unabated, both with pupils and teachers. It was gratifying to us to notice a marked improvement in the children, not only in their sewing, but in neatness and general conduct. Their perseverance in coming through storms and cold, but poorly clad, and without protection from the weather, was encouraging, and we often felt surprised that they were willing to face such inclement days.

With one hundred and fifty names on the roll, the average attendance was eighty-three. More than one-third of the children are colored, and the general good feeling that prevails between the two classes is one of the decided features of the school which we wish to preserve, in the hope that it may do something to overcome the prejudices which exist in the minds of the ignorant. At the end of the month we distributed to each the article she had made, her poor scanty clothing often being a strong appeal on behalf of her need of the warm garment, which we felt we had in a measure earned by patient perseverance. We thus distributed two hundred and eighty-seven garments through the winter, and the happy, grateful expression of the children's faces was ample reward for our labor among them. Though we feel ourselves but beginners in the work, we think it

is a field in which much good may be done, and trust with increased experience, we may make greater use of the avenues it opens, for us to help these "little ones" to roll away the stone of ignorance and indolence, which blocks the door to their improvement.

We should like all interested to have seen how happy one hundred and fifteen little faces looked on the closing day, when through the kindness of two friends, we were enabled to give these children a treat of ice cream, cakes and oranges, while another provided each with the last number of "Scattered Seeds."

While we acknowledge thanks to the many who contributed to help us, we pray that these efforts, like good seed sown, may receive the blessing of the Great Husbandman and take root to bear fruit in due season.

ABOUT CLOCKS.

Some way of measuring time must have been known at a very early period in the history of the world; for in the book of Kings, the dial is spoken of, and the shadows going backward and forward ten degrees. It is believed that there was more than one way by which men had knowledge of the passing of the hours. One was by the advancing shadows, from step to step, on the flight of stairs leading up into palaces and other important buildings.

One of the first inventions was the *clepsydra*, or water-clock, which was a contrivance of the Assyrians, and was in use among them as early as the reign of the second Sardanapalus. Clepsydra, or water stealer, it was called, from two words which have that meaning. The instrument was of various materials; sometimes transparent, but generally of brass, and in the shape of a cylinder, holding several

gallons. In any case, the principle on which it operated was the same. There was a very small hole, either in the side or bottom, through which the water slowly trickled, or, as the name expresses it, stole away, into another vessel below. In the lower one a cork floated, showing the rise of the water. By calculating how many times a day the water was thus emptied from one to another, they gained a general idea of the time. The Chinese and Egyptians used this; so, also, did the Greeks and Romans; and it is stated that something of the kind was found among the ancient Britons. It seems to have been one of the earliest rude attempts, in many nations, to keep a record of the hours.

The idea of the hour glass must have grown out of this. Instead of two large vessels, there were devised the pear-shaped glasses, joined by what may be called the stem ends; and a delicate fine sand was used instead of water. It was the invention of a French monk, and has never been improved upon. This man recovered the lost art of blowing glass, and then did a second service to the world by inventing the beautiful hour glass. There was a marvellous exactness of calculation about the time which the sand would spend in passing through the slender opening from one bulb into the other. It has always been considered a very accurate time keeper; and it is certainly one of the most curious, as it is one of the prettiest inventions.

Clocks were first used in monasteries.

The word originally meant bell; and the two—clock and bell—in calling them to their devotions and duties, performed the same office. These, however, were tower clocks: not small ones for apartments. One was set up in France in 1374, and created a great excitement, being the wonder of the age. The maker of it was made a nobleman for his service in constructing such an extraordinary piece of workmanship. The first one in England was during the reign of Edward I., and was placed in the tower opposite Westminster Palace. The hour-glass and sun-dial had long been in common use; but this was the first thing which could be called a clock, except the water-clocks, one of which had been brought home from France by Richard Cœur de Lion.

Clocks were, at this period, of so great value that they were sent as gifts by one sovereign to another, as the most rare and costly things are now.—*Oliver Optic's Mag.*

Now, is there nothing in your household to change? Is there nothing in your disposition to rectify? Is there nothing in your purpose to be made different? Is it an aim that you have constantly before your mind to so carry

yourself that every one in your presence shall go away feeling that for a time, at any rate, he has been made happy?—*Beecher.*

ITEMS.

THREE great planets adorn the evening sky. In the western heavens Venus glows with enchanting beauty, having but recently emerged from the solar rays. Near the meridian, and above the great Orion, Jupiter is enthroned. For some time past he has swayed to and fro, forming curious systems of triangulation with the Hyades and the Pleiades; but now he has a forward movement, and in less than a month will glide between the two golden stars that tip the spreading horns of Taurus. Before the middle of Fifth mo. Venus will overtake him, and these two planets will mingle their lustre, for a time, with those lesser lights that illuminate the solstitial colure.

In the east, midway between Regulus and Spica Virginis, the planet Mars holds his course.

Uranus, too faint to be seen without aid of a telescope, is in a line joining the two bright stars Procyon and Pollux, and about five degrees distant from the former star.

It is announced from Washington that the Joint High Commission have agreed upon the points of settlement of the questions in dispute, although they have not yet been reduced to treaty, owing to the delay in waiting for answers from the British Government and communications from the British Commissions. There is no doubt, however, of favorable responses. The settlement of the Alabama claims is left to a Commission of jurists, and the San Juan boundary to the arbitration of friendly powers. The fishery question will be definitely decided this week.

DURING the investiture of Paris, the *London Times* contained long columns of announcements intended for friends in Paris. People wondered what chance there was of their ever being seen by those for whose eyes they were meant to reach. The *Times* explains in the following the manner in which they reached their destination:

Those pages of the paper which contained communications to relatives in Paris were photographed with great care by the London Stereoscopic and Photographic Company, on pieces of thin and almost transparent paper, about an inch and a half in length by an inch in width. On these impressions there could be seen with the naked eye only two legible words, *The Times*, and six narrow brown bands representing the six columns of the printed matter forming a page of the newspaper. Under the microscope, however, the brown spaces became legible, and every line of the newspaper was found to have been distinctly copied, and with the greatest clearness. The photographs were sent to Bordeaux, for transmission thence by carrier pigeon to Paris. When received there they were magnified, by the aid of a magic lantern, to a large size and thrown upon the screen. A staff of clerks immediately transcribed the messages and sent them off to the places indicated by the advertisers.

So that with carrier-pigeons and balloons Paris was enabled to maintain quite a satisfactory line of communication with the outside world. We see it stated, however, that a large number of the balloons sent out have never been heard from. They are supposed to have been driven out to sea, and the passengers, where they contained any, lost.

From S. M. Janney's History of Friends.

MEMORIALS OF JESSE KERSEY AND NATHAN HUNT.

(Continued from page 132.)

Jesse Kersey was born at York, Pennsylvania, on the 5th of the Eighth month, 1768. His parents, William and Hannah Kersey, were members of the Society of Friends, and by their watchful care he was preserved from many of the corrupting influences that abound in the world.

In the sixteenth year of his age, he went to Philadelphia, and became apprenticed to learn the trade of a potter. There he was exposed to temptation from the bad example and profane language of his shop-mates, but through Divine mercy he was enabled to resist the allurements of evil, and at length to exert a salutary influence upon his associates.

His mind being brought under deep religious exercise, the meetings of Friends for Divine worship became very precious to him; and in order to attend those held near the middle of the week, he was accustomed to rise very early and get his work so forward that no objection could be made to his going. His diligence and serious deportment did not long remain unnoticed; several young men of pious character sought his acquaintance and introduced him into their family circles, where he enjoyed the advantage of refined and intelligent society.

In his seventeenth year he was called to the gospel ministry, and on submitting to speak a few words in a religious meeting, he experienced, after he sat down, that serene, quiet state of mind which assured him he had not mistaken his duty. He felt many fears arising from a consideration of the solemnity of the work; but as he kept humbly attentive to the voice of the true Shepherd, he found Divine grace was all-sufficient. In relation to the exercise of this gift he afterwards wrote as follows: "In all the experience I have had in the ministry, I have been convinced that much depends upon wholly relying on the all-sufficiency of Him who promised to be to His servants, both mouth and wisdom, tongue and utterance. But as in every instance of the blessings of heaven, our wise Creator has left something for us to do, in order to come at the full enjoyment of them,—so I believe it to be in regard to the ministry of the gospel. The gift may be bestowed; but by the indolence or inattention of the servant, the materials for it to act upon may be wanting,—the means of improvement may be unoccupied: and, like the seed in a neglected soil, it may not be permitted either to flourish or become distinctly known to others in consequence of the obstructions to its growth, or the mixture of other things."

After his appearance in the ministry, he remained an apprentice in the city about four years, during which time he began to

attract much attention on account of the impressiveness and perspicuity of his discourses.

On the termination of his apprenticeship he went to the neighborhood of East Caln, Chester county, where he kept a school. In the year 1790, he was united in marriage with Elizabeth, the daughter of Moses Coates, and they settled in York, where he commenced business as a potter. After four years' residence in that place he removed to East Caln, where he followed his trade until his health gave way, and he was under the necessity of relinquishing the business. Having sold out his shop and fixtures, he again resorted to teaching school for a livelihood; and notwithstanding his very limited circumstances, he found it his religious duty, at times, to leave his business in order to travel as a minister of the gospel.

In the year 1797, being offered a farm near Downingtown, on terms peculiarly liberal and advantageous, he concluded to accept it, hoping that with care and industry he might, in time, be able to buy it. On removing thither, he became a member of Uwchlan Monthly Meeting. "Upon a retrospect of the past," he says, "I have admired the wisdom of Divine Providence in suffering me to feel so much pressure, and occasions for so many fears and trials in relation to my temporal concerns. Had my case been a more independent one, I now have no doubt that the notice and attention which I received among the most respectable members of the Society would have raised in me a spirit of self-importance, which is opposed to the humility necessary for a Christian, and dangerous to a minister of the gospel."

Jesse Kersey was, at that time, one of the most eminent ministers of the Society, there being probably no other whose discourses were so eloquent or so generally admired.

A prospect of going on a gospel mission to England and Ireland had for some time dwelt upon his mind as a religious duty; at length, he laid the concern before his Monthly Meeting, where it was united with, and a certificate of unity and approbation was granted, which being produced at the Quarterly Meeting, was there indorsed. The rules of discipline required, however, that ministers going on a religious service to foreign lands, should have their certificates approved by the Yearly Meeting of ministers and elders. The certificate of Jesse Kersey being accordingly laid before that meeting, was not fully united with, and he was released from the concern. Referring to this transaction, he says: "The comfort I felt on this occasion is not very readily described. I now began to have my hopes revived that I should be permitted to pursue my temporal business until I had laid

a fair foundation for a comfortable living in my family. But although in the order of Society I had been excused from going on the extensive journey that had opened to my view,—yet it was not long before the concern returned, and I was constrained to lay it before Friends again. It was now united with, and I was set at liberty to pursue the prospect before me, as Truth might open the way."

He embarked for England in the summer of 1804, and after attending many meetings in that kingdom, proceeded to Ireland. He found the condition of the Society in those countries discouragingly low, owing, as he thought, to the love of the world having gained the ascendancy in many who were regarded as leaders of the people. After an absence of about a year he returned to his home, grateful to the Author of all good for preservation and peace of mind.

In the spring of 1814 he went on a religious mission to the Southern States, having in view, also, the subject of slavery, and a prospect of conferring with men in authority as to the best mode of removing it. He called on the President of the United States, James Madison, and thus relates their interview:—"He heard me attentively, and appeared to enter into the subject with some interest. He remarked that he had thought of the plan of removing the slaves to Africa, as contemplated by Paul Cuffee; but many objections had occurred to him against it. He had also thought of their being colonized; but in this difficulties also presented. In fact, difficulties would present in every plan that could be taken up. He said the only probable method that he could see to remedy the evil would be for the different States of the Union to be willing to receive them; and thus they would be spread among the industrious and practical farmers, and their habits, education and condition would be improved. I felt satisfaction to find that the subject had engaged his attention, and parted with him in an agreeable manner."

On his way to Richmond, and while in the city, Jesse Kersey had conversations with many prominent and influential men, most of them slaveholders, to whom he expressed his earnest desire that a way might be found for the removal of slavery. He found them all concurring in his view, that it was a deplorable evil, and most of them held opinions similar to those expressed by the President. It was thought to be a national concern that ought to receive the attention of the General Government.

On his return he met a select company of Friends, at Philadelphia, to whom he related the result of his inquiries in relation to the

subject of slavery; but he thought they did not feel its importance so fully as would one may be necessary.

Having returned to his home, he continued to labor on his farm, which he had occupied for twenty years; but, not having yet paid for it, he concluded to sell it. Its value at that time would have enabled him to pay his debts and to have had a competency left, but on consulting his friends in the neighborhood, they dissuaded him from selling. Land soon after began to decline in price. He was finally obliged to sell at about half what he could have had, and he found himself once more reduced to poverty.

"At length," he says, "under the pressure of various kinds of trial, my constitution seemed to fail, and I was overtaken with the phus fever. This disease appeared to prostrate my physical strength, and desolate the maining powers of the nervous system. In order to raise me above the fever, recourse was had to powerful stimulants." . . . "I had no prospect of recovery. My physician gave me both laudanum and brandy, and commended the frequent use of the latter in my case, as indispensable to my recovery. "It was during this time of weakness, and under the pressure of my difficulties and trials, that I fell into the habit of drinking brandy, and thought my constitution required

Yet I never indulged in a course of excess because of a disposition to rebel against my good and merciful Creator; but it was occasioned by reason of an overwhelming weight of weakness and incapacity to stand on my ground."

On going to the Yearly Meeting of Philadelphia, in 1823, he was informed of a report in circulation that he had become the victim of intemperance, and was advised by some of the members to return to his home, which he did under feelings of the utmost prostration. Some of his old familiar friends forsook him in this season of adversity, and, doubtless, there were many excellent persons who had too little charity for his weakness, having themselves never been tempted in the same manner.

In narrating his afflictions, he says: "The worst trying of all was, that my character among Friends had become so far blasted that it was thought proper by some to deny me the standing of a minister in the Society. I was accordingly removed from a seat in the meeting of ministers and elders. Under these circumstances, my poor soul was so far cast down that all prospect of recovery was apparently lost; and that which gave the greatest power and force to those feelings was my consciousness that I had not kept my place, and had frequently given way to an excessive

use of stimulants, in order to conquer and soothe the horror of my situation." . . . "But, adored forever be the Great Shepherd and Bishop of souls; His arm is not shortened that it cannot save, nor His ear grown heavy that it cannot hear. By the blessed interference of His adorable goodness, wisdom and power, deliverance was miraculously furnished, and a way made for me to rise again into the glorious liberty of the ever blessed Truth. This I acknowledge with gratitude to have been nothing short of a Divine work. And having witnessed that my God is indeed a God of mercy and long-suffering kindness, I am humbly bound to speak well of His excellent name, and to magnify the arm of His power."

In the year 1827, two of his sons were removed by death, and two years later his only remaining son was taken, leaving him but two out of eleven children. Near the same time, his excellent and devoted wife was likewise called to her eternal home, concerning whom he has left in his Journal an affectionate and touching memorial.

It is satisfactory to know that in the evening of life he was relieved from care, and furnished with a comfortable home; surrounded by kind friends, and enabled to preach the gospel "in demonstration of the spirit and of power."

In a testimony concerning him, by his friends and neighbors, they say: "As a minister, he was remarkably qualified to enlist the attention of his hearers, to fix their minds upon the glorious and sublime truths of the Christian religion, and often was he followed and admired by crowds of gratified auditors not of his own persuasion. In the morning of his promise, and the meridian of his day of usefulness, his society was courted by the wise and the learned, his affability of manners, his grave and dignified deportment, the soundness of his principles, the beauty and simplicity of his style of address, heightened in their effect by the depth of his devotional feelings, gave an interest and a charm which gained him many admirers."

He died near Kennet, Chester county, Pennsylvania, in the full assurance of a blessed immortality, on the 26th of the Tenth month, 1845, in the seventy-eighth year of his age.

Nathan Hunt was born in Guilford county, North Carolina, the 29th of the Tenth month, 1758. His parents, William and Sarah Hunt, were members of the Society of Friends; the former a highly valued minister of the gospel, whose death, in England, has already been noticed.

In his youth, Nathan Hunt was often

brought under the solemnizing influence of Divine grace, when sitting in religious meetings or attending funerals, and even at the age of seven years he was impressed with the belief that if he was faithful, he should one day have to preach the gospel. At seventeen, he experienced a visitation of Divine love, and the prospect of being called to the work of the ministry was again presented; but for want of abiding under the solemn weight, he was induced to associate with jovial companions, and the impression grew fainter. At twenty, he married and settled on the homestead of his father; soon after he was closely tried by the sudden death of his mother. The Revolutionary War was then in progress, and he experienced much privation, being robbed of his horses, cattle, and other property, leaving him almost destitute of the means of subsistence; all of which he bore with Christian fortitude.

In relation to his first appearance in the gospel ministry, he writes: "After passing through great sufferings on account of reluctance of nature to yield, I finally gave up to what appeared to be required of me, and in the twenty-seventh year of my age spoke a very few words in a meeting in Tennessee, which brought great peace and comfort into my mind. The first time I appeared in my own meeting, so great was my brokenness of spirit, that as I walked towards home, tears fell from my eyes like drops of rain." About the thirty-fifth year of his age, he was acknowledged as a minister by his Monthly Meeting, after which he frequently attended the neighboring meetings; but his first journey to a distance was in 1797, to Georgia and South Carolina. Before leaving home, he was much troubled at the thought of leaving his family, who were dependent upon the labor of his hands. One day, while following the plough, he heard a voice distinctly say to him, "Go, and thou shalt lack nothing, and they shall be cared for in thy absence." The impression was so convincing that he immediately gave up, accepting it as an intimation from the Lord. On his return, after an absence of six weeks, his faith was confirmed, for he found his family in health and comfort, and he had in his pocket the same sum of money with which he started.

Subsequently he performed many journeys in the service of the Gospel to various parts of the United States, and to Great Britain and Ireland. He was very generally known and much beloved throughout the Society of which he was, for sixty years, a standard-bearer in the cause of truth. As a shock of corn fully ripe for the heavenly garner, he was gathered to his fathers in the ninety-fifth year of his age.

From an interesting Memoir of Nathaniel Hunt, the following passages are selected: "He had naturally a clear and comprehensive mind, a vigorous intellect and sound discriminating judgment; but very few advantages of education. Indeed, he has been heard to say that the principal part of the learning he had was acquired by the light of a 'pine knot,' as he sat with his brothers and sisters round the family hearth, when the day's work was done. He was, however, deeply instructed in the School of Christ and with the salutary discipline of the Cross he was made familiar from his early childhood. In later life there was a striking gravity and dignity about the dear old man, and at times a deep introversion of spirit which seemed to check the least approach to lightness and frivolity, and spread a holy quietness on a around him; so that it might, with great propriety, be said of *him*, as it was of the excellent founder of the Society of Friends, 'His very presence expressed a religious majesty.' "Possessing an uncommon share of native eloquence, and dwelling very near to the alone source of all true Gospel ministrations he was indeed enabled to 'do the work of an Evangelist,' and there was such an unctious and freshness attending his religious communications, they often made a deep impression on those that heard them."

For Friends' Intelligencer.

THE OPENING OF SPRING.

Life, new life is springing up and expanding in all its primeval beauty, as fresh and lovely as when the fiat went forth: "Let the earth bring forth grass, and herb yielding seed; and trees yielding fruit, whose seed is in itself." A Fatherly provision for the needs of His creatures, ere they were called into being, so that no lack should be complained of, and that which was essential for reproduction was prepared, and so arranged as to keep up an eternal succession, in relation to the necessities of all created existences. Thousands of years have passed away, and the Word, the all-creative Word, remains full force. The seasons roll on, each in turn exhibiting our beneficent Father's care while in each there is something to cherish and much to admire and raise the heart of gratitude to the great original Author and Upholder of the works He has formed. Will sweet fragrance be continually ascending from shrub and flower as incense to God, fill the atmosphere above and around, shall we suffer the inner life to lie dormant? O, let the swelling tide of love to God and

* Brief Memoir of N. Hunt. U. Hunt & Philadelphia, 1858.

low out, and circulate till it reaches all classes of His children, drawing them into its crystal wavelets where all impurities are washed away, the lonely cheered, the solitary made glad, the wayworn refreshed, and all can rejoice together in full accord. Let us be ready with united energies to enter upon any service that tends to elevate the heart above low and sordid, vain and trifling things, and fix the attention on the substantial, the pure, the true, the honest, and all that would build up religious Society like the "walls of Jerusalem, that were compact together, where the tribes went up to the testimonies of Israel."

What comes from God draws to Him; all that is good has an upward tendency. We want a force of this kind sufficient to draw the masses from a misguided course into associations, the influence of which will preserve from the evils that abound, and the vice that allures, that they may realize the truth that virtue brings its own reward, and that reward is peace.

SARAH HUNT.

3d mo. 22, 1871.

BE NATURAL.—The unnaturalness of which we complain reveals itself also in its phraseology, adopting modes of expression not customary in daily life. It was a mistake of the old Puritans when they undertook to talk in a bible phrase, and to reproduce in their households all the Scripture names. Men immediately suspected them of cant, because the thing was artificial. We have laid this aside, and taken a good measure, contenting ourselves with a reasonable amount of appropriate Biblical allusion and quotation. But we still cling too much to theological terms, and to technical words and phrases—usually figurative, and familiar and edifying to earnest saints; but which sound odd, uncouth, and often unmeaning to worldly ears. Some of our most powerful and attractive preachers owe their freshness of style to their avoidance of this fault. We cannot but think that exhortations and private conversations would gain in natural simplicity and healthy influence were they clothed in the language of daily life. We therefore close as we began, with the injunction BE NATURAL!—*Chicago Advance.*

For Friends' Intelligencer,

"THEY FRAME INIQUITY BY LAW."

This was the complaint of the prophet formerly, and it is mournfully true in the present day.

Whilst a revenue is created for the government by the importation and sale of spirituous liquors, the use of which so clearly increases crime and misery in our land, whilst legislative and local enactments fasten this temptation on the people, should we not be individu-

ally awakened to the query: Is there nothing I can do to assist in educating public opinion in favor of a prohibitory law? Living as we do under a republican form of government, are we not in a measure responsible for the continuance of injurious or oppressive laws, if we do not protest against them? Let us not then fear the moral or political agitation of this subject; and let it not be said of us as a Society,

"That our *not doing* is set down
Among our darkest deeds."

LOCAL INFORMATION.

Having observed from time to time that the meeting held on the first First-day of each month at Penn's Manor, Bucks Co., Pa., is placed in the list of Circular Meetings, I feel it right for the information of the editors and readers of the *Intelligencer*, to say that this is not a Circular Meeting. There is no Circular Meeting held within the limits of Bucks Quarterly Meeting. An effort has been made to revive Pennsbury Meeting, which was laid down for several years, by holding an indulged meeting once a month, which has been done for more than two years, to the satisfaction of those interested in the neighborhood. They are now prepared to meet once a week whenever the Monthly Meeting will grant the liberty of so doing, which privilege has been requested.

Penn's Manor, Pa.

For Friends' Intelligencer.

TOTAL ABSTINENCE.

It has seemed to me for a long time that the standard of temperance needs to be raised somewhat higher in the Society of Friends. It is true that we as a religious people were among the first pioneers in this cause—that the first sermon preached by George Fox was against drunkenness—that the Society very early in its history had a concern in this direction, but it was a long time discovering the root of the evil, that is, the moderate use, as it is termed, of intoxicating liquors; and after they had made this discovery (if indeed we have yet discovered the whole truth in regard to it,) it took many years of arduous labor to convince its individual members that they ought not to traffic in alcoholic poison as an article of drink. Now our ancestors had a work to do in this direction, and many of them faithfully performed it, through good report and evil report, and shall we sit down idly, where they left off, or rather, shall we not gird on the armor, and enter manfully into the work, for most assuredly the harvest is plenteous. Intemper-

ance, like a wasting pestilence, is spreading ruin and destruction in its pathway, destroying our fellow-beings by hundreds of thousands, wrecking the whole man, body, soul and spirit. It may be asked, what *ought* we to do, or what *can* we do as a society, more than we have done, since our discipline does not tolerate drunkenness, nor allow our members to manufacture or sell distilled spirituous liquors, and we are further advised to abstain from the unnecessary use of intoxicating liquors of every description. It may be replied, that we should do whatsoever our hands find to do as individuals; and as a society, we should labor earnestly to raise our standard to that of total abstinence from all that intoxicates, so far as relates to these liquors as an article of drink. The day calls loudly for this step, if we would continue to be pioneers in this work as our fathers were; for total abstinence from all that will intoxicate, is the only sure foundation for the temperance advocate of to day, whatever else may have been committed or permitted to those who have gone before. It may be objected to this, that in the best days of our society, its members were in the habit of using strong drink moderately, and at the same time were faithful standard-bearers of the truth; but we must remember, that as they remained faithful to the openings of the light which makes manifest, they were led from time to time to perceive the evil results of the practice, and a concern was awakened to exalt the testimony against it. Thus, little by little, like the unfolding buds of spring, is the truth unfolded to the seeking soul, and thus by individual faithfulness, through many years of anxiety and toil, has our testimony in regard to strong drink arisen to what it now is. I apprehend that every reflecting mind will admit, that the craving of the inebriate for strong drink is a perverted appetite, an angel designed to bless, transformed into a demon to curse and destroy; and this transformation has had a beginning, and that beginning was the first glass of alcoholic stimulant. It matters not how small the per cent. of alcohol it may contain, the effect is proportionally the same.

Moderate drinking, then, is the stream that is continually filling the whirlpool of drunkenness and debauchery; it is the small beginning from which the mighty results of shame and misery, and moral depravity come. If the use of intoxicating liquor as a beverage leads to such sad results, and that continually, should not each one of us who professes the Christian name, consider well his standing, and see how far he is adding by his indulgence in these drinks, even in the mild form of wine and cider, to this curse of

the human family; for surely every one that nameth the name of Christ, should refrain from upholding this giant iniquity. In conclusion, if we feel the weight of this matter as our fathers did, are we not ready as a religious people, to take another step in advance, and write upon our banner for the future, *Total Abstinence* from all that will intoxicate? W. M. W.

Fulton, 4th mo. 20th, 1871.

UNCONSCIOUS FRUIT.—Not all the good done in the world is done intentionally and knowingly. There are no sweeter or higher influences than those which flow out unconsciously from good lives. A really good life is one to which truth and kindness and nobility have become habitual. The whole nature may become so charged with these qualities that they affect even the smallest acts and their beauty is present in the most trivial and unconsidered word or deed. Such a person goes surrounded with a moral atmosphere as constant as the perfume which a rose shed round itself. People meeting such a one are made happier, hardly knowing why.

Every one of any moral worth wishes to be of use in the world, and it is the grief of many that they seem shut off from opportunities of usefulness. But simple growth in right life is growth in usefulness. Just as fast as we acquire in ourselves the spirit of purity and love, we send out an influence of purity and love upon others, whether we know it or not. Indeed, the greatest moral force in the world is of the silent and secret kind. As the child grows up, its character is shaped in some small degree by what it hears in the way of set instruction at home or school or church; but in a far greater degree by the qualities in father and mother and companions with which it is brought in ceaseless contact. So it is with all of us. No man liveth to himself. As we ourselves are pure or base, selfish or loving, so do we give our own color to those about us.—*Christian Union.*

BUILDING ON THE SAND.

In the East the peasants' huts are often very unsubstantial structures. They are built of mud or sun-burnt brick. A night's hard rain-storm will sometimes nearly demolish an entire village. Their mountain streams, also, possess a very peculiar character. The beds of these brooks are called *wadies*. In the hot season they are entirely dry. Yet, even then they afford often the best pasturage. In the rainy seasons they are swollen streams. The shepherd builds his hut by the banks of one of these *wadies*. If it is built high upon the rock it is safe. If it is built on the sand or soil, though there is no water at the time

building, the treacherous foundation gives way with the first freshet.

Appearances are deceitful—this is one lesson of the image. The man's house seems safe so long as the *wady* is dry. It needs a torrent to test it. No man knows whether he is safe until he has been tried. The storm is needed to show whether he is built on the rock or on the sand.

There is another lesson quite as important. The hearers of Christ's sermon understood it, doubtless. A friend of mine was once traveling through Palestine. The party pitched their tents one night in one of these *wadies*. The night was fair, the air clear, the grass green and soft, the torrent bed dry. Suddenly my friend was awakened by hearing the gurgling of water. Before he was dressed it was a foot high beneath his bed. He escaped with difficulty. His clothing, books, manuscripts were carried off by the stream. Rain in the mountains had in a few hours filled the dry bed with a roaring torrent. So, without warning, stormy experiences of temptation come. They that are not built on a rock will fall. There is no time to prepare after the temptation assails. Peter in the palace has no time to think. He must do his thinking before.

Foundations are hidden. It is not the apparent virtues which give stability to the character. It is not what a man appears to be, but what he is in the foundations. This is illustrated by the history of one of the handsomest churches in Chicago. It was a magnificent structure, built throughout of one; apparently only time could destroy it. Yet before it was quite completed the workmen abandoned it, the street was blockaded, the inhabitants of the opposite houses feared for their lives on account of it. It had all to be taken down, stone by stone. The foundations were imperfect. It was admirably built—but on sand. Many a man, good citizen, and father, generous neighbor, honest tradesman, is admirably built—but on sand. What are your foundations? Are you rooted and grounded in Christ?—*Western Christian Advocate*.

It is to me a very joyful thought, not only that we have a religion which is joy-producing in its ultimate fruits, but that which, looked upon comprehensively, has already produced the best cycles of joy, and raised the tone of joy throughout the world, and is going forward, not having half expended its force yet, to an era in which joy-producing shall be more apparent, and upon a vaster scale, and with more exquisite fruit, and in infinite variety. —*Beecher*.

Scraps

FROM UNPUBLISHED LETTERS.

My dear friend speaks of her own situation as one that is cause of thankfulness of heart, and I hope she daily feels the glow of gratitude for this outward situation: but does she inquire in what channel this grateful feeling should run towards others? for according to the ingenious parable or allegory of Hawkesworth, "no life is pleasing to God but that which is useful to mankind." See Murray's Sequel, page 160. Indeed, if this is the measure of our acceptance with the Divine Being, it is well for us to examine how we are passing along through time. For, are there not many of our actions, and much of our time occupied in what is neither useful to ourselves nor others? He who taught the pure doctrines of the Gospel declared that "narrow is the way that leads to life." Is it not doubtful whether professed Christians really believe (I mean *practically* believe) this doctrine? At any rate, the estimate which is made of the *width* of this "way" is very various. If we take the character of Jesus, so far as it is transmitted to us in the brief history given by Matthew, Mark, Luke and John, for a standard width of the way to life eternal,—or even if we take John Woolman's character as a modern exemplification of the Christian path—in both cases, there is a great distance among professors of religion and the standard alluded to. And what is to become of us with these defects, or what is to become of those who care for none of these things, like one Gallio of old? When the Assyrian monarch saw a part of a hand writing on the wall over against the candlestick, the history says he was troubled so that his knees smote one against the other. What caused this trouble in the midst of his splendid feast? Was it the consciousness of his own defects? Daniel explained a part of the writing thus: "Tekel, thou art weighed in the balances, and art found wanting." Alas! what multitudes who profess to be much more enlightened than the heathen Belshazzar, might be troubled at what is wanting in their own condition. And yet

"They let unmark'd and unemploy'd

Life's idle moments run;
And doing nothing for themselves,
Imagine nothing done.

Dreadful mistake! while time goes on
Their sad account proceeds,
And their *not doing* is set down
Among their darkest deeds."

It is good to retire, even often, from all

outside stir, and feel after the enlivening presence of the soul's Well Beloved. Here is our life and the source of our strength. I feel that our safety as a Society and as individuals depends very much upon our thus retiring to the great fundamental Principle—the light within—the grace of God that brings salvation. We are greatly blessed in that we can do this even when in the midst of the cares pertaining to this present life, and thus derive guidance and strength. Surely it is not needful, in order to be thus blessed, to withdraw to the closet or the secret chamber; nay, we may hold this high communion as we walk by the way in the busy thoroughfares of our large cities, and thus realize the fulfilment of the assurance, "Lo, I am with you always, even unto the end of the world."

FRIENDS' INTELLIGENCER.

PHILADELPHIA, FIFTH MONTH 6, 1871.

OUR NEXT YEARLY MEETING.—As the time approaches for holding our annual gathering, we are impressively reminded of a concern that was expressed in our editorial under date Sixth mo. 4th, 1870. While we request for it a second perusal, we feel like saying a few words more in view of the special importance of one of the subjects there noticed.

The editorial referred to says, "As our annual assembly is considered of sufficient importance to cause many hundreds to collect from various parts of the country, surely we ought to give the needful time to its concerns." We reiterate this opinion, for while we do not wish to prolong needlessly the time of absence from home, nor to promote sluggishness in the transaction of the affairs pertaining to our religious Society, we feel a renewed concern that all things be done decently and in order, so that those who attend the meeting may derive the full benefit that such an institution can confer.

We come together at the opening of the week rejoicing in our reunion, and under this feeling perhaps we sometimes loiter, and thus lose time in the commencement. But if this be so, let us not make another mistake and attempt to accomplish an over amount of business in what we design shall be the last sitting, so that the meeting may close, as is usual, with one session on Sixth-day.

This brings us to the concern as treated in the editorial before alluded to, and we revive the caution then given that there shall be no prearrangements as to the time when the Yearly Meeting shall close. It may in many cases be necessary before leaving home, to fix a time for return, but let us allow at least another half-day, and, if necessary, be willing to return home, leaving others to finish up the business. It is better for the few who cannot remain to leave, than for the whole meeting to be thrown into a hurry or confusion sadly at variance with the good order, the observance of which our discipline enjoins.

When the last session is long and exhausting, owing to an undue press of business, we sometimes close under a sense of pressure, and are measurably deprived of an opportunity to gather up the fragments left from the table which has been bountifully spread, and also of that season of quiet solemnity which might be as a crown to our meeting.

WANTED, Numbers 2 and 3 of the present volume of *Friends' Intelligencer*, for which six cents each will be given at office, 144 N. Seventh St., Philada.

DIED.

POTTS.—On the 31st of Third month, 1871, Edith A., daughter of J. N. and Alice C. Potts, aged 19 months; members of Baltimore Monthly Meeting.

COWMAN.—On the 7th of Fourth month, 1871, Samuel S. Cowman, Sr., in the 78th year of his age; an elder of Baltimore Monthly Meeting.

SHARPLESS.—At her residence near Chester, Delaware Co., Pa., on the 3d of Third month, 1871, Eliza H., wife of John M. Sharpless, and daughter of Thomas and the late Edith Jenkinson, in the 53d year of her age.

THE INDIANS.

The Indian Committee of Philadelphia Yearly Meeting will meet in the Monthly Meeting Room, Race St., on Sixth-day afternoon preceding the Yearly Meeting, Fifth month 12th, at 3 o'clock. Punctual and full attendance is requested.

JACOB M. ELLIS, *Clerk*.

A meeting of the Executive Committee of the First-day School General Conference will be held at Race St. Meeting-house, Philada., on Third-day morning, the 16th inst. (Yearly Meeting week), at 8 o'clock.

EDWIN CRAFT, *Clerk*.

THE subjoined letter has been kindly sent for publication:—

OMAHA AGENCY, 3d mo. 26th, 1871.

My dear friend, Benj. Strattan:—My object in writing at this time is to give a little sketch of the affairs of the Indians under our charge, in order that the Friends who have

shown so warm and practical an interest in their behalf may be apprised from time to time of their advances in civilization and general improvement. It may be remembered that one of the first subjects that claimed my attention on arriving here was the allotment of the Indian lands in severalty, with a view of ultimately breaking up the tribal relations by which all things were held in common, and establishing in lieu thereof an individual interest in certain portions of the soil, as well as in any property that may hereafter be acquired by them. The work of assigning to each member of the tribe a separate tract of land that would be strictly in accordance with his wishes, and at the same time be agreeable to the views of all other members of the community, it may readily be seen, was a task of no ordinary difficulty. This work, however, was happily accomplished nearly a year-and-a-half ago, and subsequent events have led me to believe that the allotment has given general satisfaction to the Indians. Soon after the completion of the work of the allotment, the papers and maps were sent to Washington in order to have the title papers issued by the Indian Department in accordance with the provisions of the treaty. These title papers have just been received, and are to be placed in the hands of the several allottees during the present week. The treaty expressly provides that these lands so allotted can never be sold, except to members of the same tribe, or to the government of the United States. The Indians are greatly rejoiced at the reception of these title-papers, particularly as rumors have been current here of a design on the part of the government to remove them from their reservation to some distant locality. Their anxiety on this account, however, has not prevented them from making active and vigorous preparations for settling on their farms, with a view of surrounding themselves with the comforts, and adopting the habits of civilized life. Their keen appreciation of the benefits that are to arise from this change in their former mode of living is as unlooked for as it is encouraging and gratifying. Gradually labor amongst the men has become not only respectable, but FASHIONABLE. The women are thus relieved of much of the drudgery they have hitherto been required to perform; and in lieu of the heavy burdens of fuel the poor squaws were forced to carry on their backs sometimes for miles, the husbands now cut it, and haul it to the doors of their humble dwellings. Field labor is also now done principally by the men, though the women assist in planting and hoeing the corn, beans, etc., when occasion seems to require their aid. This withdrawal

of female labor from the more laborious occupations has tended greatly to promote habits of cleanliness and order in the domestic circle, and particularly among the children. Instead of a clean face and smooth, shining hair being the exception, they are now the rule; and a happier or brighter flock of children than may be seen rollicking round their playgrounds at the three Indian schools during the time of recess, or a more orderly and attentive company during school hours, it would be hard to find in any enlightened community. They are somewhat vehement in their sports and demonstrations, but I do not mind that; but rather rejoice in the bubbling up of their native energy and sprightliness, that is to be trained to the more sober and useful pursuits of life in the future.

A marked and increasing interest, not only in the education of their children, but in the acquirement of useful general knowledge, is becoming very observable throughout the Omaha tribe. I have remarked that it has become *fashionable* to work, and I am beset on all sides by eager aspirants for labor of every description.

These Indians have an annuity of \$20,000, and the treaty provides that an agent, interpreter, engineer, miller, blacksmith, and farmer, are to be furnished to them at the expense of the government, which also obligates itself to keep the mill in repair, and furnish iron and steel for the smith-shop. This constitutes about the amount of the available resources of the tribe, which numbers about one thousand. Last year they were paid eleven dollars *per capita*, the balance of the annuity money having been wisely reserved by the commissioner to be expended for Indian labor. During the past winter, and for some time previous, the Indians have been busily engaged in making preparations for building comfortable houses on their respective farms, in addition to the usual labor of cultivating their crops and providing other means of subsistence. They have lumber now sawed sufficient for about forty comfortable houses, and perhaps more than that number. Their cottages thus far have been built nearly on a uniform plan, though the chiefs are honored a little with some extra finish, not very costly. Each house is 15x20 feet, with a neat piazza in front, and is divided into five rooms—a general sitting-room, three bed-chambers, all private, and a good kitchen. The foundation walls are built of bricks, made by the Indians, and also the chimneys, which are so arranged as to admit of a fire being made in each room in the house. These houses are being built by Indian carpenters under the supervision

of a competent white carpenter, who has ten apprentices under his charge. They now build a house in about two weeks, or a little less. The quantity of material provided in advance will justify the building and finishing up of a house in about three days. The mill is in good order, and saws lumber very rapidly, but there are hundreds of logs hauled and piled up about the mill, beyond its capacity, which have been cut and transported several miles by the Indians. Besides these, there are a thousand or more, perhaps, of saw-logs in the woods, ready to be hauled to the mill. This long preamble may convince the most partial observer that all this work cannot be done without considerable expense, and it is very evident that twenty dollars to each Indian will not go very far toward the expense of a work of such magnitude, particularly as civilization involves the necessity of household furniture,—cooking-stoves, bedding, wearing apparel, and all the various *et ceteras* of the commonest order of civilized life. Some weeks prior to the usual time of the assembling of Congress in the Twelfth month last, a grand council of the Omaha tribe was called, to confer with their agent in relation to providing proper means to carry on the laudable work of building comfortable houses, breaking up land, providing stock and farming implements and for the purchase of seeds and all the necessary appliances for cultivating the soil with profit and success. When the grand council was assembled, it was unanimously agreed, after a great deal of smoking and deliberation, that a petition should be drawn up, asking that the President of the United States, by virtue of the authority vested in him by the provisions of the treaty with the Omahas, would arrange at the earliest practicable moment for the sale of 50,000 acres of the most western portion of their reservation, to be separated from the remainder by a line running along the section line from north to south, in order to realize by the sale of the said lands sufficient means to go on with the work of civilization and improvement, so long urged upon them by the government. This document, having been duly approved by acclamation and signed by the chiefs, police, and head men of the tribe, was transmitted to the Superintendent of Indian Affairs [S. M. Janney] to be forwarded to Washington. This was done with his warm approval of the measure.

I feel quite anxious this petition should be granted, as, in the absence of profitable employment, I fear a relapse into their former habits of idleness and improvidence, hindering their prosperity and enlightenment, and affecting in some degree the entire system of

what is popularly known as the Quaker Policy. With sentiments of esteem, I am very truly thy friend,
E. PAINTER,
U. S. Indian Agent.

For Friends' Intelligencer.

WINNEBAGO AGENCY, NEB., 4th mo. 21st, 1871.

Thinking it might be interesting to some of the Friends to know how and what we are doing of interest at this agency, I have concluded to write to that effect. Being a teacher here, an excellent opportunity is offered me to study the red man. The Winnebago Indians differ widely from their surrounding brethren in being much more intelligent, more willing to adopt civilized ways, and having a certain amount of industry, which is totally foreign to the general Indian character; coupled with this there is a want of appreciation among them as to the advancement made by the government and their kind friends East. They have been so shamefully abused and cheated heretofore, that they think it incredible that white men can be their friends. We have this great difficulty to meet with in all our endeavors, but with the kind assistance which we have received from the New York friends in the great abundance of good clothing which they have sent us, together with steady perseverance, we hope to overcome all this distrust.

Within the past year a marked change for the better is visible everywhere. The tribe has had its reservation carefully surveyed, and each family now has an allotment of 80 acres of good land. They have shown their appreciation of this by hauling logs last winter to the mill, to be sawed up into boards for the construction of their houses, which they have built on their respective allotments. We now have seven substantial frame houses nearly completed, which will make thirty frame dwelling houses upon the reservation, besides a large number of log houses. The demand for houses is very great, but as we employ a force of twelve Indian carpenters, we hope soon to supply it, which will only be done when each family is provided for, as they begin to see that a house is far better than a teepee.

As spring advances, a large demand for plows, shovels, spades, hoes, and nearly all kinds of agricultural implements is made. At present they are busily engaged in fencing their claims and planting them with wheat, corn, potatoes, etc., the seed being furnished by the government. Besides this, we have ploughed and seeded for general use, 400 acres in wheat, which we hope will be sufficient to meet all their wants in this line for the coming year. Our schools, three in number, are thriving; the attendance is very

fair, and a great eagerness for knowledge is manifested. We expect to make great alterations this spring in refitting our school-houses with suitable furniture, in order to practically advance the great want of cleanliness and economy. Having had some experience in teaching our Eastern schools, I am prepared to substantiate the fact, that for application to study they equal their pale-faced brothers and sisters. We contemplate building a large industrial school (provided Congress will appropriate the necessary funds,) for the accommodation of both sexes, which, with proper treatment, we believe will have the desired effect, in elevating the rising generation to the level of American citizens.

During the past year twelve exemplary men have been acting as chiefs, to the satisfaction of the tribe. According to a previous agreement we held our annual election for chiefs, a few weeks since, which passed off very satisfactorily, and resulted in the selection of twelve good men, three of whom were last year's chiefs. The mode of election was novel and interesting. Instead of the ballot, the Indians arranged themselves on the open ground. There being two sets of candidates, they took opposite sides of a road, which they made their dividing line. There were two voted for at a time, and as each candidate's name was called out, he was joined by his adherents on his side of the road; the result being known, the fortunate one would receive the congratulations of his friends by their prolonged and hearty whoops. The main characteristic of the whole affair was that it passed off quietly, amid pleasant words and actions, and during the entire election bright smiles and good humor were depicted on every countenance throughout both lines. We believe this plan to be a decided improvement on the old system of chieftainship, and will no doubt ultimately result in placing them upon a higher standing. In short, we are progressing. Each step we take has to be made with care and deliberation, lest it should be misunderstood by the Indians, and a retrograde effect produced.

It has now been about two years since the beginning of our regime, and from the observation which I have made during the little time I have been among them, I can say that at the expiration of our term of office satisfactory results can be looked for in civilizing the Winnebago Indians.

JOHN S. WHITE,
Teacher.

A RAY of light will perform the tour of the world in about the same time it would take to wink the eyelids.

THE QUARTERLY CONFERENCE OF THE FIRST-DAY SCHOOL ASSOCIATION,
Held at Woodstown, N. J.

Agreeably to notice the Association met on Seventh-day, Fourth mo. 15th, in Friends' Meeting house. 75 delegates answered to their names, and it was estimated about 400 persons were present. Eight of the schools had not appointed delegates, and 7 did not forward reports. Some of these are not in session during the winter. Encouraging verbal statements were made in reference to one of these schools. An interesting report from the Race street sewing school was read, and the Wilmington report gave a very satisfactory account of their school of the same character, as well as the mission school for colored persons.

The Mannington First-day school, held at a private house, sent its first report—though small it was encouraging.

Truly acceptable epistles from the Indiana and Baltimore Associations were read, and essays of epistles adopted to the New York Association and to interested Friends within Genesee Yearly Meeting. An essay prepared by a teacher of Green street school was satisfactory.

The names of officers and an executive committee were reported and approved. Hereafter each school is to forward annually one or two names of Friends to constitute this committee. Hannah Paxson, West Chester, was appointed Treasurer. The publishing committee reported that the child's paper, "Scattered Seeds," did not meet all expenses; they have concluded to raise a fund of \$500 (more than one-fourth of which was already subscribed) to aid in its support the ensuing year. Louisa J. Roberts, 421 N. 6th street, and Edwin Craft, Clarksboro, N. J., in conjunction with the editor, are to receive donations to this fund.

The proposition in one of the reports, the adoption of which was recommended by the executive committee, was agreed to, and accordingly there will be held, in Race street Meeting-house, at 3½ o'clock on First-day afternoon of the approaching Yearly Meeting, a children's meeting, to be composed of those connected with the several First-day Schools in the city or convenient thereto, and of any others who feel interested.

The increased interest and attendance of some our meetings resulting from the establishment of First-day schools was spoken of as one of the benefits from them resulting to our religious Society, and the view was also expressed that Friends by commingling in the Scripture Reading Associations and adult classes, and comparing their feelings and ideas, prejudices were removed, a better un-

derstanding of each other brought about, and a greater degree of love and unity promoted.

Time did not allow of the consideration of the suggestion in two of the reports, to hold semi-annual instead of quarterly meetings; but in the consideration of the subject in the executive committee, and judging from the remarks of other Friends, there seemed but few to favor the proposition.

It was concluded to hold an adjourned meeting on Fifth day evening of the approaching Yearly Meeting week, at which the Annual Report to the General Conference will be read and delegates appointed to attend that body. The meeting was a harmonious and satisfactory one, and as in other localities, Woodstown Friends were active in their hospitalities. Doubtless all in attendance felt gratified with the reception they met, and with the evidences of brotherly feeling prevalent.

J. M. T.

NEARER HOME.

One sweetly welcome thought
Comes to me o'er and o'er;
I'm nearer home to-day
Than I've ever been before;

Nearer my Father's house,
Where many mansions be;
Nearer the Great White Throne,
Nearer the Jasper Sea.

Nearer that bound of life,
Where we lay our burdens down—
Nearer leaving my cross,
Nearer gaining the crown.

But lying dimly between,
Winding down through the night,
Lies the dark and uncertain stream
That leads us at length to the light.

Closer and closer my steps
Come to the dark abysm,
Closer death to my lips
Presses the awful chrism.

Father, perfect my trust!
Strengthen my feeble faith!
Let me feel as I would when I stand
On the shores of the river of Death—

Feel as I would were my feet
Even now slipping down the brink;
For it may be I'm nearer home,
Nearer now than I think. —Curey.

LITTLE BY LITTLE.

When the new years come and the old years go,
How, little by little, all things grow!
All things grow—and all decay—
Little by little passing away.
Little by little, on fertile plain,
Ripen the harvests of golden grain,
Waving and flashing in the sun,
When the summer at last is done.
Little by little they ripen so,
As the new years come and the old years go.
Low on the ground an acorn lies,
Little by little it mounts to the skies,

Shadow and shelter for wandering herds,
Home for a hundred singing birds.
Little by little the great rocks grew,
Long, long ago, when the world was new;
Slowly and silently, stately and free,
Cities of coral under the sea
Little by little are builded—while so
The new years come and the old years go.

Little by little all tasks are done;
So are the crowns of the faithful won,
So is heaven in our hearts begun.
With work and with weeping, with laughter and
play,

Little by little, the longest day
And the longest life are passing away,
Passing without return—while so
The new years come and the old years go.

—Observer.

HOME ADORNMENT.

How luxuriantly flowers blossom beside the cottage or the palace, where love dwells. Love and industry without much money, can make a cottage home like a little paradise. Flower mounds which will cost but a trifle, may be arranged in different parts of the yard, which will add greatly to the attractions of home.

Let two wagon-loads of good soil be carted from some field where the fertile mould has been accumulating for ages, and let it be dropped in a conical pile where it is to be used for making a flower mound. In almost every cultivated field, scores of loads of the best quality of soil may be obtained, without any detriment to the land that may remain. In lieu of mellow soil, collect sods, and lay them up in the form of a cone, with the sides sloping at an angle of about 45°. The base may be four, six, or eight feet in diameter, of a circular form. Sods will soon decay, and will furnish a superb bed of mould for the roots of flowers. After the sods are all laid in their places, let the mound be covered with clean and mellow soil a few inches deep. Such mounds should be prepared early in the spring before the growing season has really commenced, so that they need not interfere with other duties which demand immediate attention. It will be found more satisfactory to have two flower mounds of moderate size, than one large one. They should not be so large that a person cannot easily reach to the apex for the purpose of weeding the flowers. Let the summit be flat, say one foot or more in diameter. Now, plant in the apex the seeds of some tall-growing annual, for a central plume; make shallow drills in the side in a horizontal direction around the mound, say eight or ten inches distant, according to the sorts of flower seeds to be planted. Let the seeds of the taller flowers be planted toward the summit, and those of lowest growth near the base of the pyramid

or cone. By recollecting the forms of growth, the height of stems, and color of petals of the sorts planted, it will be easy to arrange different varieties and colors in such a manner as to produce a charming effect. Where there are several such floral mounds, the seeds may be planted in different lines, either in a diagonal or spiral direction; and thus the flowers when in full bloom, will appear in charming contrast with the arrangement of the main cone. After such a cone has been properly constructed, it will endure any desirable length of time, simply by occasional additions of soil, as circumstances may require. A top dressing of lime and wood ashes will be excellent for all sorts of growing plants. Almost any florist's catalogue will give the reader information as to the kind of flowers which will constitute the best floral combination for such a mound.

KINDERGARTEN CULTURE.

BY ELIZABETH P. PEABODY.

(From the *Annual Report for 1870 of the National Commissioner of Education.*)

In undertaking to initiate a national system of education, and especially in a nation that, for the first time in the ages, embodies in its constitution provisions for the development of will, heart, and thought in every man, in such harmonious play that he shall be free to do the will of God on earth, as it is done in heaven—which is at once our daily prayer and the ideal of human society—we must not stop with providing the material conditions, but consider the quality of the education to be given.

The history of many great nations shows that there may be an education which paralyzes and perverts instead of developing and perfecting individual and national life. It is not from want of a most careful and powerful system of education that China is what she is. And India, Egypt, Greece and Rome had their systems of education, efficient for the production of material and intellectual glories, certainly, but which, nevertheless, involved the principles of the decay and ruin of those nations. Even the education of Christian Europe, that, with all its acknowledged defects of method and scope, has made all the glory of modern civilization, has failed to bring out the general results that are to be hoped for, if we are to believe in the higher prophetic instincts of the sages and saints of past ages, to say nothing of the promises of Christ, who expressly includes the life that now is with that which is to come. At our own present historical crisis, when it is the purpose to diffuse throughout the United States, the best educational institutions, it is our duty to pause and ask whether all has

been gained in educational method and quality which it is desirable to spread over the South; whether it may not be possible to improve as well as diffuse, and in the reconstructed States to avoid certain mistakes into which experience has proved that the Northeastern States have fallen. It is certain that a mere sharpening of the wits, and opening to the mind the boundlessness of human opportunity for producing material wealth, are not the only *desiderata*. As education builds the intellect high with knowledge, it should sink deep in the heart the moral foundations of character, or our apparent growth will involve future national ruin. In defining education as only the acquisition of knowledge, which is but an incident of it, we have indeed but followed the example set by the Old World, and have hoped that by offering this knowledge to all, instead of sequestering it to certain classes, we have done all that is possible. But it is not so. The *quality* of our education should rise above, or at least not sink below, that of the nations that have educated their few to dominate over the many, else our self-government will be disgraced; and, therefore, I would present the claims of the new system of primary education, which has been growing up in Germany during the present century, and which, in the congress of European philosophers that met at Frankfort-on-the-Main, in September, 1869, received a searching examination, and it was pronounced the greatest advance of method. A distinguished private teacher of America was present at this congress, and has furnished a translation, which I hope some time to see put to the press by the Bureau, of the report drawn up by Prof. Fichte, of Stuttgart, son of the great Fichte, who, with Goethe, Schiller, Pestalozzi, Diesterwig, and other eminent men, effected that reform of education in Germany that commenced in the early part of this century, and whose results are so brilliantly manifested at this very moment in the discipline and efficiency of the Prussian army, and also in the still more significant pervasive demand of the mass of the people for the peace of Europe.

In the report of Dr. Hoyt (United States Commissioner to the Paris Exposition of 1867) on the present state of education in Europe, there is a short, clear, and very striking statement of the normal education given to the primary teachers of all the Germanic nations, Prussia taking the lead. He says they all recognize that the primary department of education is at once the most important and difficult, and requires in its teachers, first, the highest order of mind; secondly, the most general cultivation; and thirdly, the most careful cherishing, greatest

honor and the best pay, for it has the charge of children at the season of life when they are most entirely at the mercy of their educators. As this report is distributed by the Senate to whoever will send for it, I will not repeat Dr. Hoyt's minute description of the normal training required of the primary teachers, or his statistics of the satisfactory results of their teaching, but pass at once to a consideration of the still profounder method of Fröbel, which immediately respects the earliest education, but of which Dr. Hoyt does not speak, inasmuch as it is not yet anywhere a national system, though within the last twenty years, it has spread over Germany and into Scandinavia and Switzerland, and been introduced into Spain, France, Italy and Russia; but to no country is it adapted so entirely as to America, where there is no hindrance of aristocratic institution, nor mountain of ancient custom, to interfere with a method which regards every human being as a subject of education, intellectual and moral as well as physical, from the moment of birth, and as the heir of universal nature in co-sovereignty with all other men, endowed by their Creator with equal rights to life, liberty, and the pursuit of happiness.

It is all the more important to make an exact statement of Fröbel's art and science of education in its severity, because it has been and is extensively travestied in this country by numerous schools called *Kindergartens*, which have disgraced its principles inasmuch as they have only the most superficial resemblance to those institutions to which Fröbel gave that name.

One of your assistants, in a voluminous paper upon all the reforms of education made in Europe and America during this century, has given an exhaustive history of the rise and progress of *Kindergartens* and their imitations, together with very valuable criticisms on education generally of his own and of various other writers of Europe and America; and this, also, I trust you may be able to send to the press before long. In the mean time, however, I must say something in this report on a subject of such vital importance, since it respects the beginning of education.

The fundamental or rather root point by which Fröbel's method differs from that of all other educators, is this: he takes up the human being in the full tide of that prodigious but blind activity in which he comes into the world, and seeks to make it intelligent of itself and of things around it by employing it to produce palpable effects, at once satisfactory to the heart and fancy of childhood and true to nature, by knowledge of whose order and organization the human understanding

is built up in soundness and truth. For the blind heart and will, which the human being is, until, by becoming intelligent of nature, he is transmuted into a principle of order, is the very principle of evil. Without imagining any inherent malignity of heart, we must admit that the child necessarily goes on, knocking down and tearing up, and creating disorder generally, to its own and other people's annoyance, in its vain endeavor to satisfy the *instinct to alter*, that is the characteristic of human will, until it is educated to recognize and obey the laws of God expressed in nature. For a time the young senses are not adequate to accurate perception of outward objects, and far less is the power of abstracting the laws of order developed in a young child. A certain evil is therefore originated which seems so inevitable, that it has tasked the human intellect to reconcile it with Divine benevolence and driven men into various theories, more or less unsatisfactory to all, upon the nature of evil and its place in the economy of creation. Now Fröbel undertakes to give a practical solution of this terrible problem by his art; for he seizes this very activity in the earliest infancy, and gently guides it into the production of effects, that gratify the intense desires of the soul, and cause it actually to produce the beauty and use at which it has blindly aimed. He looks upon the child as a *doer*, primarily, and a *knower*, subsequently; that is, as an artist before he is a scientist. Entering with genial sympathy into that primal activity which we call childish play, he guides the child first to embody and then carefully observe eternal laws, even on this humble plane, by which he surprises and delights himself with the beauty or use that grow under his hands, and therefore absorb his attention. For what meets a child's internal sense of fitness and beauty, especially if it is his own work, he is delighted to examine; and he loves to analyze the process by which the delightful result has been obtained. While it is a hard thing to make a child copy the work of another, he will repeat his own process over and over again, seeming to wish to convince himself that like antecedents involve like consequences. These repetitions sharpen his senses as well as develop his understanding; they also give skillfulness to his hands, and make him practically realize individuality, form, size, number, direction, position, also connection and organization, which last call forth his reflective powers. Hence *Kindergarten-teaching* is just the careful superintendence and direction of the blind activity of little children into self-intelligence and productive work by making it artistic and morally elevated. For

it carefully regards the ennobling of the soul by developing the love of good and beauty which keeps the temper sweet and the heart disinterested, occupying the productive powers in making things not to hoard—not to show how much they can do, which might foster selfishness, vanity, and jealousy, but for the specific pleasure of chosen friends and companions. Thus, without taking the child out of his childish spontaneity and innocence, Frœbel would make him a kind, intelligent, artistic, moral being, harmonizing the play of will, heart and mind, from the very beginning of life into a veritable image of the creativeness of God. The mother gave Frœbel the model for this education, in the instinctive nursery play by which she helps her little one to consciousness of his body in its organs of sense and motion. She teaches him that he has hands and feet, and their uses, by inspiring and guiding him to use them; playing with him at "pat a cake," and "this little pig goes to market and this stays at home," &c. I wish I had room to give a review of Frœbel's book of mother songs, nursery plays, pictures and mother's prattle, which is the root of the whole tree; but I can merely refer to it in passing. He shows in it that what he learnt from the mother he could return to her tenfold, bettering the instruction; and that the body being the first word of which the child takes possession by knowledge, though not without aid, we must play with the child. If we do not he ceases to play. Charles Lamb has given a most affecting picture of the effects of this in his pathetic paper on the neglected children of the poor; and the statistics of public cribs and founding hospitals prove that when children are deprived of the instinctive maternal nursery play, almost all of them die, and the survivors become feeble-minded or absolute idiots. Dr. Howe says much idiocy is not organic but functional only, and to be referred to coarse or harsh dealing with infants, paralyzing their nerves of perception with pain and terror; even a merely inadequate nursing may have this effect; and he and other teachers of idiots have inversely proved this to be true, by the restoring effects of their genial methods. And what produces idiocy in these extreme cases produces chronic dullness, discouragement, and destruction of all elasticity of mind, in the majority of children. It is appalling to think of what immense injury is done, and what waste made of human faculty, by those defective methods of education which undertake to reverse the order of nature, and make children passive to receive impressions, instead of keeping them *active*, and letting them learn by their own or a suggested experimenting. Some people, having

seen that the former was wrong, let their children "run wild," as they call it, for several years; but this is nearly an equal error. Not to be attaining habits of order is even for the body unhealthy, and leaves them to become disorderly and perverse. The very ignorance and helplessness of children imperatively challenge human intervention and help. They would die out of their mere animal existence in the first hour of their mortal life, did not the mother or nurse come to their rescue. Most insects and other low forms of animal life know no care of parents. They are endowed with certain absolute knowledge, enabling them to fill their small sphere of relation unerringly as the needle points to the pole. We call it instinct. But as the scale of being rises, relations multiply, which, though dependencies at first, become, by the fulfillment of the duties they involve, sources of happiness and beneficent power ever widening in scope. Man who is to fill the unlimited sphere of an immortal existence, knows nothing at all of the outward universe at his birth. The wisdom that is to guide his will, is in the already developed and cultivated human beings that surround him; and he depends on that intercommunication with his kind which begins in the first smile of recognition that passes between mother and child, and is to continue until it becomes the communion of the just made perfect, which is highest heaven both here and hereafter.

The instinct, therefore, that makes a mother play with her baby, is a revelation of a first principle giving the key note of human education; and upon it Frœbel has modulated his whole system, which he calls *Kindergarten*, not that he meant education to be given out of doors, as some have imagined, but because he would suggest that children are living organisms like plants, which must blossom and flower before they can mature fruit; and consequently require a care analogous to that which the gardener gives to his plants, removing and heightening the favoring circumstances of development.

(Conclusion next week.)

For the Children.

I'LL KEEP MY EYES SHUT.

Little Henry had been very sick. When he was slowly recovering, and just able to be up and about the room, he was left alone a short time, when his sister came in eating a piece of cake. Henry's mother had told him that he must eat nothing but what she gave him, and that it would not be safe for him to have what other children did till he was stronger. His appetite was coming back; the cake looked inviting; he wanted very much to

take a bite of it, and the kind sister would gladly have given it to him.

"Jennie," said he, "you must run right out of the room away from me with that cake, and I'll keep my eyes shut while you go, so that I shan't want it."

Wasn't that a good way for a little boy of seven years to get out of temptation? I think so; and when I heard of it, I thought that there were a great many times when children, and grown people too, if they would remember little Henry's way, would escape from sin and trouble.

"Turn away mine eyes from beholding iniquity, and quicken thou me in thy way," was the Psalmist's prayer; and it is a good one for each of us.

WOMAN AND WAR.—The social and domestic misery produced in Germany by the war is very great. A German paper states that in the province of Westphalia, at the beginning of October, there were 11,817 married women, the wives and widows of soldiers, together with 22,713 children, obtaining relief from the public funds. In Hanover, 9624 women and 26,418 children were dependent upon the public for support. In the Rhenish provinces there were 14,312 married women and 29,619 fatherless children who were utterly destitute. Thus, in only three Prussian provinces there were, last October, 35,753 women and 78,750 children in a condition of misery and want, and it is believed that destitution to the same extent prevails in the other provinces of Prussia. About nine-tenths of the males are in the *landwehr*, and the women and children thus deprived of their natural supporters will, it is feared, perish from starvation.—*English Advocate of Peace.*

ITEMS.

In the year 1865 Prince Nicholas Galitzin published in the *Russky Arkhiv*, a "Dictionary of Russian Authoresses." He is now preparing, says an English literary journal, to issue an enlarged edition, brought up to last year; and, accordingly, he has just addressed an appeal to ladies who write in Russia, begging them to send him a full account of themselves and of their works. He began, it appears, by publishing in the *Molva*, in 1867, "A Life of Russian Authoresses," which does not seem to have contained any great number of names. But the first edition of his dictionary contained four hundred; and so many ladies have taken to authorship within the last five years that he already has no less than eight hundred names ready to go into the second edition. Well may he say: "Female authorship has during the last few years assumed such dimensions in Russia as it has never known before, at any time or in any place."

THE PLANET MERCURY, which is seldom visible, can now be seen in the western heavens, its elongation from the sun being at the present time about twenty-one degrees east. This rare visitor, it is said, can for a few evenings be readily detected after sunset, by observing the following directions:

Draw a line from Jupiter through Venus, and extend it until the prolongation reaches a point beyond Venus, about three fourths the distance between the two planets just mentioned. This point will be a short distance from Mercury, which can be recognized by its fiery red hue. Through the telescope Mercury, it is stated, exhibits the form of a crescent. It is said that the great astronomer, Copernicus, died at the age of seventy, regretting that he had never seen Mercury, the misty horizon of his observatory, on the banks of the Vistula, having concealed this interesting planet from his view.

THE NEW PLANET discovered by Dr. Luther at Bilk, near Dusseldorf, was observed on Fourth mo. 22d by Professor Hall at the United States Naval Observatory, at Washington, D. C. At the time of observation the right ascension was 11 hours, 33 minutes and 7 seconds, and north declination 11 degrees, 2 minutes and 31 seconds. The new planet is of the eleventh magnitude, is the 113th of the minor planets, and has been named "Amalthea" by the Berlin astronomers.

THERE will be a full moon in the first week of each of the first seven months of the present year. In Seventh mo. there will be two full moons, viz: on the 2d and 31st; and in the remaining five months the moon will be at the full in the last week of each month. It will probably be many years before it will happen again.

AN Indian was permitted to testify in his own behalf, against a white man, charged with assault upon him, in the County Court at Stockton, Cal., on the 17th ult. The counsel for the defense objected, quoting the decision of the Supreme Court of the State denying Indian testimony, but the Judge ruled that the testimony should be admitted under the Constitution of the United States, the supreme law of the land. A similar judicial precedent in relation to the Chinese, also proscribed by the State laws, has been established in California.

STEPHEN GIRARD has an imitator in the late Robert Barnes of Evansville, Ind., who left \$500,000 to build and endow a college for the orphans of that State, enjoining that no minister nor missionary of any sect whatsoever shall ever hold office in the institution, or even be allowed to visit the premises.

OWING to King William's exhaustive demand for men on the battle field, the educational corps of the State has been so fearfully diminished that the Ministers of Instruction have been forced to issue an order accepting all women qualified as teachers of modern languages in the public schools—a profession hitherto monopolized by men.

"THE ACADEMY" gives some account of "forty-four authenticated balloon voyages" from Paris during the five months from Ninth to First mo. inclusive. From the few recorded observations of the elevation of flight the balloons appear to have risen and traveled at from 2,000 to 7,000 feet above the ground; their speed varied from 13 to as much as 80 miles an hour. The furthest flights were those to Norway, 840 miles, at the rate of 55 miles an hour, and to the range of St. Baume, between Marseilles and Brignoles, 420 miles, at 28 miles an hour. By means of the balloons, besieged Paris was able to send messengers to the outer world on an average once in every two days, and the whole space within which they alighted was not less than France itself. There is no certain information of any loss of life during these months of air-navigation, and the risk attending this mode of transit is certainly not greater than that of the early days of sea-voyaging.

FRIENDS' INTELLIGENCER

"TAKE FAST HOLD OF INSTRUCTION; LET HER NOT GO; KEEP HER; FOR SHE IS THY LIFE."

VOL. XXVIII. PHILADELPHIA, FIFTH MONTH 13, 1871. No. 11

EDITED AND PUBLISHED BY AN ASSOCIATION OF FRIENDS.

COMMUNICATIONS MUST BE ADDRESSED AND PAYMENTS MADE TO

JOHN COMLY, AGENT,

at Publication Office, No. 144 North Seventh Street

OFFICE OPEN from 9 A. M. to 4 P. M.

TERMS:—TO BE PAID IN ADVANCE.

The Paper is issued every week.
The TWENTY-EIGHTH Volume commenced on the 14th of
third month, 1871, at Two dollars and fifty cents to subscri-
bers receiving it through the mail. To those receiving it
through our carriers, THREE DOLLARS.

SINGLE NOS. 6 CENTS.

It is desirable that all subscriptions should commence at
the beginning of the volume.

REMITTANCES by mail should be in CHECKS, DRAFTS, OR
MONEY-ORDERS: the latter preferred. MONEY sent by mail
will be at the risk of the person so sending.

AGENTS.—T. Burling Hull, *Baltimore, Md.*

Joseph S. Cohn, *New York.*

Benj. Stratton, *Richmond, Ind.*

MEMORIALS OF SAMUEL EMLEN, JACOB LINDLEY, THOS. SCATTERGOOD, HANNAH FISHER AND GEORGE DILLWYN.

Samuel Emlen, son of Samuel Emlen, was born in Philadelphia, the 15th of the First month, 1730. Through the care of pious parents, and the restraining influence of Divine grace, he was, in youth, preserved from the contamination of vice, and as he advanced to manhood he yielded to the tender visitations of Divine love by which he was drawn to walk in the narrow way that leads to life. His call to the gospel ministry, while travelling in Ireland, and some of his religious services in Great Britain, have already been noticed.

His labors in the cause of Truth were extensive in his own country and in foreign lands. Once he visited the Island of Barbadoes, and seven times he crossed the ocean to preach the gospel in Europe. He travelled much in Great Britain; twice visited Holland, and was several times in Ireland. In all places where he labored, he endeared himself to the people,—being a lively instance of the efficacy of that grace which he preached to others, and manifesting the power of religion by meekness, humility, and love. His knowledge of several languages; his peculiarity in applying portions of the sacred writings, with an unaffected, engaging deportment, and affability of manners, frequently made

way for him among persons of high rank and with foreigners. When in company with such, his great concern was to impress upon their minds the superior benefits to be derived from a life of holiness and the comparative emptiness of the world's honors and enjoyments; frequently declaring that he was neither bigot nor sectarian, but a lover of all who loved the Lord Jesus in sincerity.

He was peculiarly gifted for consolatory visits to the afflicted in body or in mind, which he often manifested in the families of Friends, wherever he was, without distinction, and frequently amongst those not of his own communion, and this employment filled up a great part of his time. In meetings, his deportment was solid and instructive, his delivery clear, and his views comprehensive,—a holy unction attending his gospel labors.

After his return from his last visit to Europe in the year 1797, he gradually declined in health; yet, as usual, attended most of the meetings in Philadelphia, filling up the intermediate time principally in religious and social visits to the families of Friends. In these brotherly calls he often appeared to take but little interest in common conversation, yet, whenever it turned on religious subjects, he became animated, manifesting, by godly converse and pious devotion to his Master's cause, that his chief delight was in the law of the Lord, and his meditations thereon both frequent and fervent.

On the 14th of Twelfth month, 1799, he paid Rebecca Jones a visit, which proved to be their final interview. Noticing an almanac for the approaching year, he took it up, and placing it near his eye,—being very near-sighted,—he said, emphatically, “Eighteen hundred! I have said, that I shall not live to see it.” She replied, “Oh, Samuel, don’t say so!” He responded, “Rebecca, I have said it; remember the agreement which we made years ago, that the survivor should attend the other’s funeral.” On the following day he was engaged in a First-day meeting, in a lively testimony, and, finding himself ill, he leaned, in great physical weakness, on the rail before him, and repeated, with touching pathos, the following stanza from Addison:

“My life, if Thou preserv’st my life,
Thy sacrifice shall be,
And death, if death should be my doom,
Shall join my soul to Thee.”

The meeting broke up; he was taken to a neighboring house, and when a little revived, to his home. The next Third-day he assembled with Friends at the North meeting-house for the last time, and preached from the text, “This is the victory that overcometh the world—even our faith.”

Soon after this, he was taken sick, and, during his waking hours, the goodness and mercy of God were almost his perpetual theme. As there was no prospect of relief from medical aid, he desired that he might remain as quiet as possible, saying, “All I want is heaven;—Lord, receive my spirit!” He requested those about him to unite in prayer that he might be preserved in patience to the end. Then said, “My pain is great; my God, grant me patience, humble, depending patience.” And quoted the passage: “Call upon me in the day of trouble; I will deliver thee, and thou shalt glorify me.” He repeated, with great fervency, a considerable part of the Lord’s Prayer, and said, “Oh, how precious a thing it is, to feel the Spirit itself bearing witness with our spirits that we are His.” “Oh! this soul is an awful thing; I feel it so! You, that hear me, mind, it is an awful thing to die; the invisible world, how awful!” His end now fast approaching, he said, “I entreat that nothing may be done for me, except what I request, that my mind may not be diverted, that my whole mind may be centred in aspiration to the throne of Grace.” “Almighty Father, come quickly, if it be thy will, and receive my spirit.” He lay a while, the conflict being apparently over, but, feeling again the clogs of mortality, he said, in a low voice, “I thought I was gone;” and added, “Christ Jesus, receive my spirit.” He then quietly departed, and

entered into rest, about half-past four o’clock in the morning of Twelfth month 30th, 1799, in the seventieth year of his age.

He was buried on New Year’s day, 1800; his remains being taken to the meeting-house, where Nicholas Waln and another Friend were solemnly engaged in Gospel ministry, and Rebecca Jones, though an invalid, was in attendance.

Jacob Lindley was born in the Ninth month, 1744. His residence was at New Garden, Chester county, Pa.

About the thirtieth year of his age he was called to the ministry of the gospel, and by keeping humble and watchful he grew in his gift, becoming a workman that need not be ashamed, rightly “dividing the word of truth.” It has been said of him, that “for the space of forty years few pastors have more faithfully labored with their flocks, calling them to repentance, and warning them in the most emphatic language to have their accounts in readiness against the awful close of time.” “His agreeable manners and engaging turn of mind, tending to open his way among all classes and denominations of people, rendered him peculiarly useful in spreading the light of the gospel; his conversation being truly interesting and instructive.”

He was one of those who bore a faithful testimony against the use of spirituous liquor as a beverage, before his fellow-members in the Society of Friends had been fully awakened to the magnitude of the evil.

He was deeply interested for the welfare and civilization of the Indians, several tribes of whom he visited on the northern frontier of the United States, at a time when hostilities existed between them and the white people; and he was usefully engaged, with others of his own Society, in conciliating the minds of the natives, and disposing them toward peace.

It was, however, in regard to the descendants of the African race held in bondage that the most strenuous efforts of his benevolent mind were exerted. He not only labored in his own Society, so long as the members continued to hold slaves, but on all occasions where his lot was cast among those who continued to countenance the unrighteous traffic in human flesh, he faithfully and tenderly warned them of the danger to which they were exposing themselves, and the distress would bring upon them in a dying hour, they continued in a practice so repugnant to justice and humanity.

He seldom failed, in the Yearly Meeting of Friends, to hold up to view, in a very affecting manner, the cause of that afflicted people, exciting commiseration for their

ferings, and recommending the exercise of the spirit of prayer to the great Controller of events for their deliverance.

On one occasion, while attending Baltimore Yearly Meeting, he exclaimed, in his usual emphatic manner: "From the place where I now stand to the utmost confines of Georgia, blood touches blood, and cries to God for vengeance upon this nation."*

He survived two valuable wives, both of whom were ministers of the gospel. Concerning his second wife, Hannah, who, when he married her, was the widow of William Miller, a memorial by New Garden Monthly Meeting has been preserved. She is represented as one who had faithfully improved the talents intrusted to her, fulfilling her domestic and religious duties, and being a bright example of the Christian character.

On the last day of his life Jacob Lindley attended the meeting of Friends at New Garden, and delivered a lively and affecting discourse, in which "he intimated an apprehension that there might be those present who would not see the light of another day; and, he added, perhaps it might be himself. After meeting, he appeared in his usual cheerful disposition. In the evening, while riding in a chaise with his daughter, the vehicle was upset, and his neck was dislocated by the fall.

Thus suddenly terminated his life on the 12th of the Sixth month, 1814, in the 70th year of his age.

Thomas Scattergood was born in the city of Burlington, New Jersey, in 1748, of parents who were members of the Society of Friends. In youth he was deprived by death of a father's care, and was placed an apprentice in the city of Philadelphia, where, disregarding the checks of divine grace, he wandered from the path of peace.

In this unhappy condition, being visited by the "reproofs of instruction, which are the way of life," he was humbled, and enabled to submit to the Cross of Christ, through which he became qualified to extend counsel to others. After passing through much religious exercise, his mind was impressed with an evidence that he was called to the gospel ministry; but, through great reluctance to engage in that solemn service, he declined to comply for several years, and thus brought upon himself very deep and distressing conflicts. At length he yielded to his convictions of duty, and spoke a few words in a religious meeting, after which, continuing steadfast under many baptisms and trials, and keeping faithful to the divine gift, he became prepared for extensive labor in the Lord's vineyard. In this service he travelled both in the northern and southern States, preach-

ing the gospel with acceptance and returning in peace.

In the year 1794 he went to England, and during several years was assiduously engaged in religious labor, having the near unity and fellowship of Friends in the several counties where his lot was cast.

"He was much devoted to the promotion of the cause of truth and righteousness, and through the efficacy of heavenly love, was at times enabled to say, it was more to him than his necessary food." Being frequently engaged in inward retirement, his mind became strengthened and preserved in watchfulness against those things which interrupt the aspirations of the soul towards the Fountain of everlasting life.

"His sympathy with the afflicted was often manifest; and the situation of those in necessitous circumstances peculiarly claiming his tender regard, occasioned his frequently bringing to the notice of his brethren their suffering condition, in order that benevolent endeavors might be exerted for their alleviation. He was so tender of the reputation of all, that he could not take the liberty of expressing anything to lessen it, nor was he easy to hear others in such a practice."

In his last illness, a friend sitting by him expressed that he felt a peaceful solemnity; he replied, "So do I; my mind is centred in quiet peaceful resignation." On the next day, those about him apprehended he was near departing, but reviving a little, he said, "This is the last piece of the garment that is to be worked up; and if I can be favored to join the righteous of every generation, it will be enough." After a pause, he continued, "Well, I don't know that I have much to say for myself; I leave it to the Lord, the Shepherd that sleepeth not by day nor slumbereth by night; who watcheth over His children and over His flock."—"I hope that a righteous generation will be raised up and preserved as a seed." Again he proceeded, "Oh, if we can be but favored to take some of that love with us, the end crowns all; I have nothing to boast of; I have been baptized into many low places and raised up again." He quietly and peacefully departed the 24th of the Fourth month, 1814, and doubtless entered into the rest prepared for the righteous.

Hannah Fisher was the daughter of Thomas and Mary Rodman, and was born at Newport, Rhode Island, in the Fourth month, 1764. Her father dying when she was very young, the care of a large family devolved upon her mother, whose exemplary and judicious deportment proved a blessing to her children. In the year 1793, Hannah Rod-

* Related to me by an aged Friend, now deceased.

man was united in marriage with Samnel R. Fisher, of Philadelphia, and became a member of the Monthly Meeting of Philadelphia for the Southern District. In the year 1800, after a season of deep exercise, she came forth in the ministry, and being faithful in the little first communicated, experienced an enlargement in the gift, to the comfort and relief of many.

Her sympathizing spirit was often drawn to visit the afflicted and qualified to speak a word in season to the weary. To the poor she was a liberal, judicious, and feeling friend. Her illness was short, but the result was not alarming to her. For several days previous to the solemn close, she was at various times engaged in expressing to the members of her family and other friends, lively exhortation, tender acknowledgment, or pertinent remarks on the necessity of being prepared for the final change. To a friend sitting by her she said, "I have desired that my children may give up in the morning of their day and join hand-in-hand with the faithful laborers in the Lord's vineyard;" adding, "I feel nothing in my way. I feel thankful in my bed of sickness that I have given up in the cross to my natural inclination, having been favored to keep the furniture of the house and my clothing plain and simple."

At another time, addressing her children, she said, "Live in love, my dear children; may you all live in love; it will sweeten every bitter cup; there is no comfort without it." Again, "All is done, all is done; I feel so resigned, so sweet: I feel as if I were already in heaven." At another time she said, her illness had been a time of suffering to the body but not to the mind; that all was comfortable there; adding, "What a mercy! that when the body is in suffering, the mind should be preserved in such tranquillity." Her affliction of body appeared to be great; and she once expressed, she thought a part of it might be on account of survivors, that they might see it would not do to put off the Jay's work until the evening; that it was enough then to have bodily suffering. In the night previous to her close, she said, "Lord, I love thee; Lord, thou art with me; I love thee because thou hast heard my supplication. Bless the Lord, O my soul!" About an hour before she ceased to breathe, she sweetly expressed, "The Lord is with me;" clearly conveying to the minds of those present, her resignation to this allotment of unerring wisdom, and her thankful sense of His supporting arm under it. She died the 12th of the Ninth month, 1819, in the fifty-sixth year of her age.

George Dillwyn's early life and some of his

religious labors have already been noticed. On his first visit to Europe, being accompanied by his wife, Sarah Dillwyn, he remained seven years, occupied, most of the time, in religious labors in Great Britain and on the Continent. He then returned to his native land for two years, and again accompanied by his wife, in the spring of 1793, proceeded to Great Britain, where he continued for nine years laboring as he was favored with ability, for the good of the churches, until the year 1802, when he returned and settled in Burlington, New Jersey, remaining there until the close of his long and devoted life.

"Having been as a faithful servant diligent in the morning and meridian of the day, he was permitted to pass its declining period much in retirement, seldom going from home, except on short journeys. His daily conduct evinced a desire to live under the influence of the Spirit of Christ, and when he made little calls amongst his neighbors, after having cheered and brightened the social scene, for which he had a special talent, by his pleasant converse, such was his sense of the value of retirement and his desire for the good of others, that on these occasions he was not unfrequently drawn into silent travail and vocal expression." He was considered eminent as a minister of the gospel, was much beloved for his social qualities, and exemplified in practice the heavenly truths that he preached.

In old age, he continued diligently to attend the religious meetings of Friends, and in the winter of 1820, while on his way to the meeting-house, he fell upon the ice in the street, which injured his hip-bone so seriously as to confine him to the house.

During nearly five months of much bodily suffering, his Christian character shone with increasing brightness, as he approached "the house appointed for all living." "Within the last two or three weeks he said, 'There is a comfort over which disease has no power,' and after a favored opportunity in religious retirement, hopefully remarked, 'Now I am prepared to adopt the language, Lo! the winter is passed, the rain is over and gone, the flowers appear on the earth, and the time of the singing of birds is come, and the voice of the turtle is heard in our land.'" Speaking of his approaching death, he said to his beloved wife, "My dear, I have good news for thee; there is a mansion prepared for thee and for me." With the appearance of a sweet slumber, he sank to his eternal rest, the 23d of the Sixth month, 1820, in the eighty-third year of his age.

NEVER be ashamed not to know, but be ashamed not to learn.

From the National Standard.

LYDIA WHITE.

DIED.—In Philadelphia, on the 22d inst., in the 84th year of her age, Lydia White; a veteran in the Anti-Slavery service. She assisted in organizing the Philadelphia Female Anti-Slavery Society, in 1835, and in disbanding it in 1870, when its work was accomplished. During the long interval she proved, by earnest words, liberal contributions of money, and self-denying deeds, her fidelity to the principles of human freedom, upholding them against the opposition of mob and church and State. For many years she devoted her time and energies to the business of introducing into the community the products of free labor, and by her abstinence from those produced by unrequited toil, added another testimony to her abhorrence of the system of slavery. A member of the Society of Friends, she held the principles of its founder as a living, practical faith. Her work accomplished, the victory for freedom won, her life completed, she has gone to receive her reward in larger possibilities of doing good. M. G.

For Friends' Intelligencer.

LOCAL INFORMATION.

Westbury Quarterly Meeting took place on Fifth-day, the 27th ult., at Westbury, Long Island. The prospect of rain in the morning no doubt deterred some Friends from New York and Brooklyn, as well as those who live at a distance in the country, from attending, thus making our Meeting smaller than usual. We were reminded that some who were absent had gone to other sections, and would not be with us, and that some had passed on to the higher life. We also remarked that others who have stood as in the front rank were physically failing. We felt saddened at a time with these evidences of change, but were cheered in observing so large a number of young men and women assembling to mingle with their friends. When gathered, there was a feeling of united exercise that seemed to spread over the entire meeting, that argued well for the future of our Society. We had several short communications before the shutters were closed, some voices that we have not been accustomed to hear, and they seemed to us to be very impressive. There was no business in the executive meeting other than usual, except a proposition to change the hour of meeting from 11 to 10 o'clock, A.M.; as it was generally thought that the present hour was the best, no change was made. The state of Society, as shown by the answers to the queries, was somewhat encouraging, except the oft repeated complaint of neglect in the attendance of meeting. Friends were incited to greater faithfulness

in this duty. Our feeling was that we had had a good meeting, and that the presence of the Divine Master was sensibly to be felt. Not the least interesting and important feature of these Quarterly Meetings, is the kind cheerfulness with which Friends provide carriages and home accommodations for those from a distance. Is it not evident that those who are indifferent to these minglings suffer loss?

THE will hath never more freedom than when it moves toward God. And heavenly duties and spiritual performances are to flow freely from the soul like those voluntary drops that come from the honeycomb of its own accord, without any pressing, without any crushing at all. It is only the dregs of obedience that come forth with squeezing and wringing. There should be no need now of binding the sacrifice with cords unto the altar, unless it be with the cords of love, those soft and silken knots of affection.

For Friends' Intelligencer.

WEDDING OVERSEERS.

The subject of overseers at weddings, and the manner of their appointment, has long impressed me as one needing more careful thought.

Although several articles have recently appeared in the *Intelligencer*, and it may be said by some persons, "now let the matter rest," I feel it is a little work of mine to urge attention to a point mentioned in the paper of this week, (4th mo. 29th) wherein the writer desires, "that there should not even be the appearance of dissembling," &c.

I am not able to see that a reasonable objection can be made to parties choosing their overseers; but there is a departure from healthful simplicity in the manner of appointing them.

It is made to *appear* to be wholly a transaction *in* meeting; and in many places the *practice* has been so long established, that when proposals of marriage are before a Monthly Meeting, the meeting feels this part of its business has been so entirely arranged *outside*, that, although called upon to name Friends as overseers, such extended liberty is not really meant.

This is the point upon which I feel we are not true to our profession of *truth* and *simplicity*.

A case occurred in our Monthly Meeting a few years ago, which, to my view of the subject, presented a beautiful example of openness:

Following the statement of the time and place of the marriage, were the words "and — and — have been selected by

the family to attend as overseers, if approved by the meeting."

Here was no dissembling; and the whole arrangement for conducting the marriage could be truthfully understood by the most uninitiated in the meeting. And this truthfulness, I believe, is a strong point in our *simplicity*; one which our young members must see the necessity of carefully observing, long before they may feel it required of them to obey the "discipline" in regard to "simplicity of dress."

"We must be true ourselves,
If we the truth would teach."

New York, 4th mo. 30th.

S. H. B.

WHAT TO GIVE.

This is a charitable age. Appeals for charitable objects are frequently made and generally responded to. An actual case of want or suffering needs but be properly presented to any congregation, to meet immediate relief, so far as money goes. Even stingy people love to give something, and show their stinginess by giving less than they should, rather than in refusing to give anything. Benevolence characterizes our age. The men of our time most noted and most revered, are not those who wear crowns but those who give crowns,—the princely benefactors who have made whole communities opulent in the means of comfort and of culture by their splendid charities. The spirit of philanthropy is in the air, and whoever has any of the genius of the nineteenth century in his constitution prefers giving to hoarding, and would gather together only that he may grandly use for generous and general ends.

But we are very apt to imagine that the only thing worth giving, the only thing we have to give, is money or its equivalent in comfort or care; and we underrate the value of that personal notice, attention, and ministry which money cannot procure. When things go wrong with us, and we are prostrated with sadness and discouragement, it is not a present but a personal presence that we need, communicating stimulus and cheer from a sympathetic mind. In any of the troubles and crises of life, we value the companionship, the counsel, the magnetic helpfulness, the enlivening and uplifting faith of friends, a thousand times more than any check they could give. We all set a far higher value on persons than on purses, and feel nothing more keenly than a slight. The man who cheats us we can forgive more easily than the man who cuts us. This is because we all instinctively feel that persons are the most precious property this planet carries, and know from our own experience what comfort

and virtue, cheer and quickening, a kind heart and sympathetic mind can communicate.

And this fact indicates the character of the most useful and precious giving. Of course, the poor need money, medicine, food, clothes, and coal. They must have creature comforts, or they will suffer, if they do not perish. No amount of philanthropic commonplace, no number of the platitudes of charity, can ever take the place of food in a hungry stomach, or of clothes upon naked or shivering limbs. Ejaculations of sympathy pay no rent-bills. The poor and perishing classes want a Gospel in acts,—a Testament whose texts are translated into loaves and fishes, fuel and flannel; and without that material beneficence, they must die. But they want more than this; they want personal notice, sympathy, counsel, and cheer, a hundred times more than any gifts we can bestow upon them, and without these even the most generous gifts are unavailing. The chief reason that so much of our charity is wasted, if not worse; that the poor are confirmed in the very pauperism we would lift them out of, and in part by our own gifts; that wretchedness and want spread in spite of the growth of kind sentiments and the increase of charities;—is that our gifts are so exclusively material. We have given things, but not thoughts. We have bestowed money, but have not given ourselves.

It is an easy matter to give a little unneeded money, a few cast-off clothes, or an order on the grocer; and many people give these in order to get rid of troublesome applicants. But to give personal attention, interest, and direction to those in trouble and want, is a much harder thing to do. The difficulty with our modern charity is that it is so purely mechanical. Giver and receiver do not come into personal relations. There is no actual contact and communication between them. Their hearts do not touch each other. No virtue goes into the gift, and through that into the recipient's soul. We have the mechanics of charity without its mind. And what is wanted to make our charity blessed and a blessing, is just that personal quality we so crave for ourselves but are so reluctant to bestow; that interest, and sympathy for, and kindly direction of, the poor and unfortunate, which are a thousand times more valuable and precious to them than anything else possibly can be. It is not pleasant to lay down the book, to rouse from the dreamy luxury of an evening *te-te*, and visit some unventilated attic or noisome cellar to look after those whose vices are as bad as their environments are repulsive; but there is all the more merit

the sacrifice, and the personal visit communicates a positive pleasure and moral force which no gift could convey; it throws a restraint around the wayward will, while it infuses needed cheer into the heart. A young woman of our acquaintance goes every day to rub the limbs of a poor old paralytic, whose loneliness is so relieved, and whose heart is so soothed and irradiated by such personal kindness that even her body shares the renewal. Who can tell the virtue there is in a sympathetic touch? Who knows what healing lies latent in the heart, waiting to be evoked by the call of the right occasion? The voice kindly with hope, melting with tenderness, tremulous with love,—who has fathomed its miraculous power? The magnetism of a kind, thoughtful, sympathetic personality,—who can describe or define it? It is these that the poor and sorrowing need more than anything else. They want your mind more than your money. There is more help in a hand, with a warm heart beating in its palm, than in any goods that may be dropped at the door. The greatest gift, and the best, is the Giver of gifts. Almighty Love crowns all His other gifts with Himself.—*The Golden Age.*

Scraps

FROM UNPUBLISHED LETTERS.

I do not know that it will do for me to say, as the poor debtor formerly did, "have patience with me, and I'll pay thee all." I am several letters in debt, and as in purse, so in mental coin, poor. My obligations are not only on the score of letters, but I feel that I have had many favors from thy hand. This much seems left me, and I sometimes hope it may be like the poor widow's "pot of oil," and I now recollect she was bidden to pour it into other vessels. This opens an instructive view for thee, as well as myself; the more she poured, obedient to the command, the more she had for her own living, as well as to pay the debt. The debt! "how much west thou unto my Lord?" may be asked of thee, dear friend, as well as of myself and many others. But how few are entirely willing to make frequent settlements with Him who has done so much for us, and given us so many gifts and favors, and loans and talents? to which we may add in the catalogue, mercies, and forgiveness, and numerous benefits. If this were more of our concern, our bills perhaps would not run on to a hundred measures of wheat, or oil, till they at least were adjusted with promises of

full and unreserved obedience to all the clear manifestations of His will.

I was going to say I had a little left of what the little child said, unacknowledged in the modern forms or arts of politeness. When asked what it had to say in return for a favor received, "I love thee," was the language of its heart. To feel that we *love* is a precious evidence of having a little life, provided that love is pure and not the effect of selfishness. Love is expansive, like its divine original; it wants room, and as the heart is filled with it, it overflows towards others. Long hast thou felt the anxious love of maternal tenderness towards thy children, naturally, and if the time now demands an enlargement of that feeling spiritually on account of the babes in the Father's family, be willing to let it flow in prayers, in exercises, and in vocal evidences for the gathering of the children to the fold of a quiet mental habitation in the blessed Truth. "Teaching, we learn," said Young, and so says experience. Be not anxious about what others may say or think, mind thy own business in deep attention to the gift or spring, and as it flows forth be willing as a little child to move with it and in it, and to close with it and in it. I am glad to find one point settled in thy mind, that is, thou cannot doubt the requisition without doubting all thou hast ever known. Now let me drop thee one word of caution, "Take no thought for the morrow," or for what may be thy lot, or what the present dispensation may be intended for, only mind every day the opening of duty. Keep in the state of a good girl employed in domestic concerns; when one little service is performed, wait to receive or hear what next thou art bidden to do.

It is good to receive a few lines from an absent friend. We sometimes need an evidence of remembrance, which comes as a cup of cold water to a thirsty traveler. Many of our dear side companions have left us, but some still remain and are united in gospel fellowship. These can bear up each others' hands and strengthen one another, even while we feel that the shades of evening are gathering around, telling us the work of the day must soon close.

To us who are approaching the time when we can no longer enter into active service, how encouraging it is to find one here, and another there, under the preparing Hand, for service in our church militant. May these keep humble and be patient under all the needful provings. It is true there are many depressing circumstances which cause sadness of heart and fearfulness lest the "Ark of the Testimony" be borne away

and landed among the Philistines, yet I have faith in silent travail, and full reliance on an Arm which is sufficient to sustain. In dark and cloudy seasons, let us remember, the dew of heaven descends in the night season and rests upon the earth, watering it and keeping alive every green thing.

FRIENDS' INTELLIGENCER.

PHILADELPHIA, FIFTH MONTH 13, 1871.

SEASONS OF SILENCE.—While we have frequently in these columns advocated the obligation resting upon all to bring their faculties into exercise and to use their powers for the benefit of themselves and others, we know that none can labor availingly unless guided by Divine wisdom.

If the mind is permitted to enter into a continued succession of engagements without allowing sufficient time for rest and reflection, it is liable to become unhealthy and enfeebled. The law of repose pervades every department of life. The husbandman sows the seed and waits for its appearing. The overworked soil, after a time, fails to produce until its fertility is renewed by rest. The strongest muscle loses its power by continuous use: and if we would attain the true end of our being, we must not disregard the teachings thus conveyed, but learn not only to labor but to wait.

When associated in our religious meetings, we recognize the necessity of seeking to attain a state of introversion in which we wait to be instructed by the Great Counsellor, but how is it with us on other occasions? in our families and when together in social companies? Do we then in our deportment and conversation manifest a recognition of the Divine presence? Or, in our social interviews, are we not too much like the Athenians of old, who spent their time either in telling or hearing some new thing?

We remember in days past, how, during the times of our Yearly and Quarterly Meetings, the older Friends who were collected at private houses, would, after a time of social converse, settle into silence. The young would gather round them, and a precious solemnity often spread over the company, chastening the feelings and tendering the hearts. In this si-

lence, sometimes, a few words, uttered perhaps in tears and brokenness of spirit, were as seeds dropped in moistened ground. Some of these occasions are still fresh in remembrance, and the thought of them is always attended with a feeling of gratitude for the holy influence under which our minds were then gathered, believing it was one of the means by which we were brought to value seasons of solemn waiting before the Lord.

We have feared that of latter time this practice is almost lost sight of. The increased facilities of travel offer inducements to Friends attending neighboring meetings to confine the time of social and religious mingling almost exclusively to the meeting hour, depriving the visitor and the visited of the benefit that might result from meeting with Friends in their families and entering into fellow-feeling and sympathy with them.

The same effect is apparent during the week of our annual gathering. The day is devoted to business affairs, and the evenings to committees and other concerns connected with the welfare of our Society, and but little time is allowed for that kind of social religious intercourse which stimulates us to strive after that which is good, and tends to quicken our spiritual nature to renewed life when assembled for worship.

In consequence of this lack of opportunity to enter into feeling one with another more closely than can be done in a collective capacity, one means of our growth and strength as a religious body is, we believe, in danger of being overlooked.

Without wishing to censure any, we would ask all seriously to consider whether we do not sustain a loss by crowding too many things into the week allotted to the Yearly Meeting?

A FRIENDLY CAUTION.—We approach our subject with hesitation. Nevertheless, we venture, with the hope that our motive will be appreciated, and that what we say, though it may imply censure, will be so influenced by love that it will not wound any.

Our concern is that during the week of our approaching Yearly Meeting, when the several sessions close, the deportment of Friends may be fitting the occasion upon

which we have met. A gathering composed of several thousand men and women, met together to transact the business which pertains to the welfare of our Society, is doubtless an object of the notice and thought of others not of our religious organization, and the attention of the observer will naturally be turned to see what the result of such a meeting will be, and it would be well could we give evidence by a quiet sobriety of manner that we have been at a feast, where the spiritual life has been fed.

The Apostle Paul tells us all things are lawful, but all things are not expedient. This view has a direct bearing upon our concern. Most of us when returning to our homes for the night, are under the necessity of using the public street cars, where there may also be many who are not of our fold. We think it *inexpedient* when we are thus situated, to give expression to criticisms on what has been done during the meeting that has just closed, and it is even still more inexpedient that criticism on *character* be then indulged in, and names mentioned.

The loud talking and even boisterous manner that are sometimes witnessed on these occasions, pain a sensitive mind, and must greatly dissipate the feeling of serious thoughtfulness, which after having had a good meeting we would fain take home with us as our share of the gathered fragments. A quiet, laud deportment would be in better accord with the occasion. Some instances of the want of proper care in this respect, were the subject of public remark last year, and believing they may have proceeded from thoughtlessness, we offer these few words as a reminder of the fact that a seat in a crowded city car requires us to be much more guarded in what we say or do, than would be necessary were we with a few Friends in a private carriage.

TO CORRESPONDENTS. — A Friend writes that he "considers the editorial in No. 1 of the present volume, on our Fundamental principle, very good as far as it goes," but links the article defective in explaining what this principle is.

The knowledge which will prove availing must be derived through a higher medium

than the pen, although the experience of others may be often helpful in directing attention to the true source of spiritual instruction—the Spirit of Truth. We fail to find in the remarks of our friend, anything that would more fully elucidate the views expressed in the editorial in question—the difference being in words which literally have the same meaning.

THE article on "Funeral Simplicity" was laid aside, because not so appropriate as some other contributions on the same subject received about the same time.

THE friendly hints of "Scrutator" have been received.

ERRATA.—Richmond, Ind., was incorrectly appended to the article, "They frame Iniquity by Law," in last week's paper.

ANSON LAPHAM REPOSITORY. — Books, manuscripts, &c., for the above, may be forwarded to Edward H. Magill, Swarthmore College, Delaware county, Pa., or, if more convenient (and the packages are small), to Dr. George Truman, No. 142 N. Seventh St., Philada., who will see that they are properly deposited. Donations should be accompanied by name and address.

DIED.

CONARD.—On Third month 2d, 1871, Phebe Conard, wife of Albert Conard, aged 51 years; a member of Gwynedd Monthly Meeting.

SHARPLESS.—At her residence near Chester, Delaware Co., Pa., on the 3d of Fourth month, 1871, Eliza H., wife of John M. Sharpless, and daughter of Thomas and the late Eliith Jenkinson, in the 53d year of her age.

TURNPENNY.—On the 8th ult., Tabitha, widow of the late John Turnpenny, in the 88th year of her age; a beloved Elder and Overseer of Spruce Street Monthly Meeting, Phila. The following extracts from a private letter well portray the character of our dear Friend:

"There are many women as pious as she was still left upon the earth, but I know of no one who had such a pleasant way of manifesting that piety to the world. It seemed to do her good and to make her life richer, nobler and happier, and it did others good too. She did not, like many, lock up her consolations and joys and inflowings of spiritual life in her own bosom, but diffused them with ungrudging profusion. They spread around her like an atmosphere which did every one who came within it good, and made all feel when leaving her presence, that they had received a renewal of spiritual life.

* * * "She was no respecter of persons, nor worshipper of rank or wealth or intellect, but the sunshine of her presence gladdened the humble homes of the poor, and the saddened hearts of the

afflicted, far oftener than the palaces of the great or the mansions of the prosperous.

'Full many a poor one's blessing went
With her beneath the low green tent,
Whose curtain never outward swings.'

"There was no narrowness in her creed, nor exclusiveness in her associations. She laughed, and laughed right heartily, too, when she was merry, and never felt that she was lowering her Christian character."

WALTON.—On the afternoon of the 10th instant, Charles M. Walton, aged 39 years; a member of Philadelphia Monthly Meeting, Race St.

INDIAN AID ASSOCIATION.

A meeting of this Association will be held on Second-day evening next, Fifth month 15th, in Race Street meeting-house, at 8 o'clock. A report and other interesting papers will be read. It is desirable there should be a general attendance of Friends.

SARAH R. WALTER, *Secretary*.

EDUCATION.

A meeting on the subject of Education in general, and particularly in reference to that of a higher grade amongst Friends, will be held in Race St. meeting-house on Third-day evening, Fifth month 16th, at 8 o'clock.

CIRCULAR MEETINGS.

5th mo. 14th Flushing, L. I., 11 A.M.
" 21st Radnor, Pa., 3 P.M.
" Orange, N. J. 10½ A.M.
" Gunpowder, Md., (old mtg. house) 11 A.M.
" Collins, N. Y., 11 A.M.
" 28th. Cape May, N. J., 10 A.M.
6th mo. 4th. Reading, Pa., 3 P.M.
" Medford, N. J., 3 P.M.
" Middletown, Pa., 3 P.M.
" Mt. Vernon, N. Y., 3 P.M.

FRIENDS' PUBLICATION ASSOCIATION.

Annual meeting in school-room, first floor, Race St. meeting-house, on Fourth-day evening next, Fifth month 17th, at 8 o'clock.

THOMAS GARRIGUES, } *Clerks.*
PHEBE W. FOULKE, }

VITAL RELIGION.

A new edition of this excellent little work by S. M. Janney has just been issued by Friends' Publication Association, and may be had of the Agent, T. E. Chapman, 701 Arch St., where also may be obtained "Summary of Christian Doctrine," by the same author, and other works.

In press and will shortly be issued by this Association, "The Children's Gift," with embellishments, consisting of selected and original articles for youth.

GENERAL FIRST DAY SCHOOL CONFERENCE.

This organization will meet at Friends' meeting-house, Rutherford Place, New York, on Second-day evening, Fifth month 29th, (Yearly Meeting week) at 8 o'clock. Reports from the several associations should be sent to the correspondent, Joseph M. Truman, Jr., 717 Willow St., Philadelphia, accompanied by a list of delegates appointed. Where no association has been formed the several schools will please report.

T. CLARKSON TAYLOR, } *Clerks.*
LYDIA C. STABLER, }

PHILADELPHIA ASSOCIATION.

The Association within Philadelphia Yearly Meeting will meet by adjournment on Fifth day evening, Fifth month 18th, at Race St. meeting-house, at 8 o'clock. Schools which did not report at the Woodstown meeting are desired to do so at this.

JOS. M. TRUMAN, } *Clerks.*
EMMA WORRELL, }

The Executive Committee will meet for organization and other business same afternoon at 3 o'clock in the Central Building, 3d story.

CHILDREN'S MEETING.

A meeting of those connected with Green Street, Race Street, and West Philadelphia First-day schools, and such others as may incline to attend, will be held in Race St. meeting-house on First-day afternoon, Fifth month 14th, at 3½ o'clock; all are invited.

In publishing the subjoined extracts, we would call the attention of our readers particularly to the subject of which they treat, believing it to be one of special interest.—Eds.

EXTRACTS FROM THE TENTH ANNUAL REPORT OF THE BOARD OF MANAGERS OF THE WOMAN'S HOSPITAL OF PHILADELPHIA.

Ten years have elapsed since, amid the anxieties of commencing civil convulsions, steps were taken to found the Woman's Hospital of Philadelphia. The necessity for such an Institution had long been pressing, and with only about two thousand dollars pledged as annual subscriptions, we rented the present Hospital buildings, and commenced work on a small scale. We were then without the prestige of experience and success, or the sympathy of the medical profession: but a generous and appreciative public, perceiving that our objects were practicable and right, gave means and influence to sustain them.

Our reports have shown how the number of patients has increased from year to year, how our buildings and grounds have been paid for, and how an endowment fund has been commenced and raised to its present amount. We are well aware that very much remains to be done towards improving as well as extending the work of the Institution, but as we review our small beginnings and our present condition, we feel that we have cause to thank God and take courage.

The Report of the Resident Physician shows that thirty five hundred patients have been treated in the different departments of the Hospital during the past year, and that the number received into the wards has been considerably greater than in any preceding year.

Our energetic matron has kept the domestic department in excellent order; and our efforts for training nurses have been more systematic and successful than heretofore.

A capable and intelligent woman occupies the position of head nurse, and assists in the training of the less experienced; and several promising nurses who have resided in the Hospital for some months, are almost, or altogether, ready for outside labor. Their places will be filled by fresh recruits, and we trust a few accomplished nurses from this institution will go out to bless the community from year to year. When we consider that the best medical skill is often entirely defeated by the ignorance or inefficiency of the nurse, and that, on the other hand, the nurse alone, who intelligently co-operates with the healing powers of nature, is, in certain stages of illness, more important and effective than the physician, we feel like honoring the calling, and inviting intelligent and benevolent women, who desire employment, and are adapted to this work, to train themselves for its responsible duties.

A reference to our Treasurer's Report will show, among the additions to the Endowment Fund, more than ten thousand dollars from the residuary estate of the late Isaac Barton. Mrs. J. P. Crozer, also, has given five thousand dollars towards the endowment of two beds, as well as funds for their purchase and furnishing. These we have named "the Crozer Beds" of the Woman's Hospital. Notwithstanding these additions to our funds, they are still inadequate to meet the growing necessities of the Institution, and we trust a generous public will continue to furnish the means for extending its operations.

More than half of the present Managers were active in the first organization of the Hospital, and they have continued to work for its success; and both they and others who have since given their energies to its welfare, testify that their interest increases, and their appreciation of its importance deepens, as they watch the practical results of its operations from year to year. Many sufferers for whom there had seemed no relief, here found the skill and care which have restored them to the enjoyment of life. Quite a number suffering from surgical difficulties have had them successfully removed by operations. A considerable portion of these were performed by ladies connected with the medical staff of the Hospital. Other patients, with ailments equally exhausting and requiring treatment less striking, but not less skilful, have also returned to their active duties, blessing the Institution to which they owed their recovery. Women, often sensitive, who had no luxuriant homes in which to be nursed back to health, and to whom the Almshouse was a terror,—mothers of families, hard-working widows and wives, hired girls, young girls from foreign countries,—some of them homesick and heartsick, as

well as persons whose means enabled them to pay for private rooms and special attendance, have alike shared the best medical skill and received the kindest attention.

It has been the earnest desire of the Managers that this Institution should be, not only eminent for medical skill, but a place in which the Christian virtues and graces should be illustrated and diffused;—a place in which every patient, of whatever name or nation, however lowly or unfortunate, should realize that her feelings and sensibilities are respected, and her comfort and welfare carefully guarded.

THE MUTUAL AID ASSOCIATION OF FRIENDS.

As with the early Christians, so the Society of Friends has had a care to assist its members when in needy circumstances and to aid them in business; and a query whether this has been attended to is annually answered in each Monthly Meeting.

An unwillingness to be dependent on charity often deters really deserving members from seeking assistance of their fellow believers. When sickness overtakes them, and its expenses reduce their moderate incomes, they struggle on, depriving themselves even of necessities, without making known their wants.

Then, again, *permanent* aid is not usually extended unless the individual is entirely dependent, and any funds which by industry and economy they may have accumulated, must first be exhausted before the committee of the meeting takes charge of the case.

A valued friend in this city, who, for over thirty years, has been on the Committee on necessitous cases of his Monthly Meeting, felt a concern for some years that other arrangements might be devised for assisting each other, and mentioning the matter to his friends, it has finally resulted in the organization of "*The Mutual Aid Association of Friends*," to be composed of "members of the Religious Society of Friends or professors with them of good moral character, and not less than 18 years of age," both men and women being eligible for membership.

Its object "is the accumulation of a fund for the aid and relief of its members in case of sickness or accident, and of their interment. Also the establishment of a fund which may be loaned to such of its members as may need assistance in business, or be used to relieve those who from age are incapacitated from obtaining a livelihood."

Upon election to membership each one pays into the treasury a sum proportionate to age, and thereafter a small weekly charge, and in the event of sickness he is visited, and if unable to attend to his occupation, a uniform

weekly allowance is to be given, and when death ensues a fixed sum is paid towards the funeral expenses. This is done irrespective of the pecuniary condition of the individual—in other words this is *not a charity*,—but *all* having co-operated in the establishment of the fund for their *mutual* benefit, each one has a *right* to this aid, and there need be no hesitation in receiving it.

It will thus be seen that this is an *independent* way of securing aid in time of sickness or infirmity, and besides it is thought it will make our members better acquainted, and will interest them more in each other's welfare.

The Association meets every two weeks on Second-day evening, in the central building at Race St. meeting-house, up stairs. Any who feel interested are at liberty to attend.

The officers are

President—William Hawkins.

Vice-President—Jos. M. Truman, Jr.

Secretary—Alfred Moore, 28 N. 7th St.

Assistant Secretary—William P. Fogg.

Treasurer—James Gaskill.

Trustees—John Saunders,

Samuel S. Ash,

William Hawkins.

Philada., 5th mo., 1871.

J. M. T.

THOSE who look for faults find faults, and become fault-finders by profession; but those who look for truth and good find that.

THE GOLDEN AGE.

BY WHITTIER.

“O Golden Age, whose light is of the dawn,
And not of sunset, forward, not behind,
Flood the new heavens and earth, and with thee
bring

All the old virtues, whatsoever things
Are pure and honest and of good report;
But add thereto whatever bard has sung
Or seer has told of, when, in trance and dream,
They saw the Happy Isles of prophecy!
Let Justice hold her scale, and Truth decide
Between the right and wrong; but give the heart
The freedom of its fair inheritance;
Let the poor prisoner, cramped and starved so long,
At Nature's casket feast his ear and eye
With joy and wonder; let all harmonies
Of sound, form, color, motion, wait upon
The princely guest, whether in soft attire
Of leisure clad, or the coarse frock of toil,
And, lending life to the dead form of faith,
Give human creature reverence for the sake
Of one who bore it, making it divine
With the ineffable tenderness of God;
Let common need, the brotherhood of prayer,
The heirship of an unknown destiny,
The unsolved mystery round about us make
A man more precious than the gold of Ophir—
Sacred, inviolate, unto whom all things
Should minister, as outward types and signs
Of the eternal beauty which fulfils
The one great purpose of creation, Love!
The sole necessity of earth and heaven.”

LIFTED UP.

BY ISABELLA F. LEWES.

Little Willie, mild and patient,
Sunny-haired and azure-eyed,
In the twilight's mellow gleaming
Thoughtful sat, my chair beside.
On his knee a little Bible,
Grandma's gift to him that day;
He had read till daylight fading
Bade him put the Book away.
Then he nestled close beside me,
Laid in mine his little hand,
Gazing outward with expression
I could scarcely understand:
“Tell me,” said he, “mamma, will you,
What our Saviour meant when he
Said, “I, if I be lifted up,
Will then draw all men to me?”
And I said, that, by this symbol,
Christ, their Lord, would signify
That, upon the cross uplifted
He in agony must die;
And when in the coming future
All His sorrows should be heard,
Men would then be brought unto Him
By the tenderest feelings stirred.
One short month—again at night-fall
Clouds of crimson turned to gray!
Lonely sat I by the fireside
While my thoughts went far away.
Vacant was the chair beside me,
Hushed the voice so low and sweet,
Missed the gentle hand's soft pressure,
And the sound of little feet.
Upward reaching through the darkness,
Yearningly I sought my boy;
Earth seemed full of pain and sorrow,
Heaven alone held peace and joy.
Suddenly a ray of firelight,
As imbued with heavenly grace,
Fell upon a little picture,
Made alive my darling's face.
While I gazed as one enraptured,
Moving lips I seemed to see,
Heard his voice: “If I be lifted
Up, I will draw you to me.”
Now a new and richer meaning
Jesus' words for me possessed:
By our love for the departed
Upward lifted, find we rest.
Then before that picture bending,
Laid I all my burdens down;
Saw how tenderly the Father
Of my cross would weave a crown.
Through my soul this glad evangel
Surging like the rolling sea,
“Ever nearer, nearer heaven,
Darling Willie leadeath me.”

—Old and New.

I think Heaven will not shut forevermore,
Without a knocker left upon the door,
Lest some belated wanderer should come,
Heart-broken, asking just to die at home,
So that the Father will at last forgive,
And looking on His face that soul shall live.
I think there will be watchmen through the night,
Lest any, afar off, turn them to the light;
That He who loved us into life must be
A Father infinitely fatherly,
And, groping for Him, these shall find their way
From outer dark, through twilight, into day.

—Gerald Massey.

KINDERGARTEN CULTURE.

BY ELIZABETH P. PEABODY.

*(From the Annual Report for 1870 of the National Commissioner of Education.)**(Concluded from page 159.)*

The seed of every plant has in miniature the form of its individual organization, enveloped in a case which is burst by the life force within it, so that the germ may come into communication with those elements, whose assimilation enables it to unfold, in one case a tree, in other cases other vegetable forms. In like manner the infant soul is a life force wrapped up in a material case, which is not, however, immediately deciduous; for, unlike the envelope of the seed, the human body is also an apparatus of communication with the nature around it, and especially with other souls, similarly limited and endowed, who shall meet its outburst of life, and help it to accomplish its destiny—or hinder! I beg attention to this point. We either educate or hinder. The help to be given by education, is an essential part of the Eternal providence, and we must accept our duty of embodying the divine love in our human providence, which we denominate education, on the penalty of *injuring*, which is the supreme evil. "Woe unto him who shall offend one of these little ones. It were better for him that a millstone were hung about his neck, and he were cast into the uttermost depths of the sea."

As the child gets knowledge and takes possession of his own body, by the exercise of his several organs of sense and the movement of his limbs, so he must gradually take possession of the universe, which is his larger body, on the same principle, by learning to use its vast magazine of materials, to embody his fancies, attain his desires, and by and by accomplish his duties; education being the mother to help him to examine these materials, and dispose them in order; keeping him steady in his aims, and giving him timely suggestions, and a clew to the laws of organization, by following which all his action will become artistic. For art is to man what he created universe is to God. I here use the word art in the most general sense, as the beautiful manifestation of the human spirit in every plan of expression, material, intellectual and moral.

Frœbel, therefore, instead of beginning the educating process by paralyzing play (keeping the child *still*, as the phrase is,) and superinducing the adult mind upon the child, he accepts him as he is. But he organizes the play in the order of nature's evolutions, making the first playthings, after the child's own hands and feet, the ground forms of nature. He has invented a series of play-

things, beginning with solids—the ball, the cube, and other forms, going on to planes, which embody the surfaces of solids, (squares and the various triangles); and thence to sticks of different lengths, embodying the lines which make the edges of the solids and planes; and, finally, to points, embodied in peas or balls of wax, into which can be inserted sharpened sticks, by means of which frames of things and symmetrical forms of beauty may be made, thus bringing the child to the very borders of abstraction without going over into it, which little children should never do, for abstract objects of thought strain the brain, as sensuous objects do not, however minutely they are considered. In building and laying forms of symmetrical beauty with these blocks, planes, sticks, and peas, not only is the intellect developed in order, but skilful manipulation, delicate neatness, and orderly process become habits as well as realized ideas. The tables that the children sit at as they work are painted in inch squares, and the blocks, planes, and sticks are not to be laid about in confused heaps, but taken one by one from the boxes and carefully adjusted to these inch squares. In going from one form to another the changes are made gradually and in order. No patterns are allowed. The teachers suggest how to lay the blocks, planes, sticks, also wire circles and arcs, in relation to each other severally, and to the squares of the table. For symmetrical forms they suggest to lay opposites till the pupils have learned the fundamental law—*union of opposites for all production and beauty*. A constant questioning, calling attention to every point of resemblance and contrast in all the objects within the range of sensuous observation, and also to their obvious connections, keeps the mind awake and in agreeable activity. Margin for spontaneous invention is always left, which the law of opposites conducts to beauty inevitably. In acting from suggested thoughts, instead of from imitation, they act from within outward, and soon will begin to *originate* thoughts, for Kindergarten has shown that invention is a universal talent.

But the time comes when children are no longer satisfied with making transient forms whose materials can be gathered back into boxes. They desire to do something which will remain fixed. Frœbel's method meets this instinct with materials for making permanent forms by drawing, sewing, modeling, &c.

The stick-laying is the best possible preparation for drawing, for it trains the eye, leaving the children to learn the manipulation of the pencil only, and this is again made easy by having the slates and paper

ruled in eighths or tenths of an inch, that the pencil of the child may be guided while the hand is yet unsteady, for Froebel would never have the child fail of doing *perfectly* whatever he undertakes, and this is effected by making him begin with something easy, and proceeding by a minute gradualism. He would also train the eye to symmetry by never allowing him to make a crooked line, just as the ear is trained in musical education by never making a false note. Beside the drawing, which is carried to quite a wonderful degree of beauty invented even by children under seven years old, pricking of symmetrical forms may be done by means of the same squared paper; and again, pricked cardboard may be sewed with colored threads, teaching harmonies of color. Also another variety of work is made by weaving into slitted paper of one color strips of other colors, involving not only the harmonizing of colors, but the counting and arrangement for symmetrical effect, which gives a great deal of mental arithmetic, while the folding of paper with great exactness in geometrical forms, and unfolding it to make little boats, chairs, tables, and what the children call flowers, gives concrete geometry and the habit of calculation.

A lady who traveled in Europe to study Froebel's Kindergartens brought home from Dresden the whole series of work done by a class of children who began at three years old and continued till seven; and no one has seen it without being convinced that it must have educated the children who did it, not only to an exquisite artistic manipulation, which it is very much harder to attain later, but to habits of attention that would make it a thing of a short time to learn to read, write, and cipher, and enable them to enter into scientific education, and use books with the greatest advantage, as early as eight years old.

Callisthenics, ball-plays, and plays symbolizing the motions of birds, beasts, pretty human fancies, mechanical and other labors, and exercising the whole body, are alternated with the quieter occupations, and give grace, agility, animal spirits and health, with quickness of eye and touch, together with an effect on the mind, their significance taking the rudeness out, and putting intelligence into the plays, without destroying the fun. The songs and music which direct these exercises are learned by rote, and help to gratify that demand for rhythm which is one of the mysteries of human nature, quickening casual power to its greatest energy, as has been proved, even in the education of idiots, by the almost miraculous effects upon them of the musical gymnastics, which are found to

wake to some self-consciousness and enjoyment even the saddest of these poor victims of malorganization. All Froebel's exercises are characterized by rhythm; for the law of combining opposites for symmetrical beauty makes a rhythm to the eye, which perhaps has even more penetrative effect on the intellectual life than music.

If true education, as Froebel claims, is this conscious process of development, bodily and mental, corresponding point by point with the unconscious evolutions of matter, making the human life an image of the divine creativeness, every generation owes to the next every opportunity for it. In this country, whose prodigious energies are running so wild into gambling trade and politics, threatening us with evils yet unheard of in history, it may be our national salvation to employ them in legitimate, attractive work for production of a beauty and benefit that also has been yet unheard of in history; and this can best be done by preventing that early intellectual perversion and demoralization, with waste of genius and moral power, entailed on us by the inadequate arbitrary modes of *primary* discipline which deteriorate all *subsequent* education.

But the indispensable preliminary of this new primary discipline are competent teachers, who can be had only by special training. What is at once delightful play and earnest work to the children, requires, in those who are superintending it, not only a knowledge of the laws and processes of vital growth, which are analogous if not identical in nature and art, but the science of infant psychology also. These things are not intrinsically difficult of attainment, and it is easier, if the teacher has been trained to it, to keep a Kindergarten, according to the strict principle of Froebel, than to keep an ordinary primary school in the ordinary manner, because nature helps the former with all her instincts and powers, while the latter is a perpetual antagonism and struggle with nature for the repression of a more or less chronic rebellion.

The best Kindergarten normal school in the world is that founded by the Baroness Marenholtz-Bulow, in Berlin, where she lectures gratuitously herself on the philosophy of the method, and its relations to "the regeneration of mankind," (to use her own phrase;) and the pupils have instruction from professors in many branches of science and art, while they go to observe and practice several times a week in Madam Vogler's Kindergarten. But Americans, who have had our usual normal or high school education, or its equivalent, if they are fairly gifted and educated, genial, sweet tempered, and candid, can obtain the special training in

six months' diligent course, and the more surely the more they have the grace of a wise humility. What it took Fröbel, with all his heart and genius, a half century of study and experimenting to elaborate, it would seem at first could not be learned in so short a time. But it must be remembered that the more profound and complete the truth, the more easily can it be comprehended, when once fairly stated. It took a Newton to discover the *principia nature*; and a Copernicus to replace the complicated Ptolemean by nature's solar system; but any child of twelve years can comprehend and learn them, now they are discovered. Fröbel's authority inheres in his being a self-denying interpreter of nature, the only absolute authority, (nature being God's word.) As Edgar Quinet said in 1865, in a letter to the Baroness Marenholtz Bulow, remarking that Fröbel "sees the tree in the germ; the infinitely great in the infinitely small; the sage and great man in the cooing babe;" "his method therefore is that of nature herself, which always has reference to the whole, and keeps the end in view in all the phases of development," comparing him to "the three wise men from the East who placed the treasures of nature in the hands of the heavenly Child"—and the statement is worthy of all attention—"It is certain that the results of this method can only be attained if it is applied according to the principles of the discoverer. Without this, the best conceptions of Fröbel must be falsified, and turned against his aim; mechanism alone would remain, and would bring back teacher and pupil into the old traces of routine." As yet there is but one Kindergarten normal school in America, which is a private one in Boston, kept by Mrs. Kriege and her daughter, pupils and missionaries of the Baroness Marenholtz-Bulow, who is the chief apostle of Fröbel in Europe. In another year these ladies will be connected with the public normal school of New York City, as I understand liberal offers are made to them by the public school authorities. Preparations are also making for model Kindergartens, and professorships therewith connected, at several of the normal institutions of the West. These are in place in every female college and high school for girls; the training not only insuring a delightful profession that must always be in demand, but making the best education for mothers, as all women are liable to become personally or virtually. Possibly the appreciation of Fröbel's science and art may prove the true solution of what is called the woman question. Teaching is the primal function of humanity, and women now feel it to be repugnant toil only

because the true art has never before been discovered. When it becomes a fine art it will become for the teacher, like any other fine art, self-development and the highest enjoyment; for it is nothing short of taking part in the creativeness of God.

But the immediate desideratum is a free national school to supply Kindergarten education to the schools of the District of Columbia, the Territories, and the South, to be located in the District, or perhaps in Richmond, Virginia, where some of the "ten thousand southern ladies," who signed the pathetic petition to Mr. Peabody to found for them an industrial school, might learn this beautiful art, and be made able to initiate in their beloved South a higher, more refined, and also complete system of education than has ever obtained in any country. It has been ascertained that an eminent Kindergarten in Europe, now in full employ, but willing to leave all to do this thing in the United States, may be secured for five years, finding all the apparatus and materials herself. Will not some one of our munificent public benefactors trustee in the hands of some persons wise in this matter, a sum of money yielding three or four thousand dollars a year to secure this absolutely necessary normal training? In this country every radical reform of education requires the action of private intelligence for its inception.

For Friends' Intelligencer.
 REVIEW OF THE WEATHER, ETC.,
The Hottest Fourth month on Record!
 FOURTH MONTH.

	1870.	1871.
Rain during some portion of the 24 hours.....	8 days.	12 days.
Rain all or nearly all day.....	6 "	0 "
Snow, including very slight falls,.....	0 "	1 "
Cloudy, without storms.....	6 "	7 "
Clear, as ordinarily accepted	10 "	10 "
	30 "	30 "
TEMPERATURES, RAIN, DEATHS, ETC.		
	1870.	1871.
Mean temperature of 4th mo., per Penna. Hospital,	53.50 deg.	58.15 deg.
Highest point attained during month.....	84.50 "	85.50 "
Lowest do. do. do.	35.00 "	38.00 "
RAIN during the month, do.	5.60 in.	1.82 in.
DEATHS during the month, being for 5 current weeks for each year.....	1655	1365
Average of the mean temperature of 4th month for the past <i>eighty-two</i> years....		51.35 deg.
Highest mean of temperature during that entire period, (THIS YEAR, 1871).....		58.15 "
Lowest mean of temperature during that entire period, (1794-1798),.....		44.00 "

COMPARISON OF RAIN.		1870.	1871.
First month,		4.07 inch.	3.46 inch
Second month,		2.53 "	3.08 "
Third month,		4.06 "	5.81 "
Fourth month,		5.60 "	1.82 "
Totals,		16.26 "	14.17 "

But little to remark about the temperature other than to ask attention to the caption of this article and the confirmatory figures of the statistical account, the nearest approach to which we have on our records, running back to 1790, occurred in 1865, when the mean for the corresponding month reached 54.50 degrees.

The continued decrease in the number of deaths was noted last month, and it is gratifying to be able to state that it still continues, viz:

For the first eighteen weeks of 1870 the number reached 5972

Do. do. 1871 it decreased to 5116

But to return to the heat above alluded to, the 8th, 9th, 10th and 11th of the month, were excessively hot days, not confined to this city and vicinity. New York advices of the 8th stated, "The thermometer to-day marked 100 in the shade in some places, and 80 in others."

Further from home we find the following storm noted for the 25th, quite in contrast with our dotings down of the forepart of the month:

"The Yosemite is snowed up. A note from a traveller says that the rain storm which fell in Colorado was changed to a snow storm in that region, and the valley is so completely blocked up as to preclude the possibility of getting into it."

At the same time are items like the following floating through our own periodicals:

"Reports from all portions of the State leave no hope of the fruit crop. Nearly all the fruit throughout the State is destroyed," with accounts of like character from many points out west, though subsequent statements have reported these fears somewhat exaggerated. J. M. ELLIS.

Philadelphia, Fifth month 2d, 1871.

THE most agreeable of all companions is a simple, frank man, without any pretensions to an oppressive greatness; who loves life and understands the use of it; one who has a golden temper and is steadfast as an anchor. He is a much better companion than the most brilliant wit, or the most profound thinker.

ITEMS.

INFANT MORTALITY.—A meeting of the Social Science Association was held, 5th inst., in the lecture-room of the Mercantile Library, on Tenth street, above Chestnut.

A paper on "Infant Mortality," by Dr. John S. Parry, was read. Among other facts and figures cited in support of his proposition, Dr. Parry referred to the returns of the Board of Health, which showed that during the last five years there were born in this city 85,957 living, and 3,933 dead infants. During this period there was a mortality of 22.36 per cent. among infants under one year old, and 29.82 per cent. died before reaching two years of age. Under five years the mortality was 36.81. From this it appears that of those who died under five years of age, 60.73 per cent. died before reaching the first year. From the statistics of mortality it is ascertained that 63.61 per cent. of those dying under five years, died before the first year had been reached. He also affirmed

that the per centage of inquests on children under one week old has increased since 1863, having attained to 17½ per cent. in the first three months of 1871. In other words, nearly one-fifth of all the inquests made by the Coroner were upon infants under one week old.

SUFFERINGS OF BESIEGED PARISIANS.—The *Daily News Paris* correspondent (Dec. 29) says—"Out of twelve lower middle-class households which one may enter, nine or ten are wholly without fire, probably for the first time during such bitter weather. The loss of the empty stove is more felt than the empty larder; for a mother can live and feed her little ones on bread with a little wine, but how can she warm the poor shivering ill-fed bodies with the thermometer ten degrees below freezing point, and no fuel to be anywhere or anyhow obtained? We are assured by the Government that shortly wood will be more plentiful and cheap; but in the meanwhile the mortality among children is painfully high, more especially among those of very tender years; and milk is so scarce, so bad, and so dear, that in many cases, where the mother is unable to nourish her offspring, the new-born babe may be said to die literally of hunger. A walk along one of the roads leading to the principal cemeteries gives sufficient evidence of the terrible harvest death is reaping among those who are unfortunate enough to make their *delut* in the world during the siege of Paris. I have seldom witnessed a more touching spectacle than the long procession of *tiny white-covered coffins*, the little occupants of which have been as surely killed through the war as those who meet their death on the battle-field. The absence of the mothers amongst the mourners is a mute testimony to the fact that most of the early dead have succumbed during the first month of their existence.

RECENT German and Swedish Arctic explorations have led to an active seal and walrus fishing in the Kara Sea. Many of the vessels engaged make careful observations in the interest of science; and it has been definitely determined that the whole of this portion of the Arctic Sea is open through the Seventh and Eighth months. It averages a depth of only fifty fathoms, and it becomes rapidly shallower north of Nova Zembla.

THE institution of newspapers arose in Italy. In Venice the first newspaper was published, and monthly during the time that Venice was warring against Soliman the Second in Dalmatia. It was printed for the purpose of giving military and commercial information to the Venetians. The first newspaper published in England was in 1588, and called the *English Mercury*. Others were styled the *Weekly Discoverer*, the *Secret Owl*, *Heraclitus Rides*, etc., etc.

DR. WILLARD PARKER says that those who are much addicted to the use of tobacco, or who work in the manufacture of snuff or cigars, never recover soon or healthily from injury or fever. The Emperor Napoleon had his attention called in 1862 to the effect of tobacco on the mind, by a report which showed that the cases of paralysis and insanity had increased quite regularly with the increase of the revenue from the tobacco tax. This led him to order an examination of the effect of tobacco on the students in schools and colleges. It was found that those who did not use tobacco were stronger, better scholars, and had a higher moral record than those who used it. The result was that an edict was issued forbidding its use in the national institutions.

MEMORIALS OF WILLIAM SAVERY AND RICHARD JORDAN.

(Continued from page 164.)

William Savery was born in the city of Philadelphia, in the year 1750, and was educated in the principles of Christianity as possessed by the Society of Friends.* He was placed with a Friend in the country to learn the tanning business, and after the expiration of his apprenticeship returned to the city.

He then associated with those who were much inclined to vanity and folly, and seeking for pleasure in the gratification of his natural propensities, wandered far from the father's house. "I may acknowledge," he writes, "that, notwithstanding my revolt and turning aside from the paths of purity and peace, the Lord has been graciously near me all my life-long, and has watched over me as a tender Father for good, smitten me by His Spirit when I have been rebelling against His holy law written in my heart, making merry over the Divine witness there; and has reached to me and tendered me in the midst of mirth and jollity. He often followed me to my chamber, and upon my pillow has dawned tears of sorrow and contrition from me, when none had been privy to it but His all-seeing Eye; so that my days of joy and

laughter have often produced nights of sorrow and weeping."

In the year 1778, attending a meeting at Merion, held after an interment, he was on that solemn occasion deeply impressed with serious thoughtfulness. In the same year he was married, and having settled in business in Philadelphia, he endeavored to regulate his conduct and conversation, and be just in his dealings towards men, hoping to attain a fair standing in society, and to satisfy his conscience without a full surrender of his affections to the Divine government.

In relation to this stage of his experience he writes: "How can I sufficiently adore my great and good Master, for His continued regard and care over me, in that He did not suffer me to remain long in this state of delusion and error. He disturbed my false rest and made me at times exceedingly uneasy with it, and gave me at length to see that notwithstanding my regularity of behaviour and all my boasted attainments, I fell far short of that purity which all the vessels in the Lord's house must come to; and that I was yet under the law which cannot make the comers thereunto perfect; not having passed under the flaming sword, nor felt the day of the Lord to come, which burns as an oven." . . . "It pleased Him to lead me as into the wilderness, and to give me a sight of my former disobedience and folly. Oh! the bitterness and distress that covered me when I was alone or

*Journal of William Savery, Friends' Library, p. 1.

in meetings. I experienced but few pleasant draughts of His love; my meat was gall and wormwood, and my drink of the bitter waters of Marah."

After enduring for some months these trying baptisms, sometimes alleviated by gleams of comfort, and then again being plunged deeper in distress, he was at length visited with the dayspring from on high, and in the full assurance of Divine favor, cried aloud, "Oh! now I know that my Redeemer liveth."

In the year 1779, while accompanying a Friend on a religious visit in Virginia and Carolina, William Savery first opened his mouth in the gospel ministry. His gift as a minister was acknowledged by the Monthly Meeting in the year 1781, and he subsequently travelled much in the service of the gospel.

In 1781, he attended meetings in Maryland; in 1785, he was engaged in a gospel mission to New York and New England; and in 1791, he went on the same errand to the Southern States. In Charleston, South Carolina, he found the Meeting of Friends was reduced to about fifteen members; but he had crowded audiences in the Methodist and Baptist meeting-houses, where he was enabled to preach the gospel in the authority of Truth.

His soul was burdened with distress on account of slavery and its ruinous effects upon the people. After leaving Charleston, he writes: "On our road we met between thirty and forty negroes of both sexes almost naked, some of them lame and decrepit, travelling to Ashley bridge, a considerable distance off, there to be put up and sold at vendue. This made our hearts sad and caused the reflection, certainly there is a righteous and omniscient Judge that commiserates the poor and oppressed, and takes cognizance of the actions of hard-hearted and merciless oppressors, and by terrible things in righteousness will sooner or later plead the cause of the afflicted. It is sorrowful that because judgment against an evil work is not speedily executed, the hearts of men are set to do evil."

"We rode through many rice swamps, where the blacks were very numerous, great droves of these poor slaves working up to the middle in water, men and women nearly naked; a peck of corn is their miserable subsistence for a week. A gloomy sadness covered them, so as scarcely to admit of the interchange of a sentiment. O Christianity and humanity, how are ye disgraced! Where will such astonishing horrible conduct end?"

After visiting meetings in North Carolina and Virginia, he returned to his home with the reward of peace.

In the year 1793, William Savery, with other Friends of Philadelphia Meeting, being under a religious concern to visit the Indians,

and having received the approbation of their meetings, as well as the consent of the Federal Executive, attended a council at Sandusky, convened in order to make a treaty of peace. Much of the country through which they passed was a wilderness, and their journey, which occupied four months, was attended with great fatigue and exposure.

The following year he attended an Indian treaty at Canandaigua, in the State of New York. In both these journeys he found opportunities for religious service among the Indians and others, and preached the gospel with acceptance.

In the spring of 1795, he attended Virginia Yearly Meeting, and had appointed Meetings in Richmond, Manchester, and other places in that section of the State. The following year he embarked for Europe on a gospel mission, which occupied him about two years and a half.

He had for fellow-passengers in the ship *Sussex* bound for Liverpool, Deborah Darby and Rebecca Young, ministers from England then on their homeward voyage after performing a very acceptable visit to the Churches in America; also Samuel Emlen, Sarah Talbott, and Phebe Speakman, going to England on the same religious errand.

At that time there were in Europe an unusual number of ministering Friends from America; among them were Nicholas Walr Thomas Scattergood, David Sands, and Geo. Dillwyn.

William Savery, after attending meetings at Liverpool, Manchester, Birmingham, and London, went to Pymont, in Germany, and to Congeines, in the south of France, to visit a little flock at each of those places who professed the principles of Friends. Accompanied by George Dillwyn, David Sands, William Farer, and Benjamin Johnson, he went through many towns and villages in Germany seeking for religious people and preaching the gospel. Being able to speak German, he could readily make himself understood, and frequently interpreted for his companions.

In his travels through France, he was accompanied by David Sands and Benjamin Johnson. At Congeines they were lodged at the house of Louis Majolier, a minister, and the leading man in that little community of simple-hearted, affectionate Friends. William Savery writes in his diary: "I never was in a country where there was more unaffected simplicity than here. Shepherds and shepherdesses are scattered about, tending their flocks, and knitting or spinning at the same time; having very few cows or goats they milk the ewes, which afford them a sufficiency, and they think the milk richer than cows' milk."

"In the evening we had some conversation with them on their present state as to religion; and from the information of — Robinel, an ancient man, it appears that for sixty years at least, there has been a number of religious people in this neighborhood, who had separated from the common ways of worship; and were by some called Inspirants. Their attention was first turned to Friends by information in the public papers of a young man who came to Paris and advertised that the owners of a vessel and cargo, which were taken by the British in the war with America and France, were requested to come forward and claim their several proportions of the said vessel and cargo; and that his father, who was part-owner of the ship which took the French vessel, was a Quaker, and did not desire to hold their property, as it was inconsistent with his conscientious scruples. They then made inquiry respecting the principles of Friends, and found them much the same as their own. After this, being visited by Sarah Grubb and other Friends, and confirmed in their sentiments, they continued to profess the principles of our religious Society, and have passed through many trials lately, some having been imprisoned. They were truly glad to see us, believing we had come in an acceptable time."

On William Savery's return from the Continent, he spent much time in Great Britain and Ireland, finding great openness among the people to hear the truths of the gospel. He remarks, in his diary, that he seldom felt authorized to appear in the ministry among Friends; that is, where there were none others present. His mission appears to have been to the public at large, and wonderful were the effects of his earnest and impressive discourses among the multitudes of all persuasions who flocked to hear him.

On one occasion, however, when about to leave the city of London, he had a meeting appointed for Friends only. It proved to be very large, and was eminently crowned with divine favor.

Having discharged his religious duty to the people of Great Britain and Ireland, he returned to his family and friends in the tenth month, 1798.

He labored diligently in his temporal business for the support of his family, as well as for the relief of the poor, whose wants his liberal mind was ever ready to supply, according to his ability.

In 1802, the part of Philadelphia where he resided was visited with a pestilential disease, which carried off many in a very short time, when he, not being willing to desert his post, was much engaged in visiting the sick and afflicted, both Friends and others, admin-

istering counsel and consolation in the love of the gospel. In the following year, the city was again visited with the same awful scourge, and he devoted himself night and day to relieve the distressed.

In the spring of 1804, being mostly confined to the house by sickness, he expressed his resignation to the Divine will; and, notwithstanding his abundant and efficacious labors in the service of his Lord and Master, he entertained very humble views of himself, observing, "I thought I was once strong for the work, but now I am a child brought back to my horn-book, and have nothing to trust to but the mercy of God, through Christ my Saviour."

A short time before his death, under a sense of Divine favor, he exclaimed, "Glory to God!" He continued in great composure of mind, and departed this life the 19th of the Sixth month, 1804, in the 54th year of his age.

Richard Jordan was born in the county of Norfolk, State of Virginia, the 19th of the Twelfth month, 1756. His parents, who were members of the Society of Friends, endeavored to train him in the principles and practice of their religious persuasion.

When he was twelve years of age, the family removed to North Carolina, and became members of Richsquare Meeting. In early life he was deeply impressed by the tendering visitations of the Holy Spirit; but, not abiding under this religious exercise, he gradually gave way to the temptations that beset his path, until his mind became alienated from the source of all true comfort. In this condition, it pleased the Shepherd of Israel to bring him under a deep sense of judgment and condemnation. After a painful conflict of mind, which at times was experienced during several years, he was mercifully enabled to surrender himself to the Divine government, and to obtain the reward of peace.

When he married, his father offered him several slaves to assist in his agricultural labors; but he refused to receive them, being fully convinced that the practice of slaveholding is inconsistent with the spirit of the Gospel and the precepts of Christ. While applying his hands to hard labor, he felt a peaceful conscience in the course he had taken, and became an advocate for the oppressed people of color, many of whom were then being liberated by members of the Society of Friends.

In the twenty-fifth year of his age, Richard Jordan, under a sense of religious duty, expressed a few words in a meeting for worship, which yielded to his oppressed and afflicted soul an indescribable sense of joy. His ap-

pearances in the ministry were for a long time brief and not frequent; but keeping to the root of Divine life, he grew in his gift, and became an acknowledged preacher of the gospel.

In the year 1797, he was engaged on a gospel mission to New York and New England; and in 1802, with the approbation of his friends, he embarked for Europe on the same religious service, which occupied him more than two years.

After his return he removed with his family to Hartford, Connecticut, being impressed with a sense of duty to labor as a minister in that vicinity. He remained there about five years, and then removed to New Jersey, and settled at Newton, within the limits of Haddonfield Monthly Meeting.

He departed this life the 14th of the Tenth month, 1826, in the seventieth year of his age.

In the memorial concerning him, issued by Haddonfield Monthly Meeting, he is described as an able minister of the gospel, devoted to the service of his heavenly Master.

EXTRACT.

Dr. Maudsley holds that science is less destructive than constructive, and from the ruins of every demolished superstition builds a nobler faith. For every pictured curtain it tears down, it leaves the glories of a landscape painted anew every morning, and it brushes away our cobweb fancies only to show the everlasting stars. One of the chapters in his recent book on the "Body and the Mind," closes with the following fine passage: "I know not why the Power which created matter and its properties should be thought not to have endowed it with the functions of reason, feeling, and will, seeing that, whether we discover it to be so endowed or not, the mystery is equally incomprehensible to us, equally simple and easy to the Power which created matter and its properties. To a right-thinking and right-feeling mind, the beauty, the grandeur, the mystery of Nature is augmented, not lessened, by each new glimpse into the secret recesses of her operations. The sun going forth from its chamber in the East to run its course is not less glorious in majesty because we have discovered the law of gravitation, and are able by spectral analysis to detect the metals which enter into its composition—because it is no longer Helios driving his golden chariot through the pathless spaces of the heavens. The mountains are not less imposing in their grandeur because the Oreads have deserted them, nor the groves less attractive, nor the streams more desolate, because science has banished the Dryads and the Naiads. No, science has not destroyed

poetry, nor expelled the divine from Nature, but has furnished the materials, and given the presages, of a higher poetry and a mightier philosophy than the world has yet seen. The grave of each superstition which it slays is the womb of a better birth. And if it come to pass—in its onward march—as it may well be it will come to pass, that other superstitions shall be dethroned as the sun-god has been dethroned, we may rest assured that this also will be a step in human progress, and in the beneficent evolution of the Power which ruleth alike the course of the stars and the ways of men."—*The Golden Age*.

REWARDS AND PUNISHMENTS.

BY JESSE KERSEY.

In reflecting upon the doctrine of rewards and punishments, it has presented as a clear case that it never was consistent with the attributes of the Deity to impose suffering upon any of His creatures. But He has done all that could be done to make all parts of His creation happy; and therefore all the misery that we experience is the consequence of our own misconduct. In the formation of man it appears that it was consistent with the wisdom of his great Author to constitute him a being capable of devotion; and to this end he gave to him an amount of freedom agreeing with the capacity that he was endowed with. Hence he would think for himself, and make his own elections by following his passions and appetites, and indulging them, he would run into excesses, and those excesses would produce their own sufferings. Experience teaches us that every act has its consequence. Thus we find a motive for self-government, and as we learn on the one hand that every improper indulgence produces misery, so we find on the other that the more we become subject to the principle of self-government, the greater is our happiness. In those two cases of fact we have full proof that it is not the pleasure of the Creator that we should be sufferers, but that He has done all that could be done consistent with the nature of our being to render us completely happy. Had we been created without any portion of freedom, we could never have known or enjoyed devotional feelings, but must have moved along in life as mere machines. Having then a devotional capacity, it must follow that when all our experience proves the goodness of God to us in giving us the means of happiness, that this knowledge should excite the highest sense of obligation, and of course the most pure devotion and love to God. If we were obliged to contemplate Him in any other light, it would have the most melancholy effect upon us. Finding, then, that by regarding the light of Truth and walking in

it, we give energy and dominion to our more exalted and higher nature, and witnessing daily the consequence to be a complete quietude of the passions, and the most perfect possession of intellectual happiness, we are thus united to the great Fountain of spiritual good, and are one with our glorious Author. We cannot believe, while possessing this blessed state, that it ever was any part of the design or purpose of God to render any part of His creation miserable. Of course we must be convinced that all the miseries of mankind are the fruit of their own doings. According to those views it will appear that there is nothing in the attributes of God that ever can consist with dealing out penalties and afflictions upon His finite creatures. Hence we come to the belief that because it was necessary in order to our own preservation, that evil and folly should bring sufferings upon us as a consequence, or otherwise we should never be brought out of it; therefore those sufferings themselves are demonstrations of the goodness and mercy of God to man. The truth appears to be that in every case where we witness suffering, there is no more of it than seems necessary to promote their own good. In looking into the human composition, and considering it in agreement with the foregoing sentiments, we find an admirable proof of the sublimity and greatness of the Christian system. By this we are taught to believe that we have to control all our animal passions, in order to become acceptable to God; and by our own positive practical knowledge we are convinced that our happiness can never be completed by sensual indulgences. The obligations of Christianity and those that are found from the operation of the laws of our nature, both prove that they have the same origin; that is, the wisdom that dictated the Christian's path of duty, and that fixed the consequences of sensual excess is one and the same. Therefore, however the reputed philosopher, or the common sceptic may point the finger of derision at the humble and self-denying follower of the Son of God, it is impossible for himself to be happy in any other course of life than that which is adopted by the latter. But we are told that there must be some mistake on the part of those who would prohibit the indulgence of the passions and appetites of nature. Why, say they, were they given, if they must be kept in such strict subordination? The answer is not difficult, because it is easy to prove that the same wisdom and power that gave those dispositions, has set for them the requisite boundary, and no man can pass it without bringing upon himself consequences of a suffering kind. From which we might expect every enlight-

ened individual would surely be convinced that the precepts themselves that are taught by Christianity have flowed from the same fountain of perfect wisdom.

THE CHRISTIAN NAME.—A man may believe in Christ who does not believe in Christ's name, using that name simply in its superficial meaning. Do we mean by Christ simply the letters that spell out that name? Is not Christ merely a name for certain qualities—for love, for purity, for truth, for a holy faith in and obedience to the Saviour and God? Is it not a name that signifies not simple beliefs, but succor of love, and self-denial of love? Is it not a name filled full of the sweetest and richest fruit of divine being? A man may believe in the thing which that name covers, who yet, from the force of prejudice and education, is unwilling to take the name itself. There is many a man who believes in Christ, only he will not call him by that name. He believes in God as He was manifested in Christ. He does not know much about the historical part of Christianity. He believes in that part in which the heart is concerned. He may not believe in theology; he may not accept all the dogmas in regard to days, and incarnation, and mediation, and passion, as they are framed into theology; but he has taken the spirit of Christ. And, having taken that, he has taken Christ. If a man takes the spirit of Christ, it does not matter so much about the name. He takes Christ who takes his spirit.—*H. W. Beecher.*

For Friends' Intelligencer.

“THE GIFT OF CONTINUANCE.”

Important principles, aptly expressed, are frequently to be found floating about as it were, almost unnoticed and unknown, and, of latter times, it appears to have been in a measure one of the missions of the writer, in respect to some of these, to “gather up the fragments that nothing be lost.”

In accordance with this feeling, he furnishes from No. 10 of a series of religious tracts published in Boston, entitled, “*Words for Wayfarers*,” the following extracts for republication, viz:—

“It was said of one man whose protracted remarks in social meetings probably resembled a mathematical line,—having ‘length without breadth or thickness,’ that ‘he had the gift of continuance, and that was about the only gift he did have.’

“This can hardly be regarded as one of the ‘best gifts;’ it is a sign of mental infirmity as well as of spiritual emptiness. * * * * “‘Covet earnestly the best gifts;’ but do not reckon ‘the gift of continuance’ among

them. Remember, there is a time to be silent. Try and find out when it is. Not every thought that comes to your mind in meeting, is to be told of at once. Sometimes the Holy Spirit bids you *learn*; be careful how you utter to others those things which the Lord designed you to know especially for yourself. Enquire continually, 'Lord, what wilt thou have me to do?' and then rest in the Lord and wait patiently for His direction, for 'the meek will He guide in judgment, and the meek will he teach his way.'

The *point* dwelt upon above is an important one. Who has not heard an otherwise instructive discourse, almost deprived of its vitality, by being spun out until scarce anything was perceptible but "length without breadth or thickness."

Although these extracts were originally intended to apply to a species of organization to which we *Friends* apply the term "outward," they are none the less true. To the writer's mind they are confirmatory of the growth in the religious community,—of an increase of dependence on Divine Power, and less and less faith in the works of man as such, in his own will and wisdom.

Notwithstanding the clergy of the present day are almost unceasing in their efforts to gather the multitude around them, and to urge a belief in an oral dispensation which *our* fold deems at variance with a "free gospel ministry," still we have no right to question motives, where a consistent Christian life is maintained; and it must certainly be admitted, that even with these, the potency of the "still small voice," the "light within," is becoming more and more recognized, and looked up to as the guide.

Else, why the concluding words, "*Then rest in the Lord, and wait patiently for his direction,*" for "*the meek will He guide in judgment, and the meek will He teach his way.*"

J. M. E.

Philadelphia, Fifth month, 1871.

LIVING BY THE MOMENT.—The grace of the present time, be it more or less, will not answer the claim of any future time. Our feelings, in order to be right feelings, must correspond to the facts and events of the present hour, the present moment. But every succeeding moment, bearing on its bosom new events and new facts, has a character of its own; and it demands a new life, a new experience corresponding to it. In order, therefore, to live as a holy person ought to live, we must regard the claims of the smallest periods of time, as they pass before us; and must act in accordance with those claims. This is what is termed *living by the moment*.—*Thomas C. Upham.*

For Friends' Intelligencer.

COMMUNICATION.

This being one of those days in which the farmer is driven indoors by the blessed rain that descends to water the crops of his planting, my mind was led to review and reflect on some of the excellent communications that have of late appeared in the *Intelligencer*.

I will first revert to the labor of love offered to us in your paper of Fourth month 22d, by one whom I do not know, over the initials, L. J. R. We there find a germ which, if imbedded in a genial soil, and watered by love for our fellow-men, disinterested and pure, may be one of the means of making our Society "like a city set on a hill."

I certainly do not know why the Father of all has permitted our Society to exist, unless He sees in the future something it may accomplish. There is a vital spark which has lived with us for some purpose, and could not be extinguished by those who have striven to smother it. First-day schools are now an established fact, and mission schools are talked of; and my prayer is that there may arise those who are qualified to conduct them to the enlarging of the city of our God. There are some Friends who condemn and discourage those who strive to do good in that way, and believe that they are attempting to teach when they are not qualified to do it. All I can say to the sincere laborers in the vineyard is, when you hear such charges take them home, enter into your closet, and pray to the Giver of every good and perfect gift, that He may give you the qualification to do that which you have undertaken. Rest assured He will give it to you, for He has promised it to His children in more texts than I can or need enumerate.

The time was when the advocates of emancipation were persecuted by some of the members of our Society, and pursued even to expulsion, for too strongly laboring to maintain one of our leading testimonies, and against the greatest evil then existing in our land.

Some Friends have been and are opposed to action on the temperance question, which is one of our excellent testimonies. Intemperance is now the greatest evil of the day; devastating the land, and laying waste the souls and bodies of men. I very much like the communication of E. H., in No. 6 of this volume. When I perused it, I felt a wish that all could see and ponder its contents; and those who have not noticed the article would do well to read and profit by it.

Again, there is the subject of war. The practice has been with some to discourage every practical effort put forth against the evil, as though our silent example were sufficient; and if a young man goes to war, thes

are the first to favor the issuing of a testimony of disownment against him. Is this the way to maintain our testimonies, enlarge our Zion, and inculcate the principles of meekness, forbearance and love?

When Darlington Hoopes was at Washington near the close of the last Congress, endeavoring every way, publicly and privately, to lay before the heads of government the importance of initiating a movement among nations for the adoption of arbitration instead of war, I heard a member of Congress say to him, "Move in your meetings in the matter. They have force here, and we will do what we can if they will petition." There is work for the body, and work for each individual, and work of many kinds. Let each take what promises best fruit. I am a believer in works as the fruits of religion. H. J.

Forest Hill, Md.

BEN SELIM found a golden coin one day,

Which he put out at interest with a Jew ;
Year after year awaiting him it lay,

Until his coin to twenty pieces grew,—
And these to thousands,—until people cried
"How rich Ben Selim is ;" and so he died.

Ben Adam had a golden coin that day,

Which to a beggar asking alms he gave,—
Who went rejoicing on his lonely way :

Ben Adam died—too poor to own a grave.
But when his soul reached heaven, the heavens
alone
Could hold the wealth to which his coin had grown.

Scraps

FROM UNPUBLISHED LETTERS.

This morning, as I was viewing the beauties of creation around me—a luxuriant growth of wheat in one field, a beautiful rising crop of corn in another, a richly-painted purple clover field before me, and on either hand the meadows or hay fields about being housed in the barns, my heart glowed with gratitude to the bounteous Giver ; and I may add to these the blessings of health, of peace, and of harmony diffused through the neighborhood, and in my own family. Then on the other hand, I look around over the human family, and see tumult, strife, changes, schemes, and human contrivances, abounding. But

"Happy the mind that sees a God, employed
In all the good and ill that chequer life,
Resolving all events, with their effects,
And manifest results, into the will
And arbitration wise of the Supreme."

Thou canst trace the grand view of Cowper in reference to Divine superintendency over the affairs of mortals in this lower world ; and

independent of all these commotions, divisions, changes, and plans, Divine Truth may be carrying on this great work unseen by His worldly-wise reasoning creatures.

While yet from seeming evil He is educating good, and opening a way for His blessed Truth to spread and obtain dominion among the children of men.

Personal mingling in a social capacity with you, seems much precluded ; its substitute, epistolary correspondence, has often been desirable. In this, however, my powers of expression seem so feeble that when I would write the query arises, What shall I say ? My employ for a few days past, has been copying the account of Jacob Ritter, which, it is said, he had penned by an amanuensis some fifteen or more years since. The remembrance and near unity of spirit which I had with this devoted servant, is not only sweetly revived by this employment, but his well-known comprehensive impressions, when incapable of giving utterance to ideas and religious exercises, furnishes me with an example that as respects yourselves and the cause of Truth yet dear to my heart, I may adopt on the present occasion, "Oh ! the feeling—the feelings of my mind." Toward you, dear daughters, this inexpressible feeling always flows in my heart ; and though I seldom hear from you, either verbally or by written communication, yet I sometimes indulge the hope that I have a place in your best affections in the Truth. I also sometimes think I am a companion in silent suffering with those who often weep as between the porch and altar, on account of the state of many who do not appear to be worshippers in the inner temple, but rest too much in the outer court. My prayers are for your preservation, and that you may be obedient to every clearly manifested duty.

Thy welcome little letter was handed me by — before meeting. I am pleased that thy mind enjoys a pleasant retrospect of thy late journey. That it should be baptized under the weight of the work whereunto thou art called, I can readily understand. I can also feel with thee therein. But by keeping patient under exercise, there are seasons of refreshment and of brighter views sometimes mercifully dispensed to the humbled mind. Ever bear in remembrance this truth, We serve a good Master, who will feed us with food which He sees convenient for us. May thy mind be thereby strengthened to every work whereunto thou art called, and mayst thou be a willing and diligent handmaid in the Lord's house, to do whatever He may require of thee.

FRIENDS' INTELLIGENCER.

PHILADELPHIA, FIFTH MONTH 20, 1871.

PHILADELPHIA YEARLY MEETING.—On Seventh-day, the 13th inst., the meeting of ministers and elders connected with this body was held. During the solemn silence with which the meeting was favored upon assembling, it was evident that from many hearts a prayer ascended for preservation. A beloved brother extended a salutation of welcome to those assembled, and expressed the desire that all might be kept under divine government, so that each might accomplish his own work and service.

The spirit of supplication that had pervaded the assembly then found utterance through a faithful instrument from New York Yearly Meeting. The language of the apostle, "When thou wast young, thou girded thyself and walkedst whither thou wouldst; but when thou shalt be old, thou shalt stretch forth thy hands, and another shall gird thee, and carry thee whither thou wouldst not," was quoted by a friend, who applied it to those who, being old in the knowledge of the loving kindness of the great Head of the Church, were willing to be guided and led whithersoever the spirit might lead them.

Under this precious covering the business of the meeting was entered into. The representatives were present except six. Minutes were read for four ministers from other Yearly Meetings, who received a cordial welcome. Sympathy was feelingly expressed with Friends in some of our remote meetings, whose isolated situations excluded them from that sweet spiritual intercourse with those of their own household of faith, which is so strengthening and encouraging. During the sessions of this meeting there was abundant evidence of a living exercise for the advancement of the testimonies held by us as a people, and both ministers and elders were encouraged to faithfulness in their varied gifts, whereby harmony would be promoted and the health of the body preserved.

Excellent counsel was given in relation to the care necessary to be observed, that minister do not unprofitably extend their communica-

tions, so as to burden others and waste their own spiritual strength. Friends separated under the feeling that they had been blessed with that Presence which is the crown and diadem of all rightly gathered assemblies.

On First-day the meetings for public worship at different localities in and about the city were held, and so far as we have heard they were seasons of favor—in which those gathered were blessed with a ministration of the gospel, attended with the comforting evidence that it was "heard gladly," and we would fain hope that the effects thereof will not be as the vapor that vanisheth, but that fruit may be produced to the honor of the Great husbandman.

In the Race street house, in the afternoon, "the children's meeting" was held, at which a large number of both young and old were present. It was an impressive occasion. Many hearts were touched by seeing so many precious children gathered by those who feel an obligation to do the little in their power to turn their youthful minds into ways of virtue and peace. The exercise was a simple one, consisting of two pieces of poetry and a psalm repeated in concert, in the manner they were accustomed to in their First-day schools, interspersed by remarks from a few Friends.

On Second-day, the 15th inst., the sessions of the Yearly Meeting commenced. Both men's and women's meetings were interesting and solemn. Minutes for those from other Yearly Meetings were read: for Rachel Hicks, Westbury, Long Island; Stimasson Powell, from the same meeting; Alfred Moore and Clark Barmore, from Oswego, New York; and Ezekiel Roberts, Short Creek, Ohio. Epistles from the different Yearly Meetings in correspondence with us, were read to edification, and it was renewedly felt to be profitable and encouraging thus to salute one another by the way with words seasoned with life. Salutary counsel flowed freely, and encouragement was received to dwell so near the principle of life and of love that all may be drawn into near unison one with another.

In the women's meeting, the subject of the non-representation of women in the Meeting for Sufferings, which claimed attention last

year, was referred to in two of the reports, and was again considered. Much unity was expressed with the view that an advantage would arise from resuming the practice which obtained years ago and was discontinued, of associating men and women in the Representative Committee. On presenting the subject to the men's meeting, as it had also come up in one of their reports, they united in the appointment of a joint committee to consider it and report to a future sitting.

Our paper goes to press too early to admit of a more extended account.

MARRIED.

BONSAL—WRIGHT.—On the 4th of Fifth month, 1871, at the house of Joseph S. Jackson, near Winchester, Va., under the care of Hopewell Monthly Meeting, Va., William C. Bousal, of Cecil county, Md., to Rebecca M. Wright, of the former place.

DIED.

COOK.—At Havana, Cuba, on the 24th of Ninth month, 1870, of yellow fever, Lewis P. Cook, youngest son of Thomas Cook, of Point Pleasant, N. J., in the 37th year of his age; a member of Shrewsbury Monthly Meeting—

A meeting of the Executive Committee of the First-day School General Conference will be held at Rutherford Place Meeting-house, New York, on Seventh-day evening, the 27th inst., at 8 o'clock.

EDWIN CRAFT, Clerk.

For Friends' Intelligencer.

THE YOSEMITE VALLEY, CALIFORNIA.

BY THOMAS FOULKE, OF NEW YORK.

The Yosemite Valley is situated on the Merced River, in the county of Mariposa, State of California, about 140 miles due east, or perhaps a little south of east, from San Francisco. It is on the western slope of the Sierra Nevada mountains, and nearly mid-way between the northern and southern boundary of the State, and therefore very near its centre. It is a little valley or gorge, way up among the Sierras, about 4,000 feet above the level of the sea; and is only from 5 to 10 miles in length, and from half a mile to a mile and a half in breadth, and is surrounded by granite walls of varied forms and sizes, some of them with faces almost vertical and perpendicular, rising to the fearful height of from 3,000 to 6,000 feet above the surface of the valley, or the waters of the Merced River, which name signifies River of Mercy, and which has several smaller tributaries flowing into it, the latter entering the valley by a series of waterfalls. It is said, in the spring of the year, or in May and early June, when the waters are high, from the melting of the snows among the Sierra moun-

tains, there are as many as 200 of these falls pouring their waters over towering rocky precipices into the valley below! The high mountain peaks which surround and look down upon this wonderful valley, are from 7,000 to 10,000 feet above the sea level, and are dizzy and often frowning summits. On the whole, it may justly be considered, that the Yosemite Valley, with its mighty walls and towering mountain peaks, and its numerous and beautiful waterfalls of such vast and unparalleled height, is the most wonderful and impressive feature of our American Continent! European tourists and writers now generally acknowledge that trans-Atlantic scenery has nothing anywhere that can equal, or even approach it. Unless there be something in the great unknown, or unexplored, that has never yet been revealed to man, there is no spot anywhere in the wide, wide world of such wild and varied beauty, and such vast magnificence. I will not, therefore, attempt a full and complete description of the Yosemite Valley, for the grandest, mightiest scenery of the world cannot be described. These descriptions, however accurately defined, and carefully drawn they may be, can only convey to the mind a very faint idea of the wonders of the scene. It must be viewed to be appreciated, and even then it will take time for contemplation and reflection to bring the mind to a realization of its vastness and solemn immensity. I will content myself, therefore, with the effort to give some idea of this amazing temple of nature which has now become one of such vast general interest and world-wide celebrity, and which will, doubtless, in the near future be visited by multitudes of tourists from different parts of the globe.

You leave the Central Pacific Railroad at Stockton, and take stage coach and the horse trail for the Yosemite Valley. There are at present three routes, one by way of Murphy's Camp and the Calaveras grove of big trees; another via the renowned Mariposa grove of big trees, and Clarke's Ranch; and a third by way of Chinese Camp and Harden's Mill, taking the Coulterville trail, and leaving out altogether both the Mammoth Tree Groves. It would seem a pity to do this, when you are so near and almost in the immediate vicinity of these giants of the forest, which are, without any reasonable doubt, the oldest, the most wonderful, and most stupendous vegetable products of the globe. The stage ride by either route is dusty in the extreme, there being no rain in California during the summer months, and the roads being much traveled over are deep with dust, and it becomes very fine like ashes,

and when the wind blows in the direction you are going, you are enveloped in a cloud of fine dust which is very suffocating. When you add to this the intense heat of the summer's sun at noon-day, the thermometer standing say at 90 degrees of Fahrenheit, and the fatigue incident to stage riding when the passengers are closely and tightly packed, you get a little idea of what the tourist to the Yosemite has to encounter. Nor is this all, for when the journey on the saddle train commences, which is some twenty-five miles into the valley and over a mountain path, much of the way rugged, difficult, and perilous, the discomfort and hazard are by many considered still worse, and by some even unendurable. Women often find it quite difficult to keep on their saddles, lest they should be thrown over their horses' heads going down steep declivities—a catastrophe which sometimes happens; and in order to prevent this, they often prefer riding man fashion. But even in this emergency they are sometimes thrown off. Timid, nervous, delicate persons should not undertake the journey, as it is altogether too much for their nervous systems to endure. It is said, however, that the means of access into the valley are to be much improved every year, and the difficulties and dangers attending the journey are gradually disappearing. In fact, we did hear some hints that they would yet have a railroad there. The time which it will occupy in making the round trip from Stockton and back, should not be less than ten days, and if the tourist should visit both the famed groves of mammoth trees, not less than two weeks. We made the necessary detour from the main road to pay our respects to, and view and study these wonderful and mighty productions of the vegetable kingdom. Their ages are variously estimated at from 1,200 to 4,000 years. Professor Torrey, of Columbia College, places the oldest and largest of these trees at the latter figure. It seems almost incredible, and yet his calculation is not mere conjecture. It is based on good authority, and I do not see but he may be pretty nearly correct. At all events, I would not venture to dispute his theory. One evidence may be given of their great age. It is this. One of these old giants, or monarchs of the forests, having fallen centuries and centuries ago, was some years since discovered by some workmen deep down in the earth. In digging a trench they discovered some of the wood and a portion of the trunk of this enormous old tree in a perfect state of preservation! It was the well-known red wood of the *Sequoi Giganta*, and has lain there for many, many centuries, for the earth and the debris have gone on through a long

line of ages, and accumulated around and over its fallen trunk. Seeds have fallen into the soil thus formed, and new trees have grown directly over the path or track where the old monarch had fallen, and there today are standing and growing. These young trees, as they are called, are known to be from six to eight hundred years old. What, then, must be the age of that old patriarch! In the Mariposa grove there are scattered among 1,280 acres, 600 of these enormous trees. The Grizzly Giant is the largest standing tree. If it were cut off smooth fifty horses could stand on the stump easily! If the trunk were hollow to a shell it would hold more freight than a first class ocean steamer 250 feet long. In this grove there are two hundred trees more than twelve feet in diameter, fifty more than sixteen feet in diameter, and six more than thirty feet in diameter. In the Calaveras south grove, according to the authority of I. M. Hutchings, there are 1,380 trees, some of which are the largest in the world. This grove contains the greatest number of large trees in the world. According to Whitney, the State Geologist, there are trees in the Mariposa grove larger in circumference than any in the Calaveras grove, and there are taller trees in the Calaveras grove than any that have yet been measured in the Mariposa grove. The diameter of the Grizzly Giant where the first large limb shoots out, ninety-five feet up from the roots, is twenty feet, the circumference being about sixty feet, and the limb itself at this wonderful height from the roots, is twenty feet in circumference and six and a half feet in diameter, by transit measurement. The "Father of the Forest," in the Calaveras grove, is a fallen tree, the top being broken away, and measures sixteen feet in diameter at 300 feet from the roots, which according to the usual taper would give about 450 feet for the entire height of the tree, this being the estimate. Its diameter is forty feet, and its circumference at the base one hundred and twelve feet. The scene in the forest at this point is impressive and beautiful beyond description. The head of this old monarch has long since been laid in the dust, but how stupendous in his fall, and even in his ruin! We rode through his hollow trunk for a hundred feet or more on horseback, and came out at a broken part; then entered again, and walked some distance further up from the roots, and passed up some twenty steps and got out at a knot-hole on the top, about two hundred feet from the roots.

The expenses of the journey are very considerable, if you include, which you should do, the price for ponies and guides and their fare also, in addition to all you require to

make you comfortable. On a rough estimate, ten dollars per day, or from one hundred to one hundred and forty dollars for the round trip from Stockton and back would be sufficient. The kind and amount of personal baggage you take along with you into the valley is a most important matter, and your clothing should be judiciously selected. Take nothing that is not absolutely necessary, as every article has to be taken into the valley on the backs of pack-mules or horses. It is safer and always prudent to be prepared for a change of climate, as the winds often come blowing in keenly from the Golden Gate. In a journey of this kind, the wearing apparel should be suited to the nature of the trip and the place you visit. It would be well to be prepared to rough it a little if need be, and be ready for an emergency should one arise. The hotels in the valley are plain, rustic, frame buildings, but the food is substantial and good and the fruit excellent and abundant. There is but one wagon for hauling timber and other purposes in the valley, and that was taken in on the backs of mules in sections, with one wheel on each side, or some other portion being lashed together over the back with withes or ropes. Our hotel proprietor, the somewhat celebrated J. M. Hutchings, we found to be always polite and attentive to the wants of his guests, which he seemed to know very well how to provide for. Our meals were greatly enjoyed as our appetites were sharpened by vigorous exercise and abundance of it. If you enter the valley by way of the Mariposa bridge path, by all means visit the Mariposa grove of big trees, from Clarke's ranch, about five miles distant, and when near the brink of the mighty gorge, make a short detour from the main path, and go out for a few steps on the bold precipice of rock or mountain known as "Inspiration Point," from which you have perhaps the most comprehensive view of the whole valley, but not of its separate features. The name of this point is indicative somewhat of the feelings of the beholder, as he looks out for the first time on the wonderful picture of nature which is here spread out before him. Other names in this remarkable region are also peculiarly appropriate. A tourist and writer for an Eastern journal, in depicting a little the view which met his eye from "Inspiration Point" says, "Suddenly as I rode along, I heard a shout. I knew the valley had revealed itself to those who were at the front of the line. I turned my head away. I could not look until I had tied my horse. Then I walked down to the ledge, and crawled out upon the overhanging rocks. I believe some men walk out there. It's a dull clod of a

soul who can do that. In all my life, let it lead me where it may, I think I shall see nothing else so grand, so awful, so sublime, so beautiful, beautiful with a beauty not of earth, as that vision of the valley. It was only yesterday evening: I cannot write of it yet. How long I sat there on the rock I never shall know. I brought the picture away with me. I have only to shut my eyes, and I see it as I saw it in that hour of hours. I think I shall see nothing else so sublime and beautiful till haply I stand within the gates of the Heavenly City." There are some who claim that a really finer view than this is obtained a short distance below, on "Mount Beatitude," from whence is obtained a more expanded view of the valley and its surroundings. If we exclude the scene from the summit of "Sentinel Dome" and "Glacial Point," which are now considered by tourists the crowning beauty, I had almost said glory, of this whole region, and which stand unrivalled in the pomp and magnificence of the masonry of nature which are here mapped out, and the grand sublimity and beauty which they present to human vision, there is nothing in all the world that does exceed, or even bear a just comparison to the grand panorama in the book of nature, which is presented from these stand-points or outlooks as you enter the valley. With these two single exceptions, perhaps there is to be found nothing to surpass the views from "Mount Beatitude" and "Inspiration Point." Charming views are to be obtained from "Pour-pour-pa-sus, or the Three Brothers," and from almost every turning point on your difficult and at times dangerous descent of several miles into the valley, from the summits above. One in particular is pointed out to tourists. It is the "Stand Point of Silence," and it is on or near the Coulterville trail, on the Harden's Mill route, as you enter the valley. At the foot of the mountains, after your journey down, you follow a good path or trail for several miles further to the hotels. You ride along sweetly and charmingly impressed by the side of the peaceful Merced River, across the Bridal Veil meadow, with the "Pohono Fall," which signifies Spirit of the Evil Wind, or the Bridal Veil Fall in full view, with rainbow tints toying and playing with its mists in the bright sunlight. It was our pleasure and privilege one bright afternoon to behold these brilliant colors forming a complete rainbow circle, and the high mountains around standing sentinel. I need not say it was beautiful. Any lover of nature and her works would know and appreciate the fact. The fall of the water at one bound is 940 feet, looking somewhat like a veil of lace. The high mountain peaks above

and beyond the Bridal Veil are the "Three Graces." Further up the valley, and opposite to Hutchings' Hotel, are the "Yosemite Falls," the name signifying large grizzly bear, and the water falling at three bounds to the amazing and astounding depth of 2,634 feet, being by far the loftiest waterfall on the globe. Think of it, nearly half a mile of cataract! Still further up the valley, on the main stream of the Merced, you approach the Py-wy-ack, or "Vernal Fall," the name signifying cataract of diamonds, and the unbroken fall of the water being 350 feet. Still further on, and up the valley, you meet a beautiful sheet of silvery whiteness, 130 feet in width, the "Nevada Fall," or Yo wi-ye, signifying meandering, and the height of the fall, at one bound, measuring 700 feet. The volume of the water being much greater at these two latter falls, renders them more impressively grand. In the summer, when the Bridal Veil, and the Yosemite, and the Ribbon Fall become dwarfed on account of the meagre supply of their waters, the Vernal still pours on and on its ample torrent, and the Nevada, always white as a snowdrift, and beautiful, rushes on and thunders down its ample sheet. The Yosemite may therefore be characterized for its height, the Vernal for its volume, the Bridal Veil for its softness, and the Nevada for height, softness and volume combined. The base of this great fall, as you look down into the waters, is spanned with rainbows. The South Fork cataract is the most inaccessible of all, and seldom visited. The Ribbon Fall, long and slender, we did not see, but it must be charmingly beautiful when the waters are high, and they fall like strings of pearls and diamonds, as they come pouring over the mountain precipice of such vast depth. In the spring time what an amazing sight is presented, when these two hundred cataracts, sparkling in the sunlight with the bright colors of the rainbow, and swollen with the melting snows, come pouring and rushing over high walled mountain precipices of granite, fresh from the Sierras, into the valley below! The Bridal Veil and the Yosemite flow into the valley from lateral creeks, but the Vernal and the Nevada into the full swelling torrent of the Merced. Rainbows of dazzling brightness shine at their base, and are sometimes seen by tourists, in the bright sunlight, not in bows and arches only, but in complete circles of violet and gold.

(To be continued.)

THE HOUSEKEEPING PUZZLE.

A great deal is said just now of "coöperative labor;" and one might think from the

manner in which the theme is treated that it involves a new discovery. But the true principles of "coöperation" are seen notably on a farm, and generally in every well-regulated family, whether the family means be large or small. Every member has his or her appointed share in the labor of life, and from the joint stock of exertion all derive advantage. Much of the complaint which we hear of domestic discomfort arising from poor service, and the frequent change of domestics, grows out of the neglect of the proper division of family cares. A great part of the difficulty encountered by employers and employed in the domestic household is the result of circumstances which ought to be more in the control of housekeepers. The columns of the newspaper, or the agency of an employment office, brings a stranger into a household. In that household, so far as sympathy and cheerful welcome are considered, the domestic frequently remains a stranger during the whole term of service, whether short or long. The world is a weary one to her; and seldom in the house can she find any alleviation of her discontent. Her interests and amusements are all outside; and she cannot feel that interest in the family which a faithful domestic ought to feel.

The old-fashioned housekeeper of, say fifty years ago, considered every part of her establishment as worthy of her personal supervision. She was everywhere present, suggesting, directing, and not afraid to take things herself in hand; in a pleasant manner teaching and showing what she wanted done, and how. If the "help" looked worried about her personal belongings, the lady was not above receiving, if not actually inviting confidence. If sunshine instead of clouds was in the kitchen, the mistress could share in the pleasure of the good news whatever it might be. A few words of conversation, a little giving of advice, and a great deal of imparting of encouragement, taught the stranger that she had a judicious friend in her employer, and the great burthen of the feeling of loneliness was lifted off her heart. Without this relief she might have moped through a week or two of dissatisfied and unsatisfactory service, and then left her place to try the same weary experiment somewhere else, as many now do.

It is a rare accomplishment—and pity 'tis, 'tis rare—smoothly to direct a household. But it is not so difficult as it seems; and whoever undertakes it heartily, will find the trouble of "managing" sensibly diminish. Let all the female members of a household, the young by saving labor, the elder by well-timed assistance, unite, and the "co operative system" will be found to work admirably.

The kind treatment of dependants ought to form a part of every child's education; and the young girl who has been educated to be courteous without being rudely familiar, is better prepared to "come out" than she could be by any amount of time and money in a "finishing establishment." Parlor accomplishments are not to be despised; but kitchen accomplishments are quite as important. And every young woman should be so trained that even the fitting of all the servants in the house should not leave her quite in despair. She should not be at the mercy of strangers. Many of the wealthier families in our city are giving up housekeeping in disgust, and betaking themselves to hotels with suites of rooms, in which they are relieved from all the details of provision and management. Even if this were the most comfortable way of living, it is far above the means of most people. The more sensible plan is the plan of "co-operation," as we have tried to explain it, in the foregoing remarks, and under it, while fewer domestics are necessary, the housekeeper has her choice of those few; because she can dispense with all, or retain only one of whom great knowledge or experience is not demanded. In a store or counting room, if there are several partners, the business is managed with fewer salaried clerks. On a farm, while the sons and daughters are at home, there is less demand, as there is less room for "hired help." The more children a prudent farmer has, the richer he is—if they be well-trained children. They all "co-operate." In a family with daughters, sisters, or other female relatives, the same rule might be applied and everybody be the gainer—the daughters in instruction and experience, and the parents in comfort and heart service.—*Public Ledger.*

Among the pitfalls in our way
The best of us wald blindly;
So, men, be wary, watch and pray,
And judge your brother kindly.
—*Alice Cary.*

OUR HEAVENLY CROWN.

BY E.

'Tis told
That grains of gold
God scattereth among
The sands of life, our path along;
And we these grains must gather, one by one,
To form our glorious, our own immortal crown.

Our crown
Hath richer grown,
For every little grain
Our willing, patient labors gain.
Gather them while life's swift moments wing.
Who fails to glean, will ne'er be crowned king.

THE OLD SCHOOL-HOUSE.

I sat an hour to-day, John,
Beside the old brook stream—
Where we were school-boys in old time
When manhood was a dream;
The brook is choked with fallen leaves,
The pond is dried away,
I scarce believe that you would know
The dear old place to-day.

The school house is no more, John,
Beneath our locust trees,
The wild rose by the window's side
No more waves in the breeze;
The scattered stones look desolate,
The sod they rested on
Has been ploughed up by stranger hands,
Since you and I were gone.

The chestnut tree is dead, John,
And, what is sadder now,
The broken grape-vine of our swing
Hangs on the withered bough.
I read our names upon the bark,
And found the pebbles rare
Laid up beneath the hollow side,
As we had piled them there.

Beneath the grass-grown bank, John,
I looked for our old spring—
That bubbled down the alder path
Three paces from the swing;
The rushes grow upon the brink,
The pool is black and bare,
And not a foot for many a day
It seems has trodden there.

I took the old blind road, John,
That wandered up the hill—
'Tis darker than it used to be,
And seems so lone and still;
The birds yet sing upon the boughs
Where once the sweet grapes hung,
But not a voice of human kind
Where all our voices rung.

I sat me on the fence, John,
That lives as in old time,
The same half panel in the path
We used so oft to climb—
And thought how, o'er the bars of life,
Our playmates had passed on,
And left me counting on the spot
The faces that were gone.

—*Old Paper.*

A LIVING LILLIPUT IN LAPLAND.

Captain Hutchinson, of the British Artillery Service, has published in London a lively and charming book, under the title of "Try Lapland; a Fresh Field for Summer Tourists." The Captain and his wife, desiring a summer vacation out of the beaten track of English tourists, fled away to Lapland, and went to see the midnight sun at the extraordinary little hamlet of Quickjock. This picturesque and important town consists of four houses and a church, and may be accepted as the ultimate expression of Lapland. "Picture to yourself," says Capt. Hutchinson, "two Swiss valleys, united together at the head of a lake. The low ground covered with small birch and willow, of exquisitely vivid

green, a beautiful contrast to the dark forest of pine which rises immediately above it. The trees, already diminutive at the base, become more and more stunted as they approach the summit. Where the forest ceases, the shrubby willow, not more than two feet high, commence; and then we find a region where little is to be seen but mosses and lichens, close to the great fell running up to the Norwegian frontier; and, crowning all, a magnificent background of eternal snow. The village, with about thirty wooden houses (including barns and outhouses), all colored bright red, stands on a grassy slope reaching to the water's edge. The tiny church, also of bright red wood, is built on an isolated hillock. Two rivers help to form the lake; the first flows down one valley in quiet grandeur, while the second bursts over immense masses of granite in hurried fury, making three falls of excessive beauty, the roar of which can be heard for miles. Add to all this a clearness of atmosphere peculiar only to the Arctic Circle, and a dryness which never allows of a fog, and this is Quickjock."

Quickjock wore its gayest aspect at the time of this visit. The Lapps had come thither from all parts to attend the service in the little church. St. John's Day is their great festival, on which they commemorate the arrival of summer. The pastor had at least twenty mouths to supply with food, and every morning two boats set off with their nets to the lake for the day's supply. They would return about 11 A.M. with a large quantity of fish; but it was never too large for the consumers, who would each of them eat six pounds as easily as one pound, if set before them. Nothing was ever left for the morrow. They subsist entirely on fish, milk, and rye bread.

The harmless little people pleased the travelers immensely. "There was a nice little couple," says Captain Hutchinson, "we took a great fancy to, and after much consultation, decided to our satisfaction which was the boy and which the girl. As both men and women have long hair, and neither whiskers nor beard, and dress alike in high blue cloth billycock hats, and reindeer-skin coats and leggings, it is almost impossible to distinguish them. We asked them how old they were, and whether they belonged to the school. The laugh was against us, when we found the gentleman to be twenty-six, and the lady, his wife, to be twenty-four,—instead of fourteen and twelve, as we had settled them to be." In this lovely living Lilliput potatoes are the size of walnuts, lamb steaks as big as larks, and a calf about the dimensions of a large cat. No doctor is within a hundred miles, for the Lapps are never ill

until just before they die; and the one doctor even at Lulea is in despair at the want of patients. The effects of the climate are very curious to watch. The summer had set in, and everything seemed to be growing by steam; though Quickjock lies at such an altitude that an hour's walk up any of the mountains round would bring one to perpetual snow. With the warmth come the mosquitoes, which are as troublesome to the natives as to the visitors, and are prepared against by covering the tops of the chimney with sods of earth, and kept out by never opening the windows at all, and the doors only for the indispensable moment of ingress and egress.—*Chicago Tribune.*

HOW A POET LIVES.

W. C. Bryant, in a letter to the *Herald of Health*, thus describes his mode of life:

I rise early—at this time of the year about 5.30; in summer, half an hour, or even an hour earlier. Immediately, with very little incumbrance of clothing, I begin a series of exercises, for the most part designed to expand the chest, and at the same time call into action all the muscles and articulations of the body. These are performed with dumb-bells, the very lightest, covered with flannel; with a pole, a horizontal bar, and a light chair swung around my head. After a full hour, and sometimes more, passed in this manner, I bathe from head to foot. When at my place in the country, I sometimes shorten my exercises in the chamber, and, going out, occupy myself for half an hour or more in some work which requires brisk exercise. After my bath, if breakfast be not ready, I sit down to my studies until I am called.

My breakfast is a simple one—hominy and milk, or, in place of hominy, brown bread, or oat meal, or wheaten grits, and in the season baked sweet apples. Buckwheat cakes I do not decline, nor any other article of vegetable food, but animal food I never take at breakfast. Tea and coffee I never touch at any time. Sometimes I take a cup of chocolate, which has no narcotic effect, and agrees with me very well. At breakfast I often take fruit, either in its natural state or freshly stewed.

After breakfast I occupy myself for a while with my studies, and then, when in town, I walk down to the office of the *Evening Post*, nearly three miles distant, and after about three hours return, always walking, whatever be the weather or the state of the streets. In the country I am engaged in my literary tasks, till a feeling of weariness drives me out into the open air, and I go upon my farm or into the garden, and prune the trees, or perform some other work about them which they need,

and then go back to my books. I do not often drive out, preferring to walk.

In the country I dine early, and it is only at that meal that I take either meat or fish, and of these but a moderate quantity, making my dinner mostly of vegetables. At the meal which is called tea I take only a little bread and butter, with fruit, if it be on the table. In town, where I dine later, I make but two meals a day. Fruit makes a considerable part of my diet, and I eat it at almost any hour of the day without inconvenience. My drink is water, yet I sometimes, though rarely, take a glass of wine. I am a natural temperance man, finding myself rather confused than exhilarated by wine. I never meddle with tobacco, except to quarrel with its use.

That I may rise early, I of course go to bed early—in town, as early as ten; in the country, somewhat earlier. For many years I have avoided in the evening every kind of literary occupation which tasks the faculties, such as composition, even to the writing of letters, for the reason that it excites the nervous system and prevents sound sleep.

My brother told me, not long since, that he had seen in a Chicago newspaper, and several other Western journals, a paragraph in which it was said I am in the habit of taking quinine as a stimulant; that I have depended upon the excitement it produces in writing my verses, and that, in consequence of using it in that way, I had become as deaf as a post. As to my deafness, you know that to be false, and the rest of the story is equally so. I abominate all drugs and narcotics, and have always carefully avoided everything which spurs nature to exertions which it would not otherwise make. Even with my food I do not take the usual condiments, such as pepper and the like.

I am, sir, truly yours,
W. C. BRYANT.

—Exchange.

AN ESSAY ON WRITING.

To express our ideas in writing must evidently be a very difficult thing, seeing how rare an acquirement it is, and how few even of the best writers have acquired perfect facility in the art. Most of them will, I believe, tell you that, after long practice, they still find it nearly as difficult to write well as they did when they began to write.

Yet it seems that certain rules might be laid down for good writing; and at the risk of appearing presumptuous, I will venture to suggest some.

First. Let the subject that you write about be one that you really care about.

Second. Never throw away an adjective.

If you use an adjective that does not add any meaning to the substantive, it is a wicked waste of adjectival power.

Third. Take care that your relatives clearly and distinctly relate to your antecedents. In seven sentences out of ten that are obscure, you will find that the obscurity is caused by a doubt about the relatives.

Fourth. Do not fear repetition. This fear is a frequent cause of obscurity.

Fifth. Avoid parenthesis. A parenthesis can generally be made into a separate sentence.

Sixth. Do not attempt to abbreviate your general statements, or suppose that those general statements will be understood by your reader.

Seventh. Try to master what is the idea of a sentence—how it should be a thing of certain completeness in itself. If it is to consist of many clauses, let them be clauses having a reasonable dependence one upon another, and not sentences within sentences.

Eighth. Attend to method. That alone, if you commit all other faults, will make your writing readable. For example, if you have to treat a subject which is naturally divided into several branches, take them up one by one, and exhaust them. Do not deal with them by bits. Let us call these branches A, B and C. Do not begin by saying only half of what you mean about A, and then bringing in the rest of A after you have treated C, thus making B and C a long parenthesis. . . .

Ninth. Follow the nature of your subject, and let your choice of words, your length of sentences, and all the other delicacies of writing, be adapted to the nature of the subject. To use an admirable simile, which has been used before, let the writing fall over the subject like drapery over a beautiful statue of the human figure, adapting itself inevitably to all the outlines of the body that it clothes.

Tenth. While you are writing, do not think of any of these rules, or of any other rules. Whatever you learnt from rules, to be of service, must have entered into your habits of mind, and into your tastes, and must be a part of your power which you use, as you do the power of nerve or muscle, unconsciously.

—Arthur Helps.

LITTLE SINS.—In a Carolina forest of a thousand acres you can scarcely find a tree that is not dead and crumbling to decay. No fire has swept over it, no lightning scathed those naked, bleaching pines. This ruin was wrought by a little insect's larvæ, no larger than a grain of rice. What a hundred axemen could not accomplish by years of hard labor, this seemingly insignificant insect sent its feeble offspring to perform. One alone

could have little power, it is true, but millions were marshalled, and all the skill of man could not stay their course.

Such is the power of little sins.—*Young People's Helper.*

THE COST OF TRUTH.

Great truths are dearly bought. The common truth,

Such as men give and take from day to day,
Comes in the common walks of daily life,

Blown by the careless wind across our way.

Bought in the market at the current price,

Bred of the smile, the jest, perchance the bowl;
It tells no tales of daring or of worth,

Nor pierces e'en the surface of the soul.

For Friends' Intelligencer.

THE WEATHER.

Our faithful correspondent at the Sante Indian Agency, Nebraska, (Geo. S. Truman,) has again forwarded us a detailed statement of the weather at that place, but received too late for our monthly review.

The same features of *extremes* characterize it as did his previous accounts. viz:

Maximum on the 6th of the month, 90 deg.

Minimum on the 11th of the month, 24 deg.

showing a range of 66 deg. through the month.

He also remarks:

"I would call attention to the unusual temperature of the 6th, and also the storms of the 10th and 14th, which were emphatically the storms of the year, being the *first of rain or snow to wet the ground for at least nine months.*

"We had almost come to the conclusion that it could not rain on our parched soil, but we now feel encouraged to hope for the coming harvest, as our spring grain has thus been enabled to get a good start."

In comparing their temperature with ours it will be seen we had *our* extreme height on the 9th of the month, when the mercury reached 80.55 at Pennsylvania Hospital, though in some localities it reached a higher point.

J. M. ELLIS.

Philada., Eighth month 12th, 1871.

I SLEPT, and dreamed that life was beauty;

I woke, and found that life was duty.

ITEMS.

DEAN STANLEY has published a volume on the Athanasian Creed, showing what various interpretations have been put upon it, and the disadvantages of having such an authoritative statement of belief; maintaining that its use should no longer be made compulsory.

O. F. WINCHESTER, of Hartford, Conn., has offered \$100,000 of land to Yale College, for the purpose of establishing an astronomical observatory in that city, and Walter Phelps has given \$1,200 in gold to the College Library for the purchase of books on Political Economy.

A RECENT number of the "*Saturday Review*" calls attention to a plan for the rescue of the vagrant children in large cities, which has lately been adopted in Scotland. Instead of placing the children in charity schools, or in the shoeblack brigade, they are sent into the country, and apprenticed to mechanics or farmers. This system of transplanting and "grafting" children—as the *Review* calls it—

has been in operation here for many years, and those who have been familiar with the excellent work accomplished among the juvenile street-Arabs of this city by Mr. Brace and his fellow-workers, will be surprised to find that a similar work on the other side of the Atlantic should be regarded by an intelligent English journal as a novelty and experiment.

THE USE of artificial stone is a revival of a lost art, as many of the solidest walls in the old world were built of manufactured material. Mr. Tall, of England, has discovered a process for making stones which are thoroughly impervious and gain solidity by exposure. One of the good deeds of the late Emperor of France, was the encouragement he gave to the manufacturers of artificial stone, of which material he had fifty model houses erected for the poor of Paris. To cheapen durable building material is to multiply homes and hasten the millenium.—*Ec. paper.*

WOMAN PROFESSORSHIP.—The Trustees of Howard University, Washington, D. C., have established a professorship of medicine in that institution to be filled by a woman, and have elected as the first incumbent Bella C. Barrows, who, it is stated, enjoys a high reputation as a surgeon, and is particularly skillful in the treatment of diseases of the eye.

ONE of the marked features of our time is the organization of labor, both in this country and Europe. In former times political, military, and monetary power controlled everything. Capital ruled over every department of life, and while capitalists kept the laborers in a state of poverty bordering on pauperism, the latter were brought into constant competition with each other, and like the pebbles on the beach, gradually ground each other into powder. The diffusion of knowledge and the beginning of culture by means of the press, has already totally changed the position of the two parties in England and Northern Europe and in some portions of America. Laborers begin to see the power of organization; and, moreover, that there is no sort of sense in butting each other's brains out for the pleasure of capitalists. They begin to see that they have interests and sympathies and rights in common, which nothing short of co operation can protect and advance. This is the meaning of the labor unions, which have almost imperceptibly arisen in the more intelligent sections of two continents, and are now rapidly affiliating with each other and forming a network of relations of the most compact and complicated order. If nothing occurs to check the spread of these Unions and Guilds of various sorts, and interrupt their relations with those of other countries, they will hold the governments of Europe and America in their hands, and shape the politics of the world in their own wise or wild way. There is something almost terrific in the spread of this silent revolution under our very feet, while we are absorbed in measures that are bubbles, and theories that are painted breath,—this steady uprising of a new stratum of society to a level which will alter the entire state of things in the world. We apprehend no difficulty from the cause. Of course there will be occasional excesses and indiscretions on the part of labor Unions, as there has been of late in the coal regions. But in time laborers will learn that the laws which govern society, like those of light and gravitation, are not of man's making, and will respect all natural rights, whether of individuals or of communities, as their own. Let them be as faithful in the performance of their duties as they are persistent in demanding their rights, and all will be well.—*Golden Age.*

"TAKE FAST HOLD OF INSTRUCTION; LET HER NOT GO; KEEP HER; FOR SHE IS THY LIFE."

VOL. XXVIII. PHILADELPHIA, FIFTH MONTH 27, 1871. No. 13

EDITED AND PUBLISHED BY AN ASSOCIATION OF FRIENDS.

COMMUNICATIONS MUST BE ADDRESSED AND PAYMENTS MADE TO
JOHN COMLY, AGENT,
At Publication Office, No. 144 North Seventh Street.
OFFICE OPEN from 9 A. M. to 4 P. M.

TERMS:—TO BE PAID IN ADVANCE.

The Paper is issued every week.
The TWENTY-EIGHTH Volume commenced on the 4th of
Third month, 1871, at Two dollars and fifty cents to subscri-
bers receiving it through the mail. To those receiving it
through our carriers, THREE DOLLARS.

SINGLE NOS. 3 CENTS.

It is desirable that all subscriptions should commence at
the beginning of the volume.

REMITTANCES by mail should be in CHECKS, DRAFTS, or
P. O. MONEY-ORDERS; the latter preferred. MONEY sent by mail
will be at the risk of the person so sending.

SOCRATES.

From the recent translation of the "Dialogues of Plato," by Jouett of Baliol College, Oxford, we extract a few pages—the close of the Apology of Socrates. His words of prophetic warning to his unjust judges, of comfort to his friends, of satisfaction at the prospect of death, and of trust in the guidance of his "familiar oracle," are so noble, and so entirely in accord with the experience of the children of the light in all ages, that we earnestly commend them to our readers.

Not much time will be gained, O Athenians, in return for the evil name which you will get from the detractors of the city, who will say that you killed Socrates, a wise man; for they will call me wise, even though I am not wise, when they want to reproach you. If you had waited but a little while, your desire would have been fulfilled in the course of nature. For I am far advanced in years, as you may perceive, and not far from death. I am speaking now only to those of you who have condemned me to death. And I have no other thing to say to them: You think that I was convicted through deficiency of words, —I mean, that if I had thought fit to leave nothing undone, nothing unsaid, I might have gained an acquittal. Not so; the deficiency which led to my conviction was not of words—certainly not. But I had not the boldness or impudence or inclination to address you, weeping and wailing and lament-

ing, and saying and doing many things which you have been accustomed to hear from others, and which, as I say, are unworthy of me. But I thought that I ought not to do anything common or mean in the hour of danger; nor do I now repent of the manner of my defence, and I would rather die having spoken after my manner, than speak in your manner and live.

The difficulty, my friends, is not in avoiding death, but in avoiding unrighteousness; for that runs faster than death. I am old and move slowly, and the slower runner has overtaken me, and my accusers are quick and keen, and the faster runner, who is unrighteousness, has overtaken them. And now I depart hence condemned by you to suffer the penalty of death, and they, too, go their ways condemned by the truth to suffer the penalty of villany and wrong; and I must abide by my reward, let them abide by theirs. I suppose that these things may be regarded as fated, and I think that they are well.

And now, O men who have condemned me, I would fain prophesy to you, for I am about to die, and that is the hour in which men are gifted with prophetic power. And I prophesy to you who are my murderers, that immediately after my death, punishment far heavier than you have inflicted on me, will surely await you. Me you have killed because you wanted to escape the accuser, and not give an account of your lives. But

that will not be as you suppose: far otherwise. For I say that there will be more accusers of you than there are now; accusers whom hitherto I have restrained; and as they are younger they will be more severe with you, and you will be more offended at them. For if you think that by killing men you can avoid the accuser censuring your lives, you are mistaken; that is not a way of escape which is either possible or honorable; the easiest and noblest way is not to be crushing others, but to be improving yourselves. This is the prophecy which I utter before my departure, to the judges who have condemned me.

Friends who would have acquitted me, I would like also to talk with you about this thing which has happened, while the magistrates are busy, and before I go to the place at which I must die. Stay then awhile, for we may as well talk with one another while there is time. You are my friends, and I should like to show you the meaning of this event that has happened to me. O, my judges—for you I may truly call judges—I should like to tell you of a wonderful circumstance. Hitherto the familiar oracle within me has been constantly in the habit of opposing me even about trifles, if I was going to make a slip or error about anything; and now, as you see, there has come upon me that which may be thought and is generally believed to be, the last and worst evil.

But the oracle made no sign of opposition, either as I was leaving my house and going out in the morning, or when I was going up into this court, or while I was speaking, at anything which I was going to say; and yet I have often been stopped in the middle of a speech, but now in nothing which I either said or did touching this matter has the oracle opposed me. What do I take to be the explanation of this? I will tell you. I regard this as a proof that what has happened to me is a good, and that those who think that death is an evil are in error.

Let us reflect in another way, and we shall see that there is great reason to hope that death is good, for one of two things: either death is a state of nothingness and utter unconsciousness, or, as men say, there is a change and migration of the soul from this world to another. Now, if you suppose there is no consciousness, but a sleep like the sleep of him who is undisturbed even by the sight of dreams, death will be an unspeakable gain. For if a person were to select the night in which his sleep was undisturbed even by dreams, and were to compare with this the other days and nights of his life, and then were to tell us how many days and nights he had passed in the course of his life better

and more pleasantly than this one, I think that any man, I will not say a private man, but even the great King will not find many such days or nights, when compared with the others. Now, if death is like this, I say that to die is gain; for eternity is then only a single night. But if death is the journey to another place, and there, as men say, all the dead are, what good, O, my friends and judges, can be greater than this? If indeed when the pilgrim arrives in the world below, he is delivered from the professors of justice in this world, and finds the true judges who are said to give judgment there, Minos and Rhadamanthus, and Aeacus, and Triptolemus, and other sons of God who were righteous in their own life, that pilgrimage will be worth making. What would not a man give if he might converse with Orpheus and Musaeus, and Hesiod, and Homer? Nay, if this be true, let me die again and again. I, too, shall have a wonderful interest in a place where I can converse with Palamedes, and Ajax the son of Telamon, and other heroes of old, who have suffered death through an unjust judgment; and there will be no small pleasure, as I think, in comparing my own sufferings with theirs. Above all I shall be able to continue my search into true and false knowledge, as in this world, so also in that. I shall find out who is wise and who pretends to be wise and is not. What would not a man give, O judges, to be able to examine the leader of the great Trojan expedition, or Odysseus or Sisyphus, or numberless others, men and women too! What infinite delight would there be in conversing with them and asking them questions! For in that world they do not put a man to death for this; certainly not. For besides being happier in that world than in this, they will be immortal, if what is said is true.

Wherefore, O judges, be of good cheer about death, and know this of a truth, that no evil can happen to a good man, either in this life or after death. He and his are neglected by the gods, nor has my own approaching end happened by mere chance. But I see clearly that to die and be released was better for me, and therefore, the oracle gave no sign. For which reason, also, I am not angry with my accusers and condemners; they have done me no harm, although neither of them meant to do me any good; and for this I gently blame them.

Still I have a favor to ask of them. When my sons are grown up, I would ask you, O my friends, to punish them; and I would have you trouble them, as I have trouble you, if they seem to care about riches, or anything, more than about virtue; or if they pretend to be something when they are

really nothing,—then reprove them as I have reprov'd you, for not caring about that for which they ought to care, and thinking they are something when they are really nothing. And if you do this, I and my sons will have received justice at your hands.

The hour of departure has arrived, and we go our ways—I to die, and you to live. Which is better God only knows.

THE MOSS ROSE.—Krummacher illustrates simplicity by the following beautiful fable:

The angel who takes care of the flowers, and sprinkles upon them dew in the still night, slumbered on a spring day in the shade of a rose bush. When he awoke, he said, 'Most beautiful of my children, I thank thee for thy refreshing odor and cooling shade. Could you now ask any favor, how willingly would I grant it!'

"Adorn me, then, with a new charm," said the spirit of the rose bush in a beseeching tone.

So the angel adorned the loveliest of flowers with simple moss. Sweetly it stood there, in its modest attire, the *moss rose*, the most beautiful of its kind.

So the costliest ornaments are often the simplest. There is no gold, nor jewel, nor sparkling pearl equal to the "ornament of a meek and quiet spirit, which is, in the sight of God, of great price."

LETTER FROM JESSE KERSEY.

Respected Friend:—As by thy letter I am informed of the interest thou hast felt in the subject which has been lately agitated in your meeting, it has appeared to me that I might write in answer, that as to the subject itself there appears in my mind no difficulty; but I feel some concern lest my friends should too easily dispute upon it. The foundation upon which society must stand, if it stands at all, is the spirit of condescension and mutual forbearance—any degree of selfishness or opposition must be destructive of its very existence so far as it is permitted to take hold. On this general principle I have ever thought it safe to give my judgment to my friends, and having done so, passively to leave the subject; thou seest therefore that as it respects any question which may be agitated among Friends I can have no point to carry—my judgment being settled that all conclusions which take place in the harmony are right as respects the body which adopts them, though they may be defective as respects the question settled. In the order of Society there is a necessary subordination to be observed, and without which confusion must follow. No question can be finally settled by a Monthly Meeting which does not come

within the limits of its province, and all questions which relate to general practice must of consequence be settled by general consent. The general practice of Society in regard to marriage can never be settled by a Monthly Meeting, but must be guided by the harmonious conclusion of the Yearly Meeting. Let it be supposed that with a small exception in your Monthly Meeting, the Society are uniform in the marriage covenant, and enter into that solemn obligation by the same form of expression. Canst thou conceive that such uniformity should be changed in a Society professing to be led by the one Spirit and formed into the one body, especially where the act is the same, as is the fact in the case of marriage? If every Monthly Meeting within the limits of our Yearly Meeting were to take up the question and deviate in the same degree from each other that ——— appears to have done, what would be the consequence? Would it not produce very disagreeable impressions—and that they would be liable to deviate cannot be doubted by any one who is acquainted with the present state of Society—I therefore conclude that subjects of a general kind are wisely held within the control of the Yearly Meeting; therefore, without entering into the arguments which might be used on either side of the subject, I hold it safe for me to stand subordinate to the present custom of the Society; but should the objections rise in any to the present custom so high as that they might believe it proper to lay them before a Monthly Meeting, and thence to take their regular course to a Quarterly, and so if found of sufficient weight, to a Yearly Meeting, in that stage I should be willing to try the whole subject; at present I do not consider it open for discussion, and shall consequently avoid any specific sentiment upon it. I am satisfied with what has been the uniform practice of Society, and willing to remain so until the subject in the course of order and in the line of my duty shall come before me. If from what I have said thou should be in any manner benefited, thou art welcome to so much of the attention of thy affectionate friend,
J. K.

LOVE TO THE CREATOR.

This feeling, which lies at the foundation of all religion, may exist in two forms, as a sentiment and as a principle. When any impulse arises in the mind, the will must take action upon it; if it approves, and resolves to encourage it, and act according to its promptings, it then becomes a principle. But if the impulse be slighted, or indulged as a mere feeling, and not suffered to work itself out into action, then it dies out, or exists only as a vague and dreamy sentiment. Thus, we

often find persons who intellectually appear to possess this sentiment of love to the Creator, without its exhibiting any active power; and there are those who can speak touching and sublime expressions on the subject, while indulging in the most unworthy conduct. Just as in nature, though no rose could blossom without the vital energy that only the Author of Creation can impart, yet no garden can thoroughly please the eye, without the care of man to dress and to keep it; so the feeling of love to God implanted in the heart must be nourished, if its influence is to be maintained. The feeling of love within us is only available when used by our own free choice and will and determined energy of action. Socrates asked an atheistic friend, if he had not observed that man is never so well disposed to serve the Deity as in that part of life when reason bears the greatest sway, and the judgment is in its full strength and maturity, and that those kingdoms and commonwealths most renowned for their wisdom and antiquity are those whose piety and devotion have been the most observable. Every man must have some ruling principle; every character some ruling force. Goodness can never be negative, or simply innocent. It must be positive and earnest. We love innocence in a child, but strong, active, living virtue is necessary to goodness in a man, and this can only be obtained by the careful cultivation of the living principle of love to the Creator. It is this vital force that gives courage, wisdom and strength; that lightens the most wearisome duties and soothes the saddest sorrows. There are people rigid in battling against heresy, and denouncing opinions different from their own, who are yet utterly lacking in the deep foundation principle from which all such opinions ought to spring. The honorable lawyer ever keeps in view the fundamental principles of legal morality, in all his argument and practice, while the mere pettifogger will quibble about petty technicalities, mistaking them for the essence of the law. Many persons mistake the love of a sect for the love of God. But far above all sects, and all parties, is the love of truth, to which our allegiance should ever be supreme. To cultivate most successfully this principle we must cease to cherish whatever is inconsistent with it. It is a law of our physical nature that the vital force, directed to one function, is by so much absorbed from the others. The *supreme* love of business or pleasure, or honor, will be sufficient of itself to stifle and eradicate this principle, which if cherished and trained, will rise above all other affections, and develop the entire character. The careful regulation of the body, the training of the mind, and the discipline of the

moral faculties, all conduce to this end. The power of habit cannot be overrated, and religious habits are, like the pressure of the atmosphere, silent and uniform, but all-pervading. This love of the Creator, cherished and cultivated as the supreme and ruling principle of life, is the secret of all true happiness. He who possesses it need not fear calamities or reverses, for they will come to him as the wise dispensation of a kind and loving Father who cannot err; and all his joys will be enhanced by the filial gratitude that will pervade his breast.—*Public Ledger*.

IN regard to prayer, Isaac Pennington says "he that utters a word beyond the sense that God begets in his spirit, takes God's name in vain, and provokes him to jealousy against his soul. '*God is in heaven, thou art on earth therefore let thy words be few.*' The few word which the Spirit speaks, or the few still, soft gentle breathings which the Spirit begets, are pleasing to God and profitable to the soul but the many words which man's wisdom affects *hurt* the precious life, and thicken the veil of death over the soul; keeping that parasite which separates from God; which parasite must die, ere the soul can live."

THE DISPERSION OF PLANTS UPON THE FACE OF THE EARTH.

BY LEO HARTLEY GRINDON.

Travellers, on their return from the exploration of distant countries, tell us of every conceivable diversity of climate and of terrestrial surface. Those who have penetrated the Arctic circle describe snows almost perennial, and a region so inhospitable that everything necessary to support human life must be carried thither; those who bring home the browned faces that show the intensity of Indian sunshine tell of arid and sandy plains from which every particle of moisture appears to have been evaporated long ages ago. Some give us accounts of huge mountains where, at mid-summer, the white mantle of mid-winter still lingers undissolved, though at the base it is fervid summer, all latitudes being represented in miniature during the course of a few thousand feet of vertical ascent; others again, tell us of countries where rain does not fall for a dozen years at a time, and when the surface of the ground is covered with crystallized salts. Wonderful is this, whatever the associations under which it is regarded; more wonderful yet is the fact that every spot of earth, hot or cold, high or low, is supplied with vegetation at once appropriate and ornamental. No place is incapable of supporting vegetable life of *some* kind; and though there are districts where grass and trees are never seen, and perpetual desol

tion gives the idea of their being worn out and effete, as happens in the great deserts in the interior of northern Africa—even there it is not so much an absolute incapacity to sustain life, as the want of springs of water that causes the absence of it. In those sweet spots which have become a metaphor for all happy and blessed breaks in the history of trouble and sorrow,—the “oases” of the desert,—water is present, and vegetation is triumphant. Such an “oasis” was Elim, where “there were twelve wells of water, and threescore and ten palm-trees.”

How marvellous, then, in our eyes, does that Divine power and wisdom again become, which provides a fitting vesture of plant and flower for every spot of earth, yea, and a vegetable population for every stream and pond of water, for every lake and every sea, whether salt or tasteless. Hot springs have their vegetable inhabitants no less than cold rivers and chilly cascades. The driest acres of Arabia have plants congenial to them, no less than the broad plains of happy islands like our own, where in spring we may watch “from field to field the vivid verdure run.” It does but carry out beautifully and intelligibly before our very eyes that the Creator not only formed and created the earth, but formed it “to be inhabited.” The idea of “habitation” may seem to signify families of *rank*, and no doubt it does so in the first and inmost meaning, but a large and philosophical and reverent reading of the text, will connect with it the families also of the humbler portion of living nature, or animals in all their variety, and not animals only, but the families of trees and plants. All these as HE created “for His pleasure,” and though we may not understand the mode and the degree of their ministrations, still may we be assured that the flourishing existence of crowds of happy animals—happy, that is, in the enjoyment of their peculiar life—and of myriads of blooming and lovely plants, is an integral part of that Divine pleasure; and thus that the races, in all their diversity of quadrupeds and birds, fishes, and all the little denizens of earth and sea, together with those of all plants, are essentially included in the general term of inhabitants of our planet, and were given to it in order that they might dwell upon it and decorate it. In the present paper we shall endeavor to show that the connection of plants with the surface of our earth is in no respect a less admirable fact than that of their existence, and that the laws and arrangements by which the connection is maintained, rank with the most striking in any department of the science of nature.

The great physical stimuli of vegetable

growth are light and heat—a noteworthy fact when regarded in relation to the correspondence that light and heat bear to the exciting and sustaining physical forces of which we every day feel the glory as Divine wisdom and Divine love. Where there are most heat and light, trees and flowers of all kinds are most plentiful and most splendid—always provided that there is an adequate supply of moisture; where heat and light are deficient, there we see poverty and dwarfishness. In the tropics the forests are more majestic than any one accustomed only to the woods of northern Europe can possibly conceive, many of the trees clothing themselves with leaves as large as dinner-tables; while the flowers that are poured forth from every branch and twig are finer than lilies. By people coming from the extreme north, on the other hand, our English lilacs and laburnums are regarded as miracles of size and loveliness; for in the frigid zone, although there are “flowering plants” with hard and woody stems, answering so far to the idea of shrubs, they never rise more than a few inches above the ground. Dr. Clarke brought from Scandinavia six full-grown birch-trees in his pocket-book; and the greater part of the Arctic willow is to be found, not in the air, but below the surface of the soil! It is much the same at the extreme south of the great American continent. Near Cape Horn, trees which in latitudes a little warmer allow of the traveller walking *underneath* them, become so diminutive, and stand so thick together, as he ascends the mountain higher and higher, that at last he may walk upon their tops!

It is very important to observe here that it is the *combined* agency of light and heat that produces the wonderful results seen in the tropics, again inviting our minds to the contemplation of the grand correspondence above alluded to. Clear and brilliant light often brings out exquisite colors, as happens among the Alps and also in the north frigid zone, where the humble little plants called lichens and mosses are in many cases dyed of the most brilliant hues, purple and gold predominating. Warmth, in like manner, will stimulate vegetable growth in the most astonishing manner, but it is growth not necessarily accompanied by the secretion of valuable substances, such as give quality and real importance to the plant. In English hot-houses, for example, we have abundance of spice trees, those generous plants that yield cinnamon and cassia, the nutmeg and the clove; but although healthy and blossoming freely, they never mature their aromatic secretions. Though they have artificial heat equal to that of their native islands, which burn beneath the sun of the Indian Ocean,

we cannot supply them with similar and proportionate solar *light*. Our cloudy skies shut us in from the full and direct radiance of the sunshine, and wanting this, heat alone will not avail.

Next to be considered, as greatly influencing the distribution of plants over the surface of the earth, is the varying height of its different portions above the level of the sea. It is a very interesting fact, and one familiar to those who travel much, even within the area of the British Islands, that the plants of lofty mountains are, to a considerable extent, quite different from those which enamel the fields that lie at their feet; the cold, the damp, caused by their frequent immersion in the clouds, and the rarer atmosphere, being congenial to different kinds. Mounting the steep slopes of Snowdon or Helvellyn, we soon come to vegetable forms that are never seen in the lands below; and in Scotland the number of such new forms is again greatly augmented. In warm countries, on the other hand, it is very curious to observe how close is the agreement between a certain number of yards of vertical elevation, with the departure so many degrees north or south from the equator. On the mountain-chain of which Mount Ararat is the most important geographical point, all the varieties of vegetation between Syria and the North Pole may be observed by any one patient enough to ascend from base to summit. At the foot of Mount Ararat there are the vine, the olive and the fig, the palm also, and the orange. A little way up, these fruits cease to ripen, and their place is taken by the trees and plants of central Europe; a little further, again, those of Russia and Norway make their appearance; by-and-by the vegetation of Scandinavia becomes predominant, and the crown of the mountain is lost in unmelting snow—a North Pole reached by vertical ascent instead of by a long journey through seventy degrees of latitude. The analogy of a great snow-capped mountain in any tropical country with either the northern or southern hemisphere is most complete. The base answers to the equatorial zone; the middle portion answers to the temperate; and the summit answers to the frigid. In a word, our planet is like two vast tropical mountains sliced off at the base, and so conjoined as to let their summits be the two poles, the arctic and the antarctic respectively.

Soil, and the geological composition of the ground below, have also great influence upon the vegetation of a district; for plants, like animals, have their appropriate food. True, to the great mass of plants, it is a question of little moment. They grow freely in every kind of soil, and hence the colored fantasy of

the fields, in which plants grow inextricably mingled. It remains true, nevertheless, that many kinds require certain mineral constituents in the soil, in order that they may attain perfection; while others prefer certain geological formations, on account of the greater retentiveness of water. It is interesting to see how the plants of widely-separated districts often agree, when the soil is the same, or nearly so. Many of the wild-flowers, for example, of St. Vincent's Rocks, at Clifton, are seen but sparingly, or not at all, after we quit Gloucestershire on our way northwards, until we come close upon the sea-margin of North Wales. Then they are found again, and save for the new landscape, we might almost fancy ourselves breathing the soft sweet air of Durdham Down. The rocks and soil of these two districts are in many respects closely similar, and their products illustrate the harmony that so often subsists between the earth and vegetation. It is no small part of Divine Benevolence thus to distribute and marshal the substances and objects of nature; for to the exiled and expatriated there are sweet and fond sights produced as a consequence of it, that oftentimes make amends for the severance, and, by association, import the distant into the present. What an inducement, moreover, to the study of nature! If the sound of a national melody heard in a far-distant land awakens all tender recollections of the dear fields so many leagues away, no less so does the spectacle of the trees and flowers that were the delight of our youth, when we behold them in the remote spot of our adoption. Anything whatever that animates the soul with a secret pleasure, whether it come through the medium of sight or of sound, of poetry, or science, or philosophy, of thought or of reading, or of intercourse with our fellow-men, or, though last not least, of the little wild-flowers, is a fine expression and result of the Divine Benevolence in little things, in which we should rejoice and for which we should be grateful. One of the most beautiful and ennobling of all joys and satisfactions is the joy of being grateful to God; and nothing makes us more truly human than the accustoming ourselves to find reason for and inducements to such joy in the little and miscalled "insignificant" and trifling things of nature. All are made for our personal enjoyment, and to help us onwards into manliness and humanity of spirit, and they will effect that result if we will open our hearts to their influence.

(To be continued.)

PERSEVERANCE.—Mere courage, even if it be heroic after the human standard, often evaporates under slow discouragement. But

perseverance *under* discouragement, the steady struggling onwards through hours of weakness, the rising upwards still above all doubt and fear, the eye fixed on the coming light in the midst of darkness and perplexity, the hard work continued notwithstanding opposition, distrust, disappointment, failing health, and all this made harder by the bitter consciousness of sin, and by inward temptations which no one can fully understand but the tempted man himself—this holy tenacity of purpose is what we need, in this life of cloud and conflict, as much as anything in the world; and of this holy tenacity the Apostle Paul is an eminent example.—*Dr. Howson.*

Scraps

FROM UNPUBLISHED LETTERS.

I consider it an unspeakable privilege to converse on paper, when we can pour forth the tender feelings which constitute the blessed *realities* of our being. During my late indisposition, I have been employed in tracing some of the operations of *imagination* that are almost continually passing in the human mind. We form images of absent and distant things, by comparison with something once known or previously imagined, and taken for granted. But as Edward Stabler said, "Nothing gives a true revelation of a thing, but the thing itself." All imaginations are all of giving a knowledge like the presence of the object. I am induced to believe that much of the disquietude and unhappiness of human life arises from the improper indulgence of the powers of imagination. Having arrived at this conclusion, I began to enquire what constituted realities, substance, actual enjoyment and certain knowledge. After tracing the operations of our animal senses, and the evidences of the knowledge of natural objects, a further enquiry presented itself in relation to the *realities* and the *certain knowledge* of mental or spiritual things. This enquiry resulted or led, in the first place, to the testimony of our mental feelings. We *know*, we *are sure* we *love one another*. We are certain of the feelings of humility, of sympathy, of mercy, of gentleness, and a multitude of other qualities, which we know are good. Their evidence is in the feelings themselves, when present, and when supplanted by admitting others of an opposite character, we have a certain ground for comparison within ourselves. Here, if the powers of imagination operate, the images found in the mind of what constitutes substantial good or evil will, under the radiance of Divine Light, be likely to be

correct; but it is only as this Light makes manifest what is good, that we have a knowledge of goodness, and this is thus spiritually discerned by the exercise of mental vision or spiritual perception. We are conscious that we *sometimes*, at least, have these evidences of good *in ourselves*, and therein a degree of the *reality* of happiness or present enjoyment. But at other seasons we are conscious of a lack—a blank—or the actual existence of very different feelings—gloom, anxiety, fear, care, depression, leading toward despondency, fretfulness, impatience or murmuring. We are ready to conclude these are realities also, and that we are left to ourselves—"tossed and not comforted." Now suppose we carefully examine the operations of the powers of imagination in ourselves. We believe the sun *always shines*, though we do not always see and enjoy its light. We account for this from well-known causes of obstruction to his rays falling on us—and do we not also believe, from undeniable evidences of the feelings and perceptions of goodness once known, in ourselves, that the Fountain of divine light, life, goodness, power and love, is always flowing, and flowing towards us, as recipients of itself? Let the busy, active powers of imagination *now* be quiet—or let them centre to this inexhaustible Fountain, and the mind exercise itself in patient *waiting* and *hoping* for the enjoyment of the realities of goodness. In these seasons of trial, when darkness and doubt, and gloom and fretfulness, seem ready to swallow us up, as amidst the billows and waves that "come in, even unto the soul," how excellent is the watchword of caution, not to indulge the powers of imagination to our disquietude and loss—"Take no thought for the morrow." Again: "In your patience possess ye your souls." Again, look at David's experiment, "I waited patiently for the Lord, and He inclined unto me, and heard my cry. He brought me up also out of an horrible pit," &c. May calmness and confidence in the Divine Arm be the clothing of thy meek and patient spirit. Perform thy duties towards thy precious children faithfully, and leave the rest to Him, whose blessing upon thy care and concern I have seen to my comfort. This is thy province, to watch over His own seed in the garden of their sweet innocent hearts. Yes, in the delightful work of counting up good things possessed, we may reckon His image remaining as undefiled in your lovely offspring. I hear from the city nearly every day. Indeed, the state of it, and the cholera, seem the topics of general interest and converse. My prayers centre in the desire that the ears of the people may be open to Divine instruction, intended to be deeply impressed

by this awful voice "that crieth to the city," and oh that there may be "men" and women "of wisdom," in city and country, "that may see His name," that may "hear the rod and Him that hath appointed it." And I verily believe many ears are opening to hear, and many hearts are brought into deep searching and examination. Oh, that it may be effectual; that this awful visitation may humble the stout hearts of those who have been soaring above the pure Witness. The day surely calls for mourning, fasting and prayer.

FRIENDS' INTELLIGENCER.

PHILADELPHIA, FIFTH MONTH 27, 1871.

In our last issue we gave a short abstract of the proceedings of Philadelphia Yearly Meeting up to the evening of Second-day. We are unable this week to present a detail of the very interesting proceedings, but the solemnity and harmony which characterized both branches, was cause of gratitude to many hearts, and the gathering was thought to be larger than at any former period since the opening of the house on Race St.

An account of the labors of the Representative Committee with the Legislatures of several States on the subjects of intemperance and military requisitions, and the report of the Committee appointed to the charge of Indian tribes in Nebraska, added to the interest of the proceedings. We understand that 7000 copies of the extracts of men's meeting, and 4000 of the women's meeting will be published this week, and when received we shall give some further account.

DIED.

PARRY.—At Richmond, Ind., on the 1st of Ninth month, 1870, Joseph Parry, aged 81 years and 9 months; a member of White Water Monthly Meeting, formerly of Montgomery county, Pa.

FIELD.—On the evening of Third month 18th, at his residence at Purchase, N. Y., Thomas C. Field, aged 65 years; a member of Purchase Monthly Meeting. His last illness brought with it no fear. He requested all to be quiet, and in that serene state of mind passed away.

TWINING.—In Baltimore county, Md., on the 16th of Fourth month, 1871, Horace B., son of D. H. and Alice P. Twining, and grandson of J. P. and Sarah Baynes, in his 3d year.

DIXON.—On the 23d of Fourth month, Elizabeth S., wife of Isaac F. Dixon, in the 62d year of her age; a member of Baltimore Monthly Meeting. This dear Friend had suffered many bereavements, but through them all there shone forth a resignation

that was beautiful and instructive to witness. In the valley of affliction, her chastened spirit had drunk deeply of the fountain of Divine instruction, until the inward spiritual life seemed to have swallowed up in a large measure the frailties of the flesh, shedding a gentle refreshing influence upon those with whom she mingled. Life's journey thus performed, its close was peace and calm assurance.

EWER.—In Mendon, on the 4th of Fifth month, 1871, Hannah P., daughter of Isaac G. and Lydia Ann Ewer, in the 21st year of her age; a member of Rochester Monthly and Mendon Particular Meeting. This dear young Friend was suddenly called to her final home. Her quiet solid deportment, and her light estimation of the vanities which so oft captivate the young mind, have given us a well-grounded hope that she has entered into the rest prepared for the righteous.

JANNEY.—At his residence in Warren county, Ohio, on the 4th of Fifth month, 1871, Aaron Janney, in the 88th year of his age; a member of Springboro' Monthly Meeting, Warren Co., O., and formerly a member of Goose Creek Monthly Meeting, Virginia.

LUKENS.—On the 11th of Second month, 1871, Esther, widow of the late George Lukens, in the 84th year of her age; a member of Gwynedd Monthly Meeting.

WALTERS.—Near Fredericktown, Knox county, Ohio, on the 14th of Second month, 1871, Elizabeth, widow of the late Mahlon Walters, in the 76th year of her age.

WILLITS.—Of typhoid fever, on the 3d of Fifth month, 1871, Esther, widow of William Willits, late of Maidenecreeke township, Berks Co., Pa., in the 81st year of her age. She was a daughter of Thomas and Hannah Lightfoot, and was a member of Exeter Monthly Meeting, held at Maidenecreeke.

As the General Conference meets in New York on Second-day evening, the time of holding the Annual Meeting of "The First-day School Association of Friends of New York Yearly Meeting," is changed from 4th-day evening to 1st-day evening, Fifth mo. 28th. The meeting will be held in the meeting-house on 15th St., commencing at 8 o'clock. All interested in the cause of First-day Schools are cordially invited to attend.

The Board of Managers will meet at the same place on Seventh-day evening, at 7½ o'clock.

JOHN L. GRIFFEN, *Clerk of Exec. Com.*

FIRST-DAY SCHOOL GENERAL CONFERENCE.

This organization will meet at Friends' Meeting-house, Rutherford Place, New York, on Second-day evening next, 29th inst., at 8 o'clock. All interested are invited to attend.

T. CLARKSON TAYLOR, } *Clerks.*
LYDIA C. STABLER, }

P.S.—If fifty or more Friends notify T. H. Speakman, 26 N. 7th St., Philada., not later than Sixth-day, 26th inst., of their intention of attending New York Yearly Meeting, excursion tickets can be procured for four dollars the round trip.

A meeting of the Executive Committee of the First-day School General Conference will be held at Rutherford Place Meeting-house, New York, on Seventh-day evening, the 27th inst., at 8 o'clock.

EDWIN CRAFT, *Clerk.*

SWARTHMORE COLLEGE.

The list of students in this Institution for the coming year is already filling up, and it is the de

sire of the Board to give the preference to the children of Friends and stockholders. In order to secure this end, application should be made as soon as possible.

EDWARD H. MAGILL, *Principal*.

For Friends' Intelligencer.

THE YOSEMITE VALLEY, CALIFORNIA.

BY THOMAS FOULKE, OF NEW YORK.

(Continued from page 188.)

Above Hutching's hotel the valley breaks into three cañons, and the Merced river into three forks. The North Fork passes through Mirror Lake, which is the very embodiment of transparency. It reflects trees, rocks, mountains and sky with almost perfect exactness. One can hardly believe these reflections to be images and shadows. On looking into this natural mirror, one might feel almost ready to shrink back from the lake, lest he should fall over the edge into the inverted dome of the blue sky. On the middle or main fork of the river are the Vernal and Nevada Falls, and the trail in reaching them is often difficult and perhaps dangerous of ascent, along dizzy shelves, and up sharp rocks and declivities, and along the brow or edge of giddy precipices rising one thousand feet to the mile. It is much more fearful and dangerous than anything which I have ever seen or travelled over in the Alpine regions of Switzerland. At the upper end of the vast gorge you see a half dome of mountain, called the South Dome, or Tis-sa-ack, signifying "Goddess of the Valley," towering up six thousand feet, or more than a mile, at a single stretch. It was originally one vast granite mountain, and geologists perhaps would say was riven from top to bottom by some ancient convulsion of nature, and one half of it went on the other side of the chasm and disappeared. With feeble and limited sense of Divine Power, and deeply and solemnly impressed with human littleness, one could only gaze in silence, reverence and awe, occasionally turning away to rest from the oppressive magnitude of the scene. In winter, the sun rises in the valley at 1½ P.M., and sets at 3½ P.M., giving to the then inhabitants of this wonderful gorge the delightful luxury of only two hours day. Mails and news from the outside world they receive only once a week in this inclement season; they are brought in by faithful Indians. The beauty of the valley was marvellously lovely by moonlight, and it was our privilege to see it thus. Boulders from above, in the winter months, breaking from the summits, roll down thundering and crashing and filling the valley with their reverberations. The granite rocks and mountains which surround this wonderful gorge or valley are its most striking feature. The nine granite walls, which range in altitude from three to six thousand feet, are the

most striking examples on the globe of the masonry of nature. Their dimensions are so vast that they utterly outrun our ordinary standards of comparison. Immense mountain walls, upright and nearly perpendicular, tower up to the astounding height of nearly two-thirds of a mile. These stupendous works of nature almost painfully impress the mind with their vastness. The Cathedral Rocks have two huge turrets, which are about 3000 feet high. Their Indian name is "Large Acorn Cach." "Sentinel" towers alone, grand, solemn and hoary, rearing its mighty dome four thousand feet upwards towards the blue arch of heaven. The gigantic "North Dome" is almost as round and perfect as that of the cupola of the National Capitol, or of Saint Paul's at London. It is nearly four thousand feet high, and its Indian name is To-coy-ae, which signifies "Shade to Indian Baby Basket." The "Three Brothers," Pom-pom pa-sus, is a three-pointed mass of solid granite, four thousand two hundred feet in height, with corresponding dimensions. Hardy cedars and pines, thrusting their roots into the crevices, are apparently growing out of its unbroken stone. El Capitan, the mighty, is the greatest and grandest of all. No mosses or fringes are on its closely shaven face. No tenacious vine can fasten its tendrils to, or climb that stupendous wall. There it stands, as for ages it has stood; and there it will stand, solemn, grand, measureless, indestructible, until the "heavens shall pass away, with a great noise, and the elements shall melt with fervent heat." Its Indian name is Tu-toch-ab-nu-lah, which signifies "Great Chief of the Valley." It is three thousand three hundred feet high, and presents a broad mass of bare, solid, perpendicular granite more than half a mile in dimensions, or two-thirds of a mile in height, and corresponding in magnitude. Surely it must be the most marvellous pile of granite in the world. Next we come to speak of the "Cap of Liberty," cone-shaped and symmetrical, and peering up four thousand six hundred feet heavenward. "Mahta" is its Indian name, signifying martyr mountain. Mount "Starr King" looms up grandly five thousand six hundred feet. And lastly the "Clouds' Rest," as its name imports, is away up towards the blue arch of heaven, among the clouds, the crown of all this cluster of the Sierras, sitting queenly as upon a throne, at the astounding and bewildering height of six thousand four hundred and fifty feet above the valley, and ten thousand four hundred and fifty feet above the level of the sea.

Yosemite signifies "Large Grizzly Bear." This was the name of a tribe of Indians who inhabited the valley. In 1851 they were hostile, and the whites pursuing them into the

valley to their home and stronghold, discovered this crowning wonder of the world. Finding in one of the lodges a very aged squaw, they inquired how old she was. The Indians replied that when she was a girl, "these mountains were hills." Before this stronghold was brought to light, the Indians would laugh, and say they had many places to flee to where no white man could come. Now they exclaim, "Where can we go that Americans do not follow us?" A few of the tribe only remain inhabitants of the valley. They are docile and peaceful.

The forests present long and everchanging vistas for the eye to penetrate, on the heights above as you approach the valley, and are composed mostly of yellow pine, white pine, sugar-pine, silver pine, arborvita and cedar; and they surpass in loveliness and beauty anything of the kind to be found in any other part of the globe. These forests, on elevated table-lands, are not exceeded for timber by any other portion of the State. Those near Clark's Ranch are four thousand one hundred and eighty feet above the sea level, and the Mariposa Grove of Mammoth Trees is fifteen hundred feet higher. As you ride along, glimpses of the distant Sierras meet the view, upon whose lofty peaks, and in whose shadowy gorges, snows lie eternally slumbering. You are now seven thousand feet above the level of the sea, the highest portions of the trail being seven thousand five hundred feet. Presently you come to the "Hermitage," a hollow sugar-pine tree, which was the home of a solitary woodsman for nearly three months. One night he vacated suddenly in a storm, fearing his singular house might blow over, and its somewhat romantic tenant be buried beneath its ruins. On the route to the valley by the "Big Oak Flat," and "Hirder's Mill," you see growing on an immense rock the largest oak tree in the world. The forests which meet the eye, as you pass along, are gems of beauty, and to my fancy the silver pines are the most charming of all. The woodpeckers have been busily engaged at work, and have bored an innumerable quantity of holes in the bodies of the yellow pine trees, with the precision almost of an auger, and have deposited in each hole an acorn nicely fitted in. I brought one away with me, which I took from one of the apertures, as a curiosity. Whether this is a winter's store of food, or what it is placed there by the bird for, is a question for naturalists to determine. It is certainly a very curious thing, and a very remarkable phenomena.

A few years since, this whole region, the Yosemite Valley and the Groves of Mammoth Trees, was granted by the United States Government to the State of California, and it will

be preserved inviolate forever, for the use of the public. It is fast becoming an object of exceeding interest to the tourist and pleasure and health seeker alike; and as its curious and amazing wonders become better known, and its health-giving properties appreciated; and as the means of access into the valley are improved, the interest the public will take will be greatly increased. The most interesting period to visit the valley would be in Fifth or Sixth month, before the roads become very dusty, and when the streams flowing into it, are filled from the melting of the snows of the Sierras, and the numerous falls, like cataracts from the clouds, produce their grandest effects. Before reaching the immediate brink of the mighty gorge, and its walled precipices of such vast and wondrous perpendicular heights, the tourist by making a short detour from the main trail, between Hodgden and Tamarack Flat, will find a small grove of big trees, called the Tuolumne South Grove. It will well repay a visit by the traveller, for the extra time and exertion it will cost him. This grove, though small, is interesting. Two of the trees, named the "Siamese Twins," growing from the same root, measure one hundred and fourteen feet in circumference, with corresponding height and proportions. We saw a stump of one of these big trees, the trunk having been broken away, which had probably been before the removal of the bark, from thirty-five to forty feet in diameter. The height of the trees in this grove is not equal to that of the trees in the Calaveras Grove, several of which measure over three hundred feet; and one that has long since fallen, called "The Father of the Forest," has an estimated height of four hundred and fifty feet. As you approach the brink of the mighty basin, the scenery becomes bold and grand in the extreme, and you seem transfixed in awe as you stand upon the "Stand-point of Silence," and view the sublime and awful majesty of nature's panorama spread out before your admiring and wondering gaze. The feelings awakened and called into exercise are such as are beyond the power of expression. From such feelings arose the name the point bears. And in view of it one might fittingly exclaim with the poet: "Come then, expressive silence, muse his praise." On the opposite side is the point or path of entrance by the Mariposa route, and a feeling akin to that which named this point, has given the latter the name of "Inspiration Point." From the summit or stand-point in question to the valley below, is a distance of seven miles, by a precipitous trail or bridle path, descending four thousand feet. This trail has already been described, and is by many persons who have travelled it con-

sidered a hard road to travel. When you get into the valley, and come calmly to meditate upon its sublime grandeur, and its enchanting richness of beauty, you must acknowledge that it surpasses expression. You are almost dumb with astonishment. You can scarcely realize what your eyes behold. The mind cannot take it all within its grasp at once, or fully comprehend and appreciate it. Several eminent writers have attempted descriptions, but all have despaired of giving expression to the awe-inspiring feeling which fills the mind of the beholder of the mighty chasm. Bierstadt and Hill have painted it with master touches of the pencil, and their works adorn the choicest galleries of the fine arts. Watkins and other photographers have photographed it with remarkable accuracy and artistic skill; and these, as writers all agree, give perhaps the nearest idea of the majesty of the scene that can be presented, and yet they fall immensely short, and convey but a faint conception of this wonderful picture of nature; in fact, they are dwarfed into littleness in comparison with the great reality itself. The greatest artists have almost invariably failed in conveying depth from a high stand-point. It may be earnestly wished that this defect, in the near future may, in some measure at least, be remedied. But until that period shall arrive, we must be as contented as we can with the present condition of the art.

From the summit of "Glacial Point" is a projecting or overhanging rock, which, seen from the valley below, looking upward, apparently extends out three or four feet, but which we find, when standing by it, is over thirty feet beyond the nearly vertical wall. From this point Watkins, the photographer, once went out near to the brink, and from it took one of the finest views of the "South Dome" and the country beyond, ever obtained. On the margin of this projecting rock, you go out and look down and into the awful abyss below. Large trees are dwarfed into comparative insignificance. A little spot, as it appears to be from the great distance, or clump of trees in the valley, is Lemon's apple orchard, of four acres, containing five hundred trees, twenty feet apart. The bright spot or speck away among the far-off mountains, which throws out its silvery splendor in a little cañon just discernable, is "Mirror Lake," with the picturesque grandeur of its mountain walls, much of its beauty consisting in the reflections of its glorious surroundings in the calm of its glassy bosom. "Mirror Lake," or as it is sometimes called, Hiawatha, is nearly perfect as a mirror, and at evening time, when there is no ripple on its fair bosom, it reflects rock, mountain, sky and tree most

charmingly. The South Dome, always pre-eminently conspicuous in any scene near to or within the valley, overshadows and eclipses other objects, and claims a monopolizing share of admiration from the beholder. The great North Dome and the Colossal Arch, or the Royal Arches on its northern perpendicular side; the Washington Column or the Watching Eye looking down on the lake; the Clouds' Rest; the Cap of Liberty; Mount Starr King, and the great Yosemite itself, are all conspicuous objects here visible. On the right, in the deep gorge of the mountains, are to be seen the magnificent and grand Nevada Fall, and a little further on the bright and sparkling Vernal Fall, flashing out their silvery brilliancy beneath your feet, whilst mountains piled on mountains, peaks on peaks, and crags on crags, of every shape, towering up to frowning and dizzy heights, stand guard and sentinel on every side. The scenery is grand and mighty beyond all description, and far transcending all praise, almost baffles and bewilders the senses. The vast ranges and high prominent mountain peaks in the far off distance are the Sierra Nevadas, and they extend as far as the eye can reach, looming and peering up towards the blue arch above them, to the amazing height of twelve and even thirteen thousand feet above the sea level. Sentinel Dome is near to Glacial Point, and is bare of vegetation, except perhaps one or two stunted pines, which are growing there, on the top of one of which, standing as it does on the very topmost part of the dome as a sort of crown, the writer with a young friend climbed up and left their cards there, and had a superb and glorious view of the mighty chasm and its amazing surroundings, together with the far-off and snow-crowned Sierras, which view is altogether different from that at Glacial Point, only a short mile distant. Before the admiring and wondering beholder now lies the backbone of the Sierra Nevada mountains, some thirty miles distant, and every prominent peak of them distinctly visible in a clear atmosphere for fifty miles or more. The great Yosemite Fall, with the country above it, through which it runs before making its wonderful leap; its singular groups of rocks, and forest-clad banks and ravines, are all spread out beneath your feet; and stretching the vision far, far away, you can look upon the broad, rich and beautiful valleys of the San Joaquin, and Sacramento, and plainly discern, through the dry atmosphere, the Coast Range mountains, one hundred and forty miles away, and near the Golden Gate. Time should be taken to realize its almost infinite glories and wonders. In order to do this, some tourists form camping out parties, and provide themselves with

suitable outfits for the purpose. The glorious scenes which might be witnessed on such excursions, may yet rank among the greatest charms of visiting the Yosemite Valley.

(To be continued.)

THE most dangerous animal among wild beasts is the slanderer—among tame animals, the flatterer.—*Diogenes.*

A MOMENT AT A TIME.

It is said by a celebrated modern writer, "take care of the *minutes*, and the *hours* will take care of themselves." This is an admirable hint, and might be very seasonably recollected when we begin to be "weary in well doing" from the thought of having a great deal to do. The *present* is all we have to manage: the past is irrecoverable; the future is uncertain; nor is it fair to burden one moment with the weight of the next. Sufficient unto the *moment* is the trouble thereof. If we had to walk a hundred miles, we still need set but one step at a time, and this process continued, would infallibly bring us to our journey's end. Fatigue generally begins and is always increased by calculating in a minute the exertions of hours.

Thus, in looking forward to future life, let us recollect that we have not to sustain all its toil, to endure all its sufferings, or encounter all its crosses at once. One moment comes laden with its own *little* burden, then flies, and is succeeded by another no heavier than the last; if *one* could be sustained, so can another, and another.

Even in looking forward to a single day, the spirit may sometimes faint from an anticipation of all the duties, the labors, the trials to temper and patience that may be expected. Now this is unjustly laying the burden of many thousand moments upon *one*. Let any one resolve to do right *now*, leaving *then* to do as it can, and if he were to live to the age of Methuselah, he would never err. But the common error is, to resolve to act right *to-morrow* or *next time*; but *now*, just this once, we must go on the same as ever.

It seems easier to do right to-morrow than to day, merely because we forget that when to-morrow comes, *then* will be *now*. Thus life passes, with many, in resolutions for the future which the present never fulfils.

It is not thus with those, who "by patient continuance in well doing, seek for glory, honor, and immortality;" day by day, minute by minute, they execute the appointed task to which the requisite measure of time and strength is proportioned: and thus, having worked while it was called day, they at length rest from their labors, and their "works follow them."

Let us, then, "whatever our hands find to do, do it with all our might, recollecting that *now* is the proper and the accepted time."—*Jane Taylor.*

A NEW LUTHER.

Dr. Dollinger has boldly thrown down the gauntlet at the foot of the Pope, and we expect to see stirring times among the German Roman Catholics. Some are even so sanguine as to predict a new reformation on broader principles than those of Luther. Be this as it may, it is certain that the Roman Catholic church will have a shaking in Germany such as it has not had since the bold protests of the Erfurt monk. The leader of this new reform is a man of unimpeachable integrity, eminent learning and firmness of will. Dr. Dollinger is one of the foremost scholars of his age, and is equally distinguished for his clear, strong intellect as for the extent and variety of his learning. For some time he has been known as the open champion of a liberalized Roman Catholicism, and his weighty words have commanded the respect, while they have roused the anger, of the Vatican. He has made no secret of his rejection of the dogma of Papal Infallibility, and even the decree of the General Council failed either to convince or silence him.

The ecclesiastical authorities have resolved to bring the heretic to terms, so the Archbishop of his diocese called him to account. He delayed a short time his reply, and the faithful saw in this signs of faltering. But they mistook their man. He used the interval to prepare a reply which is a crusher. Unlike many others, he has no idea of eating his words, but has sent forth a letter which will have a deep influence among German Roman Catholics.

He offers to prove before the German bishops, who are expected to meet at Fulda, that the dogma of Papal Infallibility is neither Scriptural nor known to the church of the first thousand years; that the majority of the Council was misled by garbled quotations; that in the fifteenth century two General Councils and several Popes decided the matter the other way, and that their decision was promulgated formally by the Councils and confirmed by the Popes; and finally, that obedience to the new dogma is inconsistent with obedience to the laws of States that are both European and Catholic.

He also writes as a German patriot as well as a Romish disciple, and says that if this dogma were accepted it would sow the seeds of incurable disease in the body of the modern German State.

Dr. Dollinger is no hot-brained preacher,

guided by the excitement of popular enthusiasm. He is the greatest living historian of the church, and occupies one of the chief University chairs. His present conclusions are the result of careful thought and long study. If summoned before the German bishops at Fulda, or a conference of German theologians at Munich, he will confront them as did Luther at the Diet of Worms. In breadth of learning and depth of intellect he is superior to Luther, but with not a jot less of firmness or boldness of purpose. The storm is surely gathering, but he is preparing for it. At the close of his letter to the Archbishop he uses these words: "As a christian, as a theologian, as an historian, as a citizen, I cannot accept this doctrine. Not as a christian, for it is irreconcilable with the spirit of the gospel, and with the plain words of Christ and of the Apostles. It purposes just that establishment of the kingdom of this world which Christ rejected; it claims that rule over all communions which Peter forbids to all and to himself. Not as a theologian, for the whole true tradition of the church is in irreconcilable opposition to it. Not as historian can I accept it, for as such I know that the persistent endeavor to realize this theory of a kingdom of the world has cost Europe rivers of blood, has confounded and degraded whole countries, has shaken the beautiful organic architecture of the elder Church, and has begotten, fed and sustained the worst abuses in the Church.

'Finally, as a citizen, I must put it away from me, because by its claims on the submission of States and monarchs, and of the whole political order under the Papal power, and by the exceptional position which it claims for the clergy, it lays the foundation of endless, ruinous dispute between State and Church, between clergy and laity. For I cannot conceal from myself that this doctrine, the results of which were the ruin of the old German kingdom, would, if governing the Catholic part of the German nation, at once lay the seed of incurable decay in the new kingdom which has just been built up."

Of course the church will use every means to crush him. He will not only be expelled from the Catholic fold, but no stone will be left unturned to oust him from his professorship. Fortunately the civil authorities refuse to dismiss him. The Minister of Public Worship has already been entreated to expel him, and all others who reject the dogma of Papal Infallibility. But he very plainly gives the ecclesiastics to understand that they must not interfere and encroach on the civil authority. The King of Bavaria has written a letter to Dr. Dollinger, deploring

the sentence of excommunication against him. It is even rumored that he intends to appoint Dr. Dollinger Minister of Public Worship. There is no doubt the larger proportion of German civilians sympathize with him, so far, at least, as to deprecate any ecclesiastical action against him. They favor free discussion.

Thus the matter stands.—*Christian Register*.

TRUTHFULNESS.

Of all happy households, that is the happiest where falsehood is never thought of. All peace is broken up when once it appears there is a liar in the house. All comfort has gone when suspicion has once entered—when there must be reserve in talk and reservation in belief. Anxious parents, who are aware of the pains of suspicion, will place general confidence in their children, and receive what they say freely, unless there is strong reason to distrust the truth of any one. If such an occasion should unhappily arise, they must keep the suspicion from spreading as long as possible, and avoid disgracing their poor child while there is a chance of its cure by their confidential assistance. He should have their pity and assiduous help, as if he were suffering under some bodily disorder. If he can be cured, he will become duly grateful for the treatment. If the endeavor fail, means must of course be taken to prevent his example from doing harm; and then, as I said, the family peace is broken up, because the family confidence is gone. I fear that, for some cause or another, there are but few large families where every member is altogether truthful. But where all are so organized and so trained as to be wholly reliable in act and word, they are a light to all eyes and a joy to all hearts. They are public benefits, for they are a point of general reliance; and they are privately blessed within and without. Without, their life is made easy by universal trust; and within their home and their hearts, they have the security of rectitude and the gladness of innocence.—*Harriet Martineau*.

MISERIES OF WAR.—If three men were to have their legs and arms broken, and were to remain all night exposed to the inclemency of the weather, the whole country would be in a state of the most dreadful agitation. Look at the wholesale deaths on the field of battle, ten acres covered with dead, and half dead, and dying; and the shrieks and agonies of many thousand human beings. There is more of misery inflicted on mankind by one year of war than by all the civil peculations and aggressions of a century. Yet it is a state into which the mass of mankind rush with

the greatest avidity, hailing official murderers in scarlet and gold and cock's feathers as the greatest and most glorious of human creatures. It is the business of every wise and good man to set himself against this passion for military glory, which really seems the most fruitful source of human misery.—
Advocate of Peace.

“A CHILD never learns to day's lessons better for fretting over the neglected task of yesterday.”

EXTRACT FROM “BY THE RIVER.”

BY M. E. ATKINSON.

How calm and smooth the river's tide. The sails
Glide slowly down as slow the daylight fails.

Far must they roam.

They all are outward-bound—but I, to-night,
Behold my spirit's haven just in sight,
My soul's sweet home.

See! just beyond the harbor's outer bar,
The beacon light is burning like a star

With steady beam;

And as my soul looks forth, with deep delight,
It sees hope's blessed beacon shining bright,
Across death's stream.

And, gazing thus, my thoughts have wandered back,
With sad and joyful memories, o'er the track
Of many years;

Not all their bitter sorrows to renew,
Nor all their hours of gladness to review,—
Their hopes and fears,

But to retrace my spirit's inner life—
Born amid grief, grown strong through toil and strife,
And calm through pain—

From its first well-springs, trickling cool and clear
To these calm depths, whose placid currents near
The boundless main.

The voices of the Past which call to me,
The solemn echoes from the Unknown Sea,
All whisper “Peace!”

This heavenly peace, which like a river flows,
And bathes my soul in its Divine repose
Till all cares cease.

It is the Saviour's gift; His words were true,
“Not as the world gives, give I unto you!”
In early life

My soul went begging at its churlish gate:
It flung me wealth and fame, and gilded state,
With care and strife.

But still my hungry heart implored for aught
To satisfy its longing; “There is naught,”
I cried, “in these

Of medicine for secret ache—of rest
For weariness—of balm for wounded breast
That prays for ease!”

Thus at the world's broad gate my spirit cried,
And waited drearily, but none replied,
Nor gave to me.

I found it had no power to heal or bless,
And thus I learned its utter hollowness
And vanity.

Then came an angel to me in disguise,
Whose name was Sorrow. Tender were his eyes,
Though harsh his hand;

And slowly my reluctant soul he led
Within the hearing of a Voice which said,
With sweet command,

“Come unto me, and I will give you rest!”

How could I but obey the kind behest?

And as I turned,

Some door of heaven unbarred to flood my way
With glimpses of the everlasting day,
Such glory burned.

Then in my gladness, “This is peace,” I cried,
But Life replied, ere many days had sped,

“Not peace, but hope!”

For while I looked, the transient gleam was gone,
As clouds across blue rifts are drifted on
In heaven's dark cope.

Ah! then I felt the galling chains of sin,
Ah! then I found that peace is hard to win

With such a foe;

But as I strove with evil, strength was given,
And still my steady feet were turned toward heaven,
Though faint and slow.

And thus I struggled on from day to day,
Until I felt the hostile hosts give way;

The pressure yield;

And then I knew a victory was won,
And I had conquered peace at last upon
Life's battle-field.

Not that the strife was wholly ended yet,
Nor triumph perfect. Death alone can set
On mortal brow

The victor's radiant crown. Yet peace within
Is won by conquest over self and sin,
E'en here and now.

LET parents make every possible effort to have their children go to sleep in a pleasant humor. Never scold or give lectures, or in any way wound a child's feelings as it goes to bed. Let all banish business and every worldly care at bed-time, and let sleep come to a mind at peace with God and all the world.

THE CAVE OF BELLAMAR, IN CUBA.

Whatever advantage, as to extent, other caves may possess over Bellamar, surely none in the world can surpass its wondrous wealth of rare and exquisitely beautiful crystallizations. Nature seems to have exhausted her fancy in producing these myriads of quaint forms and curious combinations. The stalactites are singularly capricious and beautiful. From the gigantic “Mantle of Columbus” to the newly formed delicate tubes and cones, scarcely an inch in length, there exists every intermediate variety of size. Some are flat and transparent, and will vibrate when struck, with a sound as clear and melodious as a silver bell. Others are tube-like, hollow, twisted or curved, sometimes branching like coral, at others hanging like hooks, or darting sharply upward. According to the accidents of their position, they assume at times entirely different forms. Now they are frozen dribblets along the yellow surface of the rock; again they have worked themselves into grotesque fringes, or are scalloped into delicate frills; now they are like glittering serpents flashing wildly in the

torchlight; then the rock is coated as if with a heavy frost; and again, the shapes take the form of crucibles, of cornucopiæ, or of flowers tinged with delicate colors and resembling dahlias and roses.

In the complex web which they form it is difficult at times to separate the stalactites from the stalagmites. The latter form, in some places, rich curtains of the whitest and most quaintly patterned lace; they hang like the rich drapery of silken robes; or like motionless cascades of glittering diamonds, they extend, wave after wave, and fold after fold, from the ceiling to the floor. Sometimes they assume the most grotesque forms and resemblances; here and there we see them about the floor like devotees kneeling before fantastic idols, in silent and eternal adoration; again they seem like weary travelers stretched out to rest at noon on the cool grass by the wayside; or, perhaps again, like plumed and naked savages gathered in dread circles around the council fire to plot the war-path, or to plan the chase.

And all this is accomplished simply by the combination of water with lime! A feeble stream of water permeates the limestone above, and filters through it, carrying along some minute particles of lime in solution. As this water drops from the roof of the cave, or dribbles along the surface of its walls, it leaves behind it these calcareous particles, which, in the form of carbonate of lime, harden and are crystallized, forming a thousand capricious figures. If the drops fall from the roof, the form is generally that of a pendant tube or elongated cone, terminating in a keen point, to which every additional drop from above naturally runs. Each drop remains there suspended for a moment, contributing its infinitesimal quota of lime toward the lengthening of the stalactite downward; it then falls to the ground, carrying with it the residue of the lime, which is here deposited and crystallizes, contributing to the growth of the stalagmite upward. Thus every drop tends to increase the two formations.

If the dribble of water, however, flows along the surface of a rock, then it leaves the lime behind it to mark its devious path in the form of delicate tracery and fringes. If the quantity of water is large, then the ascades and curtains and snow-drifts are formed. The roof of the cave, its walls, and its floor, are thus all, at the same time, being ornamented through the agency above described. Considering the extreme slowness of the process, how many ages it must have required to agglomerate gigantic masses of crystallization like that called the "Mantle of Columbus!" And yet this, necessarily, is not so old as the cave itself.

Caves such as Ballamar are to be met with on a smaller scale in all the calcareous formations of the island, where natural bridges, tunnels, and subterranean rivers are likewise found. The origin of the Cave of Bellamar may be due to volcanic action; but it is more probably owing to the more gradual erosion of yielding strata by the action of water. The wonderful tunnel bored by the Cuzco river, in the eastern part of the island, might suggest the origin of a cave like this of Ballamar. The Cuzco is an insignificant and shallow stream, which, however, in the rainy season, becomes a powerful torrent. A lofty ridge barred the course of its ancient channel, and through the heart of this ridge it has carved a tunnel large enough to admit of the passage of huge trunks of palms and eriodendrons. After disappearing at the base of the hill, several feet below the crest, it does not appear again until it comes out at the other side of the ridge, a distance of nearly three miles. Any volcanic action tending to alter the level or bed of the stream might divert its waters into a different channel; the former one would be soon covered with a dense vegetation, and all distinct traces of it be lost. The tunnel, or cavern, itself probably disturbed from its original horizontal position, would remain to puzzle future geologists.—*Maj.-General Frederick Cavada, in Harper's Magazine.*

—♦—
If human affairs are controlled by Almighty Rectitude and Impartial Goodness, then to hope for happiness from wrong-doing is as insane as to seek health and prosperity by rebelling against the laws of nature, by sowing our seed on the ocean, or making poison our common food.—*Channing.*

STRINGENT MEASURES AGAINST BOB.

One of the wisest and best women of *The Golden Age's* acquaintance has a family of sons and daughters, among whom one son, by the name of Bob, gives more than a dueshare of an urchin's provocations to his two sisters, named Maggie and Hattie. Whereupon this motherly mother, taking the part of each against the other, with a view to reconcile both, one day wrote on a slip of paper, and pinned on the window curtain of the girls' room, the following bit of good advice:

"Young ladies, be kind and patient with your little brother. Consider yourselves a kind of missionary to this little heathen, and with a religious earnestness labor for his salvation. Do not kick him out of your room, but kiss him and treat him with a sisterly love and tenderness. He was once a sweet little baby like the one in the picture, and I

wish to say to you "that he sleeps!" Now you perceive he is awake, and does the best he can to keep the rest of us awake also. You must regard Bob as a means of grace."

The effect of the above manifesto was equally happy on the girls and the boy. "Robert le Diable" became "Bob the means of grace." Not that the young rebel surrendered immediately. He fought it out on the same old line for awhile, hoping to get put out of the room, or his ears nipped, or a pin stuck in his leg, or some other reasonable excuse for barricading the chamber door with twelve chairs, or for wheeling the pet goat up into the girls' closet, or for cutting the bed cords and letting down the mattress, or for executing several other ingenious tricks of his fertile mind; but he was so respectfully treated by the humane enemy that he had not the heart to make war against the spirit of peace. The rebellion within him gradually surrendered, and the latest bulletin from the orderly household is that universal amnesty prevails.

This policy suggested by Bob's mother, and carried out by Bob's sisters, of making Bob a means of grace to the rest of the house, has had its chief gracious effect on Bob himself. We commend the case to the home circle of *The Golden Age* as a specimen of the true statesmanship of family government.—*The Golden Age*.

A HINT TO GRUBLERS.

"What a noisy world this is!" croaked an old frog, as he squatted on the margin of a pool. "Do you hear those geese, how they scream and hiss? What do they do it for?"

"Oh, just to amuse themselves," answered a little field mouse.

"Presently we shall have the owls hooting; what is that for?"

"It's the music they like the best," said the mouse.

"And those grasshoppers, they can't go home without grinding and chirping; why do they do that?"

"Oh, they're happy because they can't help it," said the mouse.

"You find excuses for all; I believe you don't understand music, so you like the hideous noises."

"Well, friend, to be honest with you," said the mouse, "I don't greatly admire any of them; but they are all sweet in my ears, compared with the constant croaking of a frog."

ITEMS.

NEWS has been received in England of the discovery, by the colonial government geologists, Messrs. Sawkins and Brown, of magnificent waterfalls far exceeding those of Niagara, which exist in

Demerara, British Guiana. They are on the upper part of Potaro River, three days' journey from the colonial penal settlement, and within one hundred miles of the capital of the colony. Although so near, comparatively, to European settlements, they have hitherto remained unknown to civilized men, and are but rarely visited by the Indians, who have not appreciated their marvellous character. The fall consists of two leaps, one being a perpendicular fall of seven hundred and seventy feet, and the second over fifty feet. The volume of water measured in the dry season is twenty-eight feet in depth, and nearly one hundred yards broad. The government of the colony have undertaken to open up the neighborhood and give facilities to visitors. The Niagara Falls are one hundred and sixty feet high.

THE SUEZ CANAL.—The actual receipts of the Suez Canal, during 1870, according to the official report of the directors, amounted to \$1,277,441, or only to about one fourth of De Lessep's estimates, and this sum, it is stated, includes considerable sums arising from the sales of material, vessels and machinery used in constructing the canal. The income, it is believed, would have been much larger had the British Lloyds agreed to insure sailing vessels navigating the Red Sea. A new Russian steamship company has been organized to trade between Hankow, one of the Chinese treaty ports, and Odessa via the Suez Canal. Two iron screw steamers have already been constructed and together can carry about four million pounds of tea. There are, it is stated, about seventy Russian firms engaged in the tea trade, and the consumption of tea in Russia, in Europe, it is estimated, amounts to fifty million pounds a year.

THE aquarium of the Crystal Palace at Sydenham seems to give the English public great satisfaction. There are sixty tanks of varying dimensions—from 75 to 4,000 gallons capacity—to suit the various habits of the animals. Beneath all is a reservoir, holding 150,000 gallons of sea-water. This water is pumped up continuously, at the rate of from 5,000 to 10,000 gallons an hour, flowing through the various tanks and then returning to the reservoir. Thus the supply may be kept undiminished for years, care being taken to replace loss by evaporation by adding distilled water.

THE *N. Y. Evening Post* says: There has lately been introduced in the city a new building material in the Frear artificial stone, which is likely to come into general use not only for dwellings and stores, but for fences, sidewalks, culverts and dockages. The stone is a Western invention, and is brought here from Chicago, where more than three hundred of the finest buildings in the city have been constructed wholly or in part of it. The materials used in its composition are sand, gravel, and Portland cement, fastened together firmly with chemicals, which form a solid, insoluble stone, and is pressed in moulds of any desired pattern or form, such as bricks of various sizes, ashlers, key-stones, corner blocks, water tables, door and window caps, sills and cornices. In fact, it is claimed the most beautiful architectural designs may be executed in it with a finish and perfection which the most skillful workmen with the chisel would find it impossible to attain.

The great strength and solidity of the stone, its imperviousness to atmospheric influences, the fact that it can be adapted to all purposes to which natural stone is now applied, together with its cheapness, will doubtless bring it into general use as a staple building material in this city.

FRIENDS' INTELLIGENCER.

"TAKE FAST HOLD OF INSTRUCTION; LET HER NOT GO; KEEP HER; FOR SHE IS THY LIFE."

VOL. XXVIII.

PHILADELPHIA, SIXTH MONTH 3, 1871.

No. 14

EDITED AND PUBLISHED BY AN ASSOCIATION OF FRIENDS.

COMMUNICATIONS MUST BE ADDRESSED AND PAYMENTS MADE TO

JOHN COMLY, AGENT,

At Publication Office, No. 144 North Seventh Street.

OFFICE OPEN from 9 A. M. to 4 P. M.

TERMS:—TO BE PAID IN ADVANCE.

The Paper is issued every week.

The *Twenty-eighth* Volume commenced on the 4th of Third month, 1871, at Two dollars and fifty cents to subscribers receiving it through the mail. To those receiving it through our carriers, *Three Dollars*.

SINGLE NOS. 6 CENTS.

It is desirable that all subscriptions should commence at the beginning of the volume.

REMITTANCES by mail should be in CHECKS, DRAFTS, or P. O. MONEY-ORDERS; the latter preferred. MONEY sent by mail will be at the risk of the person so sending.

A Memorial of JOHN HUNT, a Minister in the Society of Friends.

He was the son of John and Rachel Hunt, of Darby, in the State of Pennsylvania, worthy members of the religious Society of Friends, who endeavored to train him in the nurture and admonition of the Lord; but yielding to his strong natural passions, he was in early life hurried beyond the safe inclosures of parental restraint and holy Christian discipline.

He took of the inheritance that was given him, and departed afar off, spent his substance, lost his right of membership with Friends, and sought to make up for the enjoyments of an innocent life by an indulgence in the pleasures of sin.

From manuscripts he has left, and frequent acknowledgments in his public testimonies, it appears that during this disconsolate and forlorn state, Divine Mercy continued near, and by chastisements in love, would often remind him of his father's house that he had left, where there was bread enough and to spare, when aspirations would be raised for deliverance.

One of the many evidences of this is found in a short manuscript of his, which appears to have been penned during his prodigal career, as follows:

“Thou great, eternal Source of light,
Who rules creation by thy might,
And governs by thy power;

Who fills all heaven, earth, air, sea;
And sees through all eternity,
Be pleased to hear my prayer.
Oh God! Most Holy, just and true,
My heart, my soul aspires anew,
And breathes to Thee above;
Oh! come, pronounce my darkness light,
And fashion me to please thy sight,
Most honored God of love.
Thy presence sweetens all my woes,
Thy grace can conquer all thy foes
That rage within my heart;
Thy power is over death and hell,
With all their offspring which rebel,
And from thy law depart.
Then, Oh! Supreme, Eternal Lord,
Vouchsafe thy all-creative word
That framed the Heavens above;
Spare not adversity's keen rod,
Till all doth bow to Thee, Oh! God,
In reverence, fear, and love.”

The prayer thus breathed was not without a merciful response.

Visitations of grace and of adversity were vouchsafed from time to time, until, in his own language, he could say, “Every bone in his body had been broken.”

And thus yielding himself as clay in the hands of the potter, to be moulded and fashioned according to the Divine will, he was prepared for service in the ministry of the everlasting Gospel.

He was reconciled to his friends, and again received into membership, and soon after appeared in public testimony at Salem Quarterly Meeting, held at Woodbury, in the

50th year of his age. And at a proper time his gift in the Ministry was acknowledged by Darby Monthly Meeting.

Having wasted of his temporal as well as spiritual substance in early life, and having a large family of children looking to him for support, he had much to humble him, and prove his faith in the Divine Power.

It was to this he was accustomed to look, having confidence in the declaration that "the name of the Lord is a strong tower, whereunto the righteous flee and are safe."

He soon found himself called beyond his own particular neighborhood to declare the glad tidings of the Gospel to others; and in this service he made visits, with the approval of his friends, to parts of New York, Pennsylvania, New Jersey, Delaware, Maryland, and other States.

In the year 1850, he removed with his family on a farm he had purchased, on the north bank of the Rancocas River, became a member of Burlington Monthly and Rancocas Preparative Meetings, steadily attending them as they came in course, when at home and in health.

His mission often extended to those of other principles and professions of religion than Friends—and especially to the laboring and seafaring classes—towards whom his labors of love were frequent, and attended with marked appreciation.

He was endowed with ready utterance and much earnestness of manner, in the delivery of his messages to the people; and oftentimes Truth, through him, would be in eminent dominion to the humbling admiration of himself and his hearers.

The doctrine he preached was the Free Grace of God; its sufficiency and universality; its adaptation to the conditions of all; bringing them, as they yielded to its teachings, into fellowship and harmony with itself; making all who are obedient, members of the one true Church; breaking down partition walls and removing sectarianism; maintaining there was no sect nor division in Christ; but that the Church, in the language of Scripture, is verily made up of all nations, kindred, tongues, and people.

He continued faithful in his public ministrations, both at home and abroad, to the comfort and edification of many, until his physical strength was prostrated by a cancerous affection, at times excruciatingly painful, and occasioning the loss of an eye, but leaving the mind in possession of its faculties, and which, perhaps, helped to make him, in his last days, a fit subject to magnify that power which had plucked him as a brand from the burning, and from the miry clay, and placed his feet upon a rock.

It is not known that a murmur ever escaped him because of his afflictions, but he appeared to receive all as visitations of Divine Mercy, for his further purification and refinement.

To some Friends, being with him, he took a somewhat extended retrospect of his life, more particularly of his latter years, bringing in remembrance the gracious dealings of the Almighty in his many trials, and in his preservation; rejoiced in the power vouchsafed to discharge the mission assigned him, and in the glorious assurance of the reward of "well done" which he believed awaited him.

During his sufferings he continued in a state of entire resignation to the Divine disposal, saying that "his enjoyments in this world were done, but that he had a joy which the world knew not of, the blessed presence of his Maker."

On another occasion he said, "I feel the presence of my dear Saviour daily; and what are all the sufferings compared with the joy that is meted out to me day by day?"

In an address to his children, among other things, he said: "Keep God always in your hearts, dear children." To one of them who came to his bedside, he said: "Ah, thee sees me in my last conquest!"

At another time he said: "Dear children, pray for me, that my patience may hold out to the end, and my faith fail not," and shortly after, "I feel nothing but sweet peace."

To his wife he exclaimed, "Oh, what would this bed of sickness be if it were not for my blessed Saviour! He is around me; I feel his presence."

In reply to the question, whether anything could be done for him, he answered, "You, dear ones, have done all for me that can be done; I desire nothing but peace with God, and that I have."

To a Friend who remarked, thou finds thy God to be a kind and merciful Master, he replied, "Yes, kind, merciful, and gracious."

Speaking of his intense sufferings, he said: "I deserve it all, and would not turn my hand to have it otherwise."

When near his end, and offered something to take to promote his strength, he replied, "I want no strength but that which God gives."

These, with many other like expressions, with a meek and quiet spirit, and state of resignation, proved that his rule of life had not been "a cunningly devised fable," but ordered of the Lord; and great was his peace.

In this state he continued, gradually declining, until the Fourth day of the Tenth month last, when he said: "I perceive my

breath to be failing me," and desired the windows to be opened to give him air, saying, "The end is near;" took his hands from that of his wife, laid them on his breast, composed his body, with a smile upon his countenance, and a look of recognition upon each of his family who surrounded him, closed his eyes and mouth, and his departure was so quiet as scarcely to be perceived.

Thus closed the life of this devoted servant of God in the 79th year of his age.

Read and united with, by Burlington Monthly Meeting, held at Old Springfield, Second month 6th, 1871, and signed, by direction thereof, by

DAVID FERRIS, }

At Burlington Quarterly Meeting of Friends, held at Mount Holly, N. J., Second month 28th, 1871, the foregoing memorial was read and united with, and directed to be forwarded to the Representative Committee.

BARCLAY WHITE, }
JANE D. SATTERTHWAIT, } *Clerks.*

JOHN WOOLMAN'S JOURNAL.

J. G. Whittier has rendered few services to the country that will in the end sink deeper or tell more than in lending his name and the beautiful Introduction he furnishes to the saintly journal of that sweetest of American mystics and purest of practical philanthropists, John Woolman, the New Jersey Quaker of 1720-1772. It is hardly too much to say that we have nowhere on record, out of sacred Scripture, a life and character of so utterly stainless and lamb-like a sort as John Woolman's. He half persuades one that the sinlessness of Jesus might have been only human—made divine by its perfect fidelity to the inner light. He had a prophet's illumination. His prediction of the misery which negro slavery would finally bring upon our country has as much clearness as the prophecies of Jeremiah. It is truly wonderful what vision of events owes to simple moral sincerity! Straining out of his own mind and heart all self-seeking ends, not wishing or even willing to be conspicuous or great, preferring obscurity, poverty with independence, and cultivating humility as most people cultivate pride, he attained to such a positive faith and such a satisfying knowledge of God's will that his words have an almost New Testament authority in their unpretending, impersonal simplicity and self-proving truth. He is so profoundly in sympathy with God and his Master that what men call theology never once appears in his account of religion. People in love with each other do not write treatises on their affections. People who know and love God, forget Trinities and God-heads. God is

in them, the spirit of their spirits, and all their theology is merged and lost in the joy and fulness of their sweet experience of Divine love and truth. Would that "the concern" that seemed ever resting on John Woolman's mind, to labor and serve in the cause of the divine kingdom, might take the place of the fussy, self-important, physiological "experiences" of religion which have degraded the mere emotional and mechanistic churches.

We have only to pray that this book may become the most read of all religious biographies. Dr. Channing thought it the best. There is not a word to be deducted from it; not a thought one could wish omitted. It should be upon one's table with the Bible and the hymn-book, and be read in secret moments when one wishes to throw off "the cumber" of the world and to draw nearer to God, or when one's faith is cold and weak in the strength of prayer and reliance on God. We were so fortunate, fifteen years ago, as to come into possession of Charles Lamb's own copy of John Woolman's journal. He valued no book more, and his few notes in it give it a very rare preciousness. We always wondered how it was permitted to pass out of England, but Mr. Putnam bought it at the sale of his library. Perhaps it had been forgotten what a store he set by it himself. We had not forgotten it, nor is there any finer evidence of his own essential piety than his full and profound appreciation of this work. Shall we add the painful fact that it is now missing from our library, and that we cannot trace its disappearance?—*Liberal Christian.*

PRESENCE OF MIND.

There are few things which are less understood than the nature of presence of mind. It has been supposed by some to be mainly the result of a cool and lymphatic temperament. By others it has been supposed to be mainly the result of fearlessness. * * * But if there is one predominant cause, it is hopefulness. There are also minor causes of much importance. Men differ much in the swiftness of their thinking. Men differ still more in their habits of concentrating thought, and relieving their attention from extraneous matters. But great proficiency in swiftness of thinking, and in concentrating thought, would not give presence of mind, unless there were hopefulness. For a man to have presence of mind he must be sure of these three things: that in any difficulty or emergency there is always something to be done, that this something may be made the best thing to be done, and, lastly, that there is nearly always time in which to do it. I will give a singular illustration of this—one which I

have used before, but which I cannot do without on the present occasion. To all those who have studied the way of serpents, it is known that these reptiles cannot spring at you when they are in a state of coil; they must uncoil themselves before they can make their spring upon you. Now, a man who knows this fact in natural history, if he should come upon a coiled serpent which raises its head, and as the man sees, means battle, this man will have presence of mind, because he has reason for hope that there is time for him to do something. Accordingly it is worth his while to think; and, so inconceivably rapid are the processes of thought, that he has time to think that it is worth his while to think. Shall he move to the right, or to the left? Shall he endeavor to get to that tree? Shall he fire his revolver? If the man did not know that he had time to think, he would give himself up to despair; and, like a frog or a rabbit, stupidly await the spring of his enemy. In this particular case the hope is born of knowledge; but in any man who is concerned in great affairs, and who requires much presence of mind, there should be a hopefulness, not depending upon knowledge—a *habit* of hopefulness arising from the fact that hopefulness generally carries the day. He should look upon all dangers and difficulties as coiled serpents, which, by their nature, must uncoil, and give him some time before they can spring upon him. At least, there is something comforting in the foregoing view, because, if true, it shows that presence of mind is a thing which may, to a certain extent, be acquired. We have been led a long way out of the usual road when we have come to the conclusion that presence of mind mainly depends upon hopefulness—in fact, upon a sanguine temperament, but perhaps it may not be a wrong way.—*Good Words.*

THE DISPERSION OF PLANTS UPON THE FACE OF THE EARTH.

BY LEO HARTLEY GRINDON.

(Concluded from page 198.)

Very curious indeed are the special arrangements by which the *seeds* of plants are conveyed from place to place, thus providing for the permanency of the green carpet. Many kinds are provided with delicate feathery wings, which the wind soon seizes upon, carrying them for miles over the country. Every one in the heavenly era of early youth has blown the little ships from the dandelion into the aerial sea, curious merely to learn the time of day, and unconscious that by this little pastime the great purposes of nature were being assisted. It is true that in many of the plants which have these winged seeds, we do not recognize any special usefulness to man;

and the means provided for their wide dispersion may look like good labor bestowed to little genuine purpose of benevolence; but we are not to judge of the usefulness of a thing by what it yields directly and immediately to *man*. The population of the earth includes millions of creatures besides ourselves, and anything that seems useless to *us* is no doubt invaluable to some other race. Here it may be remarked too, in passing, that the existence of so called "useless things" is one of the grand proofs of another and nobler state of being. They are outbirths of a nobler world, and have a destiny and purpose of their own; if they are useless in *our* eyes, they may be of great use in the eyes of *other* creatures of God—if not in this outer world, yet in the inner one where their spiritual forms exist, and whence they operate. Birds and insects carry seeds about almost as busily as the wind. The rough and hairy coats of quadrupeds often come in contact with and capture the burrs of certain plants, which thus get conveyed unintentionally for thousands of miles, or even half round the globe. Rivers and all running waters perform a similar use; multitudes of plants are found growing upon their banks, the seeds of which have been brought by the current from distant localities; and being stranded when the water is low, they find at once an anchorage and abiding place for growth. There are even plants that can jerk and dart out their seeds like shots from tiny guns, for the purpose of their wider dispersion! Touch-me-nots and cardamines form quite a miniature artillery when ripe, discharging their little batteries with a vigor that is quite facetious. All these things, let us never forget, are special arrangements for promoting the beauty of the world, for clothing it with green and graceful life, and for thus carrying out the designs of Infinite Wisdom and Infinite Love.

The water, like the land, is filled with vegetation,—that is, everywhere except in the open sea, and even there may often be found abundance of the strange marine plants called Algae. Half-way across the Atlantic there is an enormous submerged forest of one kind in particular, called "gulf weed," from its connection with the great "gulf-stream" that makes its way from the Gulf of Mexico. This mass of weeds is so dense as sometimes to impede the progress of ships; and when encountered by Columbus, in that wonderful exploring voyage westward which was rewarded by the discovery of the sentinel-islands of America, it was thought by the superstitious sailors to be a barrier specially placed there by an angry Providence, to prevent their further passage, or at all events to warn them from prosecuting the attempt to cross the sea.

Similarly, in the remotest portions of the antarctic ocean, there are prodigious sea-weeds with stems of the girth of a man's body, and branches that extend through the water to an almost indefinite distance. Our English coasts show two classes of these curious and interesting plants. First, there are the dark leathery weeds which form tapestry for the sea-washed cliffs, and float so beautifully in the foamy water when the tide comes up to salute them. Secondly, there are the lovely green and rose-colored weeds that are seldom more than a few inches in length, and which we may see lying about on the sands like fragments of roses, or in exquisite arabesque of pink fibres. Were we to seek them in their native habitats, or while growing, we should find them erect and displayed, forming a parterre for the sea, in its way no less lovely than are the flower-gardens of the land. Every portion of the shore is inhabited by its peculiar species of these delicate algæ. At high-water mark we see the great black thongs of the bladder-wrack, and the pea-green layer; at low-water mark and in the tide-pools, we have the pink and roseate kinds, for these latter die, like so many fishes, if removed from the incessant contact of the water, and soon bleach into melancholy films. Ponds, rivers, even ditches, have their special vegetable inhabitants. Where the water is clear and still, there are water-lilies anchored far from the land, and often with beautiful spires and campaniles of other plants rising among them, like a floral Venice. No timorous hand reaches these. To secure them, it is of no use to stand on the brink and sigh. Ingenuity and perseverance will, nevertheless, bring them to land, and then how lovely and pure a form! The white water-lily is closely allied, both in form and nature, to that mystic Lotus of the Nile, representatives of which, carved in stone, are still preserved upon the monuments of Egypt, where the plant was regarded as a sacred and natural hieroglyph, and where, doubtless, its purity and lustre conveyed their right and ample meaning.

The water-lilies never grow in foul water, and always prefer that which is in steady though slow movement, loving especially the little bays along the edges, where they can spread their broad leaves upon the surface undisturbed, and expand their argent cups, brimming with golden stamens, to the light of the sun. Towards evening they close their petals in a kind of sleep, and during the period of their highest life, which is that of the preparation of the seed that is to renew the plant, they not only close, but sink below the surface of the stream. In many kinds the odor is rich and delicate, and some sorts yield eatable seeds. The Egyptian Lotus bore a

rose-colored flower: but that does not interfere with the beautiful concordance of these plants with the ideas of truth and chastity—rather does it confirm the correspondence. Clear and moving water, broad and elegant leaves, pure white or rose-colored flowers, odor, modesty of life, and withdrawal in times of darkness—how beautifully all these characteristics of the water-lily and the lotus combine to show us what they signify in the language of nature!

What a contrast with the sea-weeds is found in trees! Here in the north all our trees are much branched, and, when full grown, form grand umbrageous sun-shades, to which we can retire for shelter when the summer heats fall fiercely upon our cheeks; their boughs in many cases decline elegantly towards the ground, so that we can reach their nuts and acorns; and in winter, when they have cast aside their foliage for a while, we see a wonderful diversity in their styles of architecture; some are massive, and seem to belong to the heroic ages, as the oak and the chestnut; others, like the birch and the acacia, are graceful and delicate, and seem feminine companions of the manly ones. In the tropics, on the other hand, there are not only branching trees such as those of the north, though enormously greater in their development, but trees that are wholly devoid of branches, rising like tall pillars of wood, perfectly erect, and to a prodigious height, with a crown of immense leaves upon the very summit. These are the palm-trees, the princes of the equatorial zone, as the pine and cedar trees are the princes of the temperate zones. In England we only see them in conservatories, as at Kew and Chatsworth. They want much more light and natural atmospheric warmth than are ever rendered to them in Britain, and thus form a peculiar and magnificent characteristic of the tropics, filling the traveller with admiration, and awakening all his sense of tropical grandeur of vegetation.

“Yet who in Indian bower hath stood,
But thought on England's good green wood;
And breathed a sigh, how oft in vain,
To gaze upon her oaks again!”

In the extreme north of Europe, and in the northern parts of America, there are forests consisting exclusively of pines and firs, and of such vast area that many days' travel is required to traverse them. They are ever-green; the animals and birds inhabiting them are very few; human habitations are scarcely known, except upon their borders, where they adjoin cultivated or pasture land; and hence they form at once the most monotonous of woods and the sublimest of solitudes. It is here, as during the darkness of night, in solitary places down by the sea, when we have

wandered away from the sound of men and the view of lamps, that we feel the littleness of ourselves and the brevity of this temporal life. Everything around is grand, solemn, and perennial; we are driven inwards upon ourselves, and live for the time in that little secret chamber which we all have in the inmost of our hearts, into which only God and ourselves can enter, and where we meet face to face. Even our English woods, in their green depths and inexpressible seclusion, give much of this feeling when we enter them alone; and it is good to do so, and to receive their healthy and happy influences. Our English woods differ greatly from those silent pine-woods in the abundance of their living creatures, and equally so in the plenty of their flowers and ferns. Hence there is much to attract the eyes and thoughts; but, over and above all, there is the inexpressible feeling of the isolation, and the nearness of Him who made them all. It is well to visit these great solitudes, for no places more powerfully awaken us to the Divine appeal, "Have I been so long time with you, and yet hast thou not known me, Philip?"

Thus do we find in all countries of the world, upon land and in water, plants appropriate to their several stations, and every place being rendered cheerful and beautiful by their presence. What would have been the case had plants all required an equal amount of warmth and protection, or an equal amount of moisture? Many spots would have been barren, and the enjoyments of man have been reduced in proportion. But go where we will, we meet with new illustrations of Divine Benevolence—the true idea of the omnipresence of God is that in every place we find the manifestations of His providence.

From the Christian Register.

DISAPPOINTMENT OFTEN A BLESSING.

There are two things on which our highest success in life must depend. One, and indeed the great thing, is to use our opportunities while we have them. The next thing is to give them up gracefully and cheerfully when their time is ended. Instead of mourning over what is going from us, we should turn ourselves to the new opportunities which take its place, and get from them all that we can. The change is not necessarily a sad one. It may be just the allotment which is best fitted to carry us on, to teach us new lessons, to open before us new fields of usefulness and enjoyment, to exercise new faculties, to strengthen our faith, to deepen our experience of God's love, to refine and subdue our hearts, and bring us into more perfect sympathy with the Divine will.

A change has come. We must give up,

perhaps, a cherished occupation. It has been very dear to us. Our life has been bound up in it. We found it a privilege, a comfort, a joy to us, and we had hoped so to use it as to make it also a comfort and a joy to others. But our time for it is past. What then? Is everything gone from us? By no means. This withdrawal of one privilege may be only an opening into another and richer field. There may be a momentary pang as we turn away from beloved walks, and look forward into new scenes and labors. But we accept the new attitude of things. We adjust our thoughts and our conduct to it. We find new food for our minds, new interests for our hearts to expand in, new sources of usefulness and happiness. And then we begin to see how beneficent the plan is that reaches through all things, and makes each separate incident, each separate moment, an instrument connected with all the rest, for the orderly and harmonious advancement of whatever should be most precious to us.

I remember being very indignant, many years ago, when, by some political management, Nathaniel Hawthorne was turned out of a small government office by which he had been able to earn a scanty support for his family. "What," we asked, "will become of this poor man now? What is to save him and them from severe want? What is there that he can do?" So we asked, and could give no hopeful answer to our question. But God, who had endowed that man with such a wonderful gift of genius, had something better for him to do than could be found in a subordinate department of the Salem Custom House. He therefore drove him out from that place which could only cramp and impoverish his soul. And, being driven out from it, he was thrown back upon himself, and in the marvellous creations of his imagination he found other ways of earning his bread, while at the same time he furnished other and better supplies to hundreds of thousands who had learned that man cannot live by bread alone. Had it not been for the fearful disappointment to which he was subjected, he might never have known what capabilities there were bound up within him, and the world would never have known the loss which it sustained.

Here is an illustration which may apply in some degree to every one of us. We have not his intellectual powers. But we all of us have moral and spiritual faculties capable of an expansion beyond all that even his imagination could conceive of. And often it is only by being forced away from one after another of our chosen haunts where we are quietly earning our bread, that we are enabled to come to ourselves, and to find the in-

finite resources of Christian faith and love with which God has endowed us, and which He is waiting by these new and better methods to unfold within us, that so they may be made a blessing to ourselves and to all around us. How many a self-denying act has thus been awakened into being! How many a homely virtue has thus been cherished in the heart till it came forth to shine with a celestial purity and radiance! How many thoughts, warmed and illuminated by a heavenly spirit, have thus been called from within us, and made to shed their joy and hope in our daily paths! How many souls have thus been born into a loftier experience, so as to throw a diviner light around them in their passage through the world! * * * *

The secret of success, in the best meaning of that sadly abused word, lies in the devotion of ourselves to the highest ends, engaging in our life's work with all our hearts, using all our faculties, taking advantage of all the opportunities that are offered, with a perfect trust in God, doing each day the most and the best that we can. When the time has come for leaving any particular work, then we are to submit willingly and gracefully, giving up that which is no longer ours, accepting the new situation, the new condition which God offers, with grateful and affectionate trust. He who has labored earnestly through the heat of the day may perhaps be pardoned if he should seek to bear a lessening burden, or even to rest a little amid calmer studies and meditations, before the lengthening shadows which tell him that his day is far spent are quite lost in the night in which no man can work. If he cannot put forth his strength as he once did, perhaps his mission now may better be accomplished by the exercise of a needed patience. If he may not influence or control events by active efforts, perhaps he may do something by a wise forbearance, a gentle tolerance, a greater charity to others, a more loving submission to a higher and better will than his. If, in the days of our strength, we have really sought to act in concert with the divine mind, we must have acquired, to some extent, the habit not only of doing what we could do, but of leaving cheerfully and trustingly with him what we could not do,—the habit of seeing His hand everywhere, in the wise ordering, the kindly succession, the wonderful adjustment,—everywhere change, and yet everywhere beautiful in His time.

VIRTUE is more to man than either water or fire. I have seen men die from treading on water and fire, but I have never seen a man die from treading the course of virtue.
—Confucius.

Scraps

FROM UNPUBLISHED LETTERS.

* * * I must hasten to a close, having nothing of importance further to say, and when people have nothing to say, it is good to be silent; yet this is a lesson in which I am not yet proficient. How often, when reflecting on the amount of idle conversation on worldly affairs, has a pensive sadness overspread my mind; yet social converse seems to be the medium of enjoyment, and in some sort the food of friendship. But we profess to feel a friendship that feeds on higher food—a friendship that in *silence* and even in *absence* grows, increases, enlarges, and we humbly hope will forever glow in the pure and purified state to which we aspire, towards which we press, and watch, and wait, and pray. Oh! for this permanent, unfading, ecstatic enjoyment, begun in time and perpetuated in the eternal world.

Many seem to be gliding along too much as though this earth was their abiding home, and they were always to inhabit these tabernacles of clay! yet we know not what is secretly and silently felt by them in relation to things which to us appear of eternal consequence. Perhaps Omniscience may often view the minds of those whom our imagination paints as worldlings, as being engaged in acceptable acts of devotion.

Amidst the vast variety of characters we meet with, could we accustom ourselves to the practice of looking on their virtues or good qualities with an eye of complacency and satisfaction, it might add to our own happiness and peace, and the moral world would oftener be considered as the natural one sometimes is—a “beautiful world.”

This morning I feel as if I could talk a little with thee; for I have been thinking of a subject that to my view involves the welfare of the community, and particularly of that part of it called the Society of Friends. It is the subject of *discipline*; not written or printed rules of discipline, but that spirit of discipline emanating from Truth; a concern for promoting self-denial, order, submission.

Discipline in families is wanting—restrictive discipline, the discipline of self-denial in parents, who, as the vicegerents of heaven, are the guardians and law givers to their families. But alas! where are the fruits of the law of love, combined with the law of self-denial? Where is the submission and humility of the children of Friends? Where the restraints upon animal inclination to fol-

low the vain fashions and customs of the age and neighborhood? Do not young mothers introduce their innocent little infants into a fondness for finery?—"the lust of the eye" and the "pride of life?" What a field is open for women Friends with the rights they possess, but do not sufficiently and properly use, to arrest the habits and manners of a licentious age. What a load of expense and toil and anxiety do undisciplined wives bring on their husbands, in order to keep pace with the inventions and fancied improvements of the day! Perhaps all-gracious Heaven may teach some who are yet teachable. Adverse circumstances seem to be multiplying in the land in various ways. Divine Goodness and Mercy has a voice in these things, but men hear it not. Friends, too, are dull of hearing the public and secret reproofs of instruction. I sometimes feel as if I should be glad the trumpet was sounded throughout our Society, as one of the prophets of old said, "Blow the trumpet in Zion; sanctify a fast; call a solemn assembly; gather the people," &c.

I am persuaded if our Society cannot be brought to submit to and uphold a purer system of restrictive discipline, it will more and more amalgamate with the friendship, policies, maxims, manners and spirit of the world, till it becomes lost in the vortex. If I had a voice that could be heard in women's Monthly Meetings (for there is the beginning place) I would call my dear female friends to engage in a thorough search of the camp, and they might soon, if honest, discover the "goodly Babylonish garment," the "shekles of silver," and the "wedge of gold," though snugly "hid in the earth in the midst of the tents" of our members. "There is an accursed thing in the midst of thee, O Israel." And a strict and impartial administration of *Christian discipline*, in the church and in families, is the only way to have it sought out and removed, that I see in the present state of things.

FRIENDS' INTELLIGENCER.

PHILADELPHIA, SIXTH MONTH 3, 1871.

NOTE.—Several original articles sent us are necessarily laid over, owing to the press of business last week.

DIED.

BROWN.—On the 28th of Third month, 1871, at the residence of Levi K. Brown, Goshen, Lancaster Co., Pa., after a lingering illness, which she bore with Christian patience and resignation, Sarah Brown, of Baltimore, aged 75 years; a member of Baltimore Monthly Meeting.

KING.—On the 28th of Third month, 1871, Amos King, in the 52d year of his age; a member of Little Britain Monthly Meeting.

JACKSON.—On the 27th of Fourth month, 1871, Mary P., daughter of Deborah and the late Isaac Jackson, members of Little Britain Monthly Meeting, in the 12th year of her age.

PHILADELPHIA YEARLY MEETING.

From the extracts of men's meeting just received, we give the following:

At the Yearly Meeting of Friends, held in Philadelphia by adjournments from the 15th day of Fifth month to the 19th of the same, inclusive, 1871:

Reports were received from all our constituent branches, by which it appears that one hundred and thirty-four Friends have been appointed representatives to attend the service of this meeting, who on being called were all present except nine. For the absence of one a reason was assigned.

Minutes of Friends in attendance with us from within the limits of other Yearly Meetings, were produced.

Epistles from our brethren at their Yearly Meetings of New York, Baltimore, Ohio, Indiana, and Genesee were received, and read to edification.

Dillwyn Parrish was appointed Clerk, and Barclay White Assistant Clerk.

Fishing Creek Half-Year's Meeting in their report inquire whether it would be proper to appoint women Friends to serve on the Representative Committee, and the subject being now introduced by women Friends, a Committee was appointed to confer with a committee of their Meeting on the subject, and report their judgment to a future sitting.

The report from Salem Quarterly Meeting contains a proposition for an alteration of discipline, in relation to "Convinced Persons." To unite with women Friends in its consideration, and report to a future sitting, a Committee was appointed.

Third-day.—The Meeting was occupied in the consideration of the first query, with the answers from our subordinate meetings. An exercise pervaded the assembly, under which salutary counsel was extended, inciting to a faithful performance of the requisitions of this query.

The second and third queries with the answers claimed the serious consideration of the Meeting.

Fourth day.—The fourth and fifth queries occupied the attention of the Meeting, and a profitable exercise prevailed while the important subjects embraced therein were under consideration.

The remaining queries with the answers, to the ninth, inclusive, and the three annua

queries with their answers were read and considered.

During the progress of the meeting, our Friends Lydia H. Price and Mary E. Smith made an acceptable visit.

Fifth day.—Soon after the opening of the sitting an acceptable visit was received from Rachel Hicks and Mary Levis.

The minutes of the Representative Committee or Meeting for Sufferings were read, and their labors appreciated and approved.

Sixth day.—In recurring to the consideration of the Indian report,* the committee were continued to have charge of this interesting subject as heretofore, to act as way may open, and to use the funds of the Yearly Meeting for such purposes as their best judgment may approve.

The Joint Committee appointed to answer the inquiry contained in the report from Fishing Creek Half-Year's Meeting made the following report, which was united with:

"The Joint Committee of men and women Friends to consider the subject from Fishing Creek Half-Year's Meeting, generally met, and after a free expression in favor of women Friends having a joint representation, it was the mind of some that alterations of the Discipline would be required previous to the adoption of the measure. Way did not therefore open for present action.

Philadelphia, 5th mo. 16th, 1871."

The Joint Committee on the proposed change of the fourth query made the following report, which was united with.

The Committee on the proposed change of the Fourth Query, as follows:

"Are Friends clear of the use as a beverage, and of the manufacture and sale for that purpose, of any spirituous or malt liquors, wine, or anything that can intoxicate? and is due caution observed in the use thereof as medicine?

Are they careful to discourage the attending of places of diversion, and the unnecessary frequenting of taverns? and do they keep to true moderation and temperance on account of marriages, burials and other occasions?"

Report. That the subject claimed their earnest and deliberate consideration; that way did not open to recommend the change at the present time, but the Committee propose that this report shall go down in the Extracts, and that the subject shall claim the attention of the Yearly Meeting next year.

The Joint Committee of Men and Women Friends, to whom was referred the proposition from Salem Quarterly Meeting, made the following report which was united with.

The Joint Committee of Men and Women Friends to whom was referred the subject brought up from Salem Quarterly Meeting, mostly met, and were united in reporting to the Yearly Meeting, that in their judgment there should be no change in the Discipline as proposed.

William P. Sharpless was appointed Treasurer for the ensuing year.

A memorial of our deceased Friend Joshua Noble, prepared by Northwest Fork Monthly Meeting, and approved by Southern Quarterly Meeting, introduced by the Representative Committee, was read, approved, and directed to be recorded.

A memorial of our deceased Friend John Hunt, prepared by Burlington Monthly Meeting, and approved by Burlington Quarterly Meeting, introduced by the Representative Committee, was read, approved, and directed to be recorded.

It was further directed that the memorials just read be published with the Extracts.

The Committee appointed to prepare Epistles to other Yearly Meetings with which we are in correspondence, produced an essay which was read, adopted, and directed to be signed by the Clerk and forwarded.

The following minute, embracing some of the exercises of the meeting, was adopted:

The various important subjects which have claimed the attention of this Meeting have called forth much valuable counsel, and we are encouraged to hope that many among us will be qualified to spread some of the general exercise which has prevailed in their smaller Meetings.

Among the important duties connected with our organization is the attendance of our religious Meetings. Believing that God is the teacher of His people Himself, we sit together in silence, and there are many who can bear testimony that as their minds have been reverently turned to the true Minister of the sanctuary in the inner chamber of the soul, they have known a renewal of spiritual strength, and a qualification to worship the Father of spirits in spirit and in truth. Though our numbers are small, we should ever remember that we have a testimony to bear to silent spiritual worship, and we would affectionately urge upon our members, particularly those in the smaller meetings, to persevere in maintaining it, even though it be under many discouragements. We are living in a time of ease and indulgence, and have need to be on the watch lest we become careless and indifferent in the performance of the obligation of assembling ourselves for Divine worship. Sympathy was expressed for those of our members in isolated situations, far removed from any established meetings of

* This report will appear in our next number.

Friends, and encouragement was extended to such to seek opportunities to sit together, though it be in silence, with their families and neighbors, at stated times, for the renewal of their spiritual strength.

We are thankful in believing that love and unity increasingly prevail throughout our borders, and that there has been a harmony of action and an ability to encourage one another in every good word and work. Earnest are our desires that this heavenly influence may more and more abound. When possessed of this, it is a well-spring in the soul, and leads us to seek out those in suffering and sorrow, to aid and advise with the widow and the orphan, to take our young friends by the hand during the struggles of their early manhood, and to exhibit fruits which will attract to our religious Meetings.

The value of a membership in our religious Society—obedience to the wholesome restrictions of concerned parents or guardians—the excellent advices contained in our Discipline—the avoidance of pernicious books calculated to vitiate the purity of the mind by suggesting impure thoughts—the reading of the New Testament—and the example of the blessed Jesus—were all impressively presented to the view of our dear young friends who are entering on the duties and responsibilities of life.

The allurements of fashion, the trials and temptations to which the young are exposed, were forcibly portrayed by those who had learned from bitter experience that the way of the transgressor is hard.

The importance of selecting as companions for life those whose religious views correspond with our own was presented. This will aid us to walk together in harmony and mutual confidence in all the concerns of life, bearing together its trials and temptations. The folly and extravagance of the age are equally chargeable upon all who fail to bring themselves under the circumscribing influence of the Truth. A departure from a pure and chaste life has its origin in the undue indulgence of the animal propensities, and experience has abundantly proved that every such indulgence weakens the power to control those sensual appetites, which when rightly used are intended for our good, but which when perverted from their lawful purposes lead down to the chambers of death.

The fearful ravages of intemperance in our land called forth much exercise on the indulgence of stimulants and the use of tobacco, which are sapping the physical, intellectual, and spiritual strength of many gifted and superior minds.

The unalterable terms as laid down by our Divine Lawgiver continue in full force: "If any man will come after me, let him deny

himself, and take up his cross daily and follow me."

As the testimonies recited in the sixth query were severally presented for consideration, evidence was furnished that their value was appreciated, and every individual member of the Society was called upon faithfully to uphold them both by precept and example, and thus be instrumental in promoting the Redeemer's kingdom on earth.

In the treatment of offenders, let it ever be remembered that the spirit of restoring love is the only means by which they can be brought back to the fold.

To assist the Clerks in transcribing and forwarding the Epistles, preparing, publishing, and distributing the Extracts, a Committee was appointed.

Having concluded the business which has brought us together, we can, as we are about to close our labors, gratefully acknowledge the continued loving kindness of our Heavenly Father in watching over and strengthening us in the performance thereof.

With grateful hearts, and with desires for each other's welfare, we conclude to meet again in the Fifth month of next year, if so permitted.

A SUNBEAM.

The greatest of physical paradoxes is the sunbeam. It is the most potent and versatile force we have, and yet it behaves itself like the gentlest and most accommodating. Nothing can fall more softly or more silently upon the earth than the rays of our great luminary—not even the feathery flakes of snow which thread their way through the atmosphere as if they were too filmy to yield to the demands of gravity like grosser things. The most delicate slip of gold leaf, exposed as a target to the sun's shafts, is not stirred to the extent of a hair, though an infant's faintest breath would set it in tremulous motion. The tenderest of human organs—the apple of the eye—though pierced and buffeted each day by thousands of sunbeams, suffers no pain during the process, but rejoices in their sweetness, and blesses the useful light. Yet a few of those rays, insinuating themselves into a mass of iron like the Britannia Tubular Bridge, will compel the closely knit particles to separate, and will remove the whole enormous fabric with as much ease as a giant would stir a straw. The play of those beams upon our sheets of water lifts up layer after layer into the atmosphere, and hoists whole rivers from their beds, only to drop them again in snows upon the hills or in fattening showers upon the plains. Let but the air drink in a little more sunshine at one place than another, and out of it springs the tem-

pest or the hurricane which desolates a whole region in its lunatic wrath. The marvel is that a power which is capable of assuming such a diversity of forms, and of producing such stupendous results, should come to us in so gentle, so peaceful, and so unpretentious a guise.—*British Quarterly Review.*

WHATEVER you would not wish your neighbor to do to you, do it not unto him. This is the whole law; the rest is merely the exposition of it.—*Rabbi Hillel.*

For Friends' Intelligencer.

THE YOSEMITE VALLEY, CALIFORNIA.

BY THOMAS FOULKE, OF NEW YORK.

(Concluded from page 204.)

"One of the most wonderful things about an excursion to the Yosemite Valley," writes Charles Bruce in his valuable work, "The New West," "which will hereafter draw many an invalid here from distant lands, is its divine atmosphere! The nights are cool, but mid-day would be too warm were it not for the delicious sea breezes, which every day at eleven, come blowing in from the Golden Gate, a hundred and fifty miles away! The gorge is fortunately east and west, just opposite to San Francisco, and about midway between the two flanks of the Sierras, here some seventy miles in width! Were it a north and south valley, even in its altitude of four thousand feet, it would be almost intolerable. Now nothing can surpass its mild invigorating climate, and harmonious atmosphere. Life seems to have a new spring and hope under it. The charm of the wonderful valley is its cheerfulness and joy. Even the awe-inspiring grandeur and majesty of its features, do not overwhelm the sense of its exquisite beauty, its wonderful delicacy and color, and life and joy."

"I have been thinking much of scenes in Norway, Tyrol and Switzerland, with which to compare this. Switzerland, as a whole, is much superior in combinations and variety of features to the Sierra region. But there is no one scene in Switzerland, or the other parts of mountainous Europe, which can at all equal the Californian valley. The Swiss scene has the advantage in the superb glaciers which flow into the upper end of the valley; but it is inferior in grandeur, and even in life, to the Californian. The latter having immensely grander precipices, and instead of one waterfall,—the Stanbach—a dozen on a much grander scale."

An English gentleman, who spent seven-teen days in the Yosemite, thus writes: "I never left a place with so much pleasurable regret in my life. I have several times visited all the noted places in Europe, and many that are out of the ordinary tourist's round.

I have crossed the Andes in three different places, and been conducted to the sights considered most remarkable. I have been among the charming scenery of the Sandwich Islands, and the mountain districts of Australia, but never have I seen so much sublime grandeur, relieved by so much beauty, as that which I have witnessed in Yosemite."

In the comparison between the Yosemite Valley and some parts of Switzerland, another somewhat celebrated writer and extensive traveller has remarked: "The loftiest of these mountain centres is Mount Blanc, in Savoy, the height of which is 15,744 feet; the next in height is Monta Rosa, 15,200 feet high, and the third is the Bernese Alps, the culminating point of which is the Finsteraarhorn, 14,100 feet high. These three grand centres are about sixty miles apart, and each has a scenery peculiar to itself. They are alike vast, rugged mountain masses, towering 6000 feet into the region of perpetual snow; but Mount Blanc has its 'aiguilles' or needles; Monta Rosa its wonderful neighbor 'Mount Cervin;' and the Bernese Alps have their beautiful valley of misty waterfalls, leaping over perpendicular cliffs. The traveller who visits the Yosemite Valley after seeing the Alps, will be reminded of each of these three grand centres. He will see the aiguilles of Mount Blanc in the "Sentinel" or Castle Rock, rising as straight as a needle to the height of 3200 feet above the valley, and in several other pointed rocks of the same kind. He will be reminded of the sublimest object in the vicinity of Monta Rosa, the Materhorn, or Mount Cervin, the summit of which is a dark obelisk of porphyry, rising from a sea of snow to the height of 4500 feet. The south Dome at Yosemite is a similar obelisk 4593 feet in height. But above all, the general shape, the size, and the waterfalls of Yosemite Valley, give it the closest resemblance to the famous valley of Santer-brunen, at the base of the Jungfrau, in the Bernese Alps.

"No part of Switzerland is more admired and visited. To me, its chief charm is not so much its sublime precipices, and its lofty waterfalls, which give the valley its name—'Lauterbrunnen,' meaning 'Sounding Brooks,'—as the magnificent mountain summits, towering up beyond the precipices, and the unearthly beauty and purity of its glistening snows on the bosom of the Jungfrau, and the mountains at the head of the valley! But these summits are not the peculiar characteristic features of the Lauter-brunen valley. These are the waterfalls, the perpendicular precipices, and the beautiful grassy and vine-clad vale between. And these are the grand features of the Yosemite Valley. But look

now at the waterfalls; only one of them in the Swiss valley has a European celebrity—the Stanbach, or 'Dust Brook'—known as the highest cascade in Europe. It falls at one leap, 925 feet. Long before it reaches the ground, it becomes a veil of vapor, beclouding acres of fertile soil at its feet. It is worthy of all the admiration and enthusiasm it excites in the beholder. But the Bridal Veil—Pohono Fall—in Yosemite Valley is higher, being 940 feet in altitude, leaps over a smoother channel in a clear symmetrical arch of indescribable beauty; has a larger body of water, and is surrounded by far loftier and grander precipices.

"When we come to Yosemite Falls proper, we behold an object which has no parallel anywhere in the Alps! The upper part is the highest waterfall in the world as yet discovered, being 1500 feet in height. (Later and better measurements make it 1600 feet.) It reminds me of nothing in the Alps but the avalanches seen falling at intervals down the precipices of the Jungfrau. It is indeed a perpetual avalanche of water, spreading as it descends into a transparent veil, like the train of the great comet of 1858. As you look at it from the valley beneath, a thousand feet below, it is not unlike a snowy comet, perpetually climbing, not the heavens, but the glorious cliffs which tower up three thousand feet into the zenith."

The following is an Indian tradition, in regard to "Pohono River and Fall:" "The river has its origin in a lake at the foot of a bold crescent-shaped perpendicular rock, about thirteen miles above the edge of the Pohono Fall. On this lake a strong wind is said to be continually blowing, and as several Indians have lost their lives there, and in the stream, their exceedingly superstitious imaginations have made it bewitched! An Indian woman was out gathering seeds a short distance above these falls, when, by some mishap, she lost her balance and fell into the stream, and the force of the current carried her down with such velocity, that before any assistance could be rendered, she was swept over the precipice, and was never seen afterwards. Pohono, from whom the stream and the waterfall received their musical Indian name, is an evil spirit, whose breath is a blighting and fatal wind, and consequently is to be dreaded and shunned. On this account, whenever from necessity the Indians have to pass it, a feeling of distress steals over them, and they fear it as much as the wandering Arab does the Simoons of the African desert; they hurry past it at the height of their speed. To point at the waterfall, when travelling in the valley, to their minds is certain death! No inducement

could be offered sufficiently large to tempt them to sleep near it. In fact, they believe that they hear the voices of those that have been doomed there, perpetually warning them to shun 'Pohono.' The name Bridal Veil is appropriate, yet many would prefer the euphonious Indian name, 'Pohono.'"

I will here introduce a very interesting and thrilling Indian legend of Tu-tock-ah-nu-lah or El Capitan, and Tis-sa-ack or South Dome, representing the part which each has taken in the history of the Yosemite Valley. The Lake referred to is Mirror Lake, and the River the Merced River. The legend is touchingly eloquent, and some of its comparisons are unsurpassed in beauty by anything which I have ever seen. It was told by one signing himself "Iota," who received it from the lips of an old Indian:

"It was in the unremembered past, that the children of the sun first dwelt in Yosemite. Then all was happiness; for Tu-tock-ah-nu-lah sat on high in his rocky home, and cared for the people whom he loved. Leaping over the upper plains, he herded the wild deer, that the people might choose the fattest for the feast. He roused the bear from his cavern in the mountain, that the brave might hunt. From his lofty rock, he prayed to the 'Great Spirit,' and brought the soft rain upon the corn in the valley. The smoke of his pipe curled into the air, and the golden sun breathed warmly through the blue haze, and ripened the crops, that the women might gather them in. When he laughed, the face of the winding river was rippled with smiles; when he sighed, the wind swept sadly through the singing pines; if he spoke, the sound was like the deep voice of the cataract, and when he smote the far-striding bear, his whoop of triumph rang from crag to gorge—echoed from mountain to mountain. His form was straight like the arrow, and elastic like the bow. His foot was swifter than the red deer, and his eye was strong and bright like the rising sun!

"But one morning, as he roamed, a bright vision came before him, and then the soft colors of the west were in his lustrous eye. A maiden sat upon the Southern Granite Dome that raises its gray head among the highest peaks. She was not like the dark maidens of the tribe below, for the yellow hair rolled over her dazzling form, as golden waters over silver rocks; her brow beamed with the pale beauty of the moonlight, and her blue eyes were as the far-off hills before the sun goes down. Her little foot shone like the snow-tufts on the wintry pines, and its arch was like the spring of a bow. Two cloud-like wings wavered upon her dimpled shoulders, and her voice was as the sweet, sac-

tone of the night bird of the woods. 'Tu-tock-ah-nu-lah,' she softly whispered, then gliding up the rocky dome, she vanished over its rounded top. Keen was the eye, quick was the ear, swift was the foot of the noble youth, as he sped up the rugged path in pursuit; but the soft down from her snowy wings was wafted into his eyes, and he saw her no more.

"Every morning now did the enamored Tu-tock-ah-nu-lah leap the strong barriers, and wander over the mountains to meet the lovely Tis-sa-ack. Each day he laid sweet acorns and wild flowers upon her dome. His ear caught her footstep, though it was light as the falling leaf; his eye gazed upon her beautiful form, and into her gentle eyes; but never did he speak before her, and never again did her sweet-toned voice fall upon his ear. Thus did he love the fair maid, and so strong was his thought of her that he forgot the crops of Yosemite, and they without rain, wanting his tender care, quickly drooped their heads and shrunk. The wind whistled mournfully through the wild corn, the wild bee stored no more honey in the hollow-tree, or the flowers had lost their freshness, and the green leaves became brown. Tu-tock-ah-nu-lah saw none of this, for his eyes were dazzled by the shining wings of the fair maiden. But Tis-sa-ack looked with sorrowing eyes over the neglected valley, when early in the morning she stood upon the gray dome of the mountain. So, kneeling on the smooth, hard rock, the maiden besought the 'Great Spirit' to bring again the bright flowers and delicate grasses, green trees and nodding corns. Then with an awful sound the dome of granite opened beneath her feet, and the mountain was riven asunder, while the melting snows from the Nevada gushed through the wonderful gorge. Quickly they formed a lake between the perpendicular walls of the cleft mountain, and sent a sweet, murmuring river through the valley. All men was changed. The birds dashed their little bodies into the pretty pools among the grasses, and fluttering out again sang for delight! The moisture crept silently through the parched soil; the flowers sent up a fragrant incense of thanks; the corn gracefully raised its drooping head, and the sap, with velvet foot-fall, ran up into the trees, giving life and energy to all. But the maiden for whom the valley had suffered, and through whom it had been again clothed with beauty, had disappeared as strangely as she came; but that all might hold her memory in their hearts, she left the quiet lake, the winding river, and yonder half-dome, which still bears her name—Tis-sa-ack. It is said to be 4500 feet high, and every evening it catches the

last rosy rays that are reflected from the snowy peaks above. As she flew away, small downy feathers were wafted from her wings, and where they fell—on the margin of the lake—you will now see thousands of little white violets.

"When Tu-tock-ah-nu-lah knew that she was gone, he left his rocky castle and wandered away in search of his lost love. But that the Yosemite might never forget him, with the hunting-knife in his bold hand, he carved the outlines of his noble head upon the face of the rock that bears his name. And there they still remain, 3000 feet in the air, guarding the entrance to the beautiful valley which had received his loving care."

Deep down in a little ravine, called the little Yosemite valley, in a grassy meadow, back of the "Cap of Liberty," meanders the Merced River, before it enters the Yosemite proper. Tall pines are everywhere abundant, being about the size of ordinary walking-sticks in appearance, from the great distance which the observer is from them. In the southeastern corner of this little valley is the Nevada Fall. The mountains on both sides are in some respects more singular than those of the great Yosemite, their formations being entirely different. You may see deer trail deeply worn and full of recent imprints of their feet; also the marks of the grizzly bear. Huge boulders and masses of granite lie scattered here and there in all directions. The river above, for some distance, before making its wonderful leap, forms a series of rapids. The Hatchie valley, in the opposite direction from the little Yosemite, and on the other side of the great Yosemite, is reached from Hodgdens, being about 15 miles distant on a tolerably good trail. It is more accessible than the Yosemite, but not so large nor so grand. If it were in any other part of the world, however, it would be regarded as a great natural wonder, and resorted to by travellers from all lands. The mountains around it are nearly as high, and the waterfalls in some instances are higher than some of those of Yosemite. At present the valley affords good pasture lands for large flocks of sheep, and is occasionally visited by pedestrian parties.

In conclusion, should any ask, does it pay to visit the Yosemite? I would reply that it paid me a thousand times over! Such scenes of loveliness and beauty, of grandeur and sublimity, spread a charm over one's life, and the impressions made are not to be effaced by the finger of time, so long as memory lasts. And when at last you turn away from this—the sublimest page in all the book of nature—you realize in its fulness

"A thing of beauty is a joy forever."

I believe "few can come from its study, without hearts more humble and reverential, and lives more worthy and loyal to truth and right."

THE most fatal idleness is that of the heart. And the man who feels weary of life may be sure that he does not love his fellow-creatures as he ought.—*Leckey.*

HIGHER AND NEARER.

A little higher yet—until we're lifted
Above the obscuring clouds that dim our sight ;
Untill our souls have through the darkness drifted
Into God's marvellous light.

A little nearer—till earth's joys and sorrow
Far, far beneath us in the shadows lie,
And we have glimpses of the bright to-morrow
That waits us in the sky.

A little higher yet—a little nearer,
Until at last a glorious crown is won,
Whilst, as we soar, sounds sweeter still, and clearer,
"Servant of God, well done !"

DEW DROPS.

The dew drops on the grass,
Stay but their little hour—
Soon from our sight they pass ;
But leaf and opening flower
Have greener, brighter grown,
For every vanished bead,
Each glistening, short-lived drop,
Hath filled some pressing need.

Some little, growing bud,
Some reddening berry's core,
Some drooping blade or leaf
The sun had smitten sore,
Hath felt the gentle touch
Which strength or healing brought,
So that no tiniest drop
Hath ever been for naught.

Each little word we speak,
Each little deed we do,
If but the heart be pure,
Hath mission just and true.
Be words sincere and kind,
Be deeds without a stain,
Then word and deed and life
Shall not have been in vain.

—*Luella Clark.*

THE WORKER.

My face is wrinkled and swart ;
My hands are hard and brown ;
I work for my daily bread
In the midst of the noisy town :
But just outside the line,
Where meadows slope to the west,
Among the blossoms and trees
I've built me a cosy nest.
I cheerily work all the day—
Work for the birdies three ;
And the heart that beats in my breast
Is stout as a heart can be ;
For the thought keeps singing in tune
To the engine's ceaseless hum,
That Jack, and Fanny, and May,
Are waiting for papa to come.

And I know when the setting sun
Shall glow in the western skies,
That the cars will be closely watched
By six of the brightest eyes ;
And, better than all, in the porch
A sweet little woman will wait,
Saying, down in her tender heart,
"Oh, dear! what can make him so la'e !"
—*Christian Union.*

"THAT'S THEE, JEM !"

BY ROBERT MAGUIRE, A. M.

A band or "troupe" of young men, with hands and faces blackened, and dressed in very grotesque costumes, arranged themselves one day for an exhibition of their peculiar "performances," before the door of an earnest Christian merchant whom we will call Mr. Carr, who resided in a noted English watering place. After they had sung some comic and some plaintive melodies, with their own peculiar accompaniments of gestures and grimaces, one of the party, a tall and interesting young man, who had the "look" of one who was beneath his proper station, stepped up to the door, tambourine in hand, to ask for a few "dropping pennies" of the people. Mr. Carr, taking a Bible, which he kept for sale, out of his window, addressed the youth:—

"See here, young man, I will give you a shilling and this Book besides, if you will read a portion of it among your comrades there, and in the hearing of the bystanders."

"Here's a shilling for an easy job!" he chuckled out to his mates; "I'm going to give you a 'public reading.'"

Mr. Carr opened at the fifteenth of Luke, and pointing to the eleventh verse, requested him to commence there.

"Now, Jem, speak up!" said one of the party, "and earn your shilling like a man!"

Jem took the Book, and read, "And he said, A certain man had two sons: and the younger of them said to his father, Father, give me the portion of goods that falleth to me. And he divided unto them his living."

There was something in the voice of the reader that lulled all to silence; while an air of seriousness took possession of the youth, and commanded the rapt attention of the crowd.

He read on—"And not many days after, the younger son gathered all together, and took his journey into a far country, and there wasted his substance in riotous living."

"That's thee, Jem!" ejaculated one of his comrades—"it's just like what you told me of yourself and your father!"

Jem continued, "And when he had spent all, there arose a mighty famine in that land; and he began to be in want."

"Why, that's thee again, Jem," said the voice—"Go on!"

"And he went and joined himself to a citizen of that country; and he sent him into his fields to feed swine. And he would fain have filled his belly with the husks that the swine did eat: and no man gave unto him."

"That's like us all!" said the voice, once more interrupting, "we are all *beggars*; and might be better than we are! Go on; let's hear what came of it!"

The young man read on with a trembling voice, "And when he came to himself, he said, How many hired servants of my father's have bread enough and to spare, and I perish with hunger! I will arise and go to my father."

At this point he fairly broke down, and could read no more. All were impressed and moved. The whole reality of the past rose up to view; and, in the clear story of the Gospel, a ray of hope dawned upon him for his future. His father—his father's house—and his mother too; and the plenty and the love ever bestowed upon him there; and the hired servants, all having enough; and then *himself*, his father's son; and his present state, his companionship, his habits, his sins, his poverty, his outcast condition, all these came limbing, like an invading force into the citadel of his mind, and fairly overcame him.

That day—that scene—proved the turning-point of that young prodigal's life. He sought the advice of Mr. Carr, communications were made to his parents, and the longest and dearly-loved child returned to the familiar earthly home; and still better, to his Heavenly Father! He found the promises of the Parable of the Prodigal Son, true both for time and for eternity.

"Yes, there is One who will not chide nor scoff,
But beckons us to homes of heavenly bliss;
Beholds the prodigal a great way off,
And flies to meet him with a father's kiss!"

—*Words for Wayfarers, No. 18.*

SOCIAL ENTERTAINMENT.—Dio Lewis, in his book on "Our Girls," says: "The time will soon come when people of really fine culture will not think of giving their guest a late supper; indeed, of the twenty most intellectual and refined homes to which I have been invited in America and Europe, not one gave any refreshments at an evening party, with, perhaps, the exception of wine in France, and lemonade in this country."

EXTRACT.

I do not think we ever get half the sweetness out of life that there is in it.

Very many of us are like greedy children. You give them a bit of candy, and they chew it up, and swallow it quickly; whereas, if

they had been slower and quieter about it, they would have got much more sweetness out of it. And there are greedy natures that do not get half the enjoyment out of life that they might. We are all avaricious of joys not yet experienced, and careless of the sources of enjoyment that are present with us.

Suppose that bees should imitate the folly of men! I notice that the bees never disdain white clover, though it is one of the smallest of flowers; and that they never touch the daisy, though it is many times as large; nor the sunflower, though it is a hundred times as large. They resort to these little flowers, and they find in each some sweetness, though it is little and homely; and when they come home to the hive, they come laden with honey.

We do not get much honey out of common things. We want larger experiences. We want great shocks of joy. So we fly over the homely flowers by the wayside of life, and do not make half as much out of them for the household as we might. What we need is contentment, humility, and a sense of God in everything.—*H. W. Beecher, in Christian Union.*

THE FRUIT OF THOUGHT.—Alexander Hamilton once said to an intimate friend: "Men give me some credit for genius. All the genius I have lies just in this: When I have a subject in hand, I study it profoundly. Day and night it is before me. I explore it in all its bearings. My mind becomes pervaded with it. Then the effort which I make the people are pleased to call the fruit of genius. It is the fruit of labor and thought."

SICK-ROOMS: DECISION AND QUIETNESS.

Consult your patient's wants, but consult him as little as possible. Your decision need not be very obvious and positive; you will be most decisive if no one suspects that you are so at all. It is the triumph of supremacy to become unconsciously supreme. Nowhere is this decision more blessed than in a sick-room. Where it exists in its genuineness, the sufferer is never contradicted, never coerced; all little victories are assumed. The decisive nurse is never peremptory, never loud. She is distinct, it is true—there is nothing more aggravating to a sick person than a whisper—but she is not loud. Though quiet, however, she never walks tip-toe; she never makes gestures; all is open and above-board. She knows no diplomacy or *finesse*, and of course her shoes never creak. Her touch is steady and encouraging. She does not potter. She never looks at you sideways. You never catch her watching. She never slams the door, of course, but she never shuts it slowly, as if she were cracking a nut in

the hinge. She never talks behind it. She never peeps. She pokes the fire skilfully, with firm judicious penetration. She caresses one kind of patient with genuine sympathy; she talks to another as if he were well. She is never in a hurry. She is worth her weight in gold, and has a healthy prejudice against physic, which, however, she knows at the right time how to conceal.

OBSTINACY OVERCOME.

A gentleman related in my presence a little incident, which I give as I heard it:

A wagon was passing, heavily laden with slates. The horse stopped, refusing to be urged or cajoled into starting. Of course I expected, as usual, to see the driver use his whip, or perhaps his heavy boots, with an accompaniment of shouts and oaths, to remind the animal of his neglect of duty. He went to the wagon, and commenced fumbling in its depths. Now, thought I, that poor horse will receive a most tremendous beating; and I waited the issue with bated breath. But instead of the stake which I anticipated, he drew out an old wooden bucket, the outside covered with meal, the remains of former lunches, ran along the road for some distance before the horse, and set it down. The animal, true to his instincts, forgetting his former obstinacy and whims, hurried towards the well-remembered receptacle of former enjoyments, and the battle was won by a little quiet management, saving pain and trouble for both man and beast. Now, thought I, as I went on my way rejoicing, here is a lesson for educators. Don't drive and push and scold, but accomplish your object, whether it be with child or "dumb animal," by means of some incentive to the performance of duty, which shall recall pleasures past, or be an earnest of joys to come.—*Our Dumb Animals.*

SUGGESTIVE.—"Is such a man a Christian?" was asked of Whitefield. "How should I know?" was the impressive reply; "I never lived with him."

ITEMS.

THE Treaty of Washington has been ratified by the American Senate. It does not require the consent of the English Parliament, and yet the Opposition there are insisting that it shall be thoroughly discussed in Parliament before being signed by the government. Upon no other basis than that of frank and friendly concession in a spirit of justice and forbearance can difficulties between great nations be settled. Even if the treaty is not equitable in its minor provisions, we advocate its adoption as settling very grave questions, and as tending to establish the great principle of neutral arbitration. It is one step toward the abolition of war.

THE new territorial government of the District—

now territory—of Columbia was inaugurated on the 15th ult.

THE OCEAN TELEGRAPH.—Expert operators are able to transmit from 15 to 20 words per minute through the Atlantic cable. The velocity with which a current or impulse will pass through the cable has been ascertained to be between 7,000 and 8,000 miles per second; the former being the velocity when the earth forms a part of the circuit, and the latter when it does not.

AN interesting object is the chronopher, or instrument from which all England is supplied with the correct time. Sixteen of the most important cities in the kingdom are in direct communication with this instrument, which is in itself in direct communication with the Observatory at Greenwich. At 9:58 o'clock every morning all other work is suspended, in order that there may be no interference with what is called the "time current," which, precisely at the striking of the clock, flashes the intelligence to the sixteen stations with which it is in communication. And not merely at these large towns, but at every post-office throughout the kingdom, the clerks, at 9:58 o'clock, are on the lookout for the signal which is being passed along their line, and the clocks are adjusted accordingly. Messrs. Dent, Benson, and all the principal watch-makers in London, receive the time every hour from this chronopher. Time-guns at Newcastle and at Shields are also fired at 1 P. M., by batteries connected with the chronopher, the clock attached to which is regulated for accuracy to the twentieth part of a second.

WATER-PROOFING WALLS.—One of the most recent of the many uses to which Frederick Ransome's process of manufacturing artificial stone has been applied, is in protecting the outer walls of buildings, so as to enable them to resist the action of the weather by making them water-proof. Through well-built and substantial walls, moisture will make its way, and the ordinary type of dwelling houses is very pervious to wind-driven rain.

The external surfaces of the walls to be protected are first washed with a silicate of soda or solution of flint, which is applied again and again, until the bricks are saturated, and the silicate ceases to be absorbed. The strength of the solution is regulated by the character of the bricks upon which it is to be applied, a heavier mixture being used upon porous walls, and a lighter one on those of denser texture. After the silicate has become thoroughly absorbed, and none is visible upon the surface, a solution of chloride of calcium is applied, which, immediately combining with the silicate of soda, forms a perfectly insoluble compound, which completely fills up all the interstices in the brick or stone, without in any way altering its original appearance. By this operation the wall is rendered perfectly water-tight, and as the pores of the bricks are thoroughly filled for a considerable depth from the surface with the insoluble compound, which is entirely unaffected by atmospheric influences, no subsequent process is necessary.

Already F. Ransome has successfully applied this process to a large number of buildings, several of which were previously almost uninhabitable from the constant dampness, and a lengthened experience has proved that it is not only thoroughly effective, but, from the comparative insignificance of its original cost, and the fact that renewals are never required, the system recommends itself for general adoption in preference to all other methods of water-proofing.

A BRIEF SKETCH OF THE LIFE OF TAULERUS.

A POPULAR PREACHER OF THE FOURTEENTH CENTURY.

Translated from the German by Peter Lossing.

It has been generally acknowledged among Christian professors that, agreeably to what was foretold by the apostles, there has been a grievous falling away from the primitive power, simplicity, and dignity which rendered the Christian name so celebrated in Europe and Asia during the first and second centuries.

It is also upon good grounds admitted that, even during the course of the overspreading of a dark night of apostacy, in which, according to what John in the vision of Light saw on the Isle of Patmos, viz., the woman with the man-child having fled to the wilderness, here to be nourished for a time, and times, and half a time, faithful witnesses were raised up and supported. And it is a matter of consolation to feeling minds, to find that even during the several centuries previous to the dawning of the reformation, although the man-child was, in a great measure, sequestered from public view, and obscured in the wilderness of superstition and the subtle intentions of a mercenary priesthood, he still existed—and that sincere-hearted individuals were nourished with the same spiritual food, and drank of the same spiritual fountain, issuing from the same spiritual rock—even Christ Jesus, the eternal light of the world. These were strengthened from time to time,

evinced a true experimental knowledge of the humbling, purifying operation of the spirit of the Gospel, enabling them to stand as burning and shining lights in their day and generation. And it is to be seen that Christianity in its genuine purity, even during the eclipsed state of the church, had its faithful witnesses.

The translator of the following abridged sketch of Taulerus, being favored with the perusal of the German translation of the life of Taulerus, never having understood that it has been published in English, from a desire that pious minds might enjoy similar satisfaction with himself in its perusal, who have no opportunity of reading the account in their native language, has been made willing to attempt a summary abridgment of the work in English; and if it should prove an encouraging and consolatory hint to any pious mind or minds, he will think himself well rewarded. The original account having been written in the darkest age of Popery some evidently superstitious remarks, owing to the darkness which then prevailed, in the original, as appendages introduced by his biographer of that age, nor, strictly speaking, necessarily belonging to the narrative of this truly great man, are omitted in this abridgment. I am not conscious of any variation made from the original account as a connected narration of facts. As such I present it to the friendly reader, trusting that the want of a thorough knowledge of grammatical acquire-

ments will plead an excuse for inaccuracies, when the difficulties arising from the great difference between the idiom of the German language and the English tongue are considered.

Taulerus was born about the year 1290; and his remarkable conversion took place about the year 1340, being then fifty years of age. He had been a very celebrated and popular preacher, for many years, of an honest disposition, joined with great natural and acquired endowments and strong powers of oratory.

After having thus with great applause filled the station of a clergyman of the highest approved order of St. Dominick, and having become the topic of adulation far and near, part of the time residing at *Coln*, and the latter part of his time in the city of Strasburg, Germany, he lived to a great age, and died in 1379. A tombstone was erected upon his grave agreeably to the custom of that age, with the representation thereon of a Lamb with a hand and finger pointing thereto, as an emblem of his faithful adherence to, and labors in directing the attention of the people to the Lamb of God, that taketh away the sins of the world.

It appears by the account given, that before his conversion, like Cornelius of old, although a stranger to the heart-cleansing, powerful operation of the baptism of Christ, as distinguished from that of John; yet in the sincerity of his heart his prayers and alms came up for a memorial before God. For it so happened that a certain layman of great piety and deep experimental knowledge of the purifying efficacy of the religion of Christ, who lived about thirty German miles (one hundred and twenty English miles) from Taulerus, who had heard much of the fame of Taulerus's piety and celebrity as a very popular preacher, was warned in three successive nights in his sleep by a dream, to go and hear for himself this celebrated Dr. Taulerus. He accordingly set out, concluding within himself that he would there wait and see what the Lord would require of him. He accordingly went, and continued there until he heard him deliver five Lectures or Sermons, in the course of which his mind became divinely impressed with a sense of the state of the Doctor's mind, viz., that he was naturally of a sweet disposition, a tender, well-disposed, good-hearted man, and possessed a general knowledge of the Scriptures; that he nevertheless was in a state of darkness in respect to the experimental operation and work of Divine Grace—which wrought powerfully on the mind of this pious layman, in the line of compassion and solicitude for his spiritual welfare. He then called on the Doctor, and said, "Dear Doctor, I have come upwards of

thirty miles on thy account, in order that I might be a partaker of the benefit of thy doctrine; and having heard five discourses, I desire thee to favor me with thy gifts as my confessor;" which request being granted, he made auricular confession in great simplicity. He remained in the city twelve weeks, having occasional interviews with the Doctor, when at last, in respectful language, he earnestly entreated the Doctor that he would, through the assistance of Divine Grace, preach a sermon on the following subject, viz. :—"How man in his natural fallen state may gain the possession of his highest and best remedy, viz., complete redemption, while here in this probationary state of existence, so as to experience a happy assurance of his acceptance before God in Christ Jesus." The Doctor hesitated to express himself, as though he supposed the subject involved such deep and sublime matter that he (the layman) would not be able to comprehend the explanation, were he to indulge him in his request. The layman still importuned, saying, although it should be so, yet if only one seeking mind among the multitude who heard him should understand and receive benefit from such an exposition, it would be well worth his trouble and labor. At length the Doctor assented, promising that he would study the subject, and endeavor to compose a sermon accordingly. This being at the close of the next service, he mentioned that he had been requested thus and so—which he had complied with, and that at the next meeting he would endeavor to elucidate this weighty and important subject. This drew together a vast concourse of people. The Doctor commenced with this text, John i. 47: "Behold an Israelite indeed, in whom is no guile."

The introductory part of his communication comprised a number of remarks, going to show that ever so close an application to what is commonly termed religious exercises and duties performed in the strength and will of man, by his powers of imitation of the wise and good, amounts to no more than *form* and *imagery*, and consequently falls infinitely short of promoting man's greatest, highest, and most essential good. That the first ground-work towards the attainment of the all-important object of the present discourse is deep self-abasement—not only a sense of the creature's unworthiness, but such an utter despondency as to its ability to do anything to promote the important work of the soul's salvation as to become willing to sink into the greatest possible state of insignificance, submitting and resigning itself wholly into the Divine hand to work in him, both to will and to do according to his own good pleasure. For as long as the creature places any dependence

on its own powers of exertion to conciliate Divine favor, the busy forward actings of the selfish part will shut out the free and uninterrupted work of the spirit of God upon the soul; and will incessantly lead into dead lifeless form, ceremony, and offensive imagery. He expressed his apprehensions and fears that many of the zealous professors of religion in that day—not only the laity, but even among the great and learned Doctors of Divinity (so called)—for want of this foundation being well laid in them, were in danger of passing through life with all their zeal and labors, in propagating what they call Christianity, depending on their natural powers, and reasoning and comparing faculties, passing in the world for great and good men; and yet remain in total darkness as it respects the efficacious influence of Divine good—and in imminent danger of at last landing in disappointment, and being ranked with those fallen angels, who, through pride and self-sufficiency kept not their first estate. Wherefore, in order to our happy attainment of the desirable end, the object of the present discourse, he called the attention of the audience to the weighty consideration of the following heads, with an earnest expostulation that those who prized their souls' welfare would compare and examine their own hearts and experiences, in order that they might make just and righteous discoveries respecting their own states and conditions, as they really were in the sight of Omniscience.

He then proceeded to show—1st. That a real Christian exhibits practically the characteristic mark of discipleship by his pure disinterested love to God and man—for without this all knowledge, and even the greatest attainments of past religious experience, amount to nothing. For Balaam, although he had such a sense of the Divine will, and was able prophetically to point out future events, failed in his acceptance before God for want of this genuine love of God and man.

2. That it is indispensably necessary in order to become an honest real Christian, to deny self—to become released from the dominion of selfish propensities: and continue his warfare against self—not as one who has already attained the victory, but as one engaged more and more to turn his back upon all his fallen selfish inclinations.

3. He must resign himself wholly to the Divine will, and submit himself as clay in the hands of the potter, so that there be nothing in the way to hinder the operation of the power of God's spirit forming, and fashioning, and working in him both to will and to do of his own good pleasure; and conceive himself still behind in the important work of resignation, as one who has not yet attained.

4. He must at all times, under every vicissitude and trial, wait for releasement the Lord's time, in patience—and know His will concerning Him, and to be content under every dispensation of His will: and at all times neither willing nor running in his own strength—desiring simply that the Lord's will be done in all things.

5. He must receive all things as being in wisdom dispensed from the Divine hand, although it may be through the instrumentality of the creature, for God oftentimes, for wise purposes, worketh through instrumental means. Therefore, whether good or evil we receive at the hands of our fellow-creatures, it should be accepted as coming for some good end, by Divine permission.

6. He must receive the good creatures of God for his bodily sustenance and support, and not for the gratification of his pride, or sensual and sinful appetite.

7. He must not, through favor or affection, or any other selfish motive, suffer himself to be drawn aside from simple truth in the honesty and integrity of his heart.

8. He must not be drawn aside by a respect of persons, nor any false light which may be presented, but quietly and submissively meet all presentations with care and caution, and draw good and wholesome inferences for his own good, and not to his own stumbling or offense. Whoever observes this rule has a certain witness within himself that he is governed by the spirit of truth.

9. He must at all times remain in readiness to be clad with the armor of God, shod with the preparation of the Gospel of peace, faithfully to maintain the warfare against all unrighteousness.

10. He must confess and acknowledge simple truth, and keep a steady eye thereto, for its own sake, agreeably to the will of God—his words few and savory, so as to abound in the inward life of God in the soul.

11. He must follow on to perfection in righteousness and true holiness—but continue guarded against conceiving himself righteous, or flattering himself with the idea of perfection in his own attainments.

12. He must be a preacher of righteousness to those round about him, by his example more than by words.

13. He must not assume the judgment-seat in censuring others, always remembering his own frailty and incompetence.

14. He must place no dependence on his own abilities and acquirements—but walk in faith, and not by sight; constantly depending on Divine aid and direction.

15. He must seek to honor God in all his doings, regardless of what others may say or think of him.

16. He must at all times keep an eye single to the example set by the Son of Righteousness in his precious personal life, as a looking-glass, and honestly compare and examine wherein he falls short of the pattern set before him.

17. Let him at all times consider himself as a beginner, a little child in the school of Christ, bearing His cross and despising the shame, glorying in being accounted worthy to suffer reproach for His name's sake, who hath taught him to see and behold the beauty there is in the truth.

Whoever does not possess the above marks of discipleship, however high and exalted his profession may be, he ought not to esteem himself, nor ought to be esteemed by others, as such. Now that we may become acquainted with the truth as it is in Jesus, in perfect humility and self-abasement let us look for help from the source and fountain of all truth, viz., Father, Son, and Holy Ghost. Amen.

After this sermon was ended, the pious layman retired immediately to his lodgings, and penned down the whole of the sermon preached by Taulerus on this weighty subject. He then went to the Doctor and said to him, "I have committed thy sermon to writing, and if not displeasing to thee I will read it." The Doctor readily assented. He then read it, and when done he asked him whether it were correct, or whether there was a word in the manuscript which varied from what was delivered, that so he might correct what was amiss. The Doctor admired, and said, "Dear son, thou hast penned it down so correctly, word for word, that I doubt whether I could by recollection pen it so correctly myself, though I were ever so richly rewarded. I am astonished that thou hast been so long concealed from me, for although I have had many interviews with thee as thy confessor, these gifts and acquirements in thee have been hidden from me."

The layman then intimated as though he was about to go away, and said, "If it please God I will now retire homeward." The Doctor said to him, "Whereas thou hast neither wife nor children at home requiring thy care, why canst thou not as well remain here awhile longer?—I have it in view to preach several more sermons on the weighty subject of Christian perfection."

The layman replied, "I did not come here merely on account of thy preaching, but from an apprehension that through Divine aid I might be a means of doing some good." The Doctor answered, "What good couldst thou expect to do, being a layman, and not understanding the Scriptures? It is not consistent for thee to attempt to preach; but remain

here, and through Divine aid I may preach another sermon to thy liking and benefit." The layman then said, "There is a subject so impressive on my mind that I would gladly unfold it to thee, but fear it will give offense, and not be borne with." The Doctor said, "Say what thou hast in thine heart to say: I am willing to hear it."

Then the layman said to him, "Thou occupiest a very high station as a spiritual guide, and hast, in this sermon, declared good and sound doctrine; but thy life does not correspond therewith. Thou hast urged me to remain here to hear another discourse. I must therefore let thee know that thy preaching and the outward declarations that can be delivered by man, are productive of no substantial benefit to me. Thou hast conveyed the idea in thy communication that when the Author of all wisdom instructs us, it is necessary that we should become emptied of everything that obstructs the Divine work; and I may now tell thee, that one hour's tuition under this heavenly instructor is of more value to me than all the instruction I can gain from man to the end of time. For under the teachings of man my mind frequently becomes impressed with ideas very unpleasant, and which I cannot easily eradicate. Now, as thou has pressed me to continue here awhile longer, if in obedience to the Divine will I remain and converse further with thee, I desire it may be by thee received as my confessor, and by no means to be divulged to any one." The Doctor said, "That I will do." Then the layman continued, "In the course of thy delivering the foregoing excellent sermon my mind became impressed with an idea as follows:—A man takes clear, pure, and excellent wine and mixes it with lees until it becomes turbid." The Doctor said, "What understandest thou by this simile?" The layman answered, "Thy vessel is still unclean, and there is much unwholesome lees sticking about thee, and consequently thy preaching sound truths in the letter, thou experiencest that the letter killeth, and that from day to day. It is written, 'The letter killeth, but the spirit giveth life.' Now that which condemneth thee in the letter is able to make thee alive in the spirit if thou honestly desirest it. But in thy present state of mind thou hast not the light of truth for thy guide; but thou dwellest in darkness wherein thou canst work in the oldness of the letter. But the sweet influence of the spirit of God thou art a stranger to. Besides this thou art as yet a Pharisee." The Doctor said, "I must tell thee that having arrived to my present age, no one has ever addressed me in such a manner, or charged me as thou hast." The layman answered, "Behold thy sermon—be-

hold how thy state is discovered. Thou apprehendest that I have gone too far in the description I have given thee; but be it known unto thee that I will convince thee of its propriety by thy own feelings and experience." The Doctor said, "I wish thee to do so, for I desire to be no Pharisee."

(To be continued.)

4 *Memorial of Northwest Fork Monthly Meeting, concerning our deceased Friend*
JOSHUA NOBLE.

As the memory of the just is blessed, and believing that the life and bright example of our friend has left good impressions upon the minds of many of his survivors, which we hope may be profitable to them, we have thought it right to offer the following testimony concerning him.

He was the son of Mark and Esther Noble, and was born near Federalsburg, Caroline County, Maryland, on the 6th of the Eighth month, 1809.

His parents were consistent members of the religious Society of Friends. His mother died in his infancy, so that he never knew the tender care of a kind mother. His father was an upright and exemplary man, and endeavored to bring up his children in the nurture and admonition of the Lord.

The subject of our memorial has left nothing upon record from which we can give an account of his experience in his youth, but we have good reason to believe that he had seasons of close trial and proving. He was a man of lively disposition and great resolution.

In his youthful days the ways and fashions of the world were very fascinating to him, and he thought that his father's restraints were hard to bear. He has been heard to say that when under his father's care he would generally take him to meetings, but these were irksome to him, and he would often make up his mind that if he ever grew to manhood, he would never be a Quaker.

When in his 23d year, his father died, leaving him the homestead, upon which he resided the remainder of his days.

Soon after this event, he was married to a person, not a member of our religious Society, but retained his right amongst us.

We have but little account of him for ten years subsequent to this period, except that during several severe attacks of sickness, he manifested much concern for his soul's welfare, and frequently sent for an esteemed Friend to converse and sympathize with him. From this time he grew more serious, and yielding to his sense of duty became a regular attender of religious meetings, and continued the practice during the remainder of

his life, when his health admitted of it. He has been heard to say that previous to this, his convictions of duty to go to midweek Meetings were so strong, and his natural inclination so opposed to it, that he would make excuses to go to the back part of his farm at such times, to keep out of the sight of his friends, as they passed on their way to meeting, thinking that he would thereby avoid the remorse of conscience he might feel, should he see them. But the Lord followed him, and finally yielding to manifested duty, in the year 1842 he appeared in the ministry with a few words occasionally. He frequently said that it was greatly in the cross for him to break the solemnity of a silent meeting.

He was recommended as an approved minister of our Society in the year 1847. He continued to improve in his ministry, dividing the word aright, and his communications were well received by persons of all denominations. He was no sectarian, but believed that in every nation he that feareth God and worketh righteously, is accepted with him. He would often say to his hearers, that it was not his mission to call them to any Society, but to call them from the *Lo heres!* and *Lo theres!* to the Light within them. He frequently attended funerals of those not in membership with Friends, and his communications on such occasions were well received.

By his industry and frugality he accumulated considerable wealth, of which the poor around him would often share, but he kept very close to the injunction of Christ, "Let not thy left hand know what thy right hand doeth." We believe he endeavored to be honest and upright in all his dealings with his fellow men. In public testimony, his communications were close and searching.

In the year 1865 he was attacked with hemorrhage of the lungs. In the autumn of 1869 he grew worse, and continued gradually to fail. A few days previous to his death, he remarked that he dreaded death, but as regarded the future, he had no doubt of his acceptance with his Heavenly Father, and felt that all would be well with him. On the morning of the day of his decease, a Friend on bidding him farewell observed that he appeared better. He replied, "I do not know; I am very weak," and late in the afternoon he quietly passed away, we doubt not, to the mansions of eternal rest. He died on the 18th of Eighth month, 1870, aged 61 years and 12 days.

His remains were interred in the family burial-ground, on one of his farms. His funeral was largely attended by his friends and neighbors, and several testimonies were

borne by ministers of our Society, and also by those of other denominations, concerning his usefulness amongst all classes, and especially the poor of his neighborhood.

Read in, and approved by Northwest Fork Monthly Meeting, held at Snow Hill, Second month 22d, 1871, and signed by direction thereof, by
WILLIS CORKRAN,
Clerk.

Read and approved by Southern Quarterly Meeting, held at Camden, Third month, 1st, 1871, and directed to be forwarded to the Representative Committee.

ROBERT B. DIXON,

WAR.

War is one of the greatest evils that has ever afflicted the human family. The prophet Isaiah in his day, when under the influence of prophetic vision, clearly saw its nature when he said: "Every battle of the warrior is with confused noise, and garments rolled in blood; but this shall be with burning and fuel of fire." He saw that the coming of Christ was to establish his righteous government of universal peace, upon the immutable basis of supreme love to God, and love unto one another; that nation should no longer lift up sword against nation, neither learn war any more. That which was foretold by the prophet, was in due season fully verified and confirmed by the testimony of Jesus, when he said, "My kingdom is not of this world, else would my servants fight." Hence it follows that none have a just claim of being the followers of Christ, and heirs of his kingdom, so long as they are actively engaged in the cruel and bitter spirit of war, and the shedding of human blood. My sincere desire is, that all who have become convinced of the unlawfulness and unrighteousness of war (and especially those professing to be followers of the Prince of Peace), may, from a sense of Christian duty, bear an uncompromising testimony against it, in order that its devastating ravages may forever cease to afflict the human family. It would seem as if an increase of faithful testimony-bearers against the barbarous custom of war should be called forth, when we consider its bitter fruits at home and abroad, in the past and down to the present time. Millions and tens of millions of human beings have been hurried to premature and untimely graves, prepared or unprepared, and many of these in the very prime of life. Truly a solemn reflection! Who can number the widows and orphans made such by war; brought to poverty and want, and left to mourn over their bereavements? We have abundant reason for believing that they who

have, from a sense of duty, become faithful laborers in the noble, righteous cause of universal peace, will in no wise lose their reward. But, alas! what shall we say of those who, neglecting the proper business of life, are spending their precious time in military schools, in order to become thoroughly qualified to carry out the system of war with the greatest success, involving, as it does, the destruction of human life and property? When hundreds and thousands are killed and wounded on the field of battle, and houses are pillaged, and cities laid waste, under the shield of the unrighteous law of nations, it is either made the occasion of a passing notice in the public papers, or lauded as a splendid achievement, a glorious victory, &c. This is one of the means of perpetuating the popularity of war. Why do men choose darkness rather than light? Would it not be more in agreement with the tenor and spirit of the Gospel, instead of eulogizing these sanguinary struggles, to portray to the people at large the degrading ravages of war in their true light, and thus convince the public mind of the unparalleled evils that have so long stained the pages of history? It is mournful to contemplate the delusions attendant on this system. When two armies are about to engage in the deadly combat, both call upon their chaplain to pray to the same God of love to aid the success of their arms, and in the destruction of each other. Can there be greater presumption? It is an unchangeable truth that the weapons of the Christian "are not carnal, but spiritual, and mighty through God to the pulling down the strongholds of sin and Satan."

The Christian's armor is of God,
Of Him who calls from war and strife,
Whose flaming sword turns every way
To guard the sacred tree of life.
It is a firm and matchless shield,
That wins, when worn, a heavenly field,

And enables all to become valiant in the Lamb's warfare, fruitful in the field of offering, and joyful in the house of prayer.

D. E. GEROW.

Fairfield Co., Conn., 5th mo., 1871.

WHO THE TUNKERS (DUNKERS) ARE.

The Tunkers have no book of forms or faith. They have and use only the Bible and the hymn-book. In cases of offences committed by members, the accused is tried by the Bible, and such punishment meted out as is suggested by the New Testament for the offence named.

We have no idea, says the Rockingham (Vt.) Register, of the number of members connected with the Tunker Church. In the valley of Virginia they are among the most

numerous of the religious denominations. Their ministers labor without remuneration. They have no paid officers in the church. Churches are erected and other necessary expenses are met by the voluntary contributions of the members. They have no paupers. Whenever a member becomes helpless and infirm, and unable to take care of himself, the church maintains him. Thus a Tunker pauper has never been known.

The Tunkers are almost universally agriculturists. They are generally good farmers, and are noted for their frugality and industry. As a matter of course, they are successful farmers. Their children are brought up under the most stringent rules of morality. Hence the Tunker boys and girls, as a general thing, are examples of sound morality and propriety. It would be a wonder to see a young Tunker drunk, or to record a violation of the proprieties by the daughters of a Tunker.

They are opposed to litigation and lawsuits. Controversies between the brethren are settled among themselves without referring them to the Gentile world.

CHRISTIAN CHARITY.

"As life advances, a more modest, a calmer, sweeter, more tolerant spirit begins to infuse itself into a man's mind. He begins to attach less and less importance to the points which divide sects and churches from each other, to think that few of them are worth a breach of charity—at any rate, to be convinced that it is not on these that the relation of the soul to God and eternity depends. Seeing in all churches men whose sweet and saintly lives breathe the very spirit of Christ, and of whom it is impossible to doubt that to Christ they are dear, shall he refuse to recognize those whom his Lord has received, or turn away with unchristian hardness and exclusiveness from men whom he may soon meet in heaven? No! whenever in the heat of party feeling, amid the weary strifes and rivalries of sects and churches, we are tempted to indulge the spirit of theological or ecclesiastical exclusiveness, or to feel for intellectual error the indignation and hostility that should be reserved for sin, there is one thought that may well bring us a better mind. Let us recall to mind the good and holy men of different sects and churches who once were with us and are now in the presence of Christ, and ask whether the points which divided them here, and about which, it may be, they contended and wrangled so hotly, can keep them asunder here, in that deeper, diviner life into which they have entered. Let us think, too, if it be ours to join one day their blissful society,

whether we shall carry with us much of our ecclesiastical partnerships or our theological jealousies into the still, sweet rest of heaven.

"Travelers as we are amidst the mists and shades of life, it is not wonderful, perhaps, that in its dim and deceptive light, we should sometimes mistake a friend for a foe, or turn away from a brother as if he were a stranger or an alien. But the night is far spent, the day is at hand, not distant is the hour when the sun of our souls shall rise full-orbed on our waiting eyes, and the mists shall disperse and the shadows flee away for ever; and then—then at last, if not now, we shall recognize in every soul that has ever loved and lived for Christ, the face of a brother and a friend."—*Dr. Caird, in the Moravian.*

Scraps

FROM UNPUBLISHED LETTERS.

1839.

Thine was duly received and was acceptable. I notice thy "valley dwelling" has been interrupted, but by what cause I am left to conjecture. I rest, however, in the conclusion that thou art in safe hands, and that both "sunshine" and "storms" will be so received and so *managed*, as to keep the balance even. But this seems peculiarly *our* part of the work. Had we something that might be called a mento-metre, graduated somewhat like a thermometer; and could we ascertain with equal precision the rise and fall of the mental powers, as operated on by external or internal causes; could we also note these on the tablet of memory, for future occasion, it might be of use to some. Suppose we make the temperature of "a meek and quiet spirit" the standard, or graduating point. But I will leave the further pursuit of the simile; for perhaps the taste for philosophizing may be turned from the *shape* of the *head* to the *mental* operations that are, as it is said, passing within the cranium. This interesting work has engaged so much of my attention from my youthful days, that I am less disposed to be diverted from it to mere outside observations than some of the children of the present knowing age.

I am unwilling to forego the idea, that men and women are as capable now as formerly, of coming to the point of decision, which is represented as the language of the spirit to those who fasted and prayed, when under a like engagement, saying, "*Separate unto me* Barnabas and Paul for the work unto which I have called them." That there are Friends *called* to the *work* or service of elders in the church, I fully believe. If it were not so,

I should be for dispensing with the order of discipline, as likely to be of more disadvantage to the ministry than otherwise. The great danger is a mixture of human policy in the nominating committee, and the Monthly Meeting.

I have been thinking much on the subject of *silent spiritual* and *social worship*, as one of the most exalted testimonies given to Friends to hold up to the view of rational intelligent beings. I believe very many are preparing for a better understanding of its sublime nature and practical utility. Oh! that there were more of a living concern for the spreading and exaltation of this pure spiritual worship, and the public, practical testimony to its efficacy. Why may not Monthly Meetings, by means of committees, hold meetings in numerous places among the people? Silent meetings, if no vocal communication should arise in the life. If Monthly Meetings could so feel the travail on this subject, as to bring forth children, little silent companies here and there on First-day afternoons, in some of the outskirts, among the people, I think it would have a tendency to gather those who are preparing to appreciate silent, spiritual worship, and be to their great advantage and encouragement; and I believe I should often feel a strong attraction toward them.

I feel at times a little rebellious at being deprived of an opportunity for daily intercourse, but I trust our spiritual greetings are not less frequent than formerly. I have need of the "fervent, effectual prayers" of such as have near access to the Divine footstool, that in the ups and downs of life's journey, I may not "become a castaway." Sometimes I am discouraged when I find how easily my faith is shaken, even when I had thought it the strongest. I know safety is dependent upon a state of watchfulness, and that upon ourselves and not upon our friends, rests the necessity of continual care and effort, that we fail not; but sympathy is very sweet to the worn traveller, and we are designed to be one another's helpers. Then let none of us withhold the out-flowings of the spirit of love and cheer. The "solitary in families" may thereby discover they are not alone in their secret exercises, and may be encouraged to press on in the path that opens before them.

WE must not hope to be mowers,
And to gather the ripe gold ears,
Until we have first been sowers,
And watered the furrows with tears.
It is not just as we take it—
This mystical world of ours;
Life's field will yield, as we make it,
A harvest of thorns or flowers!

—A. Cary.

FRIENDS' INTELLIGENCER.

PHILADELPHIA, SIXTH MONTH 10, 1871.

A RETROSPECTIVE GLANCE.—In recurring to our late Yearly Meeting we find much to encourage us. There were many evidences of life, and among the strongest, was the feeling of love which pervaded the assembly from day to day, producing a harmony that was surely allied to the "Spirit of unity which is the bond of peace." As we silently observed the movements of the body, there was a feeling which could adopt the Scripture testimony, "One is your Master, even Christ, and all ye are brethren." An occasional difference of sentiment in regard to subjects under consideration, as it brought out individual character, enhanced rather than destroyed the interest; no one appeared to have "a point to carry," but all seemed to be aiming for the same blessed end,—the advancement of Truth upon its own basis. There have been periods in the history of the Society when mutual forbearance did not attend the deliberations of those upon whom rested the responsibility of acting for the whole, and sad results followed. A remembrance of those unhappy days has, no doubt, a tendency to guard us against a repetition of them. They proved the danger of leaning upon human understanding, and not seeking wisdom of Him who giveth liberally to every humble, sincere petitioner.

May we ever continue to regard liberty of conscience as a precious boon, not to be trifled with.

The apostle Paul appears to have appreciated the importance of "each being fully persuaded in his own mind," and in the largeness of his spirit he could testify that charity should be the crowning virtue in the life of all men. We can rejoice in believing that the influence of this Divine principle is extending, not only within the narrow bounds of our own sect, but its Christianizing effects are being seen in a much more extended area. We regard the exercise of individual conviction respecting truth and error, as consonant with the doctrine of the inner Light, or "Light within," which was the rallying point of G. Fox and his cotemporaries.

The calming influence of this faith, where it is operative, proves conclusively that "Christ is not divided." During the long sittings, which were very fatiguing to those not physically strong, we were impressed with the interest manifested by the general deportment of the young people. The concern for them as expressed by several Friends from different sections, who had been drawn in gospel love "to partake of the passover" with those who might gather, as at Jerusalem,—"the city of God,"—we trust will be remembered to profit.

The simplicity of the Christian pathway was forcibly illustrated through the language of experience, and assurances were given that within the heavenly enclosure were found enjoyments which far surpassed the evanescent pleasures that too often not only impair physical health, but enervate both body and mind. Our dear young friends were also feelingly reminded of the influence they could exert on the circle of their young companions, by discouraging intoxicating beverages, and they were tenderly counselled to withhold the "tempting cup, red with wine," even when they might be thought by a few, whose approbation they valued, to be deficient in the rites of hospitality. The importance of suitable marriage connections claimed serious attention. Attachments formed under circumstances that might involve the parties in difficulties in the religious training of families, should be guarded against.

Unity of purpose is ever essential to the effecting of any great good, and nothing, perhaps, contributes more to the happiness of individuals than domestic harmony.

PROTESTANTISM IS A FAILURE.—This proposition, boldly asserted, fell upon our ear with an unwelcome sound, and was resisted with a feeling that it was a mistake—it *could* not be true! But calm reflection brought us to view the distracted condition of nearly every sect in its constituency; and slowly, but convincingly, it came to be regarded as a fact. Not that Christianity is a failure, but that too many professing the Christian name wear not the distinguishing badge of discipleship. "By this shall all men know that ye are my disciples

if ye have *love one to another*. John xiii. 35. Neither do they exhibit that harmony of spirit alluded to by the blessed Jesus, when He prayed that His followers might be *one*, even as He and the Father are one. "I in them and Thou in me, that they may be made perfect in one."

Have not the Christians of modern times committed the two evils attributed to ancient Israel? Have they not forsaken the *Fountain* of living waters, and hewed them out cisterns, broken cisterns that can hold no water? Jer. ii. 13.

In their degeneracy they have allied themselves to idols—not always to those of silver or gold, but to that which is equally the work of men. This has led to the hewing of cisterns. Accepting the Jewish tradition that there can be no remission of sins without the shedding of blood, and that it was "expedient that one man should die for the people, and that the whole nation perish not,"—with this as the basis of faith, each sect has "hewn out" a vessel or cistern in accordance with its own ideal of perfection, which it has consecrated as holy, but alas! it holds no water, and because of its dryness it falls to pieces. Its constructors, in their trouble and distress, would fain unite the broken fragments, but their cement proves no better than "untempered mortar." The *failure* cannot be concealed, and the unbeliever exclaims, "Where is their God!" We believe *the* remedy for the evil will be found in a compliance with the pathetic appeal of the Great I AM, through His prophets, "Turn ye, turn ye from your evil ways; for why will ye die, O house of Israel?" Ezek. xxxiii. 11. "Call unto me, and I will answer thee, and show thee great and mighty things which thou knowest not." Jer. xxxiii. 3.

Jesus Christ testified, "My mother and my brethren are these who hear the word of God, and do it." Luke viii. 21.

A BIOGRAPHICAL SKETCH OF THE LIFE OF TAULERUS, a popular preacher of the fourteenth century.—A Friend sent us an old copy of this little work a week or two since, in order for its publication in our columns. We carefully perused it, and arranged it for our three coming numbers.

Since that time we have received a reprint in pamphlet form from J. B. Lippincott & Co., publishers, of this city, and can confidently recommend it as most interesting and valuable. We consider it particularly appropriate to our paper, the spiritual experience of Taulerus having corresponded so nearly with that of the founders of our own religious Society.

DIED.

HAVILAND.—On the evening of the 20th of Fifth month, 1871, at the residence of her daughter, in Milan, Dutchess County, N. Y., Sarah, widow of Henry Haviland, in the 95th year of her age; a consistent member of Stanford Monthly Meeting.

BARNARD.—On the 25th of Fourth month, 1871, Vincent Barnard, of Kennett Square, Chester County, Pennsylvania, in the 46th year of his age; a member of Kennett Monthly Meeting. He was very useful in the community in which he lived, and was much loved and respected. By nature he had an aptitude for mechanical operations, and was also a man of science, devoting many of his spare hours to the study of natural history. Botany, ornithology and entomology were favorite pursuits with him, and as a taxidermist he acquired great skill. His cabinet of natural history contained over 3000 specimens, of his own collecting and preparing. In his death a loss has been sustained which will be felt for a long time.

BUNTING.—On the 30th of Fifth month, 1871, Joseph Morgan Bunting, in the 65th year of his age; a member of Darby Monthly Meeting.

CLEAVER.—On the 16th ult., Martha L. Cleaver, widow of Ezekiel Cleaver, in the 83d year of her age; a member of Gwynedd Monthly Meeting.

CIRCULAR MEETINGS.

- 6th mo. 18. Valley, Pa., 3 P.M.
 “ Manhasset, N. Y., 11 A.M.
 “ Port Washington, N. Y., 3½ P.M.
 “ Gunpowder, Md. (old house), 10 A.M.
 “ No meeting in the other house.
 “ Junius, N. Y., 11 A.M.
 7th mo. 2. Frankford, Pa., 3 P.M.
 “ Evesham, N. J., 3 P.M.
 “ Jericho, L. I., 11 A.M.
 “ Oyster Bay, L. I., 3½ P.M.
 “ 9. Boston, N. Y., 11 A.M.

CIRCULAR MEETINGS.

Committee of Philadelphia Quarter will meet at Race St. on Sixth-day afternoon, 6th mo. 16th, at 4 o'clock. *WM. EYRE, Clerk.*

LIBRARY ASSOCIATION.

Committee of Management will meet on Fourth-day evening, 6th mo. 14th, at 8 o'clock.

J. M. ELLIS, Clerk.

FRIENDS' PUBLICATION ASSOCIATION.

Executive Committee will meet at Race Street on Sixth-day afternoon, Sixth month 16th, at 3 o'clock.

W. M. LEVICK, Clerk.

FIRST-DAY SCHOOLS.

A conference with Friends of Norristown in reference to this subject will be held at the meeting-house on First day (to-morrow) afternoon, 6th mo. 11th, at 3 o'clock. All interested are invited. Cars leave 9th and Green Sts., Philada., at 9 A.M. and 1.30 P.M.

PHILADELPHIA YEARLY MEETING OF WOMEN FRIENDS.

As the subjects which came before this meeting were the same as those which claimed the attention of Men's Meeting, we give only the minute of exercises:

We humbly acknowledge that we have been favored during this Yearly Meeting with evidences of our Heavenly Father's love; and earnest desires were expressed that we may be enabled to perform all the services of the church under this cementing influence.

Comforting and encouraging have been the labors of those who, in obedience to the Master, are with us bearing the burden of His word, and we have desired that in this Gospel service their own strength may be increased.

The response in our hearts to the stream of love in epistles received, was as "deep answering unto deep," and we believe that in this feeling such salutations ever will unite and strengthen.

As the various requirements embraced in the queries have been presented by reading the answers from our constituent meetings, we have been impressively reminded of the ground of our profession, and earnestly exhorted to more faithfulness in maintaining the testimonies we are called upon to support, especially that of a free Gospel ministry. Deep concern prevailed in relation thereto. It was clearly shown that the diligent attendance of our religious meetings was a demonstration of our faith in the sufficiency of the teachings of the Holy Spirit, without instrumental aid.

Much concern was expressed in regard to extravagance and superfluity in dress and manner of living; the evil results from which can scarcely be estimated. Affectionate appeals were made to mothers and daughters that they should seriously reflect upon their responsibilities, and when tempted to expend the means in their possession for ornamental display, consider the greater good they might accomplish by aiding the needy, and relieving those less favored than themselves. We have it in our power to embarrass or assist our fathers and husbands in financial matters; and therefore are verily guilty, if in order to gratify an unwarrantable desire for luxuries, we cause trouble and distress by inducing them to enter into speculations, often resulting in monetary ruin.

The effect of individual influence regarding the use of intoxicating liquors was forcibly presented; and earnest counsel was given for all to do what is in their power to arrest the tide of intemperance which is spreading over the land. We were admonished to avoid the use in food of stimulating articles, which

might produce or cultivate a taste for a greater indulgence in that which intoxicates.

Mothers were cautioned to avoid administering to their young children medicines intended to produce temporary relief from suffering, but which, in consequence of containing alcohol, are calculated to impair the delicate tissues of the digestive organs, and create a desire for stimulants in future life. It was believed to be our duty to seek to know the laws of our physical being, and that whether we eat or drink or whatsoever we do, may be done to the glory of God.

The importance of the proper selection of associates was introduced for the reflection of our youthful members. They were advised not to allow their affections to become entangled with those of other religious professions, in order for marriage.

When those who have been educated in the simplicity of our profession are thus invited, and come to feel the responsibilities of future life, they are often not satisfied with the forms of other religious denominations, and in consequence of the conflicting views of their parents, the children suffer for want of religious care and teaching.

We were introduced into an exercise on account of the First day schools, conducted by Friends, belonging to our Yearly Meeting; and a concern has prevailed that those who believe themselves called into this service, may feel the responsibility connected therewith; that they may be watchful over their own spirits, and when called upon by the children for explanations of portions of Scripture, there may not be a reliance upon mere intellectual acquirements, but a centering to that Divine Power, whereby a qualification will be received to impart that which will be wholesome food.

A lively interest is manifested for the Indians, and believing our labors among them have been blessed, we are encouraged to continue our efforts for the advancement of their civilization.

Deep concern was expressed that we may show an abiding in the True Vine; that all our acts, comparable to the fruit, may bring honor to our Heavenly Father; and that in our desire to labor in His service, we may not overlook the small duties in our path, remember that these, if performed in humility, are unto Him equally acceptable with our service.

Under a solemn covering of reverential prayer, we conclude, to meet again next year, if permitted.

Extracted from the minutes by

PHEBE W. FOULKE, *Clerk.*

THE mistake many people make is in re-

garding life as a theorem—something to be proved; instead of a problem—something to be done.

As most of the matter contained in the Report of the Indian Committee to our late Yearly Meeting has previously appeared in our paper, we give only the part contained in S. M. Janney's letter.

LETTER FROM S. M. JANNEY, SUPERINTENDENT.

To the Joint Committee of Friends on Indian Affairs having charge of the Northern Superintendency.

DEAR FRIENDS: Feeling assured that you will be desirous to receive information concerning the condition and prospects of the Indians under our care, I submit the following report.

I have recently visited the Santee, Winnebago, and Omaha reservations, my chief object being to make a contract for supplying the Santee Sioux Indians with beef and flour during the remainder of this fiscal year, which ends on the 30th of the Sixth month.

The contract was made to the satisfaction of the agent and myself.

Last year the crop of wheat, corn, and garden vegetables at that agency, owing to the long-continued drought, was almost an entire failure.

This spring there were seeded on the agency farm one hundred and fifty acres in wheat which looked well, and will be brought forward rapidly by the rain and snow which fell last month.

It is probable half enough wheat will be raised on the reservation to supply the Indians with bread, and a considerable area of land will be planted with corn.

The flouring mill on Bazille Creek is nearly completed; and the steam saw mill near the agency has supplied a large amount of lumber for the buildings in progress. The Indians are building houses for themselves on their allotments of land. They are generally built of logs; the doors, windows, and flooring boards being furnished by the agent. Many of them have bedsteads, tables and chairs, or benches, being no longer willing to sit and sleep upon the floor as they did two years ago.

The Indian women have made a large number of bed-quilts from materials furnished by Friends. It was said one hundred and fifty quilts were made, or in progress, and the sewing neatly done.

There are two mission schools; that of the Presbyterians was not in session while I was there, but I visited the Episcopal mission school. It did not appear to me to be con-

ducted with much success, as I had reason to believe that the pupils did not understand what they were reading from books in the English language. I suggested that a system of object teaching might be advantageously adopted.

The Indians at this agency write and receive a great many letters in the Dakota language, but very few of them speak or write English.

An industrial school is much needed, but funds for it have not been supplied.

On my way home I stopped two days at the Winnebago Agency, but the weather was so stormy that I could not visit the Indians, nor examine their improvements. I was informed that an election of chiefs took place on the first of the Fourth month and was conducted in an orderly manner, all the men being permitted to vote. Each chief, twelve in number, selected a policeman from his own band.

Annual elections of officers have not heretofore been known among the Indians of this Superintendency, and the Winnebagoes are the only ones who have tried the experiment. I think it is a step in the right direction. Agent White informed me that he had sown a considerable area of land in wheat, which, together with that sown by a few of the Indians, would probably amount to four hundred acres. If it yields well, there will be a sufficiency to supply the tribe with bread. Some of the Indians are raising young cattle and hogs, and many of them have chickens. We hope they will be self-supporting in a year or two, but during the last year, as well as many years previous, a large proportion of their income has been expended for subsistence. Their allotments of land will be occupied by many of them this year, and houses are now being built by them, with the aid of the carpenter and six apprentices, who are all Indians.

There are three day-schools, and two First-day schools which I could not visit. An industrial school is greatly needed, for which application has been made to the department.

I spent one day at the Omaha Agency, and visited the schools taught by Theodore and Elizabeth Gillingham. Both these schools are well attended by Indian boys and girls, who manifest great interest in their studies, and the reading classes, being questioned by the teachers, gave evidence that they understood what they were reading. Examples in arithmetic were worked out on the blackboard with readiness. Cards with object lessons were used in teaching the younger classes. These schools are well conducted, and highly prized by the Indians.

There is another school on the reservation taught by Joel Warner, which I had no time to visit. The Omahas have lately received from the Indian Bureau certificate for their allotments of land, which have been anxiously looked for and are highly prized. A large quantity of lumber for their houses has been sawed; part of it is hauled to the allotments, and comfortable houses are being built by the carpenter and his Indian apprentices. The Omahas have corn to sell from their last year's crop, and about one hundred acres have been seeded in wheat. They receive no rations of meat or flour.

After my return from the Omaha Agency I spent two days at home, and then proceeded to Lincoln to attend the trial of the four Pawnee Indians who have been imprisoned here about twenty-two months on the charge of murder. To my great regret the trial was again postponed, on the ground that the record transmitted from Butler to Lancaster county on a change of venue was not complete. Our counsel and witnesses have always been ready, and we have applied for special term of the court to be held next month for their trial, which I hope will be granted.

I have not been at the Pawnee Agency for some months; but have received satisfactory accounts from the agent and others. The chiefs and head men of the tribe have at some time manifested a desire to make peace with the Sioux, who have, for generations, been their enemies, and who frequently commit depredations, stealing their horses and killing and scalping their men and women. When Red Cloud passed through this city, I had an interview with him, and expressed my desire that he would make peace with the Pawnees. He said he had not time to stop then for the purpose, and could not do it without consulting his people.

By authority of Commissioner Parker, afterwards corresponded with J. M. Washburn, United States Indian Agent at White Stone, who has charge of the bands of Sioux commanded by Spotted Tail, in order to bring about a treaty between him and the chiefs of the Pawnees. Spotted Tail expressed his willingness to make a treaty to keep it, and for some time, I expected to meet with the representatives of the tribes at the Santee Agency in the early part of last month; but I received while at the Santee Agency, a letter from Agent Washburn, stating that Spotted Tail and his subordinate chiefs, though willing to make a proposed treaty and to keep it, were unanimously of the opinion that such a treaty made by them without the concurrence of the other bands of Sioux, would not be s-

it would be considered a declaration of war by all the Sioux not concerned in it. I regret the failure of this cherished measure, but the overture made by the Pawnees and the willingness manifested by Spotted Tail to accept, will, I think, promote a better state of feeling between them.

Many of the Pawnees are exceedingly desirous to open farms and to be provided with good houses, instead of the mud-lodges they now live in. Arrangements are being made to carry into effect their wishes, by dividing among them a portion of their lands, and aiding them to build cottages. Last year they set apart seven thousand dollars of their annuity money to improve their mill, and to purchase live stock and implements of agriculture. This year they are willing to appropriate a still larger sum for purposes of improvement.

Their manual labor school continues to be very satisfactory, and a commodious house for a day-school has just been erected.

Within the last three months I have visited the Great Nemaha Agency twice, and was well satisfied with the progress of the Iya tribe.

The store established by Friends of Philadelphia continues to be a complete success, and all arrangements are now being made by Agent Lightfoot to establish an Industrial Home for Orphans.

I think the funds applicable to this purpose will board about fifteen orphans, and they will attend the school taught by Mary Lightfoot, which is well conducted. She has added a sewing department, which has been a great benefit to the Indian women.

The reports I received from the Otoe Agency are very satisfactory. The school is very successful, and Agent Green hopes to establish another very soon. The Indians of that tribe are overcoming their old habits of idleness, and many of them are now desirous to open farms and build houses, in which work they are assisted by the agent to the utmost of his ability. I expect to visit the Otoe Agency next week. I am informed that the store established there by Friends of Philadelphia gives great satisfaction, and I should be glad to see one of the same kind at each of our agencies.

We shall be glad to welcome here any invitation Friends may appoint to visit the agencies.

SAMUEL M. JANNEY,

Superintendent of Indian Affairs.

Nemaha, Neb., 5th month 3d, 1871.

A HINT.

In the annual report of the Women's Branch of the Pennsylvania Society for the Prevention of Cruelty to Animals, the Presi-

dent instanced a case of thoughtlessness which she had herself witnessed, in which a lady had stopped a car thirty yards from a crossing where it had stopped but two or three minutes before for the purpose of putting down a passenger. This, too, was on a clear day, when there was no inconvenience in walking that distance, but by this thoughtlessness the horses had been obliged to exert themselves twice in stopping and starting the car, when once would have been sufficient.

Thoughtfulness in matters as small as that above alluded to, trains the mind in the virtues of humanity and tenderness.

THE CRY OF THE SUFFERING CREATURES.

BY MARY HOWITT.

Oh that they had pity, the men we serve so truly!
Oh that they had kindness, the men we love so well!

They call us dull and brutish and vicious and unruly,

And think not we can suffer, but only would rebel.

They brand us and they beat us! They spill our blood like water,

We die that they may live ten thousand in a day!
Oh that they had mercy! for in their dens of slaughter,

They afflict us and affright us and do far worse than slay.

We were made to be their servants. We know it and complain not;

We bow our necks with meekness, the galling yoke to bear;

Their heaviest toil we lighten; the meanest we disdain not;

In all their sweat and labor we take a willing share.

We know that God intended for us but servile stations,

To wit, to bear man's burdens, to watch beside his door:

They of the earth are masters, we are their poor relations,

We grudge them not their greatness, but help to make it more.

And in return we ask but that they would kindly use us,

For purposes of service, for that which we were made;

That they would teach their children to love and not abuse us,

So each might face the other and neither be afraid.

We have a sense they know not or else have dulled by learning;

They call it instinct only, a thing of rule and plan;
But oft when reason fails him, our clear, direct, discerning

And the love that is within us have saved the drunken man.

If they would but love us, would learn our strength and weakness;

If only with our sufferings their hearts could sympathize,

Then would they see what truth is, what patience is and meekness;

And read our hearts' devotion in the softness of our eyes.

If they would but teach their children to treat the
subject creatures
As humble friends and servants who strive their
love to win,
Then would they see how joyous and kindly are
our natures,
And a second day of Eden would on the earth begin.
Written at Rome, April, 1871.

THE GOOD SHEPHERD

Late at night I saw the shepherd
Toiling slow along the hill,
With a smile of joy and patience,
Facing night winds strong and chill.
In his arms, and in his bosom,
Lay the lambs, content and still.

When the day broke, from the valley,
I looked up and saw no more
Of the patient, smiling shepherd
I had seen the night before ;
But new mounds along the hill-side
Lay in sunshine, frozen hoar !

H. H.

For Friends' Intelligencer.

I read with interest Schuyler Colfax's article on "How to be Happy." Even in the supplementary remarks, those who are aspiring for public honors may be instructed.

He writes of what his own hands have handled, and it carries with it an evidence of truthfulness that must be impressive to all who are disposed to candid reflection. I think there are many young men scattered through the country, who read our paper, that may be profited by it. The subject and style being rather different from the general tone of the paper, may recommend it to the young. T.

HOW TO BE HAPPY.

BY HON. SCHUYLER COLFAX,

Vice-President of the United States.

I take as the text of this article the sayings of two of the ablest of British writers. Dr. Johnson once remarked that "a habit of looking at the best side of every event is better than a thousand pounds per year." But Hume rated the money value of cheerfulness far higher; for he said "he would rather possess a cheerful disposition, inclined always to look at the bright side of things, than with a gloomy mind to be the master of an estate of ten thousand a year." These strong expressions refer, however, to the particular individual only. When the effects of good-nature, happy dispositions, sunny temperament, are measured in their relation to the family, or the wider circle of friends, or the still wider circle of the community in which we dwell, they become still more incapable of computation as to their financial value. If all needless unhappiness, all ill nature, all acrimonious words, all unkind retorts, all manifestations of temper, all moroseness of disposition, could be extirpated from our

daily lives, what an increased wealth of joy should we all garner up! How full of sunshine the world would seem to be! To develop, therefore, and to cultivate the happy side of our nature is one of the paramount duties of life. And, believing that much of personal unhappiness results from unwise habits of thought or speech, from carelessness from failure to realize the exquisite happiness of cheerfulness, I venture to day upon a few random and desultory suggestions.

Don't borrow trouble. It is safe to estimate that fully three-quarters of all anticipated troubles are never realized. And yet how prone are thousands to worry and torment themselves over their possible future—to cultivate imaginings of evil that they fear are in store for them. Do they start on a journey. Its happiness is marred by forebodings of shipwreck, or collision, or accident. Is a loved one sick? They are sure it will be unto death. Are they in business? Disaster is uppermost in their thoughts. Do children cluster around their hearthstone? Evil, they are sure, will come to them. Is he a farmer? Seed-time and harvest, he fears, will fail in his case. Has he investments? Fraud, he imagines, will impoverish him at last. And so they go through life, keeping the skeleton of misfortune ever in their sight, impairing their happiness, and constantly cultivating misery and depression. How many lives are thus clouded, with their gloomy shadows falling on all around them. What they need more than all things else is education unto cheerfulness. It is to faithfully perform every duty of life, leaving results to Him who doeth all things well. It is to educate the natures to turn ever toward the light, as of the trees of the forest and the flowers of the field. It is to carry sunshine with them wherever they go, in and out the circle of their households, in the busy work-shop and the crowded street. It is to indulge in no self-forebodings till trouble really comes, and not to make themselves melancholy by its anticipation. It is to borrow joy and hope and happiness from the cheerful and buoyant performance of every daily duty—a loan whose investment is sure and whose dividends are certain.

Study patience and forbearance. It do not need inspiration to teach us that "tongue is an unruly member." The quick, the sharp, the unkind, the cutting reply, instantly conceived, instantly spoken, and often long regretted—how much unhappiness it has created, to the speaker as well as to the one addressed? A soft answer turneth away wrath; but a harsh answer often destroys both love and friendship. The adage teach our children—that, as we have two ea

and but one tongue, we should hear twice and think twice before we speak once, is even more worthy of practice by children of a larger growth, especially if quick in temper or hasty in words. Temper, like fire, is a good servant but a bad master. It needs a curb, like a spirited horse; and, to follow out the simile, if it becomes your master, woe to you! And patience and forbearance affect by their healthful contagion all within the circle of their influence. Go into a family where this law of kindness is obeyed by the parents, and you will see it happily reflected in their children. But look into one where anger is allowed to prompt the unkind report, and you will find the sad results upon the young of the daily example of strife and discord before them. Go into a factory, or workshop, where the foreman is ill-natured, impatient, exacting, insolent, and harsh, and the workmen would be more than human if they did not find discontent and alienation growing up in their hearts too. In every sphere of life goodness of heart, kindness of language, cheerfulness of manner cause happiness to grow up all around them; and those who cultivate patience and forbearance have their abundant reward, not only in their own increased joy, but in that which fills their households, from hearthstone to roof tree.

Lay up the treasure of good deeds. The essential principle of Christianity is love. Theaviour summed up all the commandments in a single sentence—Love to God, love to man. Paul, in that striking eulogy of Charity, which all commentators concede should be more properly rendered Love, placed it above and beyond all earthly things. And that glimpse of the Last Day, given to us by the Saviour in Matt. 25th, tells us unmistakably how every result of this love for our fellow-man is recorded ineffaceably in the Book of Life, "Come ye blessed of my Father . . . for I was an hungered, and ye gave me food; I thirst, and ye gave me drink; naked, and ye clothed me; sick, and ye visited me; in prison, and ye came unto me; . . . for, inasmuch as ye did this to one of the least of these my children, ye did it unto me."

(Conclusion next week.)

MANY a discouraged mother folds her tired hands at night, and feels as if she had, after a day's done nothing, although she has not spent a idle moment since she rose. Is it nothing that your little helpless children have had to see one to come to with all their childish griefs and joys? Is it nothing that your husband feels "safe," when he is away to his business, because your careful hand directs everything at home? Is it nothing, when his business is over, that he has the blessed refuge

of home, which you have that day done your best to brighten and refine? Oh, weary and faithful mother, you little know your power when you say, "I have done nothing." There is a book in which a fairer record than this is written over against your name.—*Exchange.*

For Friends' Intelligencer.

REVIEW OF THE WEATHER, ETC.,

The Hottest Spring on Record!

FIFTH MONTH.		
	1870.	1871.
Rain during some portion of the 24 hours.....	13 days.	8 days.
Rain all or nearly all day....	6 "	1 "
Cloudy, without storms	5 "	6 "
Clear, as ordinarily accepted	7 "	16 "
TEMPERATURES, RAIN, DEATHS, ETC.	31 "	31 "
	1870.	1871.
Mean temperature of 5th mo., per Penna. Hospital,	65.25 deg.	66.02 deg.
Highest point attained during month.....	87.00 "	91.50 "
Lowest do. do. do.	52.50 "	48.00 "
RAIN during the month, do.	6.28 in.	3.38 in.
DEATHS during the month, being for 4 current weeks for each year	1352	977
Deaths during the first 22 weeks of 1870.....	7324	
Deaths during the first 22 weeks of 1871, only.....		6093
Average of the mean temperature of 5th month for the past eighty-two years....		51.00 deg.
Highest mean of temperature during that entire period, (1802, 1826).....		71.00 "
Lowest mean of temperature during that entire period, (1848),.....		51.75 "
SPRING TEMPERATURES.		
Mean temperature of the three spring months of 1870.....	52.21 "	
Mean do do do 1871.....	57.62 "	
Average of the spring temperatures for the past eighty-two years.....		51.00 "
Highest spring mean occurring during that entire period, THIS YEAR		57.62 "
Lowest do do 1799, 1843.....		46.00 "
COMPARISON OF RAIN.		
	1870.	1871.
First month,	4.07 inch.	3.46 inch
Second month,	2.53 "	3.08 "
Third month,	4.06 "	5.81 "
Fourth month,	5.60 "	1.82 "
Fifth month,	6.28 "	3.38 "

Totals, for the first 5 months of each year, 22.54 " 17.55 "
 Showing by the above comparison thus far a decrease in the quantity of five inches. The average of the quantity for the month under review for a series of years past has been about four and a half inches.
 In reference to temperature, warm as the month has been, the mean has been exceeded nine times during the past eighty-two years, viz; in 1795, 1799, 1800, 1802, 1806, 1808, 1822, 1826.
 And yet we doubt whether four consecutive days in the Fifth month can be found during that long period to have equalled in height of temperature

what was experienced on 27th, 28th, 29th and 30th of the month the present year.

The writer has compiled a table from the "*Meteorological Record*" forwarded daily from Washington, in confirmation of the above suggestions as well as for the purpose of showing that the intense heat so early in the season was not confined to Philadelphia and its locality, but appeared to exist in almost every section of the United States.*

The *lowest* point reported from any of the principal cities having been Duluth, Minnesota, on the 27th, 52 degrees; Cheyenne, on the 28th, 58 degrees.

Another noticeable feature of our review is—that the three spring months of this year constitute the *hottest spring on record*.

One striking peculiarity of the weather during the latter part of the month under review, was the regular "*dog days*" feature of damp, semi-crudry mornings, followed by intense heat, certainly very unusual for the season.

Once more calling attention to the continued *decrease* of deaths as noted above, we close.

J. M. ELLIS.

Philadelphia, Sixth month 2d, 1871.

HIDDEN GROWTH.—When once the seed has been sown, no painstaking or anxiety on our part can compel its growth, or hasten the stages through which it has to pass. How gladly we would do this if we could! How anxious we are when the seed sown grows not with the speed nor in the manner we desire! How soon we are discouraged by delay! But, on the other hand, how often do we meet with success where we have least expected it; nay, where we had determined it could not be! God's ways are not our ways. Let us leave results in His hands. As we look back upon the past, let us indeed mourn our shortcomings, but believe that faithful labor has not been in vain in the Lord.

I AM now able to see that my sorest disappointments at the time they happened, and my heaviest misfortunes, have always turned out to be my greatest blessings whenever they have been taken as admonitions and warnings, and turned wisely to account.—*John Neal*.

ITEMS.

THE COAL STRIKE.—The cost of the recent coal strike, which lasted for five months and a half, or one hundred and thirty-eight days, it is calculated, has amounted in actual loss of wages to the working people of over twenty millions of dollars. Thus the thirty thousand miners who have been idle could have earned \$2.50 a day, making an aggregate of \$75,000 for each day, or \$10,350,000 for the whole strike. Again, it is estimated that forty thousand working people, including railroad men, drivers, coal handlers and iron workers were thrown out of employment, who, at wages of \$2 a day, could have earned an aggregate of \$80,000 a day, or \$11,040,000 during the period of idleness caused by the want of coal. Adding these two sums together, we have \$21,390,000 as the actual loss in money to the working people in the coal and iron regions.

* This table, too lengthy for insertion here, can be found in the *North American* of 3d instant.

THE great telegraphic feat of direct communication between England and India, without any retransmission, has just been accomplished. For the first time, such communication was established by the transmission of a message from Kurrachee to London, which was really the first message from India to England instantaneously. Subsequently communication was opened to Bombay London and Bombay interchanged signals, perfectly and a commercial message was sent from London to Bombay direct and answered instantaneously. The distance by the Indo-European line is 6000 miles.

THE ravages of the yellow fever in the city of Buenos Ayres are said to be terrible. The city before the plague contained about 200,000 inhabitants; it now contains less than 40,000. Over 25,000 have fallen victims to the scourge, and the remainder have fled in every direction to avoid the contagion. Those still remaining are the extremely poor, unable to get away; and of these 15,000 are down with the disease. The mortality has reached the frightful number of 749 in a single day. It was found impossible to keep pace with the demand for graves, and in some houses five or six bodies lie uninterred. A tramway was constructed to the cemetery on which to convey the corpses, and they were piled on the vehicles, uncoffined, like parcels of freight. Numerous physicians from that and other cities are battling heroically with the plague and many have fallen martyrs to their noble endeavors. Great distress and suffering exist, and there is no knowing when it will end. This sad case makes a strong appeal to the philanthropy of the wealthy of every land.

THE manufacture of paper collars has become very important interest, and requires quite an outlay of capital. A machine costs from \$600 to \$10,000, and to fit up a factory costs at least 15,000, according to the character of the machinery employed. A good machine will turn out 120 collars per minute, or 7200 an hour, all in a suitable condition for wearing. About 1300 persons are employed in the collar factories of New England. The first patent collar, in 1854, was for a combination of cloth and paper, but it had never been successfully perfected until about two years ago, when the cloth lined, and cloth or linen outside, came into immediate general use. The amount of capital invested by the eleven New England manufacturers, is about 3,000,000, varying in individual cases from \$30,000 to \$500,000.

THE production of first-class lead pencils is an art of great nicety. The *Technologist* gives something of a history of it: Half a century ago a Jew named Cohen, of Dublin, acquired a knowledge of it which gave his name a pre-eminence among artists, warranting a perfect article. He kept his method jealously a secret even from his sons, and died without revealing it to any one. The famous Cohen pencil at once ceased to be a desirable article. Numerous attempts were made to take its place—the estimation of artists, without success; until Faber, by common consent, took the championship and maintains it. Different kinds of pencils are marked by figures or letters; and while manufacturers are often successful in producing a fine article of some one number, few are able to produce all the grades of equal excellence. The French have not been able to distinguish themselves in the line. Germans have done better, and now Americans are endeavoring to establish a national reputation for good lead pencils. It is still a great question whether the art has reached its best estate.

FRIENDS' INTELLIGENCER.

"TAKE FAST HOLD OF INSTRUCTION; LET HER NOT GO; KEEP HER; FOR SHE IS THY LIFE."

VOL. XXVIII. PHILADELPHIA, SIXTH MONTH 17, 1871. No. 16

EDITED AND PUBLISHED BY AN ASSOCIATION OF FRIENDS.

COMMUNICATIONS MUST BE ADDRESSED AND PAYMENTS MADE TO
JOHN COMLY, AGENT,
 At Publication Office, No. 144 North Seventh Street.
 OFFICE OPEN from 9 A. M. to 4 P. M.

TERMS:—TO BE PAID IN ADVANCE.
 The Paper is issued every week.
 The TWENTY-EIGHTH Volume commenced on the 4th of
 third month, 1871, at Two dollars and fifty cents to subscri-
 ers receiving it through the mail. To those receiving it
 through our carriers, THREE DOLLARS.
 SINGLE NOS. 3 CENTS.
 It is desirable that all subscriptions should commence at
 the beginning of the volume.
 REMITTANCES by mail should be in CHECKS, DRAFTS, or
 MONEY-ORDERS; the latter preferred. MONEY sent by mail
 will be at the risk of the person so sending.

BRIEF SKETCH OF THE LIFE OF TAULERUS. POPULAR PREACHER OF THE FOURTEENTH CENTURY.

Translated from the German by Peter Lossing.
 (Continued from page 229.)

Then the layman said, "I will now, in the first place, show thee, my dear friend, how it is with thee in that the letter killeth. Thou knowest very well that about the time that thou began to distinguish good from evil, thou didst begin at school in the letter; and herein thou soughtest thine own interest, and to this day thou continuest in this same state of mind, seeking thy own emolument and advantage—and thou dependest on what thou hast thus acquired in the letter—availing thyself of thy exalted station as Doctor of Divinity. To love, honor, and obey God is not the ruling principle in thee; thou art seeking thine own honor and not the honor that cometh from God only.

"My suggesting that thou art an unclean vessel is true; thou keepest not an eye single to the will of God in all things; in doing and forbearing thou art not influenced by His love, in consequence of which thou art a vessel full of unsavory lees. When the pure wine of the heavenly kingdom passes through an unclean vessel or conduit, those pure, quickened souls who follow the Lord and live in His love, cannot relish its taste—therefore gospel truths delivered through such a medium are incapable of conveying grace to the hearer.

"My saying that thou art in a state of

darkness is evident, because thy exhortations and preaching are not productive of good to those who hear. It does not produce the supernatural work of Divine grace to the enlightening of their minds. Lastly, my charging thee with being a Pharisee is also true; though I am far from suggesting the idea that thou art a wickedly disposed, hypocritical Pharisee. Now, my beloved friend, was it not the case with the Pharisees of old that they loved and served themselves in all things, and sought not purely the honor of God? Now examine thyself, and see whether in the eye of an all-seeing God thou art not a Pharisee, and not one of the minor grade neither. For be it known unto thee, that in this day there are many Pharisees, some greater and others less, as their lives plainly show forth."

When the layman concluded these remarks, the Doctor fell upon his neck and kissed him, and said, "O my dear son, it seems to me that I am like unto the woman of Samaria, at Jacob's well; for verily thou hast opened to me my hidden frailties and imperfections. I can therefore have no scruple in believing that it is by Divine manifestation that thou hast become so fully acquainted with my state and condition, wherefore I beseech thee that thou wilt suffer me to look up to thee as a father in spiritual things, and receive me as a son and an unworthy sinner."

The layman then said, "If thou thus inclinest to reverse thy station, and mine also, I shall feel no freedom to continue with thee, but must withdraw and go to my own home."

The Doctor begged of him not to leave him; said he would endeavor to be more guarded in future in his expressions. "I have made up my mind," said he, "by and through the grace of God, to amend my life, and I crave thy company and counsel."

The layman then said, "Verily, it is highly necessary for thee to do so, for in the *letter*, extensive literature and metaphysical knowledge and acquirements have deceived many, who are in great danger of bringing upon themselves grievous suffering and anguish of spirit whenever they come under the purifying operation of the fire of God's visitation upon them, and others, it is to be feared, will land at last in utter perdition. Believe me, verily, it is not a trifling matter that God endoweth his creature man with reason and understanding, and a portion of wisdom, whereby he is enabled to comprehend much of the weighty truths recorded in the Holy Scriptures, and experiences of wise and good men, set forth and opened to his view, if he neglects his own soul, and remains a stranger to a due conformity to the Divine will."

The Doctor then requested that the layman would open to him his religious experience, from the commencement of the work of reformation in him, and, from step to step, the way in which he had been led into such a thorough knowledge of a truly godly life.

The layman declined giving a detailed account; saying, "that mankind are so variously circumstanced, the complexion and temperament of their bodies and minds are so widely diversified, and the Searcher of hearts extends the visitations of His holy spirit, as the apostle expresses, by 'diversity of operations;' bringing them into conviction, various conflicts and trials proportionate to their several states, conditions, wants, and abilities to bear. Wherefore if a person should undertake upon another's experience, or expect such a description might serve as a model for him to rely on as a guide, he will deceive himself, bring himself into painful embarrassment, and land in disappointment, for he leadeth the blind in a way they have not known."

He, however, expressed a freedom to open to him some of the principal outlines of what he had experienced in the work of regeneration. He told him that the first effective help he was favored with in the important work was extended after the Lord had brought him into a state of deep humility and abasedness of self, submitting his own will to the Divine will: he observed to

him that previous to this, having read some accounts of the ancient fathers, who obtained this pearl of great price through intense bodily mortifications, severe abstemiousness, and putting themselves under rigid discipline, he adopted this plan, and continued it until it almost cost him his life. In a weak, debilitated state of body, one morning about break of day, having passed the night in sore conflicts, he dropped into a slight sleep, when he dreamed he heard a voice saying to him, "Ah, thou foolish, self-willed man, if thou shouldst by thy rigid severe bodily mortifications shorten thy days, thou wilt have to answer for it as an act of suicide. But if thou wilt submit thyself to God, to move and direct thy steps, thou wilt succeed far better than thus to follow Satan's devices." He awoke in great fear—immediately arose and concluded he would retire into the next forest, and advise with a hermit or recluse who resided in this forest. He did so, called on the recluse and related his dream, desiring his counsel. The recluse inquired of him to know how he had conducted himself previous to this dream. He related the circumstances of his severe mortifications, abstemiousness, and voluntary self-denial, and the motives he had therein. The recluse then asked him of whom he took counsel in his adopting these measures. He answered, "Of my own will and good intentions." The recluse then answered, "Be it known unto thee, it has been the devil's counsel; as thou prizest thy life, follow it no longer, but submit thyself wholly to God, who is a safe leader, and infinitely better guide than thy own will or the counsel of an enemy."

"I then submitted myself with my whole heart unto God in all my ways."

The layman then gave him some further account of his religious experience: the manner in which temptations were presented to his mind, tending to lead him into exalted ideas of his gifts and powers of mind, with strong insinuation that if he would exercise the strength of his genius he would become able to comprehend deep and sublime things; and how he was favored to see that these suggestions sprang from the devices of the grand enemy of his happiness, calculated to lead him into unprofitable speculative researches after deep and hidden mysteries, leading him to draw conclusions from uncertain premises, into doubts about substantial truths, to inflate his mind with self-exalted notions; and finally, to ruin in regard to his religious welfare and happiness.

And further, how he felt himself reproved by the heavenly gift of light in his conscience at a certain time, for earnestly entreating

and beseeching the Almighty that He would be pleased to favor him with some ocular and demonstrative evidence of supernatural power and interposition, beyond the ordinary dispensations of his providence in the manifestations of His will, for his own private confirmation. The humbling effect of this season of reproof, acknowledging his unjustifiable presumption, an unworthy worm of the dust, who had wandered far and wide from the path of obedience, neither loving nor seeking his Creator; yea, for one who was unworthy to tread on the Lord's footstool, to indulge so presumptuous a desire; and as he thus centered into the depth of humiliation and abasement of soul, continuing under the mortifying consideration of the offense he had committed, until the following morning, when unexpectedly light broke forth in his soul, and for some time he seemed to be on the mount of glorification with Jesus; and he was ready to say with Peter, "Lord, it is good for us to be here." "Be it known unto thee, dear Doctor, that I received more light, more clear and distinct discriminating knowledge in Divine things, in this short space of time (which to me seemed very short), than thou and all the teachers in the world could administer to the end of time." After this, he gave him some account of his having been instrumental in bringing a noted heathen in a distant land into the Christian faith, in a marvelous manner.

When he closed this account, which for the sake of brevity I have omitted, he expressed a fear that he had trespassed upon the Doctor's time and patience, and further said, "I cannot divest myself of an impression that some of my expressions in our former interviews have left some unpleasant or painful feelings in thy mind, on the ground of my being a poor layman, and using such an entire freedom in expressing myself to so great and learned a Doctor of Divinity." Pauler then said, "If thou wilt not take it amiss, I will open to thee how it is with me, and wherein I have felt straitened, in regard to what thou hast alleged."

The layman desired him cheerfully and freely to open his mind, without any apprehensions of his taking offense. The Doctor said, "I confess it has been sorely against my prepossessions and inclination to give up to be instructed by a layman, who have been so long accustomed to be accounted by others, and to consider myself a teacher and Doctor of Divinity; besides, it has produced no small degree of chagrin and concern in me, in that thou hast roundly denominated me a Pharisee." The layman said, "Is there anything else which has given thee uneasiness?" The Doctor said, "I know of nothing else in

particular." The layman then said, "Shall I explain those two points more fully and explicitly to thee?" The Doctor said, "Yes, my dear son, I pray thee do so." The layman then said to him, "Well, Doctor, through what power, or how came it to pass, that the young maiden *Catherine*, not quite eighteen years old, in the time of the ten persecutions, overpowered and convinced fifty learned philosophers—as she was instrumental in producing a willingness in them to suffer martyrdom for Christ's sake? What dost thou conceive influenced so young and tender a maiden, and enabled her to speak so clearly, and reason so powerfully, as to overcome these great and wise men?" The Doctor then said, "This was unquestionably the work of the Holy Spirit, through her as an instrument." The layman then said, "Dost thou not believe the same Holy Spirit has power down to this day to produce similar effects?" The Doctor answered, "Yes, I have no doubt of it." The layman then said, "Why shouldst thou remain doubtful, but that the same spirit may convey weighty truths unto thee, through me, an unworthy sinner? He spoke truth formerly through Caiaphas, the high priest, John xi. 45, 50, who was a sinner. Now, in regard to my having denominated thee a Pharisee, and the straitened feelings it has produced in thy mind, I conceive I did at the time of my using the expression explain the subject with sufficient clearness.

"But as this is not the case, I must explain that subject still more explicitly, and evince that this appellation, however unpleasant, is truly applicable to thee. Thou knowest, dear Doctor, that our blessed Lord said to His followers, Matt. xxiii. 4, Beware of the Pharisees, for they bind upon your shoulders heavy burdens, when at the same time they do not touch them with one of their fingers. Now, dear Doctor, examine thyself carefully, and compare thy state and condition to the various points of doctrine exhibited in that excellent sermon delivered at my request, wherein thou didst exhort the people to the strict observance thereof, and yet thou art far, very far from a state of practical obedience thereto thyself. And Jesus further said, 'Whatsoever they say unto you, that do, but do not like unto them, for they say and do not.' Now, dear Doctor, what our Lord said in that day He saith still. Now view thyself, and behold how thy life corresponds with thy weighty doctrine. God knoweth, and thou also knowest, how it is with thee. I feel willing to observe thy doctrine, but I am entirely unwilling to imitate or follow thy life and example. Wherefore behold thy real state and condition, as it is in the sight

of God, and see whether thou art not a real Pharisee, though by no means a false, deceitful, evil-intending Pharisee."

The Doctor answered, "I know not what to say. I, however, confess and acknowledge that I am an unworthy sinner; and from this time on I am determined to amend my ways and lead a better life. And now, my dear son, I beg of thee for the Lord's sake, to counsel me in what I must do, and instruct me how I may obtain that blessed state of mind which is attainable through Divine mercy in this life." The layman then said, "Dear Doctor, do not be angry with me; it is a delicate and difficult thing to advise and counsel thee, because truly the manner of life which thou hast led hitherto, being about fifty years, through long-wonted and established custom, has become so habitual and so deep rooted, as it were second nature. A thorough change and conversion (which is indispensable) cannot be effected without a course of very painful conflicts and trials: it will be very difficult to become thoroughly weaned from such a long course of indulgence." The Doctor said, "It is so—I am about fifty years old; but he who came at the eleventh hour also received his penny, the same as those who came at an early hour. I am therefore fully given up with all my heart through the grace of God to become a converted man, and to bid adieu to all my old deceptive calculations, arising from the wit, understanding, and reasoning powers of the natural man."

The layman then pointed out to him from time to time (they having many interviews with each other) the necessity of resigning himself wholly to God in all his ways; yet earnestly wrestling for the blessing of an entire death unto sin, and a new birth unto righteousness. At length the Doctor pressed him to give him further specific counsel. The layman then told him that as a man he had nothing more to say to him, yet if the Lord should see fit through him as an instrument to administer further counsel, he was willing readily, in the love he felt towards him, to do what he should be enabled to do. "But," said he, "if it should fare with thee as it did with the young man in the Gospel, when he was told, 'Go, sell all that thou hast and give to the poor,' and he went away sorrowful, I say if this should become thy case, the blame must not lie at my door."

The Doctor requested he would rest easy on that account, and said, "I have considered the subject maturely; and through Divine help I will journey forward." The layman then said, "If thou continuest steadfast in pursuit of the important object, let me tell thee thou wilt have a scene of

tribulation to pass through, thou wilt have to bear oppression, nay, persecution, and, what will be the most trying, it will be from thy brethren; and in the course of these painful exercises there will be strong inducements presented to thy mind to flinch from the cross. But thou wilt have to learn to submit thyself and surrender thy will under every besetment and trial, let it come from whatsoever source it may. For be it known unto thee, thou must submit to the injunction laid on the young man. Thou must take up thy cross and follow the Lord Jesus in truth, humility, and patience. Thou must turn thy back upon all those self-pleasing, inventive researches which so abundantly engrossed thy attention and nursed the spirit of pride in thee. Thou must avoid studying, and lay aside preaching, and abide in great simplicity." Thus he advised him to continue in a childlike, simple, dependent state, saying, "This will lead thee into an habitual acquaintance with the path of humility; and thou wilt become weaned from thy old long-standing habits, so that in the Lord's time thou wilt become sufficiently reduced from all self-dependence, and be favored with the new birth unto righteousness, becoming a new man in Christ. For before this can take place *thou must sell all that thou hast*, and surrender all unto God; all thy proud wisdom, inventions, and exalted anticipations, which were once the prime objects of thy desires; yea, whatever thou so inordinately delighted in, as a natural man, and with Mary sit down at Jesus' feet. If thou continuest here, humbly waiting for the Lord's help, the Prince of Peace will not be unmindful of his own work. He will preserve thee, He will purify thee as gold is purified in the furnace of probation. Then thy old acquaintance will conclude that thou hast lost thy senses. Thy brethren in the monastery will accost thee as one that has got into a strange way, and has almost become insane. Wherefore, if these things happen to thee, be not dismayed, but rather rejoice in hope, for the day of thy redemption draweth nigh. No doubt this will be very trying to nature, but hold fast thy confidence in the Lord, for He will not forsake thee. Account thyself, at all times, unworthy of the least of all the Lord's mercies; this will keep down all aspiring notions of great attainments. Ah, my beloved Doctor! if thou abidest here in the faith and patience, and offerest up all, submitting to drink the cup allotted for thee, whetlier it be sweet or bitter, pleasant or painful, so as to be able to say in humble aspiration of soul, 'O my Lord and my God, if it be according to Thy will that I endure these privations and suf

ferings to the 'end of my days, I will not forsake thee, the only rock of my salvation.' Thus, agreeably to thy request, I have pointed out the way, and the only sure and safe way, to obtain thy highest and best remedy. I wish thee to consider thyself well and move cautiously; and as the Lord is pleased to reveal to thee what He requireth of thee by the inward operation of His grace, this obey, and thou wilt move along in safety."

The Doctor then said, "This will I endeavor to do, and follow thy counsel, and see whether I may, through Divine help, become strengthened to overcome my evil propensities." The layman then retired to his home.

(To be continued.)

OCCASIONALLY some singular trial of faith and fealty comes, like that of the command of God to His servant, to go and offer up the dearest idol, the best beloved, the only son; then, when the sacrifice is made—really made in heart, whether consummated in the act or not—then comes a flood of light, and love, and joy in God from God, as only such a perfect self-sacrifice can prepare the way for.—*Dr. Boardman's "He that Overcometh."*

For Friends' Intelligencer.

LETTERS FROM THE WEST. NO. 1.

ON THE WING, 5th mo. 29th,
Via Penna. Central, Fort Wayne and
Chicago R. R. }

Dear Intelligencer:—The last farewells were made an hour ago. An apartment in the "Melrose" has just been assigned me, and I dare affirm that in all the spacious chambers and lofty halls of the renowned old abbey whose name it bears, were not to be found half the comforts and conveniences contained in this miniature palace, which is to be my home for the next twenty-eight hours. I have a whole section to myself; the car is not crowded, is elegantly fitted up, and as comfortable as need be. At each end there are wash-stands with all necessary accommodations, and drinking-fountains well supplied with ice-water; one end is designed exclusively for ladies. The platforms are surrounded with ornamental iron railing, and several camp-stools on each invite the traveller to a seat outside, where a much better view of the country through which the cars pass can be obtained. The road is dusty, owing to the very dry weather; besides, the fast line goes flying along at so rapid a rate that trees, towns and mountains mingle in one chromatic whirl, that tires the eyes and confuses the senses. As we rush past Paoli, I wave my handkerchief to a friend, waiting for the signal; it is responded to, and I am out on the broad sea of humanity, with no promise of a

friendly recognition again until I reach the outposts of civilization.

Alone in all this hurry and rush and tumult! Alone, in that no outward voice of friend or loved one answers to thoughts and feelings which struggle for utterance! but not alone in spirit, while I have such a companion in my journey as F. W. Robertson, and can chat with thee, dear *Intelligencer*.

We stop a few moments at Parksburg, then fly along through the heat and dust, past all the thriving towns that lie along the road, not stopping to pay our respects to any, even giving old Lancaster the go-by, until we arrive at Harrisburg, where we are informed twenty minutes will be allowed for refreshments. I turn to my basket, and with its contents, am refreshed,—wash and feel clean again.

The grain fields look well, corn is quite forward—most of it is being weeded with the horse cultivator, and the straight rows that have been through that operation, exhibit a mathematical precision pleasant to look upon. If the thirsty ground should soon be favored with genial showers, I see no reason why plenty of everything that grows may not crown the labor of the husbandman. The pastures look short and thin, and it is not probable that rain will materially increase the hay-harvest, which all conclude will be light.

I stand out upon the platform watching the train as it glides along up, up the mountains, with no sign of weariness and no slackening of speed. I wonder, as I look at the achievements and triumphs of human skill and ingenuity. The darkness gathers. One by one, the lamps of night flash out their tiny flames. The train halts at Altoona, where I know from experience a generous supper awaits the hungry. But I am not one of those; so while my fellow-travellers go to partake of the sumptuous fare, I will seek that sweet restorer of nature—balmy sleep.

To lay the "outward garments by," to wrap "the drapery of the couch" around one, and lie down to pleasant (?) dreams, on a railroad train running twenty-five miles per hour, may sound like an improbable fiction to those who have never tried it. I find it a refreshing verity, though disturbed somewhat by the constant whirl and rattle of the machinery.

Something awakens me. I draw the curtains aside, and look out into the silvery moonlight. We are nearing Pittsburg. We pass those altar-fires where science and art keep perpetual vigil over toil, forging out fulfilments of the old prophetic utterances.

What are all the fragrant odors wafted from the golden censers of the most costly fane offered to the Universal Father, when

compared to the incense arising from these shrines of human labor? The old legends are full of germs of truth, which the roll of ages is vitalizing, and which will yet bud and blossom for the golden harvest of the future.

Labor! twin sister to liberty! though grimed with the furnace soot, and the soil of the plough and the anvil, thou art the priestess at whose homely altar civilization must bow the knee.

Toil on, ye sturdy sons, through this midnight of your lives. The day-spring *will* arise; the man who, by the sweat of his face, earns a right to the ground on which he stands, is the *coming man!* It is his right arm that even now holds the destinies of our race.

Visions of Delphic oracles, Memnon's shrine, rolling mills and blast furnaces, mingle in strange admixture, and I am again forgetful of the passing hour. L. J. R.

THE troubles of life are like the sticks in a bundle of faggots. It is easy to take one at a time; but we choose to increase our trouble by carrying yesterday's stick over again to-day, and adding to-morrow's burden to our load before we are required to bear it.—*John Newton.*

COURAGE IN WORK.

In any undertaking, courage or confidence is of great importance. It is the same whatever the nature of the task, whether painting a fresco or shoeing a horse, teaching a child or writing a prescription. If one does not know how to do the thing, courage is of little use except to help in learning how; but if one does know how, he may often fail for want of confidence in the doing.

Knowledge shows the way, confidence gives force and momentum in advancing along the way. In every department of affairs much excellent ability is wasted for want of courage or confidence. Timid blows do not tell on the work.

In this respect the Christian, if he appreciates his privileges, has a great advantage. He need undertake nothing which he does not believe his Infinite and Almighty Father approves his undertaking, and intends his success in, unless indeed his failure should, for inscrutable reasons, be more useful. Every duty, with him, has relation to the Divine will; and while he cannot tell what a day may bring forth, he is sure, as no one else can be, of the beneficent results which will follow from duty faithfully performed.

Timidity, faltering and misgivings, should have no place in Christian work. When the Infinite Spirit of Truth and Power promises to make His abode in our hearts, and to di-

rect us in wisdom and love, he who sincerely studies His will, and faithfully offers himself to carry it out, may surely go forward without distrust or fear.

All great works are accomplished in this spirit of courage and confidence in truth and fidelity. It is the source of boldness in conception, and vigor in execution. Without it labor is dull and spiritless.

We are entitled to bring every scheme and every task to this test: Is this for me the path of duty? Do I honestly bring to this the best powers and guidance I have?

If so, we may go forward with assurance; and we need move in nothing which we cannot undertake with this support.—*Christian Weekly.*

THE HEART OF THE HOME.

All really useful and happy homes have a heart centre, towards which every member gravitates, drawn by attractions resistless, because unfelt. The house-band that surrounds, strengthens and protects, is usually the husband and father. The house-heart is usually the wife and mother.

More than several times have we known the weak, the sick, the needy one of the family, to become the house heart, to and from which the activities of every member were in steady circulation. For her room the best in the house was chosen. The stately parlor gave up its best chair and picture. To that room came the first flower, the first berries, the first fruit of orchard and vineyard. The newspaper came into that room first of all. There the father "reported" when returning, and left his good-by when going. Thither the sons have come thrice a day, fresh with the last excitement and stories from the street.

For her the lecture and the sermon have been listened to, and a story of them brought home. Her need has wrought a gentleness and unity in the whole family. Her tranquil judgment has tempered hasty speeches, and taught the way of impartial thought. Around the chair, or couch, or bed, as around an altar thrice consecrated, have come the daily worshippers with Scripture, song and prayer. And so, through years of chastened enjoyment and trembling hope, this family has found training in a life of unity, purity and love. The house has had a heart. The passers-by said, "afflicted." But the dwellers knew that the affliction was working out fruits most peaceable and rewards eternal.

The heart ceased to beat. The room was empty. The errands and the services of love ended. And the stricken ones stood together, and with voices low and earnest, vowed and prayed: By the memory of the past, by the ache and emptiness of this hour, and by te

hope of the future, we vow a holy living in the Lord; and we beseech Him, that in His house of many homes we may have one, and may she be the heart of it.—*Examiner and Chronicle.*

INFINITE toil would not enable you to sweep away a mist; but, by ascending a little, you may often look over it altogether. So it is with our moral improvement; we wrestle fiercely with a vicious habit, which would have no hold upon us if we ascended into a higher moral atmosphere. As I have heard suggested, it is by adding to our good purposes, and nourishing the affections which are rightly placed, that we shall best be able to combat the bad ones. By adopting such a course you will not have yielded to your enemy, but will have gone, in all humility, to form new alliances. You will then resist an evil habit with the strength which you have gained in carrying out a good one. You will find, too, that when you set your heart upon the things that are worthy of it, the small selfish ends which used to be so dear to it will appear almost disgusting. You will wonder that they could have had such hold upon you.—*Arthur Helps.*

Scraps

FROM UNPUBLISHED LETTERS.

1845.

To "mingle feeling with feeling" is a privilege; and even when feelings are tinged with the deepest gloom, it cements kindred minds to be permitted to mingle thus together. For thee and with thee, I can deeply feel in the love of the Gospel. It seems the cloud is yet resting on thy tabernacle. It is therefore a time to be still, according to the ancient figure of the Israelitish church when in the wilderness. For whether the cloud tarried on the tabernacle two days or a month, or even a year, the children of Israel were to rest in their tents, and not to journey, either forward or backward. As this circumstance has occurred to my recollection, I simply note it, in fellow-feeling with thee. But, my dear child, is there not instruction in it? It seems to me, all thou hast to do now is to abide in thy tent, patiently, quietly, and resignedly, and to keep fast hold of the faith, though but as a grain of mustard seed. "Take no thought for the morrow" is an excellent lesson, and wise caution, in relation to spirituals. Try to abide in holy, calm, confiding patience, for thou art not forgotten, nor cast off. He who holds the helm in times of tempests and

storms, as well as prosperous gales, is mindful of thy frail bark, even though clouds and darkness may seem to surround thee, and "neither sun nor stars, for many days, appear." I thought of thee to-day as I sat in an exercising meeting, and was permitted to ask of Heaven for the sustaining arm to be underneath, to support and bear up thy mind until this cloudy season shall be over past, and that the blessing of preservation might rest upon thee. I said, an exercising meeting; yes, it was so, and there is much suffering exercise to be borne by those who travail for the Church, and for the cause, the precious cause of Truth in these days. Canst thou, my dear child, understand in some degree what is meant by "filling up that which remains of the sufferings of Christ for his body's sake, which is the church?" Yes; surely thou canst—for if I mistake not my impressions on thy account, this season of deep and close trial, that has so long and as thou says "sadly bowed" thy mind, is not so much on thy own account, as it is a portion of the sufferings of the seed on behalf of the state of the church. As I sat in sympathy with thee, and with the suffering seed in the minds of others, I remembered John Woolman's case, when he said, "The horrors of darkness were gathered around me, and covered me all over; and I saw no way to go forth. I lifted up my hand, and stretched out my arm, but there was none to help me. I felt the depth of the miseries of my fellow-creatures, separated from the Divine Harmony, and it was heavier than I could bear, and I was crushed down under it. I looked round about, and was amazed. In the depths of suffering, O Lord, I remembered Thee, that thou art omnipotent, and that I had called Thee Father; and I felt that I loved Thee; and I was made quiet in Thy will,—I saw that meekness under suffering was showed to us in the most affecting example of Thy Son, and that Thou wast teaching me to follow him, and I said, 'Thy will, O Father, be done.'" Now, dearly beloved and nearly sympathized with, stand fast, and be not moved. Abide in the tent of quietude, and humble confiding patience. Go not forth into reasonings nor doubtings. I feel a care and concern for thee, lest in this winter season thou mayst be induced to take thy flight, in order to gain a little ease, or to please others. Oh! my dear, cast thy burden on the Lord who cares for thee, and patiently endure this wintry season, for lo! thy deliverance draweth nigh, and thou shalt yet again behold the light of the Divine countenance. Hope thou in God, who has done great things for thee, and He will yet bring forth thy righteousness as the light, and thy judgment as the noon-day. I do not marvel in this day of

shaking and of scattering that many of the little ones are tried and discouraged.

But "Father yet holds the helm," and the ark of the covenant will not be shipwrecked in this storm of winds and waves. I believe He is about to arise, for the sighing of the poor, and the crying of the needy,—and will make bare His arm of power for the deliverance of His suffering seed. Thus have I written in much freedom, according to the flowings of Gospel love towards thee. My sympathy and my prayers are feelingly alive for thy preservation, and firm abiding in that which has been hitherto thy safety and peace.

FRIENDS' INTELLIGENCER.

PHILADELPHIA, SIXTH MONTH 17, 1871.

CIRCULAR MEETINGS.—It is much easier to see what is needed to be done, than to take wise and efficient means to supply that need. A correspondent alludes to the want of zeal in our Society for spreading a knowledge of our principles and testimonies, and contrasts this with the earnestness and devotion manifested by Primitive Friends.

As one remedy for this lukewarmness, he suggests the holding of Circular Meetings in places where they are not already held, and that the interest of our younger members should be enlisted by asking them to assume part of the responsibility of these meetings. That the Circular Meetings now held in different parts of our Yearly Meeting have their usefulness, we do not doubt, though the testimony in some places is, that they have not perceptibly increased the attendance of the regular meetings. In every movement of the kind, however, a *religious concern* originating in the mind of an individual must be the basis.

From this source, however small the beginning, may be expected to flow results which shall really and permanently benefit the body at large.

The habit of contrasting our Society at its rise, with its present state, while it may have some tendency to quicken individual zeal, is, we believe, more fruitful in producing discouragement and despondency. There are extraordinary emergencies in religious history and in individual experience, when the spiritual sensibilities are aroused, and powers of mind called forth adequate to meet them.

But these occasions are comparatively rare, and are not at our command. We cannot now stimulate ourselves into the *same* zeal, which characterized our early Friends, because we cannot go back again to the state in which they found the world and the church. Yet, although we have not like these noble pioneers the task assigned us of hewing out a path in the face of persecution and obloquy, we have none the less duties incident to our *present* condition. In discovering these, and in cheerfully performing them, waiting patiently for light when gloom and discouragement surround us, we shall be doing all that is now required. Indeed, when we see the hurry, the activity, the unrest, religiously and socially, which characterize the present age, we might almost infer that the opposite of all this is called for from some as a counterpoise. We would not, however, dictate to any their particular line of duty, but end as we began: that it is much easier to see what is needed to be done, than it is to take wise and efficient means to supply that need.

THE REPORT OF THE EXECUTIVE COMMITTEE of Friends' Publication Association was read at a meeting of the contributors on Fifth-day evening of the week of our late Yearly Meeting. An abstract of the Report has been handed us for publication, in the hope of increasing the interest in the objects of the Association, now in the fifth year of its existence.

"Although little has been done during the past year, there has been a manifestation of interest by many Friends, and from the increased demand for our publications, we are encouraged to persevere in our labors.

When it is considered that the press is teeming with pernicious publications, and that the discipline of our Society cautions against such reading, and encourages the publication and circulation of works illustrative of our principles, and tending to promote the cause of Truth, we cherish the hope that the minds of Friends will be more impressed with the importance of such an Association.

We are satisfied, that if appropriate extracts from standard works and original articles that may be approved, were extensively published and circulated in leaflets or small pamphlets, it would meet a want which has long been felt in the Society; and we regret

that the limited means at our disposal has prevented more extended effort.

During the past year about 4000 copies of Friends' Almanac for 1871 have been published. There has also been distributed a considerable number of "Christian doctrines as held by the Society of Friends," prepared for the Association by Samuel M. Janney; also "Vital Religion," by the same Author.

Both of these valuable works have been stereotyped, and a second edition of 1000 copies of the latter has been issued. At the request of the Representative Committee of Philadelphia Yearly Meeting, we have printed from the stereotype plates in our possession, 250 copies of "Penn's Rise and Progress of the People called Quakers."

A small book, entitled, "Children's Gift," consisting of selected and original articles for children and youth, by a young Friend, is now in press, and will soon be issued.

We have found the treatise on "Christian doctrine as held by Friends" has met a want, not only among our own members, but in the community, and if funds are placed at the disposal of the Association, we would recommend to the Executive Board, to be appointed this evening, that 5000 copies be printed.

At the last Annual Meeting there was in the hands of the Treasurer	\$ 93.60
and which there has been received from sale of books	767.08
	860.68

and there has been expended for publications, &c.	607.12
	253.56

leaving a balance due the Assoc. \$253.56

We understand the balance now in the treasury is appropriated to the publication of the "Children's Gift." At the Annual Meeting eighty dollars was contributed towards the publication of Janney's "Christian Doctrines," a large number of these being intended for gratuitous distribution.

Orders for books, or contributions in money, will be received by Joseph M. Truman, Jr., Treasurer, No. 717 Willow St., Philadelphia.

NOTE.—It has been suggested to us that some of our readers would be interested in knowing that many of the "Scraps from Unpublished Letters," lately offered them, are from the pen of our valued Friend John Comly, late of Byberry. We have not appended his name because we opened this column with the understanding that there was to be a name given, so that none might feel that

the privacy of friendship was invaded by our thus making public any scrap containing a valuable sentiment, even though the letter written was designed only for the one addressed.

DIED.

BORDEN.—Suddenly, of paralysis of the heart, on the 25th of Fifth month, 1871, at the residence of her brother Abner Allen, Deal, N. J., Miriam T., widow of the late John L. Borden, in the 78th year of her age; an elder of Shrewsbury Monthly Meeting, N. J.

MERRITT.—At his residence near Green Plain, Clark Co., Ohio, on the 5th of Twelfth month, 1867, Thomas Merritt, in the 80th year of his age; formerly of Burlington Co., N. J.

At the same place, on the 16th of Fifth month, 1871, of consumption, Jane Merritt, widow of the late Thomas Merritt, in the 78th year of her age.

They removed with their family from Burlington County, N. J., to the neighborhood of Green Plain, Ohio, in 1831, where they resided until their death. They were both members of Green Plain Monthly Meeting, Ohio.

THOMAS.—At Philadelphia, on the 30th of Fifth month, 1871, William, youngest son of William John and Rebecca M. Thomas, in the 23d year of his age; a member of Sandy Spring Monthly Meeting, Montgomery Co., Md. This dear young man was a bright example in the home circle, where he was tenderly beloved; with a willing mind and cheerful spirit yielding obedience to the wishes of his parents. In the few brief years allotted him, we believe he was prepared to enjoy eternal blessedness.

For Friends' Intelligencer.

NEW YORK YEARLY MEETING

Convened Fifth month 29th, and was thought to be more largely attended than usual—many strangers, both with and without minutes, were in attendance. Those with minutes were John and Mary B. Needles, from Baltimore; Deborah F. Wharton, Wm. Dorsey and George Truman, from Philadelphia; Sarah Hunt and Isaac Lippincott, from Moorestown, N.J.; Martha Dodgson, from Darby, Pa.; James W. Haines and Jonas Janney, from Ohio; Mark and Louisa A. Wright, from Falls, Pa.; Martha E. Travilla, and Thomas and Eliza Hoopes, from Westchester; T. Clarkson Taylor, from Wilmington, Del.; and Joseph Thorne, from Rochester, N. Y.

On First-day both houses at Fifteenth street were well filled, and the meetings at Twenty-seventh street and at Brooklyn, and also those on Fourth-day, were satisfactory seasons.

Westbury Quarterly Meeting reported two schools, with an attendance of 237 scholars; Purchase, one boarding school with 68; Easton one, averaging 65. Saratoga Quarterly Meeting is united with Easton, under the title of Easton and Saratoga Quarterly Meeting, to be held at Saratoga in the Eleventh month, and at other times as Easton Quarter has heretofore been held. Stanford Quarter

is held at Ghent in the Eighth month, and other changes were reported in some of the meetings. The change first above mentioned called forth much expression. Saratoga Quarter formerly consisted of seven Monthly Meetings, but being now reduced to one Particular Meeting necessitates its union with the neighboring one of Easton. The causes of such decline were variously considered, and different suggestions for their remedy interestingly presented.

On another occasion, instances of the dilapidated condition of some of our meeting-houses were mentioned, and Friends urged to give attention to keeping them in proper order, and to make them comfortable for the attendance of Friends, even as we make our dwellings so for the benefit of our families; the reverse is an evidence of a low state of religious interest.

The Representative Committee have given some attention to the subject of bringing about a settlement of national disputes without a resort to the sword, and more recently received a communication from Indiana Representative Committee, inviting a co operation in this matter. Their proceedings were approved, and women Friends invited to appoint members of this committee, which was accepted, so that Philadelphia Yearly Meeting is now the only one in which men and women do not stand on the same footing in this respect. An appropriation was made to this committee for the publication or purchase and distribution of articles and works in relation to Friends, in which direction comparatively little has been done for a number of years. The subject of protesting against the incorporation of a creed into the United States Constitution being introduced, it was left for the Friend to open the subject to the Representative Committee of which he is a member.

In the consideration of the state of Society, deficiencies were reported and much counsel given.

In dealing with offenders, Friends were urged to look more to the reclamation of the individual than to the mere fulfilment of discipline. The object should be to restore and not to cut off. Overseers should visit offenders not as officers merely, but from a concern for the good of the individual.

An instance was given of an individual who had violated our non-resistant testimony, and was labored with by the overseers and Monthly Meeting's committee, without the desired effect; and when all hope of his reclamation seemed at an end, some of the younger members felt a concern to visit him, and had a heart-tendering opportunity with him, under which his spirit yielded, and he was willing

to make an acknowledgment, and thus became restored to the Society. Another Friend mentioned the case of a Friend who was labored with patiently for three years, and then made an acknowledgment, which two and a half years before he would not have done.

On the subject of temperance, Friends were cautioned against the use of medicines, &c., under the name of bitters, which might lead into the habitual use of ardent spirits. Care in the use of the article for medicinal purposes was also urged.

On the subject of tobacco a concern was manifested. One Friend stated that from the use of it, his system had been so affected that he could hardly write his name, and that to this day he was suffering from its effects. Another aged Friend, with much emotion, expressed his regret at having been addicted to it, and now beholding his children and grandchildren in the use thereof.

Fifth-day morning was for the greater part occupied in joint session in reading the minutes of the Indian Committee, showing that much has been accomplished in this interesting field of labor. A memorial concerning Mary C. Baker was also read, and remarks made in reference to the example of the departed.

In view of the deficiencies among us, that from time to time are apparent, it was proposed that a committee be appointed on the state of Society, to consider not only these deficiencies but also such means as may be regarded as remedies. Among others the establishment of First day schools, which many valued Friends feel interested in. It was thought by some that if these are a means of good they should be encouraged, and be under the care of the Society. Although there seemed much unity with the proposition, yet a number deemed it indefinite, and that it was better to leave the subject for the individual action of concerned Friends: it was therefore so decided.

A Friend remarked in substance that we should not expect to remain indifferent to the subjects agitated in the world around us, and that it would be well for us to examine and see whether the cause of many of our members having been led off from us in time past by the anti-slavery and temperance movements was not owing to our Society not having sufficiently advanced in the promotion of these testimonies.

The meeting closed on Sixth day at noon and the general opinion was that we had had an excellent Yearly Meeting.

The First day School Conference met on Second and Third-day evenings. Delegates were in attendance from Baltimore, Indian New York and Philadelphia Association

Written reports from three of these and also from Ohio Association, were received, and verbal reports by the Indiana delegates. A report from the mission sewing-school at Baltimore, and an account of the mission First-day school for colored persons at Wilmington were read; likewise a letter from our valued friend S. M. Janney. Letters were also received from some of the Indian agents, giving accounts of the First-day schools among the Indians. The company of several of our aged ministering Friends (some of them over 80 years of age), and their loving words of cheer as well as counsel, were truly acceptable, and whilst it encourages the laborer in this field, may it also stimulate to watchfulness to maintain this concern on the right foundation.

The New York Association met on First-day evening, and on Fifth-day a conversational meeting was held, closing with a social commingling of the interested co-workers.

From the reports received the following items are gleaned:

Baltimore reports 17 First-day schools with 70 teachers, 619 children, 116 adults. Six of these schools report libraries—total vols. 100. There are also two reading associations and Bible classes, and a mission sewing-school with 18 teachers, and averaging 120 scholars.

Indiana has 13 schools, of which 5 have been opened within the past year.

New York reports 10 schools, of which 3 are new ones; about 325 children, 100 to 150 adults. Four schools report 775 volumes in libraries.

Ohio has 3 schools with 137 children, averaging 93; also one Union school. A part of the teachers and pupils belong to the other branch of the Society.

Philadelphia reports 10 new First-day schools, 1 mission First-day school for colored persons, and 1 reading association organized within the year. Two schools were not reopened last season, but there have been in operation the past year 32 First-day schools, reading associations and Bible classes, and sewing-schools for poor children; number of officers and teachers about 300; children, over 1800; adults about 600; volumes in libraries as far as reported, 4545.

No report from Genessee, owing to the absence of the Friend addressed, till too late to procure the information; but we learn that there is considerable opposition from prominent Friends who feel a fear in regard to the movement, and out of deference to this, two flourishing schools have been closed, but considerable interest in the cause still exists.

Among the Indians. Two First-day schools

with an average of 60 are held among the Winnebagoes; a third one has been suspended by reason of the sickness of the teacher; 1 school of from 90 to 110 is held among the Pawnees—a few of the children are white. These schools are taught by the white employees, and consequently the teachers are not all Friends.

The new Executive Committee have appointed the following committees, viz.: To examine books—Anne Caley, 1618 Summer St., Philada., Deborah Comly, Lydia C. Stabler, Clementine A. Jennings, Elizabeth W. Smith, Josiah T. Tubby, Effingham Cock, Samuel B. Haines, Lydia H. Yardley, Isaac Eyre, Benjamin Strattan, Lizzie Bailey, Joseph S. Hartley, Benjamin Chase. This committee will be much aided if Friends will report to them any books which they find to be objectionable for the perusal of the children or adult classes.

As a Publication Committee, Charles A. Dixon (care of J. B. Lippincott & Co.), 717 Market St., Philada., Eli M. Lamb, Jacob Capron, Lydia H. Hall, Letitia S. Cadwallader, Ann S. Paschall, William Dorsey, Louisa J. Roberts, Anna M. Starr, Phebe W. Cornell, Mercy J. Griffith were appointed. They are expected to publish original or selected matter in cards, leaflets or small pamphlet form. Before publication all matter is to be reported to the Executive Committee, and such as has reference to the religious views of Friends is to be submitted to the Book Committee of the Representative Committee.

The next Conference will meet in Baltimore in Tenth month, 1872, and the Executive Committee at Richmond, Ind., Ninth month 25th, 1871. J. M. T.

CHURCH AND STATE.

Lecture by Rabbi Lielienthal, of Cincinnati.

. . . It is true beyond any doubt that we are living in a progressive age. But it is not less true that this age is also a momentous and critical one, big with the solution of the most important problems. No sooner is one question settled than another is pushed forward on the public arena, awaiting the proper and satisfactory answer. No matter whether we look at our domestic, social, political, or religious relations, we find everywhere the same uneasiness and restlessness—the same state of trembling uncertainty—the same pressing demands for changes and reforms. The reverence for the past is vanishing, only here and there yet supported by the ignorant and thoughtless masses. All compromises are only so many temporary concessions to the past, not meant in good faith, only effecting a temporary lull, but foreboding the com-

ing storm. Everything tends to the future, everything points to new developments, and only those institutions which will try to adapt themselves to this spirit of the future will be entitled to life and a continuous influence on the whole range of human affairs.

Of all the questions which demand our serious consideration, none is of more importance than the one, "Shall the State or the Church rule supreme?" All over Europe this question is mooted at present, and threatens to assume quite formidable proportions. There is but one empire across the ocean in which this problem, so far, has been definitely settled by virtue of autocratic might and power. It is Russia. When, in the seventeenth century, the Patriarch of Moscow had died, and the Metropolitans and Archbishops of the Greek Church met for the purpose of filling the vacancy, Peter the Great rushed with drawn sword into their meeting, and, throwing the same on the table, exclaimed, "Here is your Patriarch." Since that time the Czar is Emperor and Pope at once; and, very significantly, the "Holy Synod," or the Supreme Ecclesiastical Court of Russia, is presided over by a general, the representative of the Czar. And hence the Emperor Nicholas used to say: State and Church are represented in me; and the motto ruling the Russian Government was, Autocracy, Russian Nationality, and the Greek Church.

But everywhere else in Europe this question agitates the Old Continent. In Great Britain Gladstone works for the enfranchisement of the Church; the Thirty-nine Articles, so renowned at Oxford and Cambridge, are going to be abolished, and High Churchmen and Dissenters prepare themselves for the final struggle. Italy, so long priest-ridden, has inscribed on her national banner the glorious words, "Religious liberty," and means to carry them out to the fullest extent, in spite of all anathemas and excommunications. Spain, though still timid and wavering, has adopted the same policy. Austria has thrown off her Concordat, and inserted in her new constitution the same modern principle; and the German Empire has fully recognized the equality of all citizens, without difference of creed or denomination, before the courts and tribunals of resurrected and united Germany.

But daily we hear of the demands of the clergy, made in the interests of their church. Since the last Ecumenical Council has proclaimed the new dogma of Papal infallibility, the bishops want to discharge all teachers and professors, both at the theological seminaries and universities, who are unwilling to subscribe to this new tenet of the Roman Church. The archbish-

op of Gnesen and Posen even asked for the names of all those men who at the last election of members for the German Parliament did not vote for those men he had proposed as candidates. The Government is now bound to interfere, but nobody can tell how this coming conflict between Church and State will be decided.

This is the aspect of the Old Continent. What is the prospect in America, in our glorious and God-blessed country? Of course religious liberty, in the fullest sense of the word, is the supreme law of the land. It is the most precious gem in the diadem of our Republic. It is warranted and secured by our Constitution.

The immortal signers of the Declaration of Independence; those modern prophets and apostles of humanity; those statesmen who thoroughly appreciated the bloody lessons of past history, knew but too well what they were doing when they entirely separate Church and State, and ignored all sectarian sentiments in the inspired documents they bequeathed to their descendants. The denominated national peace that heretofore characterized the mighty and unequalled growth of the young republic bears testimony to their wisdom, foresight, and statesmanship.

But, alas! our horizon, too, begins to be clouded. The harmony that heretofore prevailed between the various churches and denominations begins to be disturbed. Then we had in the last two years the conventions at Pittsburg and Philadelphia. The men united there meant to insert God in our Constitution, as we have Him already on our coins by the inscription, "In God we trust." They intend to Christianize our country, against the clear and emphatic spirit and letter of the Constitution. And I must leave it to the learned judge of the Supreme Court of the United States who presided over those meetings, to decide whether this future Christian country hereafter shall be a Catholic or Protestant country.

The Roman Catholic press and pulpit are not slow in answering this question. With praiseworthy frankness and manliness they declare the intentions of their Church. Father Hecker says: "In fifteen years we will take this country and build our institutions on the grave of Protestantism. . . . There ere long, to be a State religion in this country, and that State religion is to be Roman Catholic." Bishop O'Connor, of Pittsburg says: "Religious liberty is merely endured until the opposite can be carried into effect without peril to the Catholic world." The Archbishop of St. Louis says: "If the Catholics ever gain, which they surely will, an immense numerical majority, religious freed

n this country will be at an end." And the Pope speaks of the "delirium of toleration, and asserts the right to punish criminals in the order of ideas."

This language is plain, unequivocal, and cannot be misinterpreted. Still, I am not an alarmist. I have too much faith in the sound common sense of the American people, that they should barter away their political birthright for any theological or clerical controversy. They are too much addicted to the policy of "a second sober thought," that after having first of all taught the human race the invaluable blessings of religious liberty, they should discard them just now, when the whole civilized world is imitating the glorious example set by our great and noble sires.

But, "vigilance being the price of liberty," in the face of this assertion, it is not only right, but an imperative duty, to enlighten ourselves on this all-important subject, so that we may take our choice, and perform our duties as true, loyal citizens and true, loyal Americans.

We cannot accomplish this serious task any better than by comparing the difference between State and Church. But here, at the very outset, let us first state the difference between religion and theology. Religion is universal; theology is exclusive. Religion is humanitarian; theology is sectarian. Religion unites mankind; theology divides it. Religion is love, broad and all-comprising as God's love; theology preaches love and practices bigotry. Religion looks to the moral worth of man; theology to his creed and domination. Religion teaches us, as Vice-president Colfax so beautifully expresses it, "The common fatherhood of God and the common brotherhood of man;" theology predestination, eternal damnation, and that we should rather fear the anger of God than to trust to His paternal love and mercy. Religion, therefore, is light and love, and virtue and peace, unadulterated and immaculate; but theology is the apple of discord, which unites and estranges one from another. And the sorrowful fact is, that we all have too much of narrow-minded and narrow-hearted theology, and too little of the spirit of true, genuine religion.

The same difference now exists between the modern State and Church. The State is humanitarian; the Church sectarian. The State, in conformity with the continuous advancement of the human race, must be progressive; the Church, in accordance with its creed, must remain stationary. The State looks after and watches over the interests of all its members; the Church as history teaches us, looks first of all to its own interests and those of its communicants. The State advances

and progresses as far as man is able to advance; the Church must discourage any criticism that may sap the foundation of its doctrinal structure.

It is quite an erroneous impression, a complete misrepresentation of facts, as some men assert, that the State is nothing but a national police system, organized for the protection of person and property. I was startled when, but a few weeks ago, a Western statesman, a prominent lawyer and a powerful orator, gave such a definition of the State in a lecture delivered before the Young Men's Christian Association. This definition is the mediæval one, and reminds us of those times in which the Church assumed the government of all the political and spiritual interests of the world, and the State was nothing but the obedient executive of the Church.

But the modern State is quite another organization than that of a mere police force. It is that organization in which mankind, conscious of all the rights and titles with which an all-kind Providence has endowed man, tries to realize those rights and titles for the practical purposes of life, and the common good of all.

The modern State says, all men are created equal, and hence, it breaks down all castes and privileges; erases all titles "by divine right," be they of an aristocratic or hierarchical nature, and recognizes but the one government, established by the people and for the people. The modern State says, man is entitled to liberty, and therefore, it grants him freedom of thought, freedom of speech, and freedom of the press. The modern State says, all men are entitled to happiness, and, therefore, abolishes serfdom and slavery, and grants to every one the free exercise of all his powers and rights, as long as they do not interfere with the rights of his fellow-men. The modern State says, every one has a right to worship his Creator according to his best knowledge and the dictates of his own conscience, and, therefore, it does not meddle with religious affairs at all, and leaves them entirely to the care and discretion of the individual. Civil and religious liberty, in all their various ramifications, are the children of the modern State. These blessings, which are considered the greatest boon of mankind, and the glory of human civilization, were bestowed on the present generation by the State, and not by the Church. For, wherever the Church rules supreme, as in the South American Republics, civil, and especially religious, liberty are unknown, and the word republic is there as little understood as liberty. The modern State, therefore, is not a national police force, but the noble representative of all those glorious ideas, which distinguish our

age and our civilization from that of past centuries.

The Church treats its votaries always as minors ; the State wants free and independent men. Sectarian schools educate sectarian pupils : free schools educate freemen, citizens ; and hence the State is better fitted to advance the interests of humanity at large than the Church, and every true and marked progress has only been achieved since the State had emancipated itself from the Church and had become entirely separated and divorced from it.

Hence, already in the middle ages, the motto of the merchant princes of Venice was, "first Venice, then Rome;" and in our days, as long as the modern State remains true to its liberal and ennobling mission, our motto and our first duty must be—*first the State, and then the Church.*

And which State, so far, has laid down these humanitarian principles more clearly, more emphatically, more unequivocally, than the United States of our God-blessed country? Where on the globe is there a Constitution and a Declaration of Independence like that framed by the immortal men of 1776? Where is there a nation, which now for nearly a century has faithfully and loyally clung to the letter and spirit of these precious documents, like the American nation? O! we feel it, we are deeply impressed with the solemn truth that humanity, hunted down for centuries by all kinds of privileged classes, has at last found a home, a sweet home, indeed, in which it will be able to realize its noblest thoughts and aspirations ; in which man will be able to be man in the noblest sense of the word ; and hence, while we reiterate our motto, "first the State, and then the Church," we fervently pray and cheerfully exclaim, God bless America and the Americans!

Do not point to vile politicians and tricky agitators. There are sinners in the State, no less than in the Church. With all their vices and egotistical corruptions, they cannot detract any from the merit and the sublimity of the modern progressive State. They will flourish but for a while. They are only the excrescences of society ; their days are numbered, and when the people, tired of them and disgusted with them, will be aroused in their sovereign majesty, they will be scattered and vanish like chaff before the whirlwind.

But, after all, what will the Church say to these inferences and conclusions? Will she submit to the charges made against her by history? Will she forever remain in opposition to the doctrines of the modern State and the spirit of our progressive age? Or will she thus reform her own tenets and doctrines that, mighty as her influence is, she might

coöperate with the State and assist in advancing the highest interests of humanity?

We all hope so, we all wish for this reform; but it is not my province here to speak for other Churches and denominations. I have only to speak as an Israelite, and for my own Church and denomination, and Heaven be thanked that I can proudly and conscientiously assert, Judaism can adapt itself to all the progressive ideas of our age, and our religion is fully able to come up to all just demands of the modern, liberal State.

For, while we firmly and unflinchingly adhere to the doctrine of the unity of God, we do not claim Him as the God of the Jews No ; we revere and worship Him as the Father of all His creatures, no matter what their creed or race may be. Our supreme motto is Have we not all one God? Has not one Father created us all? Why should we become faithless one to the other, to defile the covenant of our forefathers?—(Malachi. Yes, with Vice-President Colfax, we cheerfully proclaim the common fatherland of God and the common brotherhood of man.

And because we firmly believe in this sublime truth, therefore do we also believe in the equality of man, not only in this, but also in after life. While here we proudly assert with the inspired words of the Declaration of Independence, that every man is entitled to life, liberty—both civil and religious—and happiness, we also proudly assert, with our old Rabbis, "that the good ones of all denominations will participate in the future bliss of Heaven." We seize with one hand that of our Catholic brother, and with the other that of our Protestant brother, and say we are a God's children, all the heirs of His mercy. For God, the fountain-head of all that is good, true, just, and holy, looks only to the moral worth of man, and Jew and Gentile, Mahometan and Pagan, are all His children and entitled to the enjoyment of the same rights and blessings.

And we assert this, because we believe with Moses and Jesus, that the supreme command of all religion is: "Love thy fellow-man as thyself," without distinction of either race, color or creed. These words comprise all the law and the prophets, and this must be the corner-stone of all future religion. Hence, it is our duty to see that justice be meted out to all ; that liberty be granted to all ; that the inalienable rights with which the Creator has endowed man, be enjoyed by all, and that the old golden rule be observed by all: Do unto others as you wish to be done by.

This is the relation which modern Judaism assumes toward the modern State, and especially toward the laws of our beloved country. Hence, we have given up all idea

ever returning to Palestine, and establishing there an independent nationality. All our affections belong to this country, which we love and revere as our home and the home of our children. Hence, we have given up our sectarian schools, and send our children to the free schools; for we wish to educate them as thorough Americans, and wish them from their childhood to fraternize with their future fellow-citizens.

Let us conclude with the pertinent remarks of our President: "Let us have peace;" not only political, but also denominational peace! Let the dead past of fanaticism and bigotry bury its dead! Let ignorance and superstition be dispelled by universal and free education. And, "with malice to none, with charity for all," with love and justice, as God understands it, let us lift higher and higher our star-spangled banner, that it may float in all its heaven-born glory, bringing to mankind as the glorious greeting of modern redemption the blessings of civil and religious liberty!

WORK.

BY ALICE CARY.

Down and up, and up and down,

Over and over and over;

Turn in the little seed, dry and brown;

Turn out the bright red clover.

Work, and the sun your work will share,

And the rain in its time will fall;

For Nature, she worketh everywhere,

And the grace of God through all.

With hand on the spade and heart in the sky,

Dress the ground and till it:

Turn in the little seed, brown and dry;

Turn out the golden millet.

Work, and your house shall be duly fed;

Work, and rest shall be won;

I hold that a man had better be dead,

Than alive, when his work is done.

Down and up, and up and down,

On the hill-top, low in the valley;

Turn in the little seed, dry and brown,

Turn out the rose and lily.

Work with a plan, or without a plan,

And your ends they shall be shaped true;

Work, and learn at first hand, like a man—

The best way to know is to do!

Down and up till life shall close,

Ceasing not your praises;

Turn in the will white winter snows,

Turn out the sweet spring daisies.

Work, and the sun your work will share,

And the rain in its time will fall;

For Nature, she worketh everywhere,

And the grace of God through all.

FALSE happiness renders men stern and proud, and that happiness is never communicated. True happiness renders them kind and sensible, and that happiness is always shared.—*Montesquie.*

HOW TO BE HAPPY.

BY HON. SCHUYLER COLFAX,

Vice-President of the United States.

(Concluded from page 239.)

I allude to this Scriptural record, in passing, only to prove that this treasure of good deeds has its value hereafter. But it has its abundant dividends in this life of which I speak, as well. Whoever ministers to the sorrowing and suffering around him actually ministers to his own happiness. Whoever helps the helpless, befriends the friendless, gives food to the destitute and sympathy to the miserable, finds the resulting influx of joy in his own heart. Loved affectionately while living, he will be mourned sincerely when dead. The millionaire may rejoice as he adds house to house, and revels in his increase in wealth. But the truer happiness is his who feels that he has made the children of woe around him happier by his presence and his benevolence, and has laid up for himself that treasure of good deeds which reverses in business life can never destroy, and which thieves cannot break through nor steal.

Avoid idleness. If an empty brain is indeed "the Devil's workshop," an aimless, idle, unoccupied life is also unhealthy to the mind and joyless to the heart. Unless sickness chains you to a bed of pain, find something for your hands to do, something in which mind and body can co-operate. A French philosopher laid down three rules for the attainment of happiness. The first was occupation; the second, *occupation*; and the third and last was still *OCCUPATION*. It develops your mental and physical powers. You were created for it. Brain and judgment, sinew and muscle, bone and blood, were all given you to be thus used. Unused, they rust, and wither, and shrivel, and decay. Brought into active, healthful exercise, they bring happiness to you of which the idle, listless man knows not. Even the sleep of the toiler has a joy and rest that others can imagine but never realize.

Establish hours of rest and relaxation. To the hardest worker comes the blessed day of rest, interleaved amongst the seven days of the week. This, at least, the law allows him to command for his own; and the happy tendency of our times is to give him other hours of rest besides, to enjoy with the loved ones at home. But those who work with the mind, as well as the body, should have even more hours of rest and relaxation with their family, unharrassed by the wearing business toils of life, free from its corroding and cankering cares, and dedicated to happiness and recuperation. Visiting recently one of the busiest men in the United States, I found

that he had laid down as the law of his daily life that, when he turned his back on his office, he left all its thousand details behind him till the morrow; shut out absolutely his multiplied business cares when he closed the door of his dwelling; and there, in the fullness of enjoyment with his family, renewed his youth daily by mingling with the amusements of the household. To such, life has a daily zest never realized by him who carries his business, at home as well as at his counting-room, like a clanking chain, always hanging upon his limbs.

I have been tempted to supplement this article with another, on the question where real happiness is *not* to be found. But I will only allude to one point under that head.

There are but few who have ever tested public life, with all its excitements, to its full, who have not realized that a truer happiness is to be found in private or business life. With all its fascinating and opportunities for usefulness, it is always a pathway filled with thorns, even to the most successful. Envy, and malice, and all uncharitableness are always around them. Injustice is the daily draught they drink, and the bitter herbs of misrepresentation their daily food. I do not allude now to the malignant falsehoods of paid libelers, who mistake scurrility for wit, and invective for argument; for their malice is so transparent they deceive but few whose good opinions are of any worth. But I refer to the general fact that the millions of our citizens are apt to look with the eyes of prejudice and aversion on those who, in conspicuous positions, differ ever so honestly from their convictions. It is only when "the last of earth" has come, that public men can hope for the justice to their memories which is denied them in life. To those who remember how the storm of obloquy spent itself on Henry Clay and Andrew Jackson while living, great chieftains as they were of great parties; and how now, less than half a century after, all parties acknowledge their honest purposes and patriotic endeavors, I need no argument to attest the correctness of this statement.

But, apart from misrepresentation, injustice, and invective—the alienation of friends whose desires you may have disappointed, or the malice of those whose schemes you may have thwarted—whoever is in public life feels that he must inevitably be misconstrued and misunderstood by numbers whose good opinions he does value. If he fails, from lack of ability, to contribute to all benevolent, church-building, missionary enterprises, etc., etc., whose appeals reach him daily, he is regarded as uncharitable and ungenerous; but, if he does, he is suspected by many as

doing it only from political or personal considerations. If he suffers to pass unnoticed all kinds of untruths, he finds them at last treated as facts, which being undenied are held to be undeniable; but, if he takes occasion to expose their falsity publicly, he is sneered at for having been at so much pains to contradict them. If he declines to leave a post of duty to speak at all kinds of public meetings through the country, he is suspected of a lack of sympathy with them; but, if he goes, he is charged with abandoning official duties for the purpose of appearing prominently before the public. I might expand this record of the experience of hundreds of men in public life; but this is sufficient to illustrate my position that, whatever they do or decline to do, they are sure to be misunderstood by thousands—and, of course, or purely political questions this misunderstanding and prejudice extends to millions.

I come back, therefore, in conclusion, to my premises at the outset—that cheerfulness can be and ought to be cultivated by all that kindness is most beneficently contagious that to carry good-nature and a wisely curbed temper with you is to bring sunshine wherever you go; that patience and forbearance in your intercourse with family, friend and community, will always bring forth the richest of social fruits; that the treasure of good deeds achieved and sufferings assuaged is worth infinitely more than political honors; that the creation of joy is inestimably better than that besetting sin of borrowing trouble; and (even if some ascetic critic rebukes me for the sentiment) that I believe, with Charles Lamb, that "a laugh is worth a hundred groans in any state of the market."—*The Independent*.

IN moderating, not in satisfying desires lies peace.—*Heber*.

ITEMS.

THE submarine cable between Singapore and Hong Kong has been successfully completed. London is now in direct telegraphic communication with China.

THE St. Charles iron bridge, built across the Missouri river, twenty miles north of St. Louis, for the use of the North Missouri Railroad, is the first high bridge that has been completed over either the Missouri or the Mississippi rivers. The work of construction was commenced in 1868, and the bridge was completed in two years and ten months. The bridge is composed of seven iron spans, varying from 308 to 321½ feet each, and resting upon stone piers. It was tested by placing six heavy locomotives and tenders on each span, and the compression in the centre was generally between three and four inches. The entire cost amounted to ten millions of dollars, and the bridge is to be leased to the North Missouri Railroad at a yearly rental of \$150,000, which may, according to the business done, be increased to \$200,000.

A BRIEF SKETCH OF THE LIFE OF TAULERUS. A POPULAR PREACHER OF THE FOURTEENTH CENTURY.

Translated from the German by Peter Lossing.

(Concluded from page 245.)

After this, Taulerus passed through deep conflicts and painful inward exercise of mind before he experienced any conquest over his inward corruptions; but his confidence at length became more and more strengthened, although he experienced that the natural man struggled hard to retain a seat in his heart, which strove against a submission to Divine prerogative in him. He, however, continued steadfast in the work of reformation, and sought diligently after a thorough renovation of soul. In the course of the year he became neglected and despised in the monastery; his former friends forsook him, and generally became estranged from him as though they had never known him. This proved so great a trial to his feeling mind that it wore upon his constitution; his health declined, and he particularly suffered great pain in his head. He sent for the layman and opened to him his case. The layman encouraged him to put his trust humbly in God, having no doubt he would recover, and his life would be spared; that his life was now well-pleasing to his Divine Master, and he doubted not he would daily experience amendment, not only in his corporeal capacity, but that of adding strength to strength mentally. He told him that whosoever will

walk in the straight and narrow way of life and salvation, must become a partaker with his Lord and Saviour Jesus Christ, in a state of suffering, before he can reign with Him; wherefore not to despond, but rely on Him who had begun a good work in him. "And," said he, "I have had to pass through similar trials and exercises. It will now be very proper to nurse the body by suitable nourishing diet, and do all in thy power to strengthen thy bodily system. I have brought with me some roots, which I will prepare for thee to take, which I believe will relieve thee in regard to the pain in the head." The doctor reminded him of his having recommended an abstemious regimen in time past. The layman said, "I did so; but circumstances alter cases. There is a difference between abundance of bread and idleness and a reduced debilitated state of the body. The one needs reducing, but the other that is weak, and honestly disposed to obey the dictates of the spirit, it becomes a duty to strengthen and build up the system. A contrary course would be presumptuously opposing the Divine will, yet it is necessary to guard against making a disorderly use of the good creatures designed for the sustenance of our mortal bodies—so then, dear doctor, look to God for thine Helper, and go thy way joyfully; submit thyself to the boundless mercy of God, and wait for the influence of His grace, that so thou mayest be enabled to do His will, whether it

be sweet or bitter to the natural man. And now, as there is an important matter which requires my attention at home, I hope my leaving thee will not be taken amiss by thee, for truly, from this time forward, it will be far better for thee to look for and obtain help without the medium of any instrumental means."

The doctor said, "Dear son, do not talk so, for it seems to me as though I could not long bear thy absence, and I fear it would be too hard for me to bear a separation from thee; for except thee, I have no comforter in this world." The layman said, "Dear doctor, I must recommend thy attention to a much better comforter, namely, the Holy Spirit of truth, which has thus far directed and drawn thee from evil. I am a poor creature, the work in thee is wholly the Lord's, and I have been no more than His instrument, which I have done willingly, to the honor of God and the furtherance of thy soul's salvation." The doctor said, "I trust the Lord will be thy eternal reward; I hope to submit to the privation of thy company, and to bear up under it as well as I can." The layman then said to him, "Inasmuch as thou hast surrendered thyself to a spiritual line of obedience to God, therefore it is necessary in outward concerns to live prudently and wisely, keeping a consistent course, and matter not that thou art very much forsaken by creaturely aid and consolation; and if it so fall out that thou failest in pecuniary means, for thy comfortable support I would advise thee to put in pledge some of thy books for a loan of money, but by no means sell them, for the time will come when these books will again be serviceable to thee." He then took his leave of the Doctor, and left him bathed in tears.

Thus he continued about two years, under various trials, despised by his friends, and reduced to great poverty; so that he pawned a number of his books. At length he was brought very low by sickness, so that he became humbled as in the dust, when on a certain evening his conflicts became inexpressibly great, so that he was not able to leave his cell, resigning all hope and dependence on creaturely comfort; the bitter sufferings of our Saviour were brought to his remembrance, and the love He bore towards us, and he took a retrospective view of his past life, and saw how wretchedly miserable it had been, in comparison with the life of Christ. After this, he was smitten with great sorrow of heart; all his sins, all his lost and misspent time, were brought before the view of his mind; he broke forth with heart and mouth, "O merciful God, compassionate me, a poor sinner, through Thy boundless long-suffering

and adorable mercy, for I am not worthy that the earth should bear me up!" After this, he heard a voice saying, "Stand fast in peace, trust in God, for he it known unto thee, that when the Son incarnate was upon earth, in His fleshly nature, those whom He healed of their outward diseases He also healed of their inward maladies." Immediately after this he became insensible of anything for some time; but when he came to himself he felt in his mental and bodily capacity a new power and might; he saw a clear and manifest distinction in things that were before to him strange and mysterious, and he marvelled greatly, and wondered from whence these things came; feeling himself at a loss, he sent again for his friend, and related to him all that had happened to him. The layman rejoiced greatly and said to him, "Thou hast now for the first found experimentally the true efficiency of the grace of God; this is none other than a touch and moving from the Highest, and whereas the letter killeth, so now the Spirit hath made and will make thee alive. Now thou wilt become taught by the Holy Spirit, instead of being taught as heretofore in the flesh. Thou art favored with the Light and Grace of God, and the substance of the Scriptures of the Truth are in thee. The Scriptures will become an unsealed book to thee, and thou wilt more and more understand their spiritual meaning, beyond what thou ever didst before. Those parts of the Scriptures which, to speculative minds, seem to contradict each other, now as thou dependest on that influence of the Spirit which dictated the penman thereof, thou wilt clearly discover a harmony throughout, one part corroborating and confirming the other. Now it may be right for thee to begin to publish the Gospel of life and salvation, and point out to others the way to eternal life; now the time has come wherein good books may become again useful to thee, and thy preaching will be productive of fruit unto holiness in them that hear and believe, and in proportion as thou hast been lightly esteemed amongst the people, thou wilt become prized and beloved. But henceforth remember the necessity of humility, for thou knowest that the man who openly carries with him great and precious treasure has need to beware of thieves. For thou wilt become tried by many wiles and stratagems of an unwearied enemy, and I know of nothing so well calculated to prevent inroads of the enemy as to abide in a state of true humility." The layman further observed, "There is henceforth no need of my counseling thee, seeing thou hast the best of Teachers nigh thee." The Doctor then informed him that he had parted with a large portion

of his books, to the amount of thirty pieces of gold. The layman readily offered to redeem them for him, which he did; and suffered notice to be given that after three days he would attend a public meeting. This caused great surprise and excitement among the people, he having been so long silent, and almost forgotten; the consequence was that it brought a very great concourse of people together. When Taulerus saw such a multitude assembled, he ascended the lecturium, or high pulpit, in order that they might all have the better opportunity of hearing: he drew his cap over his eyes, and expressed the following short ejaculation: "Merciful and eternal God, if it be consistent with Thy will, enable me to speak to this people, to the praise of Thy holy Name and to their benefit." In closing these words, he burst into such a flood of tears that he could not utter a word to the people: he continued weeping so long that the people began to be impatient, and one among the crowd called out, "How long will we sit and stand here? It is already late in the day; if thou art not going to preach, dismiss us, that we may go home." The Doctor then spoke under a weighty sense of submission, in brokenness of spirit, "O my Lord and my God, if consistent with Thy will, remove from me this weeping, that so I may communicate a sermon to the people to thy honor and praise; if not, I will receive this as a token or sign that Thou knowest that I have not yet been sufficiently brought into subjection and derision: if so, fulfil Thy Divine will to Thy praise, and according to what I may stand in need of." This weeping incessantly continued: he then submitted believing it to be the will of God. He then so far recovered that, with many tears, he said to the people, "It is painful to my heart that I have so long detained you, for at this time I cannot speak to you for weeping; therefore pray to God for me, that He may be pleased to help me, so that through His grace I may at some future time do better." The people then withdrew, and this singular occurrence spread everywhere, and poor, pus-hearted Taulerus became an object of ridicule, and was everywhere despised; and it became a common saying among the people, "Now we are convinced that he has become a perfect fool:" and his brethren of the monastery utterly forbade his ever attempting to preach again; and told him he had injured the cause of Truth, and disgraced the order, by the silly notions he had imbibed, for it had crazed his head and made a fool of him. After this, the Doctor sent again for the layman, and told him what had happened to him. The layman said, "Dear Doctor, be not alarmed, it is no new thing that the

Bridegroom of souls deals thus with His dependents for their good: wherefore retire inward, and avoid company and conversation for a few days, and after this, suggest to the prior to permit thee to deliver a discourse in Latin; if he declines giving consent, then propose his assent to thy composing a lecture, and reading it in the seminary." The latter proposal was assented to, which he accordingly performed very distinctly, which contained such deep, weighty, and important doctrine, beyond what they had ever heard before, which so far opened his way in the minds of the heads of the monastery, that they consented that he might make another attempt to preach. After which, at the close of a lecture delivered by one of the brethren of the monastery, he gave notice that he was desired to publish Dr. Taulerus's prospect of a meeting on the morrow, but added, "If it should happen with him as it did before, I will take none of the blame on myself. But in truth I can say that he read in our seminary a lecture containing such interesting, weighty matter, as was beyond what we have for a long time heard; but how he will, in this undertaking, conduct himself, I know not; the Lord knoweth." Accordingly the next day the Doctor came into the monastery, and began to preach from this Scripture, "Behold the bridegroom cometh, go ye forth to meet him." Matt. xxv. 6.

In this memorable sermon he opened, in a most luminous and clear manner, the true spiritual sense of the Bridegroom being the head of the church—the manner of His coming by His spiritual manifestations to its individual members, by the inshinings of His light, which is the "true light, which lighteth every man that cometh into the world," John i., and that the Church of Christ is his bride; the way and manner in which a docile, teachable, submissive deportment on the part of the bride, increases and strengthens the bond of union; the manner in which the bridegroom proves her fidelity to the marriage covenant, and her sense of obligation to Him for His love and regard, in having passed through great trials and sufferings for her sake, until she becomes willing to endure any privations for His sake, becoming wholly absorbed in love, resignation, and entire submission to His will; the reward of the smiles of His heavenly countenance, His sweet heart solacing converse with her, encouraging and strengthening her from one degree of heavenly grace to another. He also pointed out very explicitly how perfectly incomprehensible this precious union, divine and spiritual intercourse, is to the carnally minded, which, if they were permitted to be eye and ear witnesses thereto, would consider

them fools or drunken. As he was speaking, one man exclaimed, "That is true," and swooned. Some alarm took place, and one desired him to stop, or this man would die in their hands. Soon after this, he closed his communication and withdrew to read mass: when he returned, about forty of those persons who had sat under the influence of the foregoing sermon remained still on their seats, deeply affected, and to the number of twelve were carried to their separate cells. The Doctor ordered them some warm nourishing drink, as they appeared to revive; and from this time on the fame of this wonderful occurrence spreading far and wide, he continued his public labors to the worldly class of people, as well as to the monks and nuns, utterly declining the use of Latin, in his public communications, from a sense of duty, except when he delivered his sentiments to the learned. Thus he labored in the Gospel faithfully till toward the close of his days: many, very many were the instances of repentance and amendment of life among the people under his ministry. When taken sick, after about five months' painful illness of body, supposing his end to be drawing near, he sent for his friend the layman, who immediately gave his attendance, when the following interview took place: "Dear Doctor, how is it with thee?" The Doctor answered, "I believe the hour has come in which God will remove me from the things of time to Himself; wherefore, dear son, it is a great comfort to me that thou art here to see my end." After which, he desired the layman that he would take possession of those books which lay there, saying, "Therein thou wilt find in manuscript all thy communications to me from the first of our interviews, together with my answers, including some brief sketches of my life, showing what God has done for me, a poor, unworthy man, and brought about through His poor, weak instrument. Dear son, if consistent with the Divine will, and should appear agreeable to thy mind, to digest and prepare the manuscript for the press, in the form of a small book, it will accord with my mind." The layman answered that he had five of his discourses in manuscript, which, if agreeable to him, he would add thereunto, and for his sake comprise the whole into a small volume. The Doctor then remarked with earnestness, "Dear son, I pray thee in the strongest manner I possibly can, that thou wilt not take into view the regard thou hast for me in this matter, and that thou wholly omit mentioning my name, for thou must know for a certainty that the life, words, and works which God has wrought in and through me, an unworthy sinner, are not mine; but

the praise belongs wholly to Him the merciful Giver. But if thou dost publish it, let it be solely for the benefit of our fellow-men. Thou canst say in the narrative of our intercourse the Doctor and the man, without pointing at either of our names: neither show the manuscript to any person in this city, lest it should become known or suspected. But take it with thee into thy country, that it may not become known as mine."

After this he died. The death of this great and good man was very generally lamented. Many of those who observed that this layman was Taulerus's confidential and particular friend, and treated as such by Taulerus, began to honor him with their kind attention, inviting him to partake of their hospitality and friendship. As soon as the layman observed this, he withdrew from the city, and retired to his own home.

For Friends' Intelligencer.

GRATITUDE.

Believing, as I do, that nothing but that which proceeds from good can reach to the good in others, a care is felt lest, in committing my thoughts to paper, there should be an expression of words without life.

But the subject above alluded to has impressed my mind, as one not always enough regarded, for to withhold praise justly due has, I think, a discouraging tendency, especially to the feelings of the young. I have been the recipient of many favors, not only from our all-bountiful Preserver, but from my fellow-probationers, and as it is right to feel, it is sometimes right to express our gratitude. It may have a tendency to stir up the minds of others "by way of remembrance." We read that during the mission of Christ on earth there were ten lepers, standing afar off but desirous to be healed; they cried, "Jesus Master, have mercy on us!" He directed them to "show themselves to the Priest, and offer the sacrifice that Moses commanded" but as they went on their way, they felt they were cleansed by an invisible power, and "one of them, when he saw that he was healed, turned back, and with a loud voice gave glory to God, and fell at the feet of Jesus, giving him thanks." Here was a disposition to give glory to God, and gratitude to the humanity through which the healing virtue was dispensed. The holy Jesus rebuked the lack of gratitude in the others when he said: "Were there not ten cleansed?—where are the nine? They are not found to return to give glory to God, save this stranger," and he was a Samaritan, "one of whom the Jew had no dealings.

A sorrowful instance of ingratitude is recorded of the good King Hezekiah,

when he was sick unto death, had this warning sent him by the prophet: "Set thy house in order, for thou shalt die, and not live;" and he prayed earnestly to his Heavenly Father with this excellent appeal: "I beseech thee, O Lord, remember now how I have walked before Thee in truth and with a perfect heart, and have done that which is good and right in Thy sight;" and Hezekiah wept sore. The prophet was then bidden to return with this consoling message: "I have heard thy prayer, I have seen thy tears, and will add unto thy days fifteen years!" But it is stated "Hezekiah rendered not again according to the benefit received," but by a vain display of the precious treasures with which he was entrusted, and which had been dedicated to the Lord, a door was opened which led to the captivity of Israel.

I often feel the necessity of being more careful to fulfil my part of the covenant, with "covenant keeping God." He extends to us in the hour of adversity this soul sustaining invitation: "Call upon Me in the day of trouble, and I will deliver thee, and thou shalt glorify Me." Perhaps few doubt the fulfilment of the promise on His part, but are ye careful to comply with our part of the conditions,—endeavoring by our life and conversation to "glorify Him on earth, and to finish the work He has given us to do?" A grateful heart is a blessing to its possessor; like the widow's oil, it flows while there is a vessel to receive it, enabling us to pay our debts and live of the same, for it has not only redeeming, but a sustaining virtue in it.

"There is that giveth and yet increaseth, and there is that withholdeth more than is meet, but it tendeth to poverty. R. HILL.

For Friends' Intelligencer.

THE INDIANS.

The letters from our Friends among the Indians, contained in the *Intelligencer* lately, have been very acceptable to me; and trusting that it is so with all readers of that periodical, I take the liberty of making some extracts from a letter recently received from a friend at the Great Nemaha Agency, Neb., though not written for publication. Our Friends make sacrifices which we who remain at home, enjoying a life of ease, cannot fully appreciate, but it is to be hoped *all* will aid every way possible those who, by their new life among the uncivilized, are deprived of some comforts, and the social mingling with Friends. This friend remarks that their hands have received strength to labor, and their hearts have been cheered, and encouraged to go on, not only by kind words, but by the deeds of their friends in the East. All goods

sent are very acceptable, but the last box sent them from Philadelphia was particularly so, as with clothing, &c. (all valuable), it contained several dozen of the "Children's Friend," and engravings of William Penn, donations of E. K. Smedley, which were highly prized,—the subject of the engravings making them particularly appropriate, as the Indians revere even the *name* of William Penn. M. thinks the full value of the clothing has never been known, as it does not merely protect the body from the elements, but assists in breaking the old habits of savage life, by encouraging them to dress like their "white brethren," when, even if they had money sufficient at their command, they would not spend it for citizens' dress. Most of the Iowa tribe have houses, and although some are made of bark, they are quite comfortable. Those of that tribe who do not work *at all* are by far the less number; nearly every man has his own field or enclosure, in which he raises corn; some have sowed wheat, and it is thought many more would if the land were sectionized; and ere long they would be self-supporting. Until they are, the work of Friends should not cease. The store at the Great Nemaha Agency has thus far been a success; from the surplus arising therefrom they have been enabled to encourage agriculture, by distributing wheat, oats, potatoes, fruit-trees and grape vines. By the work which has been, and is being done for them, the scales of prejudice are falling from the eyes of the people, and they see the enormity of the frauds which have been practiced on the red man. We have grounds for great encouragement. Let us not weary, and when we as a Society retire, may we feel individually that we have done what we could for them. R.

LETTERS FROM THE WEST. NO. 2.

ON THE WING, 5th mo. 30th,
Via Penna. Central, Fort Wayne and
Chicago R. R. }

As the golden hues of morning were tinting the horizon, I dressed and looked out upon our flying pathway. We had passed the good old Keystone State, and were rushing through the busy towns and thriving trade centres of Ohio. It is positively wonderful to see the amount of agricultural implements that are manufactured in this State. We pass immense factories, giving employment to hundreds of men, and sending out car-load after car-load of machinery to make farming easy. One cannot help querying where it all goes. We reach Crestline at 9 A.M., where we breakfast. A slight shower is falling;

but it is soon over, and the day wears on warm and sultry. There is little along the line of travel to invite attention. No wild flowers are in bloom; the fields are green and rich in promise, the trees luxuriant in their summer drapery, but there is a monotony which I turn from to find a rich field of variegated beauty in the life and correspondence of F. W. Robertson. It is impossible to fix attention sufficiently to gather up and make my own all the gems of thought that glitter on these pages, so I will lay them aside and seek the platform, if so be a better impression of what is passing may be mine.

A half-hour at Fort Wayne for dinner is announced. It is raining again. "We are in Indiana," said the conductor; "there will be rain plenty now,"—and the country looks as if there really had been quite enough. While most of the passengers left the cars for dinner, I left also for a stroll up the main street. The shower was over directly, and I had a pleasant little saunter; read the name and date of an unfinished church edifice, which has some pretensions to style, but is pitiful in its incompleteness; commenced in 1866, finished—in the dim, uncertain future. How much of what we undertake individually may be disposed of in the same manner! We do not sit down and count the cost, but we rush on, taking impulse for right direction, and find out our mistake when our better judgment asserts its dominion, very often to our humiliation and loss.

We do not travel so fast since leaving Pennsylvania. By a statute of the State of Ohio, all the trains are obliged to stop at every town which numbers three thousand or more inhabitants. I think the same requirement must be in force in all these western States. Doubtless the effect is calculated to advance the interests of these small towns, and, giving an easy access to the markets, offers ready and remunerative sale for all the products of the farm.

There is one feature of all this country through which we are passing, that affects me unpleasantly. It is the careless manner in which most of the clearings are made; charred logs, half-consumed trees, and decaying timber, are prominent objects in every settlement; very many of the fields under cultivation are so covered with high stumps, as to lead one to wonder how the plow and the harrow find their way between them. I see, too, what becomes of a large proportion of the farming implements manufactured; they lie about, exposed to the weather, without care as if they were of no more account than the unsightly logs that disfigure the surroundings of the homestead. I am aware of the scarcity of labor and all the disadvantages of pioneer

settlers, but it is better, in my judgment, to undertake less and do it more thoroughly. I should never be content with a home like most of these we are passing, much as I enjoy "rural sights" and rural life. I am free to write this for the *Intelligencer*, without fear of wounding the feelings of any of *its* readers. Friends, as a people, love order and neatness, and believe in economy in the use of whatever a wise Providence has blessed them with.

Said one, idleness and intemperance are the blighting influences that retard a healthy growth in this section of our country. The soil is rich, yielding to the most careless labor a generous harvest. The men are not obliged to exert themselves, and the women, borne down with household duties and the care of their children, lose heart, and settle into a drudging, slavish life. No favoring circumstances of soil or climate make the wife's toil less, or lighten the burthen of her cares; and I am not surprised to see so many prematurely old and sad-looking women in every settlement through which the iron road passes. Billiard saloons and drinking houses flaunt their painted insignia, and invite to their destroying embrace the idle and dissolute men.

We are not far from Chicago. Glimpses of Lake Michigan are caught through the low shrubbery on that side of the road. We make our toilets, gather up books, papers, &c., and prepare to leave our pleasant palace car.

The approach to Chicago is not prepossessing; the land is low, subject to inundation, and the houses are of all sizes and descriptions. One could scarcely believe that in the short time it has been settled, there could have congregated enough of the odds and ends of humanity to constitute so large a suburb of evident poverty and possible want. There are many comfortable looking houses among these, but the poorer sort predominate. The immense grain warehouses are objects of special interest; perhaps no city on the continent has so large a grain trade. With fields of from fifty to five hundred acres to collect from, there seems to be no limit to the supply that must ultimately flow into Chicago.

But here we are, at the terminus of this portion of the journey, and I pass out into this living, surging sea of humanity, "unknown and unknown." The omnibuses are across the street, in waiting, and I am taken in charge of the one for the Chicago & Northwestern R. R., and we are soon *en route* for the depot; but we are brought to a full stop. The draw is open, a tug going this way and one going that puff through the opening; the ponderous section moves back to its place, and the long train of vehicles of every description and of foot-passengers cross the

bridge. We hurry through the business portion of the city, and are again brought to a stand-still at another bridge; the same scene is enacted, with like results, only this time drays, wagons and carriages so block up the streets that cross each other just at the bridge, that one is tempted to fear a catastrophe. But we pass over without danger, and are landed in safety at a hotel adjoining the depot. It is six o'clock, P.M.; the train leaves at nine. I take supper, make the acquaintance of a lady merchant from one of the towns through which I am to pass, and we agree to take a berth together for the night. I find her society pleasant. We spend the intervening time in conversation, and at the proper hour get our ticket for the sleeping-car, and go on the train.

For Friends' Intelligencer,

REMARKABLE PHENOMENON.

On the 3d of this month, about ten o'clock in the evening, the moon being low in the south-east, and shining brightly on a moderate shower which was coming up from north-west, and into favorable position, a beautiful rainbow was formed. Though there was but little except the light gray under the arch, similar to a fog rainbow in the morning, and a dark brown above, still I could discover a little of the blue and orange tints of the bright rainbow at the southern extremity, where it was brightest. It lasted perhaps five minutes, until the cloud extended over, and hid the light of the moon. ENOS HEACOCK.

Ohio, 6th mo., 1871.

WITH WHAT BODY DO THEY RISE?

We do not know what satisfactory answer to give to a query addressed to us in these words: "What is your opinion as to the resurrection of the body?" It is easy to refer our inquirer to St. Paul's views. But what are St. Paul's views? He thought a human body in the grave was like a seed of wheat in the ground. There is a sense in which this view, which was meant to be theological, is also scientific. The body, once buried, shall rise again. That is, it shall decompose in the earth; it shall mingle with the soil; it shall become part of nature's mould; it shall receive the rain from heaven; it shall quicken and revive, atom by atom; it shall struggle up re-germinant to the surface; and finally it shall appear again to human eyes—here in a blade of grass, there in a head of clover—here in a trailing vine, there in a spreading oak. This is the only resurrection of the body in which we have any faith. Now, this explanation may not satisfy the spiritual yearnings of our inquiring friend; but after all, rightly looked at, there is something very

beautiful and satisfying in that eternal round of nature's transmutation, which brings death and mortality to light.—*The Golden Age.*

FROM UNPUBLISHED LETTERS.

1844.

The acceptable letter of my dear friend — came safely to hand. I view thee still "sitting at home," and hope thou canst say with the poet,

"'Tis pleasant through the loop-holes of retreat,
To peep at such a world,—to see the stir
Of the great Babel, and not feel the crowd;
To hear the roar she sends through all her gates,
At a safe distance."

Cowper says,

"Oh! blest seclusion from a jarring world."

The wish of my heart for my dear friend to whom I am writing is, that the evening of life may be serene and tranquil—that all clouds may vanish, and the mind repose in confidence in the mercy and goodness of the God that has led and fed the immortal mind through this present life. There is something soothing and precious in the account of Joseph's going to see his father Jacob when he was sick; and he took his children with him. This circumstance gave a double interest to the visit, for the children took the old patriarch's attention, and he felt them and claimed them (though born in Egypt) as his own. What ample proof he gave of his paternal affection and interest in these children, when he said, Bring them unto me that I may bless them. Although the eyes of Israel were dim with age, so that he could not see, yet his spiritual vision was clear and unclouded. He embraced the youth, and, recalling his pilgrimage through time, and the favor, the unexpected privilege of again not only seeing his beloved son Joseph, but also his seed, he delivered a most impressive testimony to the preserving power and sustaining goodness of the God before whom his fathers Abraham and Isaac did walk. On him he called to bless the lads, and, said he, "let my name, and the name of my fathers Abraham and Isaac, be named on them, and let them grow into a multitude in the midst of the earth." I almost marvel that among the lovers of historical paintings, that this deeply interesting interview has never been chosen. But such imaginary representations are very low and insignificant, when we attain to a feeling and spiritual perception of the concern of the pious patriarch for those whom he was about to leave behind him.

How consoling his hope, when he said, "Behold, I die: but God will be with you, and bring you again unto the land of your fathers." Ah! my dear friend, when "the distracted state of our Society" is seen or felt, and we are bowed down at the hearing of it, and sometimes dismayed at the seeing of it,—when "there is much to exercise our patience," and when we can do nothing actively to bring, or help to bring the people out of Egypt, it is indeed "a comfort to trust in a superintending gracious Providence." I think Jacob came to this state, after all his afflictions, and then his confidence reposed on the evidence, that after he was gone, God would still be with the children, and bring them again into the land of their fathers. So it may yet be with the professors of Truth. For this return may the prayers and travail of the hidden seed be availing.

FRIENDS' INTELLIGENCER.

PHILADELPHIA, SIXTH MONTH 24, 1871.

THE MAGNETIC TELEGRAPH.—The struggles and achievements that attended the introduction of this wonderful art, are of historical interest. Future generations will probably regard it, as it is now looked upon, as one of the greatest enterprises of the nineteenth century.

The occasion of the unveiling of a bronze statue of Prof. Morse, which has been placed in the New York Central Park, was made the subject of an editorial in the *Philadelphia Ledger* of the 13th inst., from which we take the following account.

The position of the Professor on that day was contrasted with the period of doubt and gloom through which he passed in 1843. The two positions were considered to be as wide "apart as the wires which connect the batteries of our telegraphic offices with those in Hong Kong among the antipodes." Now in 1871, in the 80th year of his age, he is surrounded by thousands ready to do him honor—the guest of those who wielded a mighty influence in society. He is "in the centre of seven hundred thousand miles of telegraph wires communicating with twenty thousand stations in America, Europe, Asia, Africa and Australia, and nearly encircling the world."

In 1843, he stood pleading with incredulous

members of Congress in the outer halls of the Capital at Washington, as well as with men in private life, who looked upon his discovery as chimerical. To the bill asking for an appropriation of \$30,000 to enable him to construct the short line of forty miles from Washington to Baltimore, insulting amendments were offered. "One member proposed that half of the sum be devoted to mesmerism, and another, that part be disbursed in favor of millerism."

On the last day of the session, the appropriation for which he had been struggling for five years, was granted. His troubles, however, did not end here. "The first attempt to construct the line was a mortifying failure. Nine or ten miles of insulated wire were placed in leaden pipes and buried in the earth between Baltimore and the 'Relay House,' and then it was discovered that the 'earth currents' of electricity prevented the line from working. Scarcely a single mile of the wire could be made to respond to the battery. The work had to be commenced anew, and this time by carrying the wires on poles, as at present, though with far inferior appliances for insuring 'insulation' to those which now exist. The line was completed and ready for operation on the 25th of Fifth month, 1844, and on the morning of that day messages were interchanged, in the presence of a few spectators, between the Capitol at Washington and the old Pratt street depot of the Washington railway in Baltimore.

"The first 'press message' was sent to the *Baltimore Patriot* at 1 P.M. of the same day, and was published as follows: 'One o'clock. There has just been made a motion in the House to go into Committee of the Whole on the Oregon question. Rejected—ayes 79, nays 86.' This is the first public despatch by magnetic telegraph of which we can find any record."

The line between Baltimore and Philadelphia was not completed for more than two years after this time. It was opened for business on the 2d of Sixth month, 1846.

"Now the wires are being extended throughout the world, at the rate of one hundred thousand miles a year. At the beginning of the present year, there were 150,843

miles of wires in operation in the United States, supplying 5914 offices, and employing about 10,000 persons. In America, Europe, Asia, Africa, and Australia, there are now about 650,000 miles of wires and about 20,000 telegraphic stations. All this vast result Prof. Morse has lived to see, as the result of his labors and those of his co-laborers, among whom we are glad to see that in his interesting address he mentioned with honor Prof. Joseph Henry, without whose electro magnet of insulated wires around an iron bar the telegraphic instrument would be bereft of half its life."

We clip from the same paper an anecdote said to be told by Prof. Morse:—

"When he was in Washington, employing all his energies to obtain an appropriation from the Government to erect a line from Baltimore to Washington, he had his instruments at each end of the Capitol to demonstrate to the members of Congress the feasibility of the plan. He says: 'I talked to them, explained the working of the instrument hour after hour. I gained many adherents; still I saw that many were yet incredulous, and many even scouted at the idea as preposterous, and pronounced my instrument as the toy of a crack-brained enthusiast. It was towards the close of the session, and there were still about two or three hundred bills yet to be passed before they came to mine. It was late at night, and finally I gave up in absolute despair, and left the Capitol building with a sad heart. I was bankrupt, having expended all that I had on my discovery. I walked down the Capitol steps with exactly fifty cents, all I had in the world, and a more disconsolate individual it would have been hard to find. After a wakeful night I arose in the morning to find my bill passed, and a new era in the history of science commenced.'"

On the evening of the 10th inst., the day upon which the statue was unveiled, a meeting was held in the Academy of Music, New York, for Prof. Morse and his friends. About 9 o'clock "a telegraphic instrument, one of those which was used on the line between Baltimore and Washington, was laid on the table in front of the platform, and the lines

having been connected with all the principal cities and towns in the United States, the following message was transmitted:

"'Greeting and thanks to the telegraphic fraternity throughout the world! Glory to God in the highest, peace on earth, and good will to men.'

"Professor Morse manipulated his signature to the message.

"Mr. Orton remarked, 'Thus the father of telegraphy sends his benediction to his children.'"

DIED.

BROTHERTON.—At Randolph, Morris Co., N. J., on the 30th ult., Mary, widow of the late Richard Brotherton, in the 83d year of her age.

DELL.—At Randolph, on the 10th of Fourth month, 1871, Silas Dell, in the 83d year of his age.

The above Friends were members of Randolph Meeting, which is now attached to Rahway and Plainfield Monthly Meeting.

DAKIN.—On the 24th of Second month, 1871, near Harveysburgh, Ohio, after a short but severe illness, James M., son of James and Nancy Dakin, in his 22d year. His remains were interred in Miami cemetery.

DAVIS.—On the 23d of Second month, 1871, at the residence of her son Elisha Davis, in Clearfield Co., Pa., Rebecca Davis, in her 73d year; an elder of West Branch Monthly Meeting. She was a diligent attender of meeting while in health, and bore the sufferings of her last illness with Christian fortitude and resignation. She was a kind neighbor, and loved by all who knew her.

WILLIAMS.—On the 12th inst., Thomas R. Williams, in the 79th year of his age; a member of the Monthly Meeting of Friends of Philadelphia (Race Street).

HARLAN.—On the evening of Fifth month 30th, 1871, at his residence near Long Green, Baltimore Co., Md., John L. Harlan, in the 52d year of his age; a member of Little Falls Monthly Meeting.

CORRECTION.

In the summary of the Treasurer's Report of Friends' Publication Association in last week's paper, the amount stated as from the sales of books should have been: total receipts \$767.08, of which \$175.80 were contributions from Friends.

There is an error in the punctuation of the account of the First day School meetings in New York City. The Union School *only* within Ohio Yearly Meeting is composed of members of both branches of Society. J. M. T.

THE AIR WE BREATHE.

Extract from an Essay by Wm. H. Churchman, A.M.

The author of this essay treats of the prime necessity of pure air in our dwellings, places of business, churches, school-houses, &c., as an essential condition of mental and physical health.

He enumerates some of the vitiatory agents as follows:

1. The very numerous class of manual arts, whose processes create and load the air with mineral, metallic, vegetable and animal dust, together with other mechanical impurities.

2. The equally numerous class of arts in involving chemical and compounding processes, such as brewing, distilling, dyeing, bleaching, tanning, paint, varnish, drug, match and gas making, lime burning, etc., etc., which give rise to poisonous vapors, gases and other volatile products.

3. Morasses, grave-yards, slaughter-houses, open or imperfectly covered cess-pools, privy-vaults and drains, faulty water-closets, filthily kept premises, and all other places where the decomposition of animal and vegetable organism is going on.

4. The storing together, in masses, of the products of many of the arts mentioned above, as in paint shops, drug-stores, leather stores, clothing and dry-goods stores, printing offices and the like, which are constantly eliminating deleterious gases and vapors.

5. The presence of recently applied paint, varnish, and wall paper which has been colored with certain materials, as well as of new

carpeting, furniture, and even wood-work in our buildings, public and private.

6. The prevalent custom of repapering apartments without first removing the old paper, until a thick coating of combined paste, paper and coloring chemicals is formed upon the walls.

7. The presence of certain varieties of flowering plants, as well as of deleterious perfumery, in the living and sleeping rooms of our dwellings.

8. Cutaneous and pulmonary exhalations from the bodies of all persons, whether healthy or diseased, cleanly or uncleanly.

9. Excepting in well arranged grates, the open combustion of all substances, solid, liquid, or gaseous, in enclosed apartments, whether for warming, lighting, cooking or any other purpose.

10. The respiration of all animated beings, whether within or without the pale of humanity.

11. Improperly devised and constructed warming appliances.

Cast iron furnaces for heating purposes are apt to warp or crack, and so permit the escape of poisonous gases; and even when intact, cast iron is too porous for the purpose. Furnaces are apt to be heated to redness or even to whiteness, making the heated air injuriously dry, and vitiating it by decomposing the organic matter always present in the dryest air.

Heating and cooking apparatus is liable also to be made much too complicated, so that the condition of air tightness is not attained, permitting the escape into our apartments of carbonic oxide, sulphurous acid and fine dust.

Having enumerated some of the poisonous agents which pollute the atmosphere of our houses, our author remarks:—

In view of the condition of things here disclosed, and the fastidiousness of civilized man in some other directions, one is lost in amazement at his marvelous inconsistency. Who is there that would not go uncleaned rather than attempt to lave himself in water previously used by several others, or even suffer almost unto death, rather than slake his thirst at a fountain known to be vitiated by nauseating impurities? Or who does not shudder with sickening disgust at the recital of the "traveler's story"—no matter if true or not—of the wine baths in a foreign city, where, after serving as a medium for the ablutions of four different grades of bathers at a descending scale of prices, the delectable fluid is bottled up and shipped to America for consumption as a beverage? And yet how few there are of us who do not voluntarily submit to being jammed for hours at a

time with a thousand others, into a fetid atmospheric bath, teeming with all possible impurities derivable from the exhalations of a motley mass of human beings of all grades of health and cleanliness, drinking in, the while, with undisturbed serenity, the nauseating compound in which we are immersed. Are any one's sensibilities shocked at this revolting picture, let him ponder it for awhile and say if it is not true to life. If he find it so, which he undoubtedly will, then let him join us in an earnest endeavor to eradicate the greatest existing cause of disease and premature death, with which humanity is afflicted. The work is a noble one, and worthy of the highest efforts of the philanthropist.

The existence of very many of the agents of atmospheric contamination is readily detected by the senses, particularly the olfactory one, save where their admonitions go so long unheeded as to stifle their warning voice; but there are others whose presence can only be discovered by delicate chemical tests, or by their effects upon the physical and mental powers: which effects, by the way, are much sooner felt by an invalid than by a well person, especially if he be afflicted with pulmonary disease. Indeed, a consumptive makes an admirable and reliable foul air detector. The undermining influence of some of these agents is so gradual, and does its work so silently that we fail to recognize in it an insidious enemy which is sapping the foundations of our strength.

Better would it be for us, did all of these poisons do their suicidal work more openly and vigorously. Then would we spare no pains to protect ourselves against their baneful influence.

The task of delineating all the diseases due to foul air would be endless, but the writer mentions many.

It is estimated by competent authorities who have devoted much time and labor to scientific research upon this subject, that from forty to fifty per cent. of all the deaths which occur, are attributable to the morbid influence of foul air. This is truly an appalling statement, and if only half correct, should inspire the hearts of philanthropists throughout the world, to unite as one man in an effort to eradicate an evil of such magnitude.

Statistics would seem to show that tender infancy is the period when the foul destroyer makes his greatest onslaughts; and even though some of the little ones do succeed in running the gauntlet with the breath of life left in them, it is, sad to relate, too often the case that seeds of disease are planted in the furrows of their stripes, which yield a rich

harvest of sickness and death in after life. This is not due alone to the greater susceptibility of the infantile constitution to injurious influences, but mainly, we fear, to erroneous notions and practices of mothers and nurses. They are too much afraid to allow their tender charges to breathe the pure, free air of the out-door world, and too careless or ignorant as to the quality of that within the nursery. Moreover, and it is exceedingly difficult to conceive the condition of ignorance and indifference which permits such a practice, the poor little victims are oftentimes enveloped "head and ears" in shawls or blankets, whether in the nurse's arms, the cradle, the baby-wagon, or in bed with their mothers, thus being obliged to breathe over and over their own poisoned breath and bodily exhalations, and, in the latter case, the exhalations of their mothers in addition, who perchance may be at the time in a condition of health calculated to intensify the poisonous quality of their bodily exhalations. Can we wonder then, in view of these facts, and they are facts—stubborn ones too, that our bills of mortality should show so large a percentage from the ranks of infancy and youth? And is it not a marvel of divine mercy that even so small a proportion of the persons born into the world should survive the cruel, though well enough meant treatment they receive in infancy?

Next to infancy, the scarcely less tender period of youth comes in for its share of maltreatment, whether in the crowded school-room, the college lecture-room, the air-poisoned work-shop, store or counting-house, or, in short, any place else, save out of doors under the blue canopy of heaven, in which our children are caged up for the purpose of education and business training.

Again we ask, in the name of suffering humanity, when will we learn to act intelligently upon the lesson which these sad experiences teach us?

From The Leisure Hour.

A LEISURE HOUR AT CREWE.

BY THE JOURNEYMAN ENGINEER.

It is a common figure of speech to say of a town that has benefitted in a special degree by the facilities for "intercommunication opened up to it by a railway, that "the railway has made it." In regard to the town of Crewe, in Cheshire, however, this saying is not a figure of speech, but a literal fact. As a town, the London and North-Western Railway created it, and still maintains it—not by the traffic it brings into it, but as an integral part of itself, for the town is as much a part of the system of this, the greatest of our rail ways, as are the engines and carriages run

ning the line. Before the railway age, the place was a little rural hamlet, taking its name from the barony of which it formed a part, Crewe Hall, the family seat of the Lords Crewe, lying but two miles distant. Such the great Railway Company found it; they have made it the thriving populous town it is; and were they to withdraw from it, they would leave it a brick-and-mortar wilderness of uninhabited houses.

As the largest of all consumers of "rolling stock," the London and North-Western Company soon found that it would be to their interest to be their own manufacturers of such stock; and it is in fixing their locomotive manufactory and depot at Crewe that they have made it a town. They commenced operations there upon their own account in 1843, erecting workshops that were large for that time, occupying as they did two and a half acres, and being furnished with all appliances then known to locomotive engineering. But the Company so extended itself, and became such an Aaron's rod among smaller and originally independent railways, that these works rapidly became too small for its wants. Carriage and wagon departments were formed elsewhere, and the space that had been devoted to them at Crewe given to the engine department. But this was not enough; the "mileage" of the Company continued to increase, and additions had to be made to their locomotive manufactory, until at present the workshops cover an area of upwards of seventeen acres.

These workshops are, so to speak, the heart of the town, the reason of its being; the "hands" engaged in them, together with their wives and families, and the tradespeople necessary for supplying their wants, constituting the sole inhabitants of the place. Therefore in describing this, perhaps the most interesting of what may be called our artisan colonies, it is a thing of course to speak first of the works. The Crewe Locomotive Factory is—and in this age of foreign competition and cosmopolitan enterprise it is a great thing to be able to say—admittedly the finest in the world. It is such an establishment as only a great and rich company could have organized. It is truly imperial, both in the magnitude and manner of its operations. One characteristic of it is that it employs machinery, some of it of a unique and specially ingenious character, to the fullest possible extent. To drive this machinery there are twenty stationary engines, representing an aggregate of about 12,000 horse-power; but water and air are also pressed into the Company's service as motive powers, some of the heaviest machines being worked by hydraulic, and others by atmospheric pressure. Among the most

notable of the direct labor-saving appliances are two small locomotives, named "Topsy" and "Tiny," which, with a number of stout low-wheeled trollies by way of train, and shrilly whistling to warn workmen of their approach, run about the shops, carrying the heavier kinds of work from place to place. The way upon which these miniature engines run is, of course, proportionately small, but the more widely separated departments of the works are connected by ordinary lines of rails, along which a full-sized engine finds regular employment in running the large open van, called by the workmen "The Cab," used for the conveyance of men and material between those departments. Since their establishment these works have turned out upwards of thirteen hundred new engines, but the making of wholly new engines is but a tithe of their work. They are chiefly occupied in repairing and rebuilding the running engines of the company. Under their system the engine, like the king, never dies—does not die even in the momentary fashion in which the king does. It lives on *individually*, and not through a successor; lives on unchanged in name or number, and with a constantly renewed vitality. In running, the tyres of a locomotive go first, then the boiler tubes, followed in their turn by the cylinders, motion, fire-box, etc., the wheels and framing outlasting all the rest. These various parts are renewed time after time as they wear out, and consequently there are many of the company's engines that are like the boy's knife, which had a new blade at one time, a new haft at another; though no remnant of the original remains, they are not new engines. Over fifteen hundred engines are repaired annually, and there are usually about two hundred and forty in the shops at one time.

That these works have become show ones will be easily understood. They have been visited by every class, from the Prince of Wales downwards, sight seers (admitted by ticket) are going through them every day, and that their fame is spread abroad is abundantly evidenced by the large percentage of foreigners whose names and nationalities are inscribed in the visitors' book. To the professional visitor every part of the establishment is replete with interest, but to others the great "sight" of the works is one to be witnessed in a large wing specially erected for the manufacture of Bessemer steel. By the Bessemer process molten pig iron is, by a single operation technically known as "blowing," converted into steel, and this blowing is probably the most picturesque operation in the whole range of practical mechanics. It is performed in a "converter,"

which may be simply described as a gigantic crucible. The converter, which is lined inside with "ganister," a kind of refractory stone brought from the neighborhood of Sheffield—having been well heated, a sand lined channel is laid between its receiving mouth and the running mouth of a furnace in which the pig iron has, in the meantime, been melted. Down this channel the molten iron glides like a veritable fiery serpent, falling into the converter with a heavy gurgling sound. When the metal has been run in, the mouth of the converter is turned upward into an arched entrance to a large chimney, and the blast that performs the blowing is turned on. Acting upon metal which is already in a liquid state, the blast produces a heat so intense that the mass is thoroughly disintegrated, and the impurities, being lighter than the metal, coming to the top, are blown out. The "slag" thus thrown off forms a sort of stalactite cavern in the archway of the chimney. At each blowing this fretwork of half-transparent slag becomes incandescent, and so far molten again that within their own length the pilasters and icicles acquire a flowing movement like that of a scenic cascade. And seen through the stream of flame rushing from the converter—a flame gradually changing from deep red to pure white—the whole miniature cavern presents a prettiness of form and gorgeousness of color which the scenic presenters of realms of bliss and homes of the genii might envy but not hope to equal. Nor does the picturesqueness of the sight terminate here. The whole of the lofty roofed building is lit up by the flame, in some of the varying shades of which the faces of the attendant workmen show such weirdness of expression and ghastliness of hue that, as armed with their long-reaching implements they move about in the pit below the converter, it would require but a slight stretch of fancy to imagine them the familiars in some necromantic rite.

These works afford one of the strongest arguments that could possibly be adduced against the fallacy that machinery extinguishes hand labor. In them machinery is used to the utmost—probably to an unparalleled—extent, and yet they give employment to five thousand men and boys, and to this army of "hands" we will now turn our attention. Let us take a look at them as they are leaving work for the week at one o'clock on Saturday. While the steam "buzzer," which releases them from and recalls them to work, is still sounding, they begin to come pouring out at the different gateways. The boys are first coming with a run, and already shouting and "larking," and altogether showing an unmistakable disposi-

tion to—

"Turn to mirth all things of earth
As only boyhood can."

The men come at a more staid pace, but you notice that among them too groups of mates are chatting cheerily as they walk along. When they get fairly clear of the works and into the streets, little toddling children are to be seen advancing to meet "Father," who, on coming up with them, will often mount them on his shoulders and bear them home in triumph. Here and there a wife is at the door as her husband comes up, and greets him with a smile, while at the same time she exchanges friendly nods and how-d'ye-do's with the mates with whom he is walking.

(To be continued.)

How much would neighbors rise in value, and how much would neighbors rise in beauty, if all should lay aside habits of criticism, and neighborhood scandal, and petty feuds, and ridicule! And if men should study the things that make for peace, and the things that make for happiness, everybody trying to make everybody else happy, what a revolution there would be!—*Beecher*.

WIDOWS' SONS.

Many of the illustrious men whose names blazon the page of history, were the sons of women early left widows. Julius Cæsar lost his father at the age of fifteen. This, De Quincey says, was a decided advantage to him, as it "prematurely developed the masculine features of his character, forcing him while yet a boy under the discipline of civil conflict and the yoke of practical life, without which even *his* energies would have been insufficient to sustain them." * * * In literature there are few names more brilliant than those of Sir William Jones and Sir James Mackintosh. These were the sons of widows who devoted their lives to the education of their children. An acute observer for fifty years of the rise and growth of prominent men, in one of our principal cities, was remarking in our hearing the eminent success that the widows of her acquaintance had had in rearing their sons. One reason of it no doubt springs from the nature of things. A fatherless boy, with a noble mother at once to protect and lean upon him, is stimulated by every motive that can appeal to a fine nature. He is urged to supply the place of husband and son, to represent worthily the family dignity, and realize all the aspirations of his fond parent and his own ardent soul. High position and substantial achievement he must win for himself. A conscientious and ambitious mother cannot have stronger incentives to do all that can

be done in the formation of noble character than she who feels responsible for the entire education and success of her children. Of many a timid, retiring, dependent, self-depreciating woman, widowhood has made a heroine. The great world may never hear of her triumphs, but they are treasured in the hearts of her family; they are all recorded in the book He keeps who in Sacred Writ again and again declares himself to be the Father of the fatherless and husband of the widow.—*N. Y. Tribune.*

TAULER (OR TAULERUS.)

Tauler, the preacher, walked, one autumn day,
Without the walls of Strasburg, by the Rhine,
Pondering the solemn Miracle of Life;
As one who, wandering in a starless night,
Feels, momentarily, the jar of unseen waves,
And hears the thunder of an unknown sea,
Breaking along an unimagined shore.

And as he walked, he prayed. Even the same
Old prayer with which, for half a score of years,
Morning, and noon, and evening, lip and heart
Had groaned: "Have pity upon me, Lord!
Thou seest, while teaching others, I am blind.
Send me a man who can direct my steps!"

Then, as he mused, he heard along his path
A sound as of an old man's staff among
The dry, dead linden-leaves; and looking up,
He saw a stranger, weak, and poor, and old.
"Peace be unto thee, father!" Tauler said;
"God give thee a good day!" The old man raised
Slowly his calm blue eyes. "I thank thee, son;
But all my days are good, and none are ill."
Wondering thereat, the preacher spake again:
"God give thee happy life." The old man smiled:
"I never am unhappy."

Tauler laid

His hand upon the stranger's coarse gray sleeve;
"Tell me, O father, what thy strange words mean.
Surely man's days are evil, and his life
Sad as the grave it leads to." "Nay, my son,
Our times are in God's hands, and all our days
Are as our needs: for shadow as for sun,
For cold as heat, for want as wealth, alike
Our thanks are due, since that is best which is;
And that which is not, sharing not his life,
Is evil only as devoid of good.
And for the happiness of which I spake,
I find it in submission to his will,
And calm trust in the holy Trinity
Of Knowledge, Goodness, and Almighty Power."
Silently wondering, for a little space,
Stood the great preacher; then he spake as one
Who, suddenly grappling with a haunting thought
Which long followed, whispering through the dark
Strange terrors, drags it, shrieking, into light:
"What if God's will consign thee hence to Hell?"
"Then," said the stranger, cheerily, "be it so.
What Hell may be I know not; this I know—
I cannot lose the presence of the Lord;
One arm, Hum'ility, takes hold upon
His dear Humanity; the other, Love,
Clasps his Divinity. So where I go
He goes; and better fire-walled Hell with Him
Than golden-gated Paradise without."
Tears sprang in Tauler's eyes. A sudden light,
Like the first ray which fell on chaos, clove

Apart the shadow wherein he had walked
Darkly at noon. And as the strange old man
Went his slow way, until his silver hair
Set like the white moon where the hills of vine
Slope to the Rhine, he bowed his head and said:
"My prayer is answered. God has sent the man
Long sought, to teach me, by his simple trust,
Wisdom the weary schoolmen never knew."

So, entering with a changed and cheerful step
The city gates, he saw, far down the street,
A mighty shadow break the light of noon,
Which tracing backward till its airy lines
Hardened to stony plintbs, he raised his eyes
O'er broad facade and lofty pediment,
O'er architrave, and frieze and sainted niche,
Up the stone lace-work chiselled by the wise
Erwin of Steinbach, dizzily up to where
In the noon-brightness the great Minister's tower,
Jewelled with sunbeams on its mural crown,
Rose like a visible prayer. "Behold," he said
"The stranger's faith made plain before mine eyes!
As yonder tower outstretches to the earth
The dark triangle of its shade alone
When the clear day is shining on its top,
So, darkness in the pathway of man's life
Is but the shadow of God's providence,
By the great Sun of Wisdom cast thereon;
And what is dark below, is light in Heaven.

—Whittier.

TEACH YOUR GIRLS HOW TO USE MONEY.

BY WM. B. CLARK.

We remember hearing a man of high business reputation once say that he had found a great advantage in giving his daughters an allowance. It was gratifying to them. It taught them the use of money. And it taught them economy. For many things which they would not have hesitated to ask of him, they found they could do without when the money came out of their own pockets.

We have opened to us here a subject of great importance. The young man, upon marriage, finds not unfrequently that his wife has no knowledge whatever on the subject of money. Its purchasing power she is quite ignorant of. One dollar and five dollars are much the same to her. And whether she is living upon the scale of one thousand or five thousand a year, she has no idea. She knows, it may be, that she has been restricted in the past. But she has probably looked forward to marriage as the time when this restriction was to be removed. Then she should be independent and have what she wanted. Thus the husband is in a strait between two. He loves his wife, and is anxious to gratify her every desire. But he finds it will take all he can earn, and more too, to accomplish this. What the result is, many a history shows. Often failure itself, and no end of unhappiness. Or if success is finally attained, it is only after much bitter experience, and some of the best years of life wasted.

We insist upon one thing. The poor girl in this instance is but very partially to blame.

Why should she have been kept always as a baby in the matter of money? Why should she have been forced to grow up with no judgment, and no intelligent self-control on a subject so important? The parents are chiefly to blame for many such an unhappy history. And until they begin to apply the principles of reason, and to be willing to take some *pains* in the matter of educating their children, such cases may be expected often to occur.

The young girl should have her allowance at as early an age as the boy. By the time she is ten or twelve years old, she should be put, under the superintendence of her parents, in partial charge of her own expenses. Some portion of needed things she should be entrusted to buy. She should be taught how little money will do in these days; and how important it is to save, in order to accomplish any desired object. And especially in the case of both boys and girls, the use of their allowance should be made a means of training in the true principles and spirit of giving. The church will have greater need of this grace in the future than ever. The early years are those in which it should be taught. But it cannot be taught effectually so long as children give away the money of others. They must have their own allowance, and give at their own expense.

It is too much the fashion in the education of girls, to sacrifice the womanly to the feminine. A female is the counterpart to a male. But the woman is the partner of man. Which is the nobler? Let us train up *women*, if it be possible, having their full share of all that is best in our common humanity. Let them be educated to breadth of mind, to good, sound sense, to practical judgment. And as the most delicately brought up girl may have one day to earn her living, and possibly her husband's living, let her be taught what money is, what it will do, and how to use it.—*Congregationalist*.

No doubt there are some nettles in the world. There are unpleasant things, sad, hard things, that tend to make life smart keenly. But we put far more nettles into the world than are there originally. The real nettles are ourselves, in our own uncomfortable, petulant, sour, selfish dispositions, and they spread their own character over nature.

THE MORNING CONCERT.

If you would hear a beautiful concert, you must be an early riser, or at least an early waker, these fine spring mornings. Indeed, it begins as early as three o'clock. If you should chance to wake at that hour you may lie in that delicious, half-dreamy frame, and

hear a concert such as all the orchestras of the continent cannot equal. I would not recommend you to rise at such an hour, unless, indeed, you went to rest with the birds; but the melody will well repay a half hour's loss of sleep.

The larks, and robins, and thrushes are all broad awake, and seem vieing with each other in their music. Occasionally a deeper note from neighboring fields chimes in, and chanticleer's shrill cry says, "Awake! awake!" The peacock's loud, rough cry of "e-coe—o-coe," seems hardly in harmony with the rest; but it serves well to show off more sweetly the melody. The great birds are rarely musical, and it is no doubt a wise provision of God for their greater security. If they sang like the dear little brownies in the wood, they would betray themselves to every enemy. The tiny song birds find it easy to hide in and out of their leafy coverts. Perhaps for a similar reason the mother bird is rarely a singer. If she sang to her callow brood as she sheltered them with her wings, it would show the old mousing owl, or the shining robber snake, the way to her little straw-built cottage. Then woe to her pretty nestlings, and woe to the poor mother's heart.

A practised ear can detect many different sounds in this beautiful concert, while a dull listener will hardly hear a bird sing. You have heard the old saying, that "many people will go through the whole forest and see no fire-wood;" and the same principle is true of all other senses. You cannot begin too early to take an intelligent interest in things about you. It is a great book which God has written and spread out before us, and there is not a page of it but is full of pleasure and profit.—*Presbyterian*.

INVIOABLE fidelity, good humor, and complacency of temper outshine all the charms of a fine face, and make the decay of it invisible.

HEALTH.

Many persons lose life every year by an injudicious change of clothing, and the principles involved need repetition every year.

If clothing is to be diminished, it should be done in the morning when first dressing. Additional clothing may be safely put on any time. In the Northern States, the undergarments should not be changed for those less heavy sooner than the middle of May; for even in June a fire is very comfortable sometimes in a New York parlor. Woolen flannel ought to be worn next the person by all during the whole year; but a thinner material may be worn after the first of June. A blazing fire should be kept in every family

room until ten in the morning, and rekindled again an hour before sundown, up to the first day of October.

Particular and tidy housekeepers, by arranging their fireplaces for the summer too early, oftentimes put the whole family to a serious discomfort, and endanger health by exposing them to sit in chillness for several hours every morning, waiting for the weather to moderate, rather than have the fireplace all blackened up—that is, rather than be put to the trouble of another fixing up for the summer, they expose the children to croup, and the old folks to inflammation of the lungs. The old and young delight in warmth; it is to them the greatest luxury. Half the diseases of humanity would be swept from existence if the human body were kept comfortably warm all the time. The discomfort of cold feet, or of a chilly room, many have experienced to their sorrow; they make the mind peevish and fretful, while they expose the body to colds and inflammations, which often destroy it in less than a week.—*Hall's Journal of Health.*

WHENEVER I contemplate man in the actual world or the ideal, I am lost amidst the infinite multiformity of his life, but always end in wonder at the essential unity of his nature.—*Henry Giles.*

DEVOTE each day to the object then in time, and every evening will find something done —*Goethe.*

ITEMS.

ATLANTIC CABLE RATES.—After Seventh month 1st the rates of transmitting messages from New York city to Great Britain, Ireland and France, will be reduced to ten dollars, in gold, for dispatches not exceeding ten words, including address, date and signature. For each additional word beyond the first ten, one dollar in gold will be charged. After Seventh month 1st the rule limiting the length of despatches to fifty words will be discontinued. The present rates are fifteen dollars, in gold, for messages not exceeding ten words, and one dollar and a half for each additional word.

A CYCLONE occurred near Mason City, Ill., on the 26th ult. An inky hued cloud or smoke-like column was observed gathering near the earth's surface on an open prairie, six miles from that place, and from this column soon shot out three narrower and spire-like cloud columns, which continued to ascend rapidly until they reached and seemed to attach themselves closely to a passing cloud above.

This frightful apparition moved slowly towards Mason City, but finally changed its course, much to the relief of the people of that place.

The pathway of the cyclone was nearly three miles in length and from twenty to eighty feet in width, and in that pathway not a spear of grass, stalk of corn or wheat, not a shrub nor a particle of vegetation was left alive. For some distance the earth was literally ploughed up to a depth of six inches. The column of whirling air must have been

intensely hot, as every green thing in its path was dried to a crisp.

Another feature of the cyclone was that while its rotary motion must have been of inconceivably great velocity, its progressive motion was not above a rate of six miles an hour. The outlines of its pathway were so well defined that five feet from the outer line of the total destruction of vegetation of every kind, not a vestige of its effects could be seen. Fortunately no houses stood in the tornado's line of march.

THE GREAT SOUTHERN MAIL ROUTE.—The mails from New York to New Orleans, heretofore transported by way of Chattanooga and Grand Junction, Tennessee, and Canton, Mississippi, have, by order of the Postmaster-General, been changed to the route running by an air-line from Chattanooga to Meridian, Mississippi, and thence over the Mobile and Ohio Railroad to Mobile, and thence to New Orleans, over the Mobile and Texas R. R. It is stated that by this new route the mails will reach New Orleans twelve hours sooner than by the old route.

BRAZIL.—Advices from Rio de Janeiro to May 23d, state that the Duke de Caxias has, on the part of the Brazilian Ministry, presented to the legislature a bill for the emancipation of all the slaves belonging to the Government and the Emperor. This bill emancipates, it is stated, many thousand slaves now working in the diamond mines in the province of Las Minas, and those engaged in building docks and other public works at Rio de Janeiro, Bahia, Pernambuco and Maranhão, and also a large force employed on the Government railways. The bill, it is reported, in spite of the determined opposition of the conservatives, will become a law. The objection to the measure appears to be the hasty enforcement of emancipation. The present law provides a system of gradual emancipation for slaves belonging to private individuals, but the bill introduced by the Duke de Caxias decrees immediate emancipation of all slaves owned by the Emperor.

FOUNTAINS.—There are many things in Philadelphia worthy of imitation, and among them are its fountains, which deserve the attention of every city in the land. About two years ago Dr. Swann, aided by a number of ladies and gentlemen, obtained from the Legislature a charter for the purpose of erecting fountains upon the streets and thoroughfares. Last year 117 fountains and 90 troughs were erected. They are made of iron, granite, or marble, and many of them are the voluntary gifts of wealthy ladies and gentlemen. Some of them show great artistic taste, and are ornamental as well as serviceable. At three of these fountains count was kept of the number of persons who drank at them during one day, and it was found to exceed seventeen thousand. At six fountains more than a thousand horses and mules drank in a single day. Who can estimate the amount of suffering prevented, and comfort supplied, in various parts of the city, by this free water? Philadelphia is noted for its charities, but she has scarcely one more worthy of support than this.

It is strange that this subject has not been taken up by our city government, and fountains erected as a public improvement. Plenty of fresh cool water to drink is more essential to the health and comfort of the people than parks and fine drives. New York should have five hundred of these scattered over the island, and we do not believe anything could be undertaken for which the inhabitants would so cheerfully be taxed to pay the expense.

FRIENDS' INTELLIGENCER.

"TAKE FAST HOLD OF INSTRUCTION; LET HER NOT GO; KEEP HER; FOR SHE IS THY LIFE."

VOL. XXVIII. PHILADELPHIA, SEVENTH MONTH 1, 1871. No. 18

EDITED AND PUBLISHED BY AN ASSOCIATION OF FRIENDS.

COMMUNICATIONS MUST BE ADDRESSED AND PAYMENTS MADE TO

JOHN COMLY, AGENT,

At Publication Office, No. 144 North Seventh Street.

OFFICE OPEN from 9 A. M. to 4 P. M.

TERMS:—TO BE PAID IN ADVANCE.

The Paper is issued every week.

The *Twenty-eighth* Volume commenced on the 4th of Third month, 1871, at Two dollars and fifty cents to subscribers receiving it through the mail. To those receiving it through our carriers, *Three Dollars*.

SINGLE NOS. 3 CENTS.

It is desirable that all subscriptions should commence at the beginning of the volume.

REMITTANCES by mail should be in CHECKS, DRAFTS, or P. O. MONEY-ORDERS; the latter preferred. MONEY sent by mail will be at the risk of the person so sending

BETHLEHEM: A PILGRIMAGE.

BY LUCRETIA P. HALE.

I have often thought, that, if we chose to put on our traveler's eyes at home, we should be surprised to find how much there is that is picturesque about us. In the curved, narrow streets of our native town, with its irregular rows of old houses, or in its serried brick blocks and smooth pavements, we might find the charms of a foreign city, if we only stopped to look, and were not hurrying along, full of our every-day concerns. In the crowded "main street" of our country towns are groups of wagons, horses tied and untied, marketers, shopping men and women, with some variety of color, and much busy activity, if we were only not too busy to look at them.

Yet, I acknowledge, all this motion and gayety and show, and change of color, fades quite away before the mere remembrance of a market-day in some Oriental town, even the smallest. If any one, with traveled or untraveled eyes, could be dropped suddenly in the midst of a fair at Tanta, in Egypt, or the market-place of Jaffa!

For it is not merely the gay, changing pictures which one sees, but the whole atmosphere is utterly different. * * * In the Arab street cries, there is something sharper than our wildest newsboy's shriek, with something, too, deeper and more guttural than one's ideal of the German language. The

gabbling and shouting is incessant; the yelling to the passers-by, and the warnings to keep out of the way.

Boys with live geese and turkeys gobbling under their arms; men with trays of bread or vegetables on their turbans; porters staggering under large skins distended with water; women with water-jars upon their heads, and one of their children over their shoulders; all these are warned by the incessant cries of "*Inshi! imshi!*" to keep out from under the feet of the horses, donkeys, and camels that are mixed up in the whirling mass of people. As I go along on my donkey, my way is stopped. I suddenly find my feet deep in a basket of cabbages belonging to a sweet old Turk, who is sitting calmly on his donkey, and smiles upon me benignly as I extricate myself from his saddle-bags and pass on, slinking into a doorway to avoid being knocked out of my saddle by the projecting load of a camel.

In this market-place of Jaffa, we do not wonder at Peter, that he pulled his skirts about him to avoid the noisome touch, and withdrew to the house top to dream, and have his vision, warning him that "God is no respecter of persons." Jaffa is reputed to be one of the oldest cities in the world, as well as the dirtiest; and old and dirty it must have been, even in Peter's day, beyond any other eastern city. * * * *

But Peter, perhaps, shrank from the West-

ern touch, with his Oriental notions, hearing for the first time some of the language beyond the sea, looking out over the wide water, and getting an idea suddenly of something larger than the narrow circle out of which he was awakening.

What the contrast is between this Eastern and our Western life, no one can fully know without plunging into it; and in Syria, as well as Egypt, it is a plunge into the Old World. From Jaffa forward, we found ourselves suddenly walking in the Bible atmosphere. We had seen Abraham and Isaac and Jacob moving about with their camels in Egypt,—even Noah doing mason's work, laying stones and cement; and in Syria, all the landscape came to help us with its scenery.

Such a lovely variety of scenery between the green plains of Sharon and the bare hills around the Dead Sea! and the difficulties of traveling enhance all the beauty we pass through; so different from hurried views from a railway car! I have time to see the several tulips that my mules tread under their feet,—yellow and red tulips, such as we watch over in our garden borders in spring.

Indeed, I wonder how I ever got out of Jaffa in my swaying palanquin. * * * It had a narrow seat with a straight back, shaped like a carriage for one, with square windows to let up and down on each side and in front. Instead of powdered footmen to bear it, I had two mules, one in front, and one behind. These were tethered to the palanquin by two long bearers, extending back and forward, and fastened to the beasts by ropes. I entered the thing through a door at the tail of the front mule, mounting by a chair kindly placed for the purpose.

We made our start from the door of the Russian convent, on a Jaffa street scarcely three feet wide, which wound up a hill steep as a flight of stairs, with an irregular pavement of stone. The rest of the party were mounting their Arab horses from doorsteps a little farther on. They, too, were having their struggles. The sorry beasts did not look like the ideal of "the Arab steed;" and they had a way of standing on their hind legs as you were getting into the saddle; and the saddle was a disappointment. You were to sit upon it the whole day; but you found the uneasy place in the first minute. All the Arab attendants were yelling and screaming; everybody felt he had got on the wrong horse, and most indeed had. There was a general dissatisfaction, as there always is in an Arab start. Everybody is talking, but nobody is talking to anybody. You ask questions, and nobody gives an answer to you,—perhaps to somebody else, who don't understand. Indeed, nobody understands.

All this is very charming in Egypt on the Nile, where there prevails such a delicious air of do-nothingness. It does not make any difference if you do not start on the hour punctually for your nice little donkey excursions. The hubbub and uncertainty of getting off is simply entertaining, and one of the delightful features. But in Syria you have your day's journey marked out before you; you must turn up at its end before six o'clock, or the gates of the city will be closed, and it would not be pleasant to be found out anywhere at sunset, with a few wild Bedouins straying around.

For myself, I was beginning to find that the luxury of the palanquin which had been appointed to me, on account of my dizziness from sea-sickness, was not that of fancied Oriental ease. I began to tip over fearfully on one side, and had to join my screams to those of all the rest for Hassan, our faithful dragoman. He came rushing to my rescue with cries of "Sitt! Sitt!" "The lady! the lady!" which roused my brigand-looking muleteers, who gave some fresh yanks to the ropes, that sent my palanquin as much over to the other side, and it was some time before it was brought up even. But only for a short moment. As the mules began to step up the uneven pavement of the street, I bobbed about, to one side and another, the umbrellas and canes of the party, which had been put in for convenience, tumbling over my knees. We came to an angle of the street; how did we get round it? My machine, with its bearers and its mules, was very long, and had no joints to bend, and the streets not more than three feet wide; yet we did round that corner. It was done by a great deal of shouting and yelling. The mules stamped and kicked up behind and in front, I held on to the sides of my car, and screamed now and then to Hassan. A few stray passers-by in the street helped yell, and so we managed it. In the same way, we got through the Jaffa gate, which presented the same difficulties, as we had to pass through the basement of a tower that formed a part of the wall, going through the gates at right angles. Some Turkish soldiers, lounging on divans in a corner of the tower, joined in with some strong Turkish language, and we came out into the Jaffa market place.

Here we saw boys carrying along basins of clotted milk, sipping of the same as they went; men and women eating sugar-cane, of which there were bundles leaning against the booths; we saw little donkeys laden with deep baskets full of Jaffa oranges; men, women, and children feeding on oranges; heaps of bananas: trays of vegetables of every sort; and all the usual crowd of

camels, donkeys, and horses. Through this we made our way, out into the narrow lanes, that led through orange gardens. Here we were hedged in by rows of cactuses; and on the other side stretched large fields of orange-trees, the wide orchards, miles long, of Jaffa oranges, all in fruit and flower. To eat a Jaffa orange is a new sensation. It is very large, almost the shape of a pine-apple, without seeds, a bag of juice.

By this time, we were getting on even ground. My palanquin moved more easily and smoothly. It still swayed more or less; I still had to cry to my faithful muleteers, to tighten up the harness of my mules, on one side or the other, and I should not recommend this method of traveling for its comfort. In my after experience, I found riding much easier, as it allows much more change of position and independence; for, in the palanquin, I found myself quite at the mercy of my two mules, and their guides. The guides were always faithful, to be sure; there was always one at the head of each mule. Even when one of them was eating his luncheon of oranges, and off duty, he appointed a boy on a donkey to his place, to watch the mule, and see when the ropes wanted tightening.

And this kind of traveling is worth trying. It is something to see one's shadow on the grass, sitting upright, in a sedan chair, with a mule in front, and a mule behind. And there is a kind of perpetual entertainment in being in the thing. And of a hot day, there is a convenience in being screened from the sun, without having to hold an umbrella. One has to sit very upright, and there is no possibility of changing one's position, or standing up; yet, with all its discomforts, I would not give up a ride to Jerusalem in a palanquin—for once.

These Eastern journeys are very solitary. Horses and mules are taught, by habit, to plod along, one after the other. Whoever has the fastest horse leads the way, and the one who has the slowest is left far behind, of whatever age or sex. It is useless to attempt any social talk, by bringing up side by side; neither horses nor guides understand it. I used to say over to myself, "In the something desert I ride, I ride, With the silent Bush-boy by my side." The donkey-boy or the muleteer plods along faithfully by you. You soon use up, in talk with him, your own Arabic and his English. You ask him the name of something, and he does not understand you; or you set him to picking flowers here and there. We used to have to teach every fresh guide how to pick flowers. When we pointed them out, they had a way of grabbing a whole bunch, and handing them to us, root foremost, very likely, as

they would give a handful of fodder to a donkey. We learned some of the Arabic words for the different colors, and could point out that "red thing" or "blue thing;" but it would generally end in their picking the wrong red thing. Yet they soon learned our desire for flowers, and the muleteers would bring great handfuls and plunge them into my lap.

How I wish I could give a picture of "Tabitha's Well," with its stone basin with edges wide enough for us to sit upon,—our first stopping-place, where we could exchange exclamations over the beautiful green plain, all flaming with bright flowers. For us, fresh from Egypt, there was something delightful merely in the wide extent of grass, which did not have to wait for the waters of the Nile to be brought to it, but got its greenness from real mountain streams, that come down like ours in New England. And in the rich grass were large scarlet anemones, and equally scarlet poppies, deep pink mallows, that are called the Rose of Sharon, with yellow buttercups and white daisies; blue flowers, unknown, some known; deep purple clover, and a rich gayety that drove us wild with delight. Along the grassy plain some workmen were opening a road, the only road in Syria, except that from Beirut to Damascus. They told us that the Sultan was building it for the Empress to go to Jerusalem upon. But she has not trodden it yet! Sometimes my palanquin swayed into it, but it was pleasanter to tread along on the grass, among the tulips and anemones.

(To be continued.)

THE TENDERNESS OF THE DIVINE PROVIDENCE.

When the child begins to walk, the mother looks upon the little creature standing balancing with one hand on the chair, and coaxes it away; and she does it by reaching her hands almost out to its hands. At last the child lets go of the chair, and runs toward her; and as it runs toward her, she steps a little back, and a little back, to tempt it on. But the mother's hand is not an inch removed from the child at any instant, so that if it falls she can catch it. And I think it is very much so with God's providence in the treatment of men. It is best that the child should learn to walk; it is best that he should be coaxed to make his best endeavors; but it is not best for the mother to be too far off, so that she cannot lift him up again if he falls. And it is best that we should be put upon walking ourselves, and upon taking care of ourselves to the uttermost; and yet, just at that point where our strength fails, there stands the divine providence.

God says, "The very hairs of your head are numbered. Do not suppose that I think you are so insignificant that I do not think of you. I think of you to the degree that I have numbered the very hairs of your head."

Here see sparrows, that are not worth a penny, and not one of them falls to the ground without God's notice. It makes no difference in the universe if there is one sparrow less; and yet not a sparrow falls to the ground that God does not notice it.

In the morning, when the little birds, almost fledged, are striving for their food, one of them is crowded out; one bird drops to the ground; and it is speedily devoured by the prowling cat. And we look on it and say: "Well, it is over; quick come and quicker gone!" But God says to every one of us, "Even so small a thing as that I recognize; I notice it; I observe it; and are ye not of more value than many sparrows?"

More than that, if you ask, "If God does abhor evil so, and does so much desire that which is good; and if He be infinite in power, how is it that so many evils befall us?" My reply is that I do not know that there are so many evils that befall us. For *ill that God blesses is good*. It is very true that our purposes fail; it is very true that those whom we would save from death die; and it is very true that many things in life which we are vehemently desirous of are not given to us. But God stands by us and says, "*All things (not good things, not bright things, but all things), work together for good to them that love God.*" They work together. You must take one with the other—the good with the bad; the present with the future, or with the past. And all of them, working together, complete, by-and-by, the circle. And when you come to look back upon your experience, taking in five years, or ten years of your past life, you will be able to say, at a little distance, "After all, it has been good for me that I have been afflicted."

This mode of dealing with men has made them humble; it has limited their worldly ranges; it has chastened them where they needed chastening most; it has often gone into the secret and innermost parts of their soul.

God sometimes makes a man's heart a threshing floor, where he threshes him in order that the chaff and the straw may be taken away, and that the wheat may be left. And every stroke carries blessing with it; for the wheat rattles out, and all that is worthless is thrown aside and perishes.

It is a matter, not of speculation, but of observation, that when men have been brought through trials and troubles, and they have held out to the uttermost, then God interferes

in their behalf. There is, I believe, a special divine providence; but it does not take care of the careless and the lazy. It takes care of people that take care of themselves. It operates at that point where men have taken hold and done the best that they knew how, and failed. Just there the help of God comes in, as where a little child strives to walk, and fails, the help of the mother comes in.

A man that never had any troubles, I was going to say, never had manhood. What clay is before it is baked, that, generally, men are before they have been baked. The potter takes the lump, and shapes it, and gets it into a beautiful form. It resembles the vase of antiquity; it is fair; but what is it worth? It is only wet clay. It is not until it has gone into the furnace and been burned; it is not until it has had pictures wrought upon it, and been glazed, and been put into the furnace again; it is not until it has gone into the fire three, four, five, six times, and been burnished by the hard steel tool of the workman, that it comes out, not only beautiful in look, but permanent in form, decorated, and with tints laid in upon it. And many persons can look back and see that the troubles which they have gone through have been God's fashioning or adorning hand—certainly God's *gracious* hand.—*H. W. Beecher, in the Christian Union.*

THE BLESSINGS OF PROTESTANTISM.

BY S. M. JANNEY.

In a late number of the *Intelligencer* I find an editorial headed, "Protestantism is a failure." As I dissent from this proposition, I ask the privilege of stating my reasons for thinking that Protestantism has been the means employed by Divine Providence to confer great blessings upon the human family, and that, notwithstanding its shortcomings in some respects, it is now immeasurably superior to any other form of Christianity.

The professors of the Christian religion are chiefly of three classes,—the Roman Catholics, the members of the Greek Church, and the Protestants. These latter, it is true, are divided into many sects; but all agree with Luther and his associates, in protesting against the corruption in doctrine and practice which is characteristic of the Papacy, and naturally springs from its enormous assumption of ecclesiastical power. The numerous sects among Protestants, regarded by the Roman Catholics as an evidence of unsoundness in the faith, are in fact the result of religious liberty; and, like the divisions among philosophers and statesmen, are the inseparable attendants of progress. The Roman Church, by asserting its infallibility

and claiming for its clergy the sole right to expound the Scriptures, endeavored, before the Reformation, to prevent religious inquiry, compelling all to accept its doctrines, and submit to its oppressive sway, under pain of excommunication, attended often by imprisonment, torture and death.

Since the Reformation, the same cruel measures have been pursued in Catholic countries, whenever the priests could prevail on the secular powers to sustain them in their unchristian proceedings.

As it is admitted that Christianity is not a failure, the assertion that Protestantism is a failure obviously implies that some other form of Christianity is superior to it. Now let me ask, where shall we find a people who have risen higher in all the elements of material prosperity, intellectual culture, and moral elevation, than the three great Protestant nations, Great Britain, Germany, and the United States? It is true that there are many Roman Catholics in all these nations, but the Protestants constitute the ruling class, and they only are the champions of civil and religious liberty.

Look at Spain, Portugal and Italy, oppressed and degraded for many centuries by a priesthood whose policy is to keep the people in ignorance, in order to govern and fleece them. These nations have recently been awakened from their lethargy by the spreading of Protestant ideas, and in proportion as the priests lose their influence, will the prosperity of the people be advanced.

It has been generally acknowledged, that the worst governed territory in Europe was that which embraced the city of Rome, and was, until recently, under the sway of the Pope and his Cardinals. It is a significant fact, that the people who had long been kept under control by French troops,—the protectors of the so-called Holy Father,—embraced the earliest opportunity to throw off the priestly government which they detested, and to welcome the excommunicated king, Victor Emanuel. It is very remarkable that in about a month after the Pope's infallibility was declared by the Council, he was stripped of his temporal power, by those who professed to be his spiritual children.

The recent appalling calamities of France are due, in a great measure, to priestcraft, which crushed out Protestantism by fire and sword, expelled the Huguenots, caused the massacre of St. Bartholomew, and, by a long course of bigotry and intolerance, induced thousands of thinking minds to renounce Christianity, while the uneducated peasantry remained under the control of the priests, and supported the measures of Louis Napoleon, which led to the war with Germany.

Some persons who witness the errors and

short comings of certain Protestant churches,—their love of show, their want of vitality, and the worldliness of their members,—are disposed to think there has been no progress since the Reformation; but these faults are found in a still greater degree in the Catholic and Greek churches.

It is not unusual for Protestants to expatiate on the self-sacrificing zeal of the Sisters of Charity and other religious orders among the Roman Catholics, and I freely admit that they are doing good service in the hospitals and prisons; but I maintain that Protestant women, in equal or greater numbers, are unostentatiously engaged in works of benevolence and humanity throughout our land; and at the same time fulfil their religious and social duties, as wives, mothers and sisters.

So far from being disheartened by the aspect of the times, I am encouraged by observing in the publications of the various Protestant churches in this country, an increasing liberality of sentiment, a diminished reliance upon the dogmas of theology, and a more earnest teaching of practical piety.

The term priest is not properly applicable to ministers in Protestant churches, and I believe none of them in this country claim it except the ritualists, or High-Church party in the Episcopal Church. The essential characteristic of a priest is, that he offers sacrifices on the altar, and professes to mediate between God and man. This power the Roman Catholic priests claim for themselves, maintaining that the host, or consecrated wafer, is to be adored as the real body and blood of Christ. The Protestant clergy, on the contrary, maintain that ministers are only the servants of their brethren, and authorized teachers of Christian truth.

There is, therefore, a vast difference in theory, and I believe also in practice, between the priests of Rome and the Protestant clergy. The whole system of the former is inimical to religious liberty, and no nation where they have the instruction of the people exclusively in their hands, can maintain a republican government.

Look at Mexico, and the South American States, where the attempt to establish and maintain republican government has so often been thwarted by the influence of the Catholic priests, and where anarchy has so often led to despotism.

In consideration of the blessings we enjoy, let us prize our privileges. For my part, I feel that I cannot be too thankful that I was born in a Protestant country, where civil and religious liberty are enjoyed to a degree unparalleled in the history of man.

FORM is good, but not formality.—Penn.

AS THE STARS FOR MULTITUDE.

"As the stars for multitude," is a very ancient formula for a vast host. As to the Chaldean of old so to us still there is the unvarying suggestion from the celestial dome at night that the stars are without number. The impression is natural, almost necessary, though in fact only an illusion of the sense of sight. The stars are like so much sparkling dust strewn across the skies with a confusion which utterly confounds the mind in counting the host.

There are no natural boundaries or lines in the blue expanse to fix a beginning or an end of counting, or to help the eye; and, as all our ideas of size or quantity, or of number, must start from something definite with which to make comparison, the star-gazer is soon lost in bewilderment, until what is only a maze may easily seem to be infinite. In face of the strong impression thus fastened upon the mind, it seems almost ludicrous to say that 3000 stars is probably an over-estimate of what most people can see, with the naked eye, in the half of the heavens which is visible at any one time in a clear night. A little haze or the presence of moonlight will extinguish more than half of even these. Three thousand soldiers at parade, three thousand houses in a city, three thousand trees in a grove, three thousand islands in the sea, are within quite easy grasp of thought; yet so feeble are our powers that when our bodily senses travel away from the measurement of earth, and when they fail us in exactness and definition, even if it be low down on the scale of numbers, there infinity begins for us. The measureless empyrean closes in upon us with its mystery, yet more of a mystery because of the twinkling points that bestrew it.

The stars which are visible to the eye alone are called lucid. Sirius of all the nightly train shines peerless, but with it are some twenty named, of the first magnitude; so ranked, not from any knowledge of their size, but only for their surpassing brightness. Diminished to one two-hundredth of the brightness of Sirius, or about one-hundredth of the brightness of the other first magnitude stars, are those which are ranked in the sixth magnitude; and these mark the vanishing point of the unassisted eyesight. Beyond that the telescope traces the feebler shining orbs down to the sixteenth magnitude and below. This division into magnitudes, according to relative brightness, is only an artificial arrangement, determined by delicate instruments, and is more a matter of convenience than any addition to our astronomical knowledge.

If the naked eye is deceived as to the true count of the stars within its reach to see, the

telescope gives us to know that our idea of the heavenly host is nevertheless correct. The ordinary estimates figure up 20,000,000 of telescopic stars. Some say 70,000,000 or 80,000,000, and even more. Of these 354,000 is the largest number catalogued, with positions defined; as for the rest, they still defy the patience of human counting, and can only be estimated as one might the sands on a sea-beach. Gemini is to the northeast of Orion, and the two principal stars are not hard to find in this fraction of the heavens as enlarged by the telescope. What a blaze of splendor! and this only in a minute fraction of the whole heavens! Amazing as such a revelation of glory may seem, we must still allow our wonderment a margin for increase, since thus far the astronomers have only succeeded in proving that the more powerful instruments they construct, the more stars come to light, and no creature may yet dare to guess a limit.

Of the 20,000,000 ciphered by Herschel, about 18,000,000 lie in the track of the Milky Way. This we all know as apparently a long, irregular ribbon of diffused light spanning the heavens. Its milky aspect is due to the enormous aggregation of telescopic stars whose blended light makes this impression on our eyes. It is a favorite theory of many astronomers that the faintest stars are dim because of their greater distance, and as the great mass of faint stars are found in this belt, and few elsewhere in comparison, it is a natural conclusion that the longest diameter of our sidereal system is in the direction of the Milky Way. Our system is not spread out equally in every direction as if its general outlines were globular, but astronomers compare it to a flattened disk; and, supposing we are somewhere near the centre of this disk, as we look through it, it appears like a belt of stars.

The reasoning which takes for granted that the faintest stars are the most remote, is, however, not very strong, since there are so many other circumstances which might cause stars to differ in glory, circumstances entitled to equal weight with distance. The fixed stars are suns ever burning at a white heat, and it is not at all likely that they are equal in the light they emit. Some may be much more nearly burned out than others. Exceeding little is it that we know of their elemental substances, and the kind of matter which is incandescent may make a great difference in the character of the light. Size, again, is a consideration of great importance, and there is every reason for supposing that the sizes are very various. Through every part of God's works, as far as we become conversant with them, infinite variety is a

marked law; and there is more probability that this law holds through the universe, as to size, substance, and brightness of burning, than that the faintest stars are as a rule the farthest off.

Many of the stars are known to be variable in their shining, a number of them with definite periods of increase and decrease. *Mira*, in the *Whale*, looms up for a fortnight as a star of the first or second magnitude, and then it grows dim till it has vanished from sight; but after 331 days it is again in its place, in all its glory. Other stars have flashed out for a short life of great brilliance and have passed away. In the year 1572, a new star took its place in Cassiopeia, to the "unspeakable astonishment" of Tycho Brahe. It rivalled Jupiter in brightness, and could be seen at mid-day, but in seventeen months it was gone. Another bright stranger paid a short visit to the *Northern Crown* in 1866. In *Argus* is a star of great interest for the wonderfully rapid alternations of brightness through which it has been passing for these many years.

All such phenomena which baffle explanation serve only to enlarge the proportions of our ignorance, while they increase our wonder. About the mass of stars the astronomer knows no more absolutely than the little child. A certain few of them are subject to changes of position or brightness, which he watches with the utmost enthusiasm to find in them the key which is to unlock the mystery of the whole. Instead of being mere eccentricities and side-matters in astronomy, these changes contain the clues and afford the only possible hope of some day constructing a proper science of the stars; yet thus far they serve but little purpose, save to enlarge our conception of the things that remain to be revealed.—*The Christian Weekly*.

LOCAL INFORMATION.

PRAIRIE GROVE QUARTERLY MEETING.

We who are remotely situated from the body of Society, read with deep interest the published accounts of the seasons of Divine favor experienced, as in the late Yearly Meeting of Philadelphia; so perchance there may be those who will welcome a brief allusion to our quarterly solemnity west of the great Mississippi. We feel the deprivation of Yearly Meetings, and our Sixth and Ninth month Quarterly Meetings being occasions which draw Friends together from considerable distances, are looked to with interest. On the present occasion we were peculiarly favored. Railroad facilities have increased in Iowa, and by this means some can reach us who otherwise might not. All our meetings

were represented, and the spirit of Christian love was felt eminently to prevail. We were favored with the acceptable presence of several dear Friends from other places, some of whom were baptized into the state of the meeting, and favored in an eminent manner to comfort the discouraged and the mourners in Zion. But for a trial pending in Nebraska, in which the life of an Indian was at stake, our dear friend S. M. Janney would probably have been here. From the opening of the meeting of ministers and elders on Seventh-day, until the close of the meeting for discipline on Second-day, there seemed to be no abatement of interest. Near the close of the meeting the shutters were opened, and a letter to all our subordinate meetings and to Friends in remote settlements, and to all bearing the name of Friends, was produced by a committee and read and united with. The meeting was baptized into a precious feeling of religious concern and sympathy for the welfare and spiritual life of its members; that old prejudices might be buried, and our beloved Society go forward in the good work of Christian reformation; banded together in the unity of the Spirit of Christ, which embraces all who are taught of the Lord. After a season of solemn silence, followed by vocal supplication, in which it was expressed that "the very windows of heaven had been opened," the meeting closed. "As the mountains are round about Jerusalem, so the Lord is round about His people." J. A. D.

Mt. Pleasant, Iowa, 6th mo. 16, 1871.

FROM UNPUBLISHED LETTERS.

Dost thou ever think of our little meeting? It is now four score years since its commencement, never large, but considerably larger once than now. It is the only one that survives out of four preparative, and three indulged meetings that composed the Monthly Meeting when I first remember its sittings. It is held as from its establishment, twice in the week, the mid-week held almost entirely in silence, and occasionally a few not members attend on Fifth days. There are some sincere seekers after a religion that has more vitality than is commonly found among the popular orders, and as there is no other meeting in our village, it frequently happens that those who come to the place to visit their friends, drop into our meetings. Many of these seem like sober, solid, right-minded people. One such, a young wife and mother, who remained here some weeks, really became en-

amored of Quakerism, claiming that if her residence was in the neighborhood of a Friends' Meeting she would certainly become a member. I think there are many such scattered over our widely extended country. She received gladly such books as we could furnish from our collection, which we call a library. It belongs to the Monthly Meeting, and is under the care of a committee. We would like to make some additions from time to time as way may open. Perhaps some of you might furnish us with a catalogue of low priced books, from which a selection might be made.

It would indeed be pleasant could we meet and mingle more frequently with each other; look on each other's faces, and hear each other's voices; but that cannot be. I should undoubtedly be very unhappy should I attempt a permanent residence in a city, and our city Friends would be equally unhappy in a mountain home. Perhaps I represent as fully as most the youthful poet's ambition:

Happy the man whose wish and care
A few paternal acres bound;
Content to breathe his native air,
In his own ground.

Whose fields with bread, whose herds with milk,
Whose flock supply him with attire,
Whose trees in summer yield him shade,
In winter fire.

But I should not be quite so willing to adopt the following:

Thus let me live unseen, unknown,
Thus unlamented let me die;
Steal from the world, and not a stone
Tell where I lie.

May we not rationally look forward to a time when religion may and will be better understood than it is now—when its nature and character will be better comprehended, when those loathsome ceremonies will be abandoned and done away with, as has been the case with the still more objectionable sacrifices and burnt offerings under the Jewish code? Our form of worship is doubtless the most simple and consistent of any of the sects, and yet I am given to believe there is room for very much more improvement among us, could we but divest ourselves of a dependence on each other, and turn from looking toward the preachers for vocal utterances, and could we as a people more fully realize the omnipresence of the Great Father, that He is as really and truly with us at one time as at another, and that worship is not an act but a state, a condition of the mind.

I feel it to be quite complimentary that my communication was considered worthy the attention of the editors; and although the letters I have addressed to thee have always

been written to thee, and for thee, yet I recognize thy privilege to bring them into thy service in any way thou thinkest would be useful. I have never been able to place much value on what I write, and I have felt that some of my letters were treated with a degree of courtesy and respect, as undeserved as it was unexpected, in portions of them being placed among the "Scraps."

I have near sympathy with the editors in their interesting, laborious, and responsible engagement, and believe you are doing a great amount of good. At no period since the commencement of its publication, has it, in my view, possessed higher merits as a paper for Friends and others, than at present.

Some little time back, a year or two, I sent a few numbers, in reply to an inquiry about Friends, to a valued correspondent and former student at Terre Haute, Indiana. He was for many years Chief Engineer for the State of Indiana, constructed the Wabash and Erie canal, and several other works of importance. He is not a member of Friends' Society. Yesterday I received a letter from him in which he says:

"*Friends' Intelligencer* is a welcome weekly messenger, that I read with much pleasure, and I trust with some benefit. I wish the *Intelligencer* could be furnished to every family that would read it. There is not as much interest taken in its circulation as ought to be by Friends. The great principles so long maintained by true Friends, are, I think, constantly gaining ground, and must eventually prevail amongst religious people. Of course, those devoted to pleasure and fashion will be slow to adopt a system so opposed to what they conceive the highest earthly enjoyment."

My interest in our beloved Society, and in Society concerns—that is, those living concerns, and fundamental principles of which all our noble testimonies are the outgrowth—was never greater than at present; and never, do I believe, was there a time when greater need existed of humble, faithful, devoted laborers for the building up of the waste places of our Zion.

FRIENDS' INTELLIGENCER.

PHILADELPHIA, SEVENTH MONTH 1, 1871.

MARRIED.

WEST—SMALL.—On the 15th ult., by Friends' ceremony, Edwin West to Emma Small, both of this city.

DIED.

ROGERS.—At Manhasset, Long Island, on the 12th of Sixth month, 1871, Sarah W. Rogers, widow of the late Morris M. Rogers, M. D., in the 86th year of her age; a member of Westbury Month-

ly Meeting. So faithful was this dear Friend to the unerring Monitor within, that she appeared strangely free from the temptations and weaknesses of humanity. Her long life was characterized by those quiet excellencies which spring from a kindly affectionate and pure heart. She enjoyed life rationally; had strong attachments to it, yet willingly obeyed the summons, when it came, to go up higher.

TITUS.—In Brooklyn, on the 8th of First month, 1871, Sarah R., widow of the late Peter Titus, in the 80th year of her age; an elder of the Monthly Meeting of New York.

A Circular Meeting is to be held at Concord, Pa., on First-day, Seventh mo. 2d, at 3 o'clock, P.M.

SUMMARY OF CHRISTIAN DOCTRINES, as held by Friends.—A new edition of this valuable little work is about to be issued by Friends' Publication Association, at the following rates, for gratuitous distribution: In paper covers, \$40 per thousand; flexible covers, \$90 per thousand. Friends desiring them are solicited to forward their subscriptions to the Treasurer.

Benjamin E. Hopkins, Cincinnati, Ohio, has been appointed an agent of Friends' Publication Association, and will keep an assortment of its publications for sale and distribution.

Friends are requested to forward any corrections in list of meetings, &c., or any other information that will be useful to Friends, and thought desirable to have in the Almanac for 1872, as early as practicable to Jos. M. TRUMAN, JR., Treasurer, 717 Willow St., Philada.

EXTRACT FROM A LETTER FROM SALT LAKE CITY, U. T.

This is a most wonderful valley; mountains, many of them snow-clad throughout the year, surround it on every side. The melting of the snow feeds constant fresh water streams that are conducted through the city. There are two streams in most streets, and the water is turned into the yards and gardens, where fruit trees and vegetables grow luxuriantly. Thousands of acres along the Salt Lake City Railroad, and many through Wheeler and Echo Canons, are fertilized in the same way.

South of this place some twenty miles, is Utah Lake of fresh water, of which the outlet is Jordan River, a stream perhaps thirty yards wide, which flows into Salt Lake, about twenty miles from the city.

We took a carriage yesterday and drove there, and standing on the southern shore looking north, nothing is seen but the blue water and sky. On the right and left are mountains, with two mountain islands in the midst of the lake. All the mountains we have crossed are nearly bare of timber, and many seem made of a conglomerate rock, of different degrees of durability, taking on many strange, wild shapes, that without much stretch of the imagination can be made into pulpits, churches, towers, witches, sentinels, &c. The mountains round and in the lake are of this character.

The water is so salt, we are told, that one gallon will make a quart of salt, and for clearness, the streams of the White Mountains do not excel. The beautiful Saco does not look more pure. Large deposits of salt are found when the water recedes, in the latter part of the season. Hanging to the rocks we found a salt formation resembling icicles, beautiful and white. Previous to the growth of vegetation here, the Hon. Horace Maynard, of Tennessee, told me yesterday, there were no rains, and now they seldom fall, but the Lake is rising, and one of the Mormon Councillors told me that the water is eleven feet higher now than when they first located there. On the sides of the mountains are two distinct benches, one above the other, that were supposed to be the level in former times. The strata of rock varies in inclination from an angle of 45° to perpendicular.

A large spring issues from the foot of the mountain on the north, that I would suppose ran a barrel of water a second, with a disagreeable sulphurous odor, and a temperature of 127°. It is very clear and slightly greenish, full of a mossy-looking growth.

Salt Lake City is on one side of the mountains, and Salt Lake is across a level barren plain of near twenty miles, covered with sage brush, cactus, and a few herbs and some grass, and the lowest places with a white deposit. Not a tree grows on this plain to shield us from the sun, that burns fiercely in the middle of the day. The mornings and evenings are delightfully cool.

In the different canons that fall into this valley, are mines of silver and lead mixed, now being worked by different companies.

6th mo. 11th, 1871.

THE HEALTH OF OUR WOMEN.

BY JULIA COLMAN.

There is a great outcry in the land, every now and then, about the way in which our women are killing themselves off with hard work. There is, no doubt, much occasion for this. No one can go into the families or the audiences of our Northern, and especially our North-eastern States, without seeing scores of women whose care-worn looks, and pale faces, and prematurely gray hairs, tell of excessive toil and broken health.

Many causes have been blamed for this, and principally the lack of efficient servants, and the thoughtlessness of husbands. The former item is a serious difficulty in our domestic economy, and one largely agitated; but we will not enter upon it here. As to the latter item there is no doubt but that there are many husbands who do not concern themselves, as we are told, half so intelli-

gently about securing the best conditions for their wives and children as they do for their stock. Perhaps if this be true they are no more thoughtless than the wife herself. But even when they are thoughtful, the remedy is not always within their power. I know one husband who is so grieved at this literal using up of his wife by her toils and cares, which he has neither the time nor the money to remedy, that he sometimes tells her in his desperation that he wishes she never had married. I believe she never agrees with him in wishing so too, but I have reason to suppose that his feeling is prompted by the true spirit of thoughtful and devoted love.

Some there are who lay aside their lofty prejudices against "women's work," and help their women folk as freely as the latter would help them about anything when within their power to do so. Why this should not always be the case, I am at a loss to see. I cannot tell why it should be any more degrading, even for a man of culture, to make fires, sweep the parlor carpet, do the washing or cooking, or even wash dishes, than it is for his cultured wife to do the same things; nor why it is not just as honorable for him to help her thus about any work for which his nerve and muscle is more adequate, as it is for her to indite his letters and attend to his business in his absence, or illness, or to read Latin and Greek to him if his eyes should fail him in time of need. The prejudices of this kind under which we have been laboring are far more worthy of our aboriginal predecessors, who looked with lofty scorn on "squaw's work," putting everything upon her, excepting when they chose to hunt, or fish, or fight. I believe matters are improving in this direction. I think of a family at this moment whose early prejudices against any such work were very strong, but who now get a breakfast as neatly, and wait upon the temporarily disabled wife and mother as deftly as any woman. The acme of attainment in this direction is that when all men and women, allowed to follow the pursuits for which they find themselves best adapted, those shall be considered the most accomplished lords and ladies of creation who shall be able most readily to adapt themselves to the circumstances in which they may be placed, and *do* what is needed.

But setting aside all attempts to blame, exonerate or defend the men in this matter, let us first inquire what women can do to help themselves; for we find such a practical ignoring of supposed male responsibilities, as strongly suggests the idea that there is some responsibility elsewhere. It is not enough in any case that women work like slaves to help their husbands, and kill themselves in doing

it. Woman's duty to herself, and her God, and her children, cannot be ignored if she would even help her husband to the best advantage, as many a wife broken down with hard work comes at last to realize. Perhaps she makes the very best amends she can for her mistake by working silently and doggedly to the very last, but too often, with all her silently-borne pain, she has the yet more bitter pang of feeling that her chronic invalidism is dragging down the man she has been trying to help, with the triple burden of a suffering wife, a cheerless home, and a growing doctor's bill.

These are terrible things even to talk about, and I fancy I see the sad, hopeless eyes of too many women drearily questioning my words; and the clouded brows of half-despairing men lifted a moment, as if to ask if there be any hope. Ah, how true it is that often only when it is too late do men and women begin to think about such things!

Now, I do not mean to intimate that all women are working too hard. There are many wives and mothers who have little enough to do, and do not half accomplish that. And a still larger proportion of young unmarried women scarcely make a pretense of regular work. They are, I believe, as Mrs. Stowe says, "our only aristocracy, privileged to live in idleness." I am not talking to them, nor about them at present, but to and about the much larger and worthier class that are ambitious of doing their part in this work-a-day world. These are found in nearly all grades of society, high and low, rich and poor, but mostly in the families of farmers, mechanics, and professional men, with moderate incomes. I know many such, and it is my sympathy with them and their sufferings that has led me to discuss these questions, and inquire if there is any remedy for the present state of things.

I think that many of these women are piqued into attempting more work than they can safely accomplish, by injudiciously comparing themselves with their husbands. The latter do the work that brings in the money and that looks large. The woman's department is guilty of consuming much of it, and that looks greedy and wasteful, and the man often does not realize where it all goes to. He thinks, and perhaps says, that if his household expenses were less, he could launch out "and do so and so." He forgets that here is where he gets his own ability to do, his muscle and strength to work with. . . .

. . . . I fancy our greatest mistake is in comparing our labor with his in *kind*. Our work is not like men's work. They know what a day's work is, and commonly tax themselves accordingly,—we do neither, part-

ly because our work is no two days alike, and partly because we are much more liable to interruptions either by visitors or by children. They set about their day's work coolly, and stop when they have finished it,—we set about ours intently, strain every nerve and muscle to get one job done, and keep the brain busy meanwhile about what must be done next. When a woman goes through the morning and middle of the day in this sort of tearing style, she is used up, fit for nothing; while if she had gone on coolly and deliberately she would have accomplished much more in the course of the day, or certainly in a succession of days. This is especially hard on the nerves. It is not an easy matter to correct the habit of working in this style. Frequent reminding one's self will do much, but if with or without that, we find ourselves growing tired, we should sit down and rest at once, half an hour perhaps, no matter what is doing; and then resume our work more deliberately. This will not be easy, and there will be times when it will seem impossible, but if we are resolute it can be done much oftener than we will at first suppose. This is far better than to work on till we get through and then rest, for by that time we are often too tired to rest well at all. It is not hurtful to become moderately tired, but there is a point beyond which the exhaustion of both nervous and muscular force brings serious injury, and about this we must judge for ourselves, or at least not allow the demands of others for our work to warp our judgment.

By six or seven o'clock at the latest we should absolutely lay aside all work in which we feel any special interest. Reading, knitting, anything that we can do or not with indifference, are the only pursuits we should allow ourselves. We would even do well to imitate the absolute repose of the husband and brother, though the putting the children to bed, the closing of the house and the premonitions of to-morrow's baking or washing will often prevent our doing that very fully. The wearied brain must rest, and the socialities and amenities of the evening family circle will prove its very best unbending.

Then be sure to retire early. Dio Lewis says that he has found this rule absolutely indispensable in his school for young ladies. Many a maid and matron has robbed herself of early bloom, and grown thin and worn for lack of an hour or two more of sleep before midnight. Some take this time to read after the children and husband have retired, saying it is "all the time they can get." Others think it necessary to devote these hours to their sewing. I know one dear good woman

who always will insist on sitting up to finish off any garment nearly done; and dearly enough has she paid for this "sin of finishing off," as her family facetiously call it. But if time must be taken from sleep for such purposes, it is better to take it in the morning. Such a change of hours should be made gradually, but when made it pays well.

Nine o'clock is a good hour for all hard-working women to go to bed, but if we grow sleepy go earlier. Above all things we should not allow ourselves to nod or doze before retiring. Of all forlorn moments in one's life, I know of none so utterly desolate as that which comes to the person who must "wake up and go to bed." Besides, an imperfect night's rest often follows such indulgence, and the subject rises already weary before commencing the work of the day. A nap in the middle of the day, if it be not too long, will be of decided benefit to the tired woman. The great difficulty is that it should not be taken soon after dinner, and before dinner we are apt to be busy.

But whatever we do, we must be reasonable, use common sense, and understand ourselves.—*Home and Health.*

FOR THE GIRLS.

I suppose you really love those rough, teasing brothers of yours, but don't you think you might show it a little more pleasantly? I can tell you I know all about boys. I was brought up in a house full of them. I have enough in my own house this very minute to keep things from getting stupid. I know just how rough and noisy and heedless they are; how they forget to wipe their feet on muddy days, throw their caps and scarfs on the floor, and leave their books in the queerest places, to be hunted up in the last minute before school time. I know how they whittle on the carpets, paste kites on the chair seats, daub the table covers with paint, and spill mucilage on the bed and bureau. I know how they come in with a whoop, and clatter up stairs like so many fire-engines, the moment the baby goes to sleep; and how they are always leaving the doors open, and cutting and burning and blowing themselves up. But for all that, we could not spare them from our homes very well, could we? And isn't there something wrong in the family when sisters can call their brothers "nuisances?" Yes, that's the very word she used, and I've remembered it these half dozen years; for the speaker was a pretty, delicate girl, and I was a good deal astonished to hear her say:

"A boy in a family of girls is a perfect nuisance."

The "nuisance" came home from school

presently, a hearty, good-natured-looking boy of eleven or twelve, whistling "Kingdom Coming," with all his spare breath. He stopped suddenly as he saw me, and came forward awkwardly enough, to speak to me, for he was evidently unaccustomed to meeting company. Unfortunately, his foot came in contact with his elder sister's dress, soiling it slightly.

"You clumsy thing!" was the impatient exclamation; "you ought to be kept in a cage."

I looked from the crimson face of the "nuisance," and tried to fancy how sweetly that sister would have assured an older gentleman that it was of no consequence at all, and was entirely her own fault for taking up so much room. In an arm-chair one of the younger sisters was curled up, examining with great interest a new magazine. An exclamation of delight brought her brother to her side, and he was soon absorbed in the engravings, looking over her shoulder.

"Wait just a second," he begged, as she was turning a page.

"Oh, you always want to see something," said the sister, fretfully; "I hate to have any one look over my shoulder."

So it was, from morning to night. There was not a place in that house, so far as I could see, where the boy was wanted, or a person who wanted him; and I wondered if the dear, dead mother knew how it was, and whether it would not make her heart ache, even in heaven, to see it. If the sisters walked, or rode, or sang, or played croquet, no one ever said, "Come Johnny." And I really suppose they thought he did not care for their laughing and teasing and snubbing, just because he was a boy, and was too brave to show that he did care. I found out another thing, too, and that was that the "nuisance" was very convenient when the pony was to be harnessed, the pitcher to be filled with cool water, a big bundle to be carried down town, or a disagreeable errand to be done; yet I never heard any one say:

"Thank you, Johnny; it was kind in you to take the trouble."

No doubt he would have stared if they had said so; but I think it would have helped him to remember to be polite himself.

"Why didn't you thank that boy for bringing your hat?" I asked of a pleasant little girl.

"Why," she exclaimed, "that's our Tom!" as if that were reason enough for not being polite to him.

* * * * *

These brothers of yours will not always say when you hurt them by unkind, careless words, but they feel it all the same, and it hurts in another way, by gradually chilling

their love for you, and making them hard-hearted and careless of the comfort of others.

I tell you, girls, you cannot afford to lose your brothers in this way. You need them, and they need you. Many a boy has gone into bad company, and yielded to evil, degrading influences, simply because there was no stronger, purer influence at home to draw him away from it, and lift him above it. Make your brothers your companions and friends, and never be afraid or ashamed to show your love for them—*Little Corporal*.

From The Leisure Hour.

A LEISURE HOUR AT CREWE.

BY THE JOURNEYMAN ENGINEER.

(Conclude*d* from page 269.)

If you mingle with the crowds of workmen as they pass through the streets your ear tells you that they are gathered from all parts of the country, but upon the whole there is a noticeable predominance of the Lancashire dialect, and looking at the speakers of this tongue, you find that they are worthy of their country, that physically they—as Hugh Miller expressed it when speaking of Lancashire men—loom large in the forefront of humanity. But while the *physique* of the "Lancashire lads" is specially noticeable, the whole of the workmen are, taken as a body, fine stalwart men, of a type calculated to gladden the heart of muscular Christians. They are large-boned, large limbed, broad-shouldered fellows, the muscles of whose brawny arms you can see, even though they have now their coats on, are strong as iron bands. At the moment at which we are "taking stock" of them their brows are not wet with sweat, but you can see that during working hours they have been, while most of their faces are like the tan, and many of them indeed a good deal blacker than the tan. The clothes of the majority of them, too, are black and greasy to such a degree that the sight thereof must be sufficient to give a sympathetic sensation of arm ache to those who have to wash them. Two or three hours later, however, there will be a metamorphosis in the outward appearance of the men. Then they will be beginning to come out washed, and "cleaned-up." The elderly and middle-aged will be mostly clad in plain, dark cloth suits. The younger men being naturally more disposed to be smart, will appear more or less "fashionably attired," according as their individual means allow, or tastes dispose them. While mingling with the variety of ordinary dress will be seen cricketer suits and volunteer uniforms, for the "hands" organize such things as bands and cricket clubs, and in conjunction with the managers of the workshops, have raised from among themselves a volun-

teer rifle corps. On Monday morning there is another change in the dress of the men. The clean working clothes are put on, and very bright and fresh the wearers look as they stream into the shops in their white "duck" jackets and over-alls, or clean mole-skins or cords.

The London and North-Western Company, or as those connected with it more briefly style it, "the Company," is all powerful in Crewe, practically, in fact, as we have already pointed out, it *is* Crewe. By consequence, the social welfare of its *employees* is, to a great extent, dependent upon it, and it has always dealt by its "hands" in a liberal and parental spirit. When it first commenced its workshops it built streets and blocks of commodious cottages for the workmen. As year after year the works increased in size, private speculators came forward to join in the work of providing additional house room, and building societies were started, by means of which some of the workmen came into possession of houses of their own. But still the Company's houses form a large proportion of the town, and are among the most comfortable and convenient dwellings. The Company makes gas for the whole of the town as well as for its own workshops and station, and it has erected public baths and wash-houses. It has founded and endowed a church, and subscribed towards the erection of various dissenting places of worship. It has built schools for the education of the children. It takes the sons of the workmen as apprentices without premiums, and, with a view to providing employment for their daughters, has induced the great clothing contractors who make the uniforms of its guards, porters, etc., to establish a sewing-machine factory in the town. It gives an annual excursion to its "hands" and their wives and families, and it has founded and is a liberal subscriber to a mechanics' institution, which affords means of mental culture or innocent amusement to all who choose to avail themselves of them. Its care for its servants is, perhaps, however, most strikingly exemplified by two institutions which it has established, in the shape of workmen's cooking and dining-rooms, and a lodging for drivers and firemen, who, having their homes in other towns, arrive in Crewe in the night and have to stay in it till the following morning. Like all such matters which the Company takes in hand, these are on a thoroughly complete and systematic scale. The dining-rooms—there are two of them, a large and a small one—are for the use of those about the works who may bring their breakfast or dinner (or both) with them. The large room affords accommodation for 397, and the smaller one for 63. The large building is a two-story one, and is

provided with a lift, and both have ranges of steam heated ovens, and are attended to by men cooks. Breakfast is a very simple affair, consisting generally of plain bread and butter and coffee. Dinner is the great culinary event of the day. When the meal is such as requires cooking or warming, each man on bringing it places it in one of a row of tin dishes laid out on the tables, and, having put a numbered ticket upon it, leaves it. There are, of course, a variety of such viands as eggs and bacon, liver and bacon, sausages, and beef-steak puddings, all with potatoes. But chops or steaks, with sliced potatoes, and a sprinkling of cut onions, is the predominating dish. At one o'clock the diners are served up, hot and nicely cooked, and the punctuality and efficiency with which this is done speaks volumes for the ability and attentiveness of the cook. Those who use the dining-room come rushing in hungry from the labors of the day: and to see them fall to would, to some people, be a "caution." The meals run large as to quantity, and any persons having the fear of indigestion before their eyes would probably consider them heavy in quality. But with these workmen good digestion waits on appetite; they eat with a present gusto pleasant to see, and have no dread of future ill consequences.

The drivers' lodging contains forty-two beds, placed in airy, well-ventilated bed-rooms, while on the ground floor of the building are lavatories fitted up with every convenience, and a large, well-lighted, well-warmed general sitting room. How great a boon this lodging is to those for whom it is provided only the men themselves can fully realize. They have generally come long journeys, and been on the foot-plate for hours; and in the winter season often arrive cold and wet, as well as tired and sleepy, and to men in this condition, away from their own homes, and only requiring temporary accommodation, the value of such a lodging-house, with its bright fires and clean comfortable beds always ready, may be conceived.

Most people who have travelled much will be aware that the Crewe station is a very large one. It gives employment to a numerous staff of porters, and these with their wives go to swell the population of the town, which numbers about 20,000 inhabitants. The town, however, extends over a greater area than many with much larger populations, as it is built in an open, healthy, roomy style. Many of the workmen's cottages have gardens attached to them, and on various sides of the town are pleasant rural walks of which the "hands" avail themselves, so that as regards their health the artisans of Crewe are very favorably situated.

In the mouth of "the trade" (the locomotive engineering trade) Crewe is as familiar as household words. In addition to the thousands always engaged in its workshops, there are tens of thousands who have worked in them at some time, while all know it by reputation. Scarcely a day passes on which men tramping in search of employment do not visit Crewe, and though they may not always succeed in obtaining work, they are almost certain to find some old mate among the workmen from whom they will receive a kindly welcome, and if the circumstances of the case call for it, something more, for in this matter brotherly love abounds among working men.

Outside of trade circles Crewe is also widely known. It is one of the most interesting of our "industrial hives," the greatest thing of its kind in the world. It is a striking example of what a great English Company can do, and the country at large, as well as the Company in particular, has reason to be proud of it.

WE are ruined, not by what we really want, but by what we think we do; therefore never go abroad in search of your wants; if they be real wants, they will come home in search of you; for he that buys what he does not want will soon want what he cannot buy. — *Colton.*

SONNET.

BY H. I. SPENCER, ST. JOHN, N. E.

'Tis not for us the limit to define
Of power supreme, of Heaven's all-pitying love.
We trust that both are ample, and decline
The thought that mercy pleads in vain above.
To hide their own shortcomings, men condemn
The failures of their fellows; but we know
The sternest formalists have fallen as low
As those who once no pity drew from love.
In blessings known, the symbol we beheld
Of greater blessings which are yet to be,
And, undeserved, to us so they unfold
Heaven's perfect love and boundless charity,—
Love, that points out the straight and narrow way;
And charity that pardons when unwittingly we
stray.

— *Old and New.*

THE NEAREST DUTY.

BY M. C. SMITH.

I sought to do some mighty act of good
That I might prove how well my soul had striven.
I waited, and the minutes, hours passed,
Yet bore no incense of my deed to heaven.
Sad, without hope, I watched the falling rain;
One drop alone could not refresh the tree,
But drop on drop, till from its deepest root
The giant oak drank life and liberty.
Refreshed, like Nature, I arose to try,
And do the duty which should nearest lie;
And ere I knew my work was half begun,
The noble deed I sought in vain was done.

SACRED SILENCE.

The following beautiful poem was recited in the sign language, by Annie Szymanoskin, at the recent exhibition at the Deaf and Dumb College in Washington :

Never with blasts of trumpets,
And the chariot wheels of fame,
Do the servants and sons of the Highest
His oracles proclaim;
And when grandest truths are uttered,
And when holiest depths are stirred,
When our God Himself draws nearest,
The still, small voice is heard.

He has sealed with His own silence
His years that come and go,
Bringing still their mighty measures
Of glory and of woe.

Have you heard one note of triumph
Proclaim their course begun?
One voice of bell give tidings
When their ministry was done?

Unheralded and unheeded
His revelations come,
His prophets before their scorers,
Stand resolute and dumb!
But a thousand years of silence
And the world falls to adore,
And kiss the feet of martyrs
It crucified before?

Shall I have a part in the labor,
In the silence and the might
Of the plans divine, eternal,
That He opens to my sight?
In the strength and the inspiration
That His crowned and chosen know?
Oh! well might my darkest sorrow
Into song of triumph flow.

I hear in this sacred stillness
The fall of angelic feet.
I feel white hands on my forehead,
With a benediction sweet:
No echo of worldly tumult
My beautiful vision mars:
The silence itself is music,
Like the silence of the stars!

REPRODUCTION OF CHARACTER.

One of the laws governing the world, from its most simple forms to its grandest organizations, is that which causes all life to reproduce itself according to its own nature. Through the entire vegetable and animal world this law reigns supreme and without exception. The farmer sows his various seeds, in the full certainty which an unvarying experience has given him, that the different crops which are to reward his efforts will be of the same kind as the seed he has so carefully selected. The tender graft, though of a different species from the plant that nourishes it, is true to its nature, and, refusing to become absorbed in the stronger growth, produces its distinctive flower or fruit in proportion to its vitality. It may die, but it will not merge its individuality in that of another. In the animal creation, each race preserves its identity, and only reproduces within its own limits.

This law, like many others that govern the material world, is equally potent in the world of mind, thought and character, though less perceived and acknowledged. There is no truth more certain than that, whatever be the nature of our passions, desires, tempers and feelings, they will be reproduced according to their distinctive character in those with whom we mingle, or who come in any way within the pale of our influence. The exemplification of this law is seen in the relation of parent and child. When we describe one nation as being simple, healthy, pure and virtuous, and another as corrupt, indolent, luxurious and passionate, we assert the law, that character continues to reproduce itself from one generation to another. Just as surely as the natural physical peculiarities of the parents descend to the child, are their moral traits for good or for evil also repeated afresh in their offspring; and if it be wrong to entail a hopeless and incurable disease upon posterity, how much worse is it to hand down the tendency to vice and crime, which may ruin and debase the character and life? If there is any external motive calculated to lead parents to improve their natures, to cultivate pure and virtuous habits, and to foster in their hearts the spirit of truth and honor, justice and love, it should be the consideration that they are inevitably planting the germs of the future character of their children, and that what they now sow not they alone shall reap, but those also who will surely follow in their footsteps. The variations that are seen in every family form no argument against the stability of this law. They are easily accounted for by the blending of the different traits of both parents, but not less assuredly is every quality in each reproduced, though its form may not be recognized.

This influence is not merely hereditary; it extends to every relation we hold to society, and emanates from every thought, word and act. We never exhibit anger, fretfulness, irritability or passion, without communicating some degree of them to those around us. He who blames society for any fault which grieves him, will usually find, if he but turn a faithful eye inward, that it is but the reflection of his own character. The hasty, unjust or passionate teacher is by every word and look reproducing these qualities in his scholars, and although youth is more impressible than age, the same is in a great measure true of him who exhibits like qualities among his equals. Every one has at times experienced the strong influence brought to bear upon him by an excitable mind or a nervous temperament, or a gloomy, discontented spirit, and though he may imagine that the influence is only temporary, and passes away with

the presence of the person, no one knows how often it leaves a sensible impress on the character. It is for this reason that so often those who have opposite and contrasting dispositions are found to agree together, and improve each other more than those who are formed on the same model. They tone down each other's extremes by their unconscious influence.

In proportion to the strength and vigor of any of our moral qualities, will be their reproductiveness in the minds and hearts of others. He who is thoroughly imbued with the spirit of love and sympathy, will so greatly infuse it into those with whom he associates, that he will ever be met with the kindly look, the answering voice of affection, and the ready help in time of need. He will rejoice in the good will and kindness of his friends, unconscious that it has first emanated from his own heart, and then returned in rich streams to bless and reward him. And the cold and selfish man who rails at the indifference and lack of sympathy with which he meets, is equally unconscious that he is himself the cause, that what he has sown, he must surely reap. So to the cheerful and hopeful, life is bright and warm, and people are joyous and inspiring, while to the melancholy and depressed all scenes appear gloomy and sad, and their friends become sombre and dismal. These are not mistaken estimates, they are real; society actually wears these different aspects to different persons, but it is because their own prevailing characteristics reproduce themselves in others.

It follows, then, that what we most desire to meet in others we must first cultivate in ourselves. If we long for sympathy and affection let us be ourselves quick to feel for others, and ready to open a loving heart and a helping hand. If we would be treated with courtesy, let us ourselves be courteous. If we would be honorably and justly dealt with, let us nourish the principles of justice and honor in our own bosoms. If we prize cheerfulness and good temper in others, let us be enlivening and inspiring in our intercourse with them. As surely as the seed that we drop into the ground will bloom forth into leaf and flower and fruit, according to its individual nature, so surely will the qualities of mind and heart that we cherish in ourselves be reproduced in others, and return back to comfort or to afflict us. When we remember that not only are we thus sowing seeds of happiness or misery for ourselves, but also moulding the lives and characters of others with an impress that can never be effaced, surely no motive can be wanting for the noblest endeavors at self-improvement.—*Public Ledger.*

BE SILENT.—It is a great art in the Christian life to *learn to be silent*. Under opposition, rebukes, injuries, *still be silent*. It is better to say nothing than to speak in an excited or angry manner, even if the occasion should seem to justify a degree of anger. By remaining silent the mind is enabled to collect itself, and call upon God in secret aspirations of prayer. And thus you will speak to the honor of your holy profession, as well as to the good of those who have injured you, *when you speak from God*.

NOT the least of God's mercies is the apparent decay of the faculties by age, as a provision for death. It is the ripening of the apple, that it may fall without violence.—*Anon.*

ITEMS.

THE Borough of Kennett Square, Pa., upon the petition of over two-thirds of the tax-payers, has had its charter so amended by a decree of court as to make unlawful forever in that place the sale of intoxicating liquors.

THE ESTABLISHMENT of meteorological stations throughout our country, and the daily telegraphic reports made to headquarters at Washington, have given a new interest to the science of the weather and the prediction of storms. The telegraph has given a great practical value to the study of the laws which regulate the progress of storms, as it now informs us not only of their occurrence, but of their probable path; and mariners can judge of the weather a day or two in advance, when before a few hours' warning was all they could obtain. In Europe practical meteorologists have devoted a great deal of attention to this branch of the subject, and Mohn has prepared already a storm atlas for Norway.

It is stated that our envoys on the Continent of Europe have received instructions to ascertain the possibility of arriving at an agreement between the Great Powers with reference to the protection of private property at sea in time of war.

THE English universities are now free to male students of all religions. The Dissenter, the Roman Catholic, the Jew, and the Atheist are equally eligible to fellowships and professorships in these institutions. The only exception to this statement is in the case of divinity degrees and of clerical fellowships. A bill abolishing religious tests was sent up to the Lords from the Lower House of Parliament; and, under the lead of Lord Salisbury, an amendment was engrafted upon it requiring tutors to pledge themselves "not to teach anything contrary to the Holy Scriptures." But this proposition passed the Upper House only by a majority of five; and, on being sent down to the Commons, was rejected by them without a division. One other amendment proposed by the Lords, that each college should provide religious instruction for such of its students as are members of the Church of England, was accepted by the government, and passed by the House of Commons.

THE VENDOME COLUMN.—"The Patrie," the well-known French journal, gives some interesting particulars in reference to the Column in the Place Vendome, recently demolished by the French Communists. The column was faced with the bronze of 1200 cannon captured in 1805, and subsequently

from the Austrians, Russians and Prussians. It was commenced Eighth month 15th, 1806, and was finished in 1810, under the direction of Denon and other artists. The total weight of the material was 600,000 pounds, and the expenses of construction were as follows: Melting the bronze, \$30,967; weighing, \$90; chiselling the plates, \$53,444; cost of the original statue, \$2600; sculptured cornices, \$7823; general designs, \$2280; wages of masons, carpenters and plumbers, \$120,396; compensation of architects, \$10,000. The bronze, weighing 554,169 pounds avordupois, was worth \$201,094, and the total cost amounted to \$470,494. It is reported that the founder of the Column was so unskilful in melting the bronze that he exhausted the alloy and copper, and was then obliged to work up the refuse in the upper plates.

AGRICULTURAL COLLEGES.—It is announced that not one of the twenty-nine young men about to graduate from the Massachusetts Agricultural College proposes to become a farmer, and that all of them look forward to engaging in business, or in the learned professions, just as the graduates in the academical departments of classical colleges. This statement, which has attracted great attention, has been quoted as confirming the view that the scheme of educating young men at agricultural colleges to become farmers is proving itself to be impracticable. Out of this class of twenty-nine graduates one proposes to study for the ministry and four to become teachers; ten are going into business and eleven are undecided. The remaining three state that they intend to devote themselves to "money-making."

THE Banda Islands, where a hurricane recently destroyed the nutmeg and mace crops, inflicting damage to the extent of \$2,500,000, are twelve very small but important islands in the Molucca Archipelago, about fifty miles south of the island of Ceram. They belong to the Dutch, and the population amounts to about 110,000 souls, of whom 5000 are Europeans. The Banda Islands are all lofty and volcanic, and Goonong Apee rises 7880 feet above the sea, and is one of the most active volcanoes in the Malay Archipelago, subjecting the other islands to the ravages of frequent and destructive eruptions and earthquakes. The four larger of the Banda Islands are exclusively appropriated to the cultivation of the nutmeg tree, 400,000 pounds of nutmegs and 130,000 pounds of mace being produced annually. The nutmeg tree is about thirty feet high, resembling an orange tree. The fruit which appears on the tree, mingled with the pale yellow flowers, is the size of a small peach, and is at first of a light green color, and when ripe is yellow and marked with a longitudinal furrow. The external covering, at first thick and fleshy, and filled with a bitter astringent juice, afterwards becomes dry, and separating into two valves discloses a scarlet net-work or membrane known as "mace," which covers a thin brown shell which contains the kernel of nutmeg. The fruit is gathered by hand, and the outside covering being rejected, the mace is carefully separated and dried in the sun. The nuts are dried in the sun or in ovens, and exposed to smoke till the kernel rattles. The shells are then broken open, and the kernels having been steeped in lime water, are packed in chests for exportation. The nutmeg tree is produced from the seed, and does not flower until the ninth year, when it bears fruit and flowers together without intermission, it is said, for seventy years. The nutmeg tree does not arrive at maturity until its ninth year.

FRIENDS' INTELLIGENCER.

"TAKE FAST HOLD OF INSTRUCTION; LET HER NOT GO; KEEP HER; FOR SHE IS THY LIFE."

VOL. XXVIII. PHILADELPHIA, SEVENTH MONTH 8, 1871. No. 19

EDITED AND PUBLISHED BY AN ASSOCIATION OF FRIENDS.

COMMUNICATIONS MUST BE ADDRESSED AND PAYMENTS MADE TO

JOHN COMLY, AGENT,

At Publication Office, No. 144 North Seventh Street.

OFFICE OPEN from 9 A. M. to 4 P. M.

TERMS.—TO BE PAID IN ADVANCE.

The Paper is issued every week.

The TWENTY-EIGHTH Volume commenced on the 4th of Third month, 1871, at Two dollars and fifty cents to subscribers receiving it through the mail. To those receiving it through our carriers, THREE DOLLARS.

SINGLE NOS. 6 CENTS.

It is desirable that all subscriptions should commence at the beginning of the volume.

REMITTANCES by mail should be in CHECKS, DRAFTS, or P. O. MONEY-ORDERS: the latter preferred. MONEY sent by mail will be at the risk of the person so sending.

AGENTS.—T. Barling Hull, *Baltimore, Md.*

BETHLEHEM: A PILGRIMAGE.

BY LUCRETIA P. HALE.

(Concluded from page 275.)

At Tabitha's Well, we left the cactus-bordered lanes and orange-groves, and came out into these wide flowery fields. We had left Jaffa about two o'clock, and we plodded on silently till sunset. We saw the distant minarets of Lydda on our left, and in front of us a line of distant mountains, and between, far away, the towers of Ramleh Arimathea where we were to pass the night. On and on we plodded; the towers of the town seemed to come no nearer. Silently we went along, an occasional stop to give a fresh pull to the cords of my palanquin; and near sunset, at last, we reached the place. One by one the party in front disappeared behind the cactus-hedges that shut in the town. Hassan, the faithful dragoman, went on to lead the way. Then we, too, turned in among the high cactus shrubs, I and my mules and my muleteers, and passed into the short, narrow streets, with garden walls, or houses with colored lattices, on either side. We accomplished many difficult turns, and at last reached a narrow gateway. What a screaming of Arabs, and backing and plunging of mules, it took to get in! And, when we were in, it was but a small court-yard; and my palanquin, with its mules, could only stand in it crossway. But where were the rest of the party? where were their horses,

and where were the pack-horses? Even these had been in advance of me, laden with valises and bags and boxes. C.'s hat-box, that had come by mistake, bobbing on top of the pile; and our supper hanging on the side of one of the horses, in the shape of some live hens, who had begun by making some complaint, screaming with the rest, at our start, but had philosophically stopped, and gone the latter part of the journey as silently as the rest.

It was not possible that all of these could have been unpacked and cleared away. Could I have arrived at the wrong place? A crowd of monks surrounded me with their straight, high, brimless hats, and long black gowns. Latin monks they must be, though they could jabber nothing but Arabic. Now, we were to go to the Russian convent, and the rest of the party must have gone there; and my Arabs had brought me to the Latin convent!

But they seemed quite satisfied with their prowess, put a chair temptingly at the tail of the front mule, opened the door, and would fain have lifted me out. I was in despair, and appealed to the monks in all the languages I could muster. But they were not so learned as monks in general are reputed to be, or else their set of languages was different from mine. They still invited me to get out, with true Arab affability. In vain I tried the name of the "consul," which usu-

ally strikes terror into the heart of an Arab. They were only more eager to do me a service. To get me out of the palanquin must have seemed to them the greatest. I cried, "*La, la!*" (the Arabic "No") emphatically. They only answered, "Yes, yes!" ("*Eiwa, eiwa!*") in the most courteous manner. At last a female figure appeared on the upper walls of the courtyard, like Sister Anna at a tower window, looking as outlandish as the rest. She listened to the clamor, and managed to hear my words, "*La maison Russe;*" and, much to my joy, repeated them, then interpreted them to the monks. Apparently, they pretended never to have heard of such a place; but a handsome Arab boy started up and shouted, "*Russico, Russico!*" and made signs that he would show the way.

Hope returned. After all, I was not to be stranded in an unknown Latin convent, far from my friends; but, alas! how could we ever get out of the courtyard? The mules began to plunge worse than ever, the Arabs to yell. I would fain now have accepted the chair, and left the machine while they were turning it; but "*La, la!*" ("No, no!") so I held to the sides and my breath. The newly-found Arab guide danced a saraband, shouting, "*Russico!*" a word he took up instead of "*Muscovito,*" the proper term; and, somehow, we managed to get out of the courtyard without an upset, and without knocking down any of the monks.

And now we went on through the narrow streets again; the Arab youth dancing still at my side, and murmuring occasionally, "*Backsheesh, backsheesh.*" I suspected him a little of taking us round some unnecessary back streets by way of enhancing his services, and in hopes of more backsheesh. But, at last, we turned up at the entrance to a larger courtyard. I did not venture to go in till I had summoned Hassan; for I was not at all sure I had arrived at the right place. But there he came! flying down some stone steps, with sleeves rolled up, for he was in the midst of cooking the chickens. He helped me out, used severe language to the Arabs and to the boy who clamored for "*backsheesh,*" and, I am afraid, dismissed him without giving him all he expected. We heard faint clamors for "*backsheesh*" coming up from below for some time.

I found the rest of the party assembled in a broad up-stairs courtyard, with a row of whitewashed chambers going round two sides. All the rest had had their adventures. E. and S., exhausted with their horses, had walked into town leading them, and had been lost too. How tired we were! and sat down on broad stone steps, looking off on a glowing sunset, on the strange scenery about.

How hungry we were! so that we did not stop to think of the chickens hanging by their legs all the way from Jaffa, but ate them, broiled, with a relish. And there were eggs too, and delicious coffee and tea even, brought by the R's; and we got out Murray's "*Syria,*" and read in the Acts of the Apostles about Lydda and Peter,—and we went to bed. Our rooms were like convent-cells, with stone floors, and whitewashed walls, and iron bedsteads. The ceilings were arched (as are those of all upper rooms in Syria,) meeting in a point in the middle, all whitewashed cleanly to receive the pilgrims that throng along in time for Easter every year.

So we went to sleep as pilgrims; and, in the waking, I could easily seem to be a pilgrim in the Holy Land. Across the wide-opened windows were iron bars; and a clear sky, bright with the sunrise, shone through. The windows looked out upon the ruined stone towers of an old church; and in and out the broken arches of the windows flew sparrows, singing gayly, and in between the stones of the ruin grew the thick leaves and the yellow flowers that we afterwards knew to be hyssop. A fresh air of some strange place came breathing in; and from a distance rose some strains of music. It sounded like a chorus of monks,—a *miserere* off the stage,—and no wonder, because it was indeed the matins sounding up from the convent.

And this was my first waking in the country of which I had read and dreamed so much. And the air and the sound and the sight were indeed all so Oriental, so strange, so different from any former life, that I could fully realize that I was in an old, old world,—in the land of the Bible. There was the clear eastern sky; and its morning silence was broken by the screams of the Arabs in the courtyard below, coming mingled with the solemn chant from the convent, and the gay twittering of the birds in the tower of the church, which I could see rising upon the level of my arched windows. This church, most picturesque with its broken walls, was built by the Crusaders; for this town of Ramleh, where we were passing our first night in Asia, was the encampment of Richard Cœur de Lion.

So we were pilgrims too, along with Richard Cœur de Lion, and Louis IX., and Godfrey de Bouillon,—all the dear old heroes of history and story; and pilgrims farther back,—old Jerome, that lived so long in his rocky cell in the Grotto of the Nativity, and the Empress Helena, the first to come and build churches over sacred places, back to the wise men of the East, the earliest pilgrims to the birthplace at Bethlehem. And with us were modern pilgrims,—the Spanish countess who

proposed to walk on foot to Jerusalem from Jaffa, but consented to accept the night's shelter of the convent; uncouth Russian pilgrims, dressed in skins, bringing their families; women and children heaped into baskets borne on camels; strange looking women, some richly dressed in picturesque shawls, some poor, and begging their way from convent to convent. There were Mussulman pilgrims, who were come to the tomb of Moses, as a holy shrine, on the borders of the Dead Sea.

All these might have felt some disappointment in reaching the Holy Land. It might have been for them that the vision came no nearer in one spot of the earth than another. They could have said with the holy Rabia, the woman held as sainted among the Mohammedans,—

“O heart! weak follower of the weak!
That thou shouldst traverse land and sea,
In this far place that God to seek
Who long ago had come to thee!”

For all of these came to a land which they believed was made holy by the very presence of God Himself, living, suffering, and dying on earth.

But, feeling that our own far-away land was holy with the very presence of God; that, from the freedom and liberty of thought it offers to all, men can draw nearer to Him there than in any other country in the world,—this land where Christ was born becomes more sacred to us than to any of these. We come to seek a nearer acquaintance with Jesus. We draw nearer here to the life of Him who brought God nearer to us. Here better could we understand the clearness and the purity of His words.

Into the cool atmosphere of our Western thought has been brought the warm fervor of an Eastern religion. But more than ever in the Eastern country of its birth did I feel that Christianity was greater than the country where it was born. I could see, that, if Christ were to walk again in the courts of the mosque at Jerusalem as He walked in the courts of the temple, He would still find the same sins to rebuke; that the pure religion that glows in the Sermon on the Mount, and in all the words of Jesus, comes from no mere Eastern fervor of atmosphere, but is the high inspiration of the reformer of the world.

In this land, we can draw very near the person of Christ. In Egypt, there lies buried in the kings' tombs the complete picture of all its old life of thousands of years ago, strangely and wonderfully preserved; but, in Syria, one walks in the midst of such a picture, with all its characters moving in glowing color and costume,—the characters of the Bible.

We walk up and down the rugged side of Olivet, and through the deep valleys that bound Jerusalem; and we know that Jesus must have walked through these very paths, and lingered to look at these same wonderful pictures of Jerusalem, as she rises up suddenly before our eyes in our returning wanderings. We see the same gay flowers of the field that could rival Solomon in his glory; the same shepherd carefully tending his lambs. We see the cattle stabled in caves and grottos, the women drawing water at the fountains. * * * *

We had travelled up and down the rugged mountains over which the pathway leads to Bethlehem; they are the same rugged mountains on which David watched his sheep. We had clambered down the narrow streets of Bethlehem. Then we had visited the Latin church, underneath the great roof that covers all the various churches that nestle round the spot called the Grotto of the Nativity. There must be three stairways to this place, because these three churches fight for precedence, and each must come his own way to the sacred place.

I have seen, that, since the declaration of the Infallibility of the Pope, the Latin and Armenian churches at Bethlehem have had a division. They had consented to come down the same stairway to the Grotto of the Nativity; and each party agreed in turn to sweep the staircase. But now neither will allow the other the sweeping; and the Moslem authorities have interfered, and have taken possession of the staircase, and allow neither party to sweep it,—so it goes unswept.

But when we were there, was a time of peace; we went down the Latin staircase, and our Latin monk took us up that of the Greek church.

I saw, indeed, there, three different ways leading to the one holy spot,—a symbol and indication of all the differences, the myriad differences, in the Christian Church; but I saw on the stone pavement, lighted by the little wax tapers that pilgrims had left there, these words inscribed, “*Hic natus est Christus*” (“Here was Christ born;”) and I felt that I stood on holy ground. I felt the stony mountains of Bethlehem shutting me in. I saw again the little child in the arms of its mother. I thought of the small, feeble life, once glimmering there, and of the great extending present life of Christianity.

And since then, when I come back to our great working Western world, with its days and hours seething with life and marked out with duty, there comes to me a holy radiance out of that little enclosure, with its still rude, rocky walls, and with its simple inscription: “*Hic natus est Christus.*”

And the life of Christ becomes to me a greater miracle than ever before; not in its separate, special workings, nor merely in its grand effect. I wonder that so simple and pure a spirit could have arisen in the midst of a religion so ceremonial and external; how it could have existed so simple and pure in the midst of a people, so living a life of the senses from day to day. I can see that this lofty spirit accepted from this religion its faith in the one God, and a perseverance in faith, —from the people in which it was born, it took the free, natural life of humanity. * *

WAS IT A MEETING?

"Where two or three are gathered together in my name, there am I in the midst of them."

The Yearly Meeting of Friends in Philadelphia had closed its labors. The different sittings were largely attended; love predominated, and the Gospel was preached with eloquence and power. At the mid-week meetings for worship on Race street, nearly four thousand persons were in attendance. With feelings of spiritual strength renewed by this intercourse with my friends, on the succeeding Fifth-day my horse and I wended our way to my own little meeting near home, which is so near to the large city I had lately left, that the reflection of its gas lights can be seen upon a cloudy eve. How marked the change! There, the never-ceasing pulsations of humanity; here, the beauty and the peacefulness of nature.

The day was lovely; peace seemed to overspread the world, and there was peace and love and harmony within my own breast.

The old stone meeting-house, built during the struggles of the revolutionary war, and marked with the year prior to that in which our States declared their independence of the mother country, stands, as our fathers' protest in stone against all wars and fightings, even those which seem to bring in their train most benefits. Situated beside a forest, with ivy trained on its walls and overshadowed by noble old oaks, commanding an extended view over a beautiful agricultural country, few meeting-houses have been more happily located; while on the adjoining slope, as though looking down and watching over the scenes of their earthly labors, the transient owners of that beautiful country through four generations, sleep their last sleep.

It was in this meeting-house that I, that lovely day, took my seat to worship. A heavenly calm seemed to overspread everything; under the eve of the portico of the house, as if claiming its protecting care, a Pewit had built her nest, and not in vain, for the little birdlings had outgrown their home,

and were about to test their strength in a wider sphere; from the forest came the song of the wood-robin, pouring forth its happiness in sweet melody.

And there, in that plain old meeting-house, from its associations dearer to me than domed abbey, and with music sweeter than cathedral choir, I worshipped—aye, worshipped in spirit and in truth—the God of my being, the protecting Father of us all.

Time passed; the meeting closed;—the meeting? There was no one to take me by the hand; I was alone,—yet, not all alone. The wood robin was there, and the Pewit and her young, and, over all, an overshadowing influence; it was love, and God is love,—and God was there.

As I left that meeting-house, I felt in my heart it was good for me that I had been there. Even Henry appeared to feel the influence; for, as I moved him from the oak that had sheltered him, I seemed to disturb his meditations. B.

For Friends' Intelligencer.

JOHN TAULER.

The brief sketch of the life of this remarkable man, published in the three past numbers of the *Intelligencer*, will no doubt be interesting to many a spirit "hungering and thirsting after righteousness," whose appetites will no doubt be sharpened to know more of John Tauler, and of the character of his teachings. The author of the sketch now published seems not to be aware that the life of this interesting character has been published in English; and as the same impression has been produced upon the minds of the readers of the *Intelligencer* who do not know to the contrary, I will advise all who are interested, that Wiley & Halsted, New York, published in 1858 the life of Tauler, with twenty-five of his sermons. The following is a copy of the title-page:

"The History and Life of the Reverend Doctor John Tauler, of Strasbourg; with Twenty-five of his Sermons (Temp 1340). Translated from the German, with additional notices of Tauler's life and times, by Susanna Winknorth, translator of *Theologia Germanica*; and a preface by the Rev. Charles Kingsley, with an introduction by Prof. Russell D. Hitchcock."

This life of Tauler is profitably interesting to all such as desire a knowledge of the workings of the Spirit upon willing souls. Many of the learned in the middle ages were in the habit of lecturing and preaching in Latin, and of signing their own names in Latin, which of course made them somewhat longer than if in the mother-tongue; this was the case with Tauler, who is universally known as Tauler, and not Taulerus.

For Friends' Intelligencer.

"CIRCULAR MEETINGS."

The editorial of Sixth month 17th says that "it is easier to see what is needed to be done than to take wise and efficient means to supply that need;" and that "in every movement of the kind, a religious concern originating in the mind of an individual must be the basis." I am aware that any movement will do but little for us, or the world, unless originating in a living concern in one or many minds. But if Society were willing to aid the concern, the work ought to be more wisely done than if left to individual action. If our meetings could but feel a life in the work, their guardianship ought to keep in check the wayward zeal of impulsive minds. But if the *life* is wanting, then aid will do but little, and then counsels fail to reach the witness. And if none have life, no movement, whether for Circular Meetings or aught else, had best be undertaken.

But I am clear in the conviction that the hearts of many are being aroused to more religious life and labor. And though we may not "stimulate ourselves into the same zeal that characterized our early Friends," yet "the duties incident to our present condition" do surely call for earnest active labor, for the intelligent promulgation of the fundamental principles of Quakerism. Can the mind that is alive to the religious welfare and progress of human kind, look abroad and see the fields as white unto harvest,—see the people more ready to receive the truth in its simplicity than they ever before have been,—and not feel that we each and all have *important duties*, which if unperformed will leave us verily guilty concerning our brother. Though the task may not be ours to hew out a path or plow up the soil, yet as the early pioneers have done this, and thereby opened the way for the spread of our principles, and prepared the soil for the reception of the good seed, is it not equally important that *we* now sow that seed, and thus endeavor to perfect the work so nobly begun? When we see among all denominations a disposition to inquire into the correctness of the basis of their organizations, and a desire to seek after the higher, purer truths of religion, should we not feel that ours is the age in which, by using the talents that are given us, more may be effected for the religious improvement of the race, than at any former period?

Should not considerations like these be the means of arousing all our spiritual sensibilities? And though no "extraordinary emergencies" have arisen, do not our *great opportunities* call for more consecration of mind and heart in the performance of duties which the present condition of the religious world

has laid upon us? That these duties may be well and truly performed, and the good work carried on, is the prayer of one whose spirit has travelled through years of discouragement, but who now believes that a brighter day is coming; and in this hope feels called upon to endeavor to warm the hearts of others.

W. L.

Makefield, 6th mo. 23d, 1871.

LETTERS FROM THE WEST. NO. 3.

(Continued from page 263.)

ON THE WING, 5th mo. 31st, }
Via Illinois Central R. R. }

The moon shone so brightly last night, that I begrudged the hours required for repose. My companion left at early dawn, as we were passing through a most charming section of country. I had lost much that was beautiful, but was up in time to see castle-crowned hills and crumbling walls, overgrown with ivy, whose solid foundations were laid "when the mountains were brought forth," and whose history is to be found written in the rocks, by the Great Architect. Nothing in the way of scenery has ever impressed me as do these broken masses. I seem to be flying past vast ruins of some immense city, about such as travelers in the East, among the earlier civilizations, tell wonderful stories. Just now a wall runs along parallel with the road. It is of considerable height, large trees have grown out of the crevices, and vines and shrubbery half conceal its irregularity; it ends where the hill rises perpendicularly from a small river, clear and sparkling, that winds in and out among the rocky undulations. I involuntarily strain my eyes to catch a glimpse of what is behind. It is so real, so like the huge architectural works of man, that one cannot help wanting to discover a stately human habitation of corresponding proportions within its enclosure.

From the time we leave Warren, at day-break, until we reach Galena, a distance of 27 miles, the face of the country presents the same castellated appearance. After leaving Galena, which by the way looks exceedingly well from the railroad, the hills are less beautiful, the land being more level. All watch with much anxiety for the first glimpse of the Mississippi. Our approach is indicated by a stretch of marshy ground, rank with summer vegetation and flooded with water. We pass rapidly along, and halt at last at the miserable little town of Duleith, in full view of the mighty river, which we cross on a bridge to Dubuque, where breakfast is provided and time allowed all the hungry ones to satisfy, as best they can, the cravings of the appetite.

Dubuque, as seen from the station, is but a

counterpart of her sister over the river, but I was told that on the bluffs the view is very fine; many elegant residences have been erected, and large and handsome stores adorn her business thoroughfares. We pass through a tunnel at least one half a mile long, cut through the bluff, and are off again over the long stretch of prairie that lies between the Mississippi and the Missouri, a distance of 326 miles. There is a great charm about this vast sea of living green, spreading everywhere in graceful undulations. We stop frequently, there being 39 stations on the road between the two rivers. Many of these are towns without houses or inhabitants, only in prospect; very many are flourishing trade centres, which, doubtless, in time, will become important cities. I can scarcely see any limit to the development of this wonderful section. Now we see an emigrant train of four wagons winding along the road that follows a little ravine, where a low growth of cottonwoods affords shade from the burning heat. Cows and oxen, and men walking leisurely along, complete the picture. Many of the wagon trains are composed of emigrants of small means. These often stop where work is brisk, labor awhile, gather up a little to add to their slim stock, and again move on until they find a desirable location on which to settle. What fields of corn, what acres upon acres of spring wheat, green and thrifty! No wonder such huge grain elevators as they have in Chicago, are needed. In a field just passed, a two-horse cultivator is being driven through the corn, a little colt following close upon the heels of its dam. I understand all these vast corn-fields are worked with machinery. Now the road runs through low timber and chapperel, from which we emerge into the same sea of green, but most beautifully diversified with flowers, and the first roses give forth their fragrance. They are on low bushes, scarcely a foot high, but scattered about in profusion. At Independence, we see mills on a very pretty stream. The town looks well. Cedar Falls is another pretty and thriving place; a river from which I was told the town gets its name, runs through it. There is some timber, and around many of the more prosperous farmers' homes, cottonwood trees are planted to break the force of the winds, which sweep over these prairies with great violence. The larger part of the houses have not a green thing above a foot in height in sight of them. Of course, when the corn crop is of full size, it makes an exception. All trace of tree or shrub is at last lost sight of, and for a circuit of at least 50 miles, the eye finds nothing to rest upon, east, west, north or south, but the occasional log hut of the

settler, the blue sky, and the undulating sea of living green. As we fly rapidly along, the same monotony of sight greets us. Yet to me it is not tedious. It seems so fresh from the hand of our Father—a renewal of His benefaction, not marred by the unsightly stump or half-charred logs that so disfigure more Eastern settlements. It seems to invite the thrifty farmer to come and take possession, plow, sow, and in due time reap, all with less labor than in heavily wooded regions is required to clear the land. We have passed many emigrant trains, all similar to the one seen first. For many miles an unbroken solitude reigns supreme, then again we come into a strip of cottonwoods, and see many plantations of trees, mostly cottonwood, which grows quickly, and makes a good shade, besides being excellent for fuel. Coal is plenty in the neighborhood of Webster City. A branch road runs to the mines, a mile or so distant, which are being worked extensively.

Late in the afternoon we reach Fort Dodge, where we stop for the night. I take a coach for the best hotel, which proves to be but a shabby affair. The town has a thriving look, and some of the stores and private residences are well built. The Illinois Central Railroad has done everything for this section of Iowa. All the stations have well-built houses, and every facility for transportation and passage is afforded. There is but one track, yet the numerous turnouts, with the unbroken view, make danger of collision very small. The day has been most charming; no traveler could ask a better. I retire early, but it is long before sleep finds me a willing votary. The whip-poor-will tells his mournful story to the bright faced moon, that is smiling complacently on him the while. My room is small, dirty, and close; the window looks out upon an ill-kept yard, but the clear blue of the vault above invites to contemplation "The peace of God which passeth understanding," stills the tumult of thought, and at last I am lost in the oblivion of repose.

Sixth mo. 1st.—I will see the muddy waters of the Missouri before noon to-day, said I, as I awoke with the dawn of this bright day. The cars were to start at six—I had nearly an hour. How delightful to spend the intervening time among the profusion of wild beauty that formed the suburbs of Fort Dodge. The thought resolved itself into action. I found the beauty, but lost my passage. There was no alternative but stay over until the same hour next day, or take a seat in the caboose of a freight train going an hour later, and which would reach Sioux City late in the afternoon. I chose the latter, and re-

ceived the kindest attention from the conductor. We travel very slowly, putting off or taking on freight at every station. Most of the stations on this part of the route are mere stopping places, without other buildings, though laid out in town lots, with spacious streets. Doubtless there will be settlers in all of them before the summer passes, but it appears to me they will have a hard time of it. There is so little timber that even the most simple and rude house must be costly, and the water is so inferior, and there are so few springs or streams, that in the winter especially, there must be great exposure and suffering. None but the strong and hopeful should ever seek homes in this region. I see many pale, delicate women, who look out of place in this rough life.

The finest scenery on this road is in the vicinity of Storm Lake, a charming sheet of water lying out on the prairie, clear and sparkling. Thousands of trees have been planted around it, and a spacious avenue leads from the station to the margin of its waters. The town is mostly on the opposite side of the railroad, but a large park has been laid out and planted with trees and shrubbery between the railroad and the lake. Doubtless in a few years this will be one of the most delightful places for summer resort in all this region of country. I was informed that gunning parties from the Atlantic States come out here to shoot wild duck. Fish, some of them weighing one hundred pounds, are caught in abundance.

Cherokee and LeMars are points of interest to settlers, and will soon become important places. At length we reach Sioux City and the turbid waters of the Missouri. I take lodgings in a hotel overlooking the river from the balcony, and watch the swift current as it winds along in and out between the bluffs, which on the Iowa side rise abruptly from the water's edge, a little beyond the city. In front of the hotel at the river bank is a rude reservoir, capable of holding several hundred gallons of water, to which is attached a sort of apparatus for raising water from the river. A bony white horse patiently trudges round and round from morning till night to keep the wheel in motion; water-tight wagons are driven under and filled from the reservoir, and in this way nearly all the water used in the city is obtained. It is very muddy, but soon settles, though it seldom becomes quite clear. I had intended to notice in place the windmills that are seen at all the water stations along the road over which we traveled to-day. They are used for supplying water to the engines.

The steamer on which I am to go up the Missouri is at the wharf receiving freight,

but will not leave before Seventh-day. A note from G. informs of his inability to leave the agency long enough to meet me at this place. I have traveled thus far without accident, and am willing to risk the remainder, though it is said the Missouri is perhaps the most dangerous river to navigate that we have.

Third.—I go on board "The Miner;" and find everything in the very best order; a stately middle-aged mulatto woman has charge of the state-rooms, and clean sheets and fresh towels promise comfort. We leave the wharf at noon.

Afloat on the muddy waters of this wonderful river, which from its entrance into the Mississippi, is navigable 3,300 miles! A high bluff rises from the water on the right; on the other side, the land for some distance back is level and covered with coarse grass. The banks are constantly changing. A few days, even a few hours sometimes, are sufficient to throw the channel into an entirely different part of the river. I sit with other passengers in the wheel house. The pilot dare not leave his post, even for a few moments, without some one competent taking his place, the most constant vigilance being required. The river is high, yet we hear now and then the bottom of the boat grating on the sand. There is a bewildering sense of unreality about all this part of my journey. It is so unlike any other I have ever taken. The danger enhances the excitement. Now the bluffs are on one side, then on the other. There, winding many miles inland, is the former course of the river, which the rushing, tumultuous waters, becoming impatient of the bend, have cut their way through, and thus saved a circuit of 20 miles to the navigator. Now, a deposit taken from some other place has been made, which throws the bluffs a mile or more inland. Even this is again being washed out, and falling in, is borne along to be again deposited at the caprice of the wilful waters. Some of the bluffs seem to be composed of loose sand. Many more are of a kind of chalky stone, which yields readily to the action of the water. Most of the bottom lands are covered with timber, cottonwood and willow being the most common. Huge trees are washed out by the roots and carried down with the current; these sticking fast in the mud, as they frequently do, render the navigation of the river perilous. To strike one of these snags, as they are called, is a catastrophe which is almost certain to shipwreck the craft. All along the channel are little eddying surfaces where the water seems to bubble and whirl, as if springs were boiling underneath. It is the frequency of these that make falling

overboard a dangerous experiment, and there is an undertow in the river that the best swimmers, it is said, are afraid of. The night is very clear, the moon shining in unclouded splendor. It is not usual to run during the night, but the captain is anxious to make a quick trip, and the sky being without a cloud, we move on until near daylight, when for a few hours the engine is stopped. We resume our voyage when it is light enough to see the channel. The river presents the same features that it has all along. At Vermilion, on the Dakota side, we haul along the bank and put off two ladies and two children, coming from Canada to meet the husband of one of the ladies, who had preceded them to make ready a home in this wilderness.

After a voyage of 170 miles, though the distance is only 60 miles by land, we reach Yancton about noon on First-day. All the men of the town must have turned out to see the arrival. There is a bustling time; no respect is paid to the day; freight is unloaded and hauled away. Passengers who, like myself, are going further, look about for a conveyance. An open wagon large enough to hold all of us and our baggage is soon engaged, and in a little time we are off at full speed over the hills of Dakota. The face of the country is the same as that of Iowa. A ride of thirty miles is before us; the day is warm and the wind high, the wagon without cover, and it is difficult to keep an umbrella raised. Bald bluffs and deep ravines succeed each other; the latter are generally well covered with timber and underbrush. The road is excellent—not a stone is to be seen. The hills are steep, and their descent looks perilous, but we get along safely.

Many settlers from Bohemia are located along this road. They are thrifty, well-to-do people. Large herds of cattle and many horses are feeding on the luxuriant grass, that covers with a green mantle all this vast prairie land. We stop at Springfield, which is opposite Santee Agency. It is too late to venture across the river in the frail canoes that are used for ferry boats, so I am hospitably entertained at the house of one of G.'s friends. It is pleasant at least to know that once across the river, my long journey of over 1,400 miles will have terminated.

L. J. R.

BEFORE men we stand as opaque beehives. They can see the thoughts go in and out of us, but what work they do inside of a man they cannot tell. Before God we are as *glass* beehives, and all that our thoughts are doing within us He perfectly sees and understands.—*Beecher.*

FROM UNPUBLISHED LETTERS.

1838.

. . . . My mind since leaving the city has been introduced into deep sympathy with the sufferings, oppressions and afflictions of my fellow probationers among mankind. Under this exercise it has appeared to me that the cause of these difficulties, toils and perplexities, very much originate in the same spirit that induced the Babylonish monarch of old to make an image of gold, and set it up in the plains of Dura, in the Province of Babylon. The habits and customs of civilized Christendom, especially in these United States, have made an image of gold as high in stature as the one alluded to, and it would almost seem as if *all* people, nations and languages, had fallen down and worshipped it. Gold, gold! or money, money! seems to be the great idol that prostrates in one way or other nearly all the people, high and low, rich and poor, professor and profane,—and among the rest *Friends*—the professedly plain, lowly-minded followers of Him who had not where to lay His head, and who emphatically declared of the kingdom of God, that it was not of or according to the governments and customs of this world. What Babylonish confusion now abounds in the land! What guessing and reasoning and imagining, to find the causes of the stagnation of trade and business,—the tottering of the image! Like the dream of the proud monarch, which all the magicians, astrologers, soothsayers and Chaldeans, could not fathom, explain or interpret. Yet Daniel, in whom he acknowledged was the “spirit of the holy Gods,” could by this holy spirit unravel the mystery. So *Friends* ought by the same spirit, *their fundamental principle*, to have stood firm in their testimonies to plainness, simplicity, moderation, self-denial and humility, so as like Shadrach, Meshach and Abednego, not to have worshipped the image, nor bowed to a money-getting and money-spending spirit, nor the spirit of curiosity in the lust of the flesh, the lust of the eye and the pride of life. Then, among them, as a city set on a hill, the light on the candlestick would have shone with brightness, showing the excellency and safety, amid all the storms of fluctuating custom and fashion, a stability and peace derived from attention to the only safe Guide through time. . . .

. . . . Yesterday, I returned from Horsham where I had been two days, attending two successive funerals. In a meeting

held after the latter, after several short communications from Jacob Ritter and one or two others, Jacob spoke in German for some time as a concluding service. His voice was solemn, regular and somewhat melodious; which induced me to suppose he was repeating a German hymn, but I could not understand a word of it, and it was thought by some that there was not one German in the meeting. Yet I say not that it was out of place. The dear old man, tottering with age and weakness, seems full of love and good-will to all.

Much depends on the state of our own minds, when we form an estimate of persons and things and occurrences around us.

I am induced to think if Friends were deeply enough attentive to the pure openings of Truth, a way would be found for holding Quarterly Meetings to more practical advantage and benefit to society than is the present result. I wish they could be considered more as meetings for the supervision of Monthly and Particular Meetings, and for conference on the state of society, as respects the due support of all our Christian testimonies.

When I compare the state of our Society with the standard of Christian discipline and Christian character, which I surely believe we are called by the nature and spirituality of our profession to sustain and exemplify, I mourn and regret the loss to ourselves and to the community in which we are located. There is a brighter side view, I grant, but unless the broken walls are repaired, or rather rebuilt, even this bright view may (and will) become obscured.

FRIENDS' INTELLIGENCER.

PHILADELPHIA, SEVENTH MONTH 8, 1871.

IN the last number of the *British Friend*, in which the proceedings of the late London Yearly Meeting are detailed, Isaac Robson, who has recently made a religious visit to his (orthodox) brethren in America, is reported to have said, "that there was among those whose forefathers separated* from our Society in America, an earnest desire to be reunited. Friends were not at present prepared to receive them, as their views on the fundamental doctrines of Christianity were not in full accordance with those we had al-

* We have taken the word as I. R. evidently meant it, although strictly speaking, Orthodox Friends were the Separatists in a majority of the meetings.

ways received. Yet there was manifest a considerable approximation to the doctrine of the Atonement as held by Friends, with whom there is a great openness for union when unity of view was attained."

We are at a loss to conceive upon what ground the Friend alluded to based his statement in regard to the "earnest desire for reunion," but we are confident he has been misinformed. In an extensive knowledge of what has passed in the several Yearly Meetings of Friends on this continent, and a large acquaintance among the prominent members, we have never heard the desire expressed for a reunion with so-called Orthodox Friends under present circumstances. It is true that a concern has been expressed in one or more of our Yearly Meetings and also by individuals, that the several bodies which claim the name of Friends might cultivate a kind and liberal spirit toward each other. That they should avoid calling in question the religious standing one of another on account of theological differences, and thus prove themselves a peace-loving people and an example to the community in which they dwell. We should have thought that the visit of Isaac Robson to this country, and the want of "unity of view" among those to whom his minute was addressed, would have caused him to hesitate before alluding to our reunion with a body so divided and sub divided on points of speculative belief. In the closing sentence of his remarks, he does not explain what particular phase of the popular doctrine of "Atonement*" he considers as held by Friends; it would not therefore be easy to say whether there is or is not an "approximation" to it on the part of that section we represent. But this we may say, that neither in the published documents of our several Yearly Meetings nor in our ministry, so far as our knowledge extends, have we observed anything like an "approximation" toward establishing any standard of speculative belief as a test of Christian fellowship.

* A striking exemplification of the various shades of opinion held on this subject may be found in the two periodicals *The Friend* and *Friends' Review* of this city. Under the same date, Sixth mo. 17th, we find an editorial in one accepting the doctrine of "Substitution" as sound; while the other rejects it as unsound.

Notwithstanding our many short-comings, we are sometimes enabled to rejoice that we increasingly keep out of view those questions in theology which have ever had a tendency to divide and scatter, and that we are more and more united in holding up our fundamental doctrine of "Christ within" which was the burden of the testimony of George Fox and his associates. When (orthodox) Friends of all the different shades of opinion are brought to the same conclusion, then and not till then may there be a reunion of the various dissevered portions of the Society of Friends.

DIED.

WILLIAMS.—On the 12th ult., Thomas R. Williams, a member of Philadelphia Monthly Meeting. The writer enjoyed a close intimacy with the deceased, and well knows the purity of his character, his earnest desire to avoid injury to another, and the pleasure he took in doing good. It was in the privacy of the home circle that his virtues were best known and most respected, endearing him to those about him. During his illness he expressed a desire that he might be soon released; and from the first seemed impressed that the time had come when he should "lay aside the corruptible and put on the incorruptible." Making but little profession, he passed through a long life "pure in heart," and to such the promise is made that they "shall see God." F. S.

BROWN.—At the residence of her brother, Jehu Brown, in Zanesfield, Logan Co., Ohio, on the 29th of First month, 1871, Rachel Brown, daughter of Elihu and Margaret Brown, in the 74th year of her age; formerly a member of Littlefalls Monthly Meeting, Md.

JENKINS.—On the 22d ult., Eliza A., wife of Hunn Jenkins, in the 64th year of her age; a member of Race St. Monthly Meeting.

FOULKE.—On the 21st of Sixth month, 1871, at the residence of her son-in-law, George A. Newbold, Moorestown, N. J., Susanna C., wife of William Foulke, in the 69th year of her age; a member of Gwynedd Monthly Meeting.

MADDEN.—On the 18th of Fifth month, 1871, at Wyoming, Kent county, Del., Thomas L. Madden, aged 58 years; a member of Camden Monthly Meeting.

From the National Standard, New York, 6th mo. 17, 1871.

"IN PRISON AND YE VISITED ME."

Very little consideration, relatively, is given to the condition and needs of the inmates of our prisons. Weak and erring men and women, in sore need of better, instead of worse conditions and surroundings, are withdrawn from the sight of the general public, for restraint and punishment, and out of sight, are to a great extent out of mind also, so long as kept in confinement. That in the present condition of society restraint and confinement are often necessary, is manifest. That the object of all such enforced discipline

should be reformation rather than punishment, is not less true. Much of the present prison life, great as has been the improvement in many respects, is calculated to confirm rather than to cure offenders. Still more unfriendly to the restoration and welfare of such is the attitude of society generally towards those who for any cause have been subjected to imprisonment. To such the world presents a cold, forbidding and forlorn aspect.

We learn with much satisfaction that this subject has recently engaged the attention of several Friends, who were in attendance upon the Yearly Meeting held in this city. The Friends concerned to visit the prisons, to commingle and sympathize with, and to address their inmates, were M. E. T., a minister of Westchester, Pa.; James Haines, of Richmond, Indiana; and S. W., of this city. On the afternoon of the 28th ult., they visited the Tombs. Having inquired if it would be agreeable to him, they had an interview of a most interesting and touching character with Foster, now under sentence of death for the murder of Mr. Putnam. The unhappy, condemned man was kindly taken by the hand and addressed in words of tender sympathy and compassion, and exhorted to a spirit of repentance and of trust in the All-Father. He was deeply affected and moved to tears. They could hold out to him no expectation of pardon or reprieve, for an exacting public opinion demands that he be speedily hung. He appeared, however, very grateful for their visit, kindly consideration and interest in his welfare. M. E. T. and J. H. subsequently addressed the other prisoners of the Tombs, bearing testimony against intoxicating drinks, and exhorting them in words of kindly sympathy to sobriety and truthfulness. They were very kindly received by both the prisoners and the officers of the prison, and retired with an assured feeling that the visit would be blessed for good.

M. E. T., accompanied by S. W. and his wife, afterwards visited, successively, the Inebriate Asylum, and Soldier's Retreat on Ward's Island; the House of Refuge, and other prisons on Randall's, and Blackwell's Islands; the Home of Juvenile Delinquents, at Fort Washington; and at Sing Sing. On the visit to Sing Sing they were accompanied also by J. H. Wherever they went their words of kindness, their warnings against intemperance and vice, their exhortations to upright, truthful, manly and womanly ways of life, were listened to with much attention, and the good seed thus sown we doubt not will bring forth in due season a rich harvest of good results. Would that there were more missionaries of a kindred spirit for such timely and sorely needed service.

At Sing Sing, in the men's prison, M. E. T. was only permitted to occupy a back seat in the chapel as a *spectator*. The privilege asked for her to speak to the men prisoners, or even to sit on the platform of the chapel during the meeting, which was appropriately addressed by J. H., was denied to her *because she was a woman!* She subsequently addressed, very effectually, the inmates of the women's prison. The chaplain at Sing Sing, also the warden, received them very kindly, and explained the denial of a hearing to M. E. T. in the meeting of the male prisoners by saying that it was peremptorily forbidden, by resolution or direction of a State Prison Inspector, that any *woman* should speak there. We see no good or sufficient reason for a rule of government on the part of the State Prison Inspectors, making an invidious distinction between missionary visitors on account of sex. If any such rule really exists, the matter should be followed up, some explanation called for, and also a modification by the proper authorities.

They subsequently paid a very interesting visit to the Colored Orphans' Asylum of this city, which replaces the one burned by the negro-hating rioters in the infamous July riots of '63. They found therein two hundred and sixty children, and all things considered, the best ordered institution they had visited. The children were much interested in and pleased with the remarks made to them.

The case of Foster, condemned to execution in a little less than one month, is one which brings up anew the question of capital punishment. He avows that he did not intend to kill Mr. Putnam, and says he was unconscious of what he was doing, from excessive drinking. Ought such a man to be hung, while the Government licenses and keeps wide open the doors of temptation, of which he is the unhappy victim? Ought not some effort to be made to have the sentence commuted to imprisonment for life?

EXTRACTS FROM THE ANNUAL REPORT OF
THE LONDON PEACE SOCIETY—1871.

The last year has been an eventful year to the cause of peace; for others than lecturers of the Peace Society have taken in hand the work of proclaiming the folly, the cruelty, the waste and wickedness of war. It is Emperors and Kings who have been the teachers this time. They have taught in a voice so loud, and with practical illustrations so terrible and appalling—in the shape of slaughtered men and despairing women, of devastated countries, and blazing villages, and bombarded and famishing cities, and a general accompaniment of brutality, and blasphemy and blood, such as the world has

seldom witnessed—that the nations must be deaf as the adder if they do not listen to, and lay to heart, the lessons so impressively taught them by these Royal and Imperial personages, the most obvious and emphatic of which, commonplace though it be, is that already taught us by one of our own poets, that—

“War is a game which, were their subjects wise,
Kings would not play at.”

And surely another lesson which the events of the year proclaim with a clearness and emphasis which ought to carry conviction to all hearts, is this—that large armaments, so far from being preservatives of peace, are eminently provocative of war; and that there is no hope of rest or happiness for the world until the power of controlling the policy of States, and thereby deciding the destiny of nations, is wrested out of the hands of the military class, who for many generations have contrived, all booted and spurred, to mount and ride on the neck of the stooping and toiling millions. It is hardly necessary for the Committee to say, that the terrible crisis on the Continent to which they have just referred, and the effects, direct and indirect, that flowed from it at home, have principally engaged their attention and energies during the past year. After the outbreak and during the continuance of the war, there was not much that could be done as respects the nations actually engaged in the conflict.

It is sometimes made a matter of taunt against us by our opponents, and almost of reproach by some impatient friends, that when nations are about to plunge into mortal fray, the Peace Society does not rush between the combatants, and, as they say, put their principles to the test. But the truth is—and it is a truth to which the friends of peace will do well to give heed—that our time for labor is during peace and not in war. When once the tempest is unchained, when men's minds are clouded by prejudice and their hearts inflamed with passion, to speak peace to them at such a moment would be like preaching temperance to a company of drunken revellers at the very moment when they are most “flushed with insolence and wine.” The Roman orator has said, that laws are silent in the midst of arms; and not only are laws silent, but reason, religion, conscience and humanity are also drowned in the horrid din. The fruit of righteousness is sown in peace. But whatever could be done at such a time was done by the friends of peace at home and abroad. During the few days that preceded the actual conflict—for only a few days elapsed between the first signs of danger and the actual bursting of

the conflagration—the Committee communicated with their fellow-laborers on the Continent, earnestly counselling that they should make some counter demonstration against the spirit of war that was being fanned so perniciously by those bent on mischief. Nor were those friends wanting in courageous fidelity to their convictions at that supreme moment, though the almost total suppression of all freedom of the press and of public meetings placed them at the utmost disadvantage. When British diplomacy was making its last effort to avert the breach that was so imminent, a most earnest and pathetic appeal from the pen of M. Martin Paschaud was addressed, in the name of the Paris International League of Peace, to the Emperor of the French and the King of Prussia. At a later period also an address from the same society was sent to the Queen of Prussia, who some years before, in accepting the honorary membership of that body, had expressed herself as in full sympathy with their principles and objects. And all through the long agony of the conflict that ensued, the members of the League never ceased, especially through the voice of their eloquent secretary, M. Frederic Passy, to bear their testimony for peace, though it was like speaking in the face of a hurricane. After the great crisis at Sedan, your Committee also addressed memorials to the King of Prussia and M. Jules Favre, urging moderations and concessions on both sides in the interests of peace. Of course all such appeals were in vain, and were made rather to discharge the conscience of those who made them than with any sanguine expectation of success. * * * *

Very often, in answer to the reports of what the Peace Society is doing, we are met by a certain class of cynical philosophers with the scornful question of *Cui bono?* "What is the use of the well-meaning but weak-minded persons going about preaching peace? Do they imagine that their preaching will have any effect in arresting or contracting the tempest of human passion?" Well, "the foolishness of preaching" has been a favorite theme with philosophers from at least as early a time as the origin of Christianity. And yet nothing is more certain than this, that if by preaching we mean, as we must mean in its larger sense, the use of argument, persuasion, and appeal addressed to the understanding and conscience of mankind in the interests of truth, justice, and humanity—the most important and lasting revolutions in the history of the world have been brought to pass by this despised agency. It was by preaching, that the apostles and their successors conquered the world to

Christ. It was by preaching, that Peter the Hermit kindled the wild fanaticism of the Crusades. It was by preaching, that Luther transformed the face of Europe in the sixteenth century. It was by preaching, that Wesley and Whitfield infused new life into the torpid heart of England when all but dead with infidelity and formalism. It was by preaching, that Clarkson and Wilberforce abolished the accursed traffic which made merchandise of the blood and bone, and sinews and souls, of men. It was by preaching, that Buxton and Sturge in England, and Lloyd Garrison and Wendell Phillips in America, smote the monster Slavery itself with its death-wound. It was by preaching, that O'Connell won emancipation for his long-oppressed countrymen. It was by preaching that Cobden and Bright got untaxed bread for the poor, and an unfettered commerce for the world. And it is by preaching, we believe—from pulpit and platform, and press and free parliaments—that the heart of nations is to be so imbued with humane and Christian sentiment, that they will rise in rebellion against the iniquity of war, and say to their governments, of whatever nature they may be, "There shall be no more of this. We are all brethren made of one blood, the children of a common father. We refuse to be trained to this work of mutual butchery; and if there is to be any more fighting—

'Let the men that make the quarrels
Be the only men to fight.'"

OUR BROTHER'S OFFENCE.

BY ELIZABETH M. POWELL.

To overcome any evil in the world, it is necessary for every one to ask himself, "What have I to do with this wrong thing? What can I do to make it right?" For we are so bound together in the great household of God that the weakness of one member taxes the strength of all the rest; the offence of one brother or sister becomes the care and touches the responsibility of all the others. It is so easy to forget this. We crave some personal indulgence that perhaps we are strong enough to bear, and plant ourselves on our individual liberty, and console ourselves by saying, "I want to enjoy this, and I ought not to be deprived of it because some weakling may hurt himself by its indulgence." It would do to reason in this way if the world were peopled with insulated beings, if men and women were marble statues. But we are so constituted that our individual lives enter into the life of the world; being overruns the limits of body, and mingles with all its touches, and so we paralyze by our weakness or renew by our strength the spirit of the whole. It is glorious

to realize fully that "no man liveth to himself alone," and to throw ourselves unreservedly into the life and work of the world, resolved that in our limited way we will live as our Father does, for all.

To overcome the evils of intemperance, we need first of all a baptism into the grand spirit of the apostle, "Wherefore, if meat make my brother to offend, *I will eat no meat while the world standeth*, lest I make my brother to offend." He did not satisfy his conscience with the reasoning, "Meat is as much a provision of God's bounty as bread is, and He means it to be used reasonably. Besides, if I chance to be with those who sit at meat in the idol's temple, I can not make a mark of myself by refusing the meat." It was enough for him to know that his eating of flesh might make his brother to offend, might "embolden the conscience of him that is weak to eat those things which are offered to idols;" and he puts his personal gratification behind him. It was enough for him to know that it might make his brother to offend, and he bore his testimony wherever he was called to do so.

In these days the drinking of wine leads to innumerable and immeasurable offences. It causes brothers and sisters, old and young, to offend grievously. Its wretched results in poverty and degradation are written daily, and daily are they lived before our eyes. Still the social wine-drinking goes on. Still does the elegant lady offer to the elegant gentleman the red wine. Still do our literary men, meeting in clubs, discuss poetry and history over their wine. Still do our churches consecrate the wine cup in their communion service. And so long as wine-drinking is tolerated and encouraged in these high places, so long shall we be burdened and degraded by the debauchery of the low. Of what use is it to preach of the religion of Christ if we persistently ignore the characteristic that exalts it above all other forms of religion; if its ministers and churches do not sternly refuse their countenance to the indulgences that make so many to offend? God has beneficently provided so many sources of physical enjoyment that do not endanger the welfare of men, that it seems a very small sacrifice to banish wine from the list of gratifications.

It is clearly the duty of individuals to bear testimony against the use of wine by example and protest. This every one of us can do; and although it is no business of ours whether or not our efforts actually check the evil, we may believe that our influence will be felt in society for great good. It is a very cheering thought that a good deed, or a "word fitly spoken," may be seen in the soul of another that will multiply itself a hundred fold; indeed, it will go on reproducing itself through

the infinite ages. Especially forcible is individual example in the cultivated circles of society. The cultured woman who forbids wine in her house strengthens the good resolves of all less favored women, and she makes a pure and invigorating moral atmosphere, in which men, young and old, can develop their best manhood. If all good women would resolve that in their presence no temptation should come nigh their brothers, how much faster the world would grow into the heavenly place it might be!

Faithfulness in individuals will secure right legislation to protect the young and weak. The burning of a house is a penal offence. How much greater is the wrong done to the householder by the man who comes to his neighborhood and scatters firebrands that may burn out the moral nature of his sons. It is not only the right, but the duty of society to legislate against a traffic that infects the moral atmosphere, and creates a contagion more woful in its results than any physical scourge.

The hope of the world is in its young, and so we come back to the home as the centre of light and hope, the stronghold of purity. It is in the home that young men and women must be fortified to meet and overcome temptation. At home they must be surrounded by influences so pure and elevating that when they go out into the world evil can not come near them. At home their souls must be so filled with all that is happy and good, that they shall have eyes for only the good, and they shall walk without seeing or feeling the temptations that are spread for them. Too often parents are absorbed in business and in domestic cares, and their boys particularly are left to themselves, and their undeveloped natures seize upon unwholesome things, and they enter manhood scarred if not disabled morally. It would be easy to spare them the season of "sowing wild oats," and they would be saved many unhappy experiences, and come to a better, stronger manhood. Not many boys or girls choose to be bad if their parents shine before them, and enter fully into their young active life, and lead them by sunny paths to the things that make for eternal peace.

And let no one be indifferent to his duty in this important matter. Each has his community to influence. Let him see to it that his testimony is pure and strong.—*Bond of Peace.*

WHEREVER I have traveled, I could never judge of the height of any hill, but from the vale beneath. The height of God's eternal love is only to be discovered from the vale of humility.

For Friends' Intelligencer.

THE UNFAITHFUL.

We are in the darkness, Father,
Searching vainly for the light;
All the path ahead seems buried,
In the shadows of the night.

We have left it, and are wandering
All alone, without a guide,
And a thorny, tangled wildwood,
Clogs each way which we have tried.

Oftentimes we see a glimmer
Of the daylight far ahead,
But we scarce have taken courage,
'Till the sky is overspread;

Then we seem to lose our footing,
And go straying from the track,
And are longing for, and asking,
God's strong hand to bring us back.

We have known Thy arm's protection,
Need we cry in vain to Thee?
Let us walk like little children—
By Thy side, as trustingly.

Then our path will open plainly,
Through the straight and narrow way;
Give us strength and earnest purpose,
Thou, our only hope and stay. EMILIE.

STARLIGHT.

"Like as a star,
That maketh not haste,
Yet taketh not rest,
Be always fulfilling
Thy God-given best!" —GOETHE

As the stars that—never resting
Through the watches of the night,
In their steady course, unceasing—
Trace their path in lines of light—
Shedding their pure radiance, nightly,
God's good purposes fulfil,
Ever patiently and brightly,
Working out His lofty will,

So on us a charge is lying
Through the night of life below
God's pure light to shed undying
Round us, wheresoe'er we go;—
Be the pathway high or lowly
God shall choose for us to tread;
Still He gives this mission holy,
Still His light is ours to shed!

Not alone the great and gifted
Have this mission to pursue,
E'en the weakest heart, uplifted,
Shall find strength and work to do!
Not for high and hard things only
Is this blessed power bestowed;
But to cheer the sad and lonely,
And to light the dark abode!

There is many a path benighted,
Where weak feet uncertain stray,
That might reach the goal, if lighted
Even by a star-light ray!
There are hours of bitter sadness
When all earthly hopes are fled;
We might turn such grief to gladness,
By God's light in darkness shed!

And, if weary and benighted,
Sometimes fall our pilgrim feet,
Let our lamps be ever lighted
Freshly, at the mercy-seat!

Till—heaven's radiance brightening o'er us,
Starlight shadows fled away—
He who walked the night before us,
Calls us to eternal day!

MY UNCLE TOBY'S MISTAKE.

Uncle Toby says, "Woman, the dear little ornamental fixture of every good man's house, has an easy time in this world. She is petted and caressed, and supplied with the necessaries and comforts of life, with very little to annoy her; while we, poor fellows, are obliged to battle hard with the world to get money for her to spend."

Now my Uncle Toby is at the head of a class of men who have a striking family resemblance. He has no idea that his dear little Lily, who weighs only about a hundred pounds, and flits so easily about the house, is ever tired. He never heard her say so. He wonders sometimes that she is not, for it puts him all out of breath to tend the children but half an hour. He supposes that Tobias junior, the six-year old, saves her some steps and helps amuse the three younger ones, who, he thinks, lie or creep quietly around the sitting-room floor all day, like so many kittens. He is sure they are very little trouble to their mother; for he never comes home after business hours, but he finds the house in perfect order, and his wife at the door with the whole four neatly dressed to meet him with smiles and kisses. "It is so much better," he says, "than to have a hired girl about, putting things out of place, and hearing all that is said."

It was his own suggestion, that no servant should be employed, lest the opening minds of these promising children should take in sentiments which he should wish eradicated. "Teach them all yourself, Lily," said he one morning as he stood at the door with his hat in his hand. "Don't let anything come between you and them. You have plenty of time. As for the housework there is not much to do for our small family; let it slide and attend to the children."

Uncle Toby took his five kisses upon his bearded mouth, and as many more thrown from the chubby hands of the little ones, and walked leisurely off to his business, complacently flattering himself that he was a model of a husband, with a loving wife, and four as smart children as ever entered the world.

Lily was a good wife: she loved her husband, and although she knew that her duties and cares were not understood by him, she determined that every muscle should be strained to meet his expectations. She had often heard him say that "his mother never kept a hired girl, though she brought up a large family;" and Lily tacitly yielded to the forced conviction that she ought also to do her own work.

Bright silver, clean door-knobs, tidy rooms, and good meals, he always noticed and praised; and though she felt tired and worn down by the over labor of previous days, and the restless nights of the children, she shut the door after her husband, put on a calico dress, and, with a child in each arm and two trudging on behind, hurried to the kitchen to commence anew her daily toils.

She could scarcely pass the lounge, so strong was her desire to stop for rest; but there was no time for that; the house must be put in order, the dinner cooked, the children looked after continually, their clothes got ready, and the four washed and dressed to meet "dear father" at five o'clock.

So all day long, with busy brain, busy tongue, and active hands and feet, Lily wore away the day, and was herself in turn worn away. She was nervous and dispirited, and though she reasoned with herself and tried to laugh away the depression of her mind, the effort only rebounded upon herself; the tears would come, and occasionally overleap their barriers, and drop upon her languid hand.

Life seemed to her a great burden which could neither be borne nor thrown off. At the last moment she was ready, and at the door with her little brood, to welcome the father, whose rested, contented, happy look did her good. He was full of playfulness and good humor, and said, "You are looking very handsome this afternoon with your red cheeks, Lily; you have just enough to do for health. I don't know what a hired girl would find to do in this neat house;" and, as he chucked her under her chin, he added, "An old friend of mine will be here to dinner and spend a few days with us. You must be careful and not work too hard."

This was a drop too much upon her overburdened heart and hands, and she longed for a place and time to weep; but there was neither, and bravely choking down her grief, and spurring up her energies, she brought her husband's slippers and evening paper, and while he lay upon the lounge resting, she dished up and brought in the dinner.

A noted lecturer was to speak upon an interesting topic that evening, and Uncle Toby and his friend determined to go. The children could not be left alone, and of course Lily must remain with them; but though Uncle Toby declared it was too bad, and he regretted it very much, yet it never seemed to enter his mind that he could change places with her, and let her have a breath of the outside world she so much needed.

At the table the next morning, the lecture, politics and the common events of the day were discussed, when Lily, not wishing to be silent, and anxious to do credit to her well-

informed husband, unfortunately made a remark which exposed her ignorance of what she was supposed to know, and greatly mortified Uncle Toby. He raised his head, stroked his long black beard, and said: "Lily, you must read more; you have two daily papers supplied you."

The tension upon her spirit was tightening, an overstrain was upon the strings of life, and after a year or two more of constantly increasing cares they snapped. Delirium came on, weeks of suffering followed, the spirit was released, and the attenuated body was at rest.

Uncle Toby was greatly distressed, and talked of the mysterious visitation of God in thus cutting short the life of one who had not lived out half her days, and who was so essential to him and the children. But he acknowledged the duty of submission, as urged upon him, and bowed to the divine decree!

Are there no other thoughtless Uncle Tobys in our land, who are wearing out human lives? It is poor economy to over-tax mothers with menial service. Save them for the nobler work which God has put in their hands.—*Christian Weekly*.

THE BOHON-UPAS TREE.

During the cruise of the United States ship Plymouth in the East Indies, she visited the coast of Borneo, and there spent some time in regulating our commercial interests. While lying off the mouth of Bruni River, upon which is situated the capital city of Borneo proper, a party was made up to visit an upas tree, which it appears is occasionally found in other islands than Java.

With a boat's crew, well-armed, we left the ship at daybreak, in order to accomplish the distance (21 miles,) before the sun came out in full strength. Reaching the mouth of the river, after a pull of an hour and a half, we landed to eat our breakfast, and, after resting the crew, put off again, arriving at our place of destination about 10 A. M. We were all looking out eagerly for the wonderful stories that so fascinated our boyhood; but here were no barren wastes, or arid, skeleton-covered plains.

Following our native guide-boat, we sheered in alongside of a grassy bank, the summit of which was laid out in small plots like children's gardens at home, each plot surrounded by a border of shells, with carefully kept walks between them. Nothing but grass and flowers were growing there, but these were luxuriant; for this was a graveyard, and we were even then standing under the shadow of the terrible poison tree, near which these people bury their dead, which may partially account for the wonderful

stories told by early travelers. The tree itself measured eleven feet in circumference five feet above the ground, and, instead of scattering death and destruction, was girded round with creeping vines and many-colored parasites, that wound their way to the topmost branches, which were higher than any of the surrounding trees, and equalled, if not surpassed, those of our loftiest forest trees at home.

An incision was made, after the manner of tapping maple trees, and the sap, which is reported to be a deadly poison, commenced flowing drop by drop. It was of a yellowish white color, thick and glutinous, resembling in its general appearance, good rich cream. There was no unpleasant odor perceptible from it, nor did any of us experience any disagreeable sensations, though standing near by while the sap was being discharged. This was so slow an operation that it required nearly an hour to fill a two-ounce vial. Meantime it was desirable to procure some of the leaves and branches, but these were beyond our reach, as the lowest branch was at least 100 feet from the ground, and, although the men could easily have climbed up by the vines, the surgeon in charge of the party refused to let them make the attempt, fearing that their hands and feet might become poisoned.

At last, having loaded all our carbines with ball, a particular limb was selected, and we fired together, by this means securing several fine specimens.

Having obtained matter enough of all kinds to satisfy the demands of science, we returned to the ship, arriving on board at 2 o'clock in the morning, highly gratified by the result of our visit to this great natural curiosity, which had been one of the wonders and mysteries of our boyhood.—*Appleton's Journal.*

ITEMS.

THE last report of the United States Agricultural Bureau makes a very strong appeal to the people to do what they can to make up for the loss of timber, by planting young trees. A little attention on the part of landholders to this matter would not only add greatly to the beauty of the country, but would increase the value of estates, and prevent what is really in danger of overtaking us—a wood famine. Over fifty millions of acres of land were denuded of timber between the years 1850 and 1860, and are now fruitful farms. Aside from the uses of wood for fuel, fencing, etc., it ranks as a necessity in many of the arts and in various industrial callings. American oak, pine and walnut, enter largely into our exports, and a single gun factory in Europe during the first two years of our war, used no less than 28,000 walnut trees, imported from this country, in making gun stocks, which were returned here in the form of weapons. When we think of the immense amount of timber required in the construction of wharves, piers, railways, etc., it becomes apparent

that measures should be taken not only by individual owners of land, but by Legislatures, to provide against wanton destruction of forests, and for repairing the necessary loss and waste of timber. It appears to us also, that in view of the rapid decay of wood used for piles, sleepers and similar purposes, that it would be well to subject material so used to the Bethell, or some such process, for the purpose of resisting decay. It is said that wood, which, after being submitted to the Bethell process, was used for railway ties and bridge timber, was found after a quarter of a century's use and exposure to be sound as new timber.

AN interesting paper on artesian wells was read before the Chicago Academy of Sciences at its regular meeting lately. The writer's general opinion, founded on geological data, was that throughout the valleys of the Ohio and Mississippi rivers, at least, deep seated springs, penetrated by artesian wells, would afford water too highly charged with mineral compounds to be fit for drinking or washing purposes. Reference was made to the Dupont well at Louisville, 1800 feet deep; the Belcher well at St. Louis, 2176 feet deep; the Poorfarm well in the same city, 2250 feet deep; the Rose well at Terre Haute, 1793 feet deep; the Lodi well, 1218 feet deep; the State House well at Columbus, 2775 feet deep; and several other wells in Indiana and Illinois, each over 1000 feet deep. The water from all these wells is more or less impregnated with sulphuretted hydrogen, and contains lime, soda, iodine, bromine, magnesia, and phosphorous, in various forms of combination. From this fact and other observations, the writer comes to the conclusion that lake and surface waters are far preferable for domestic purposes to those from springs that must be reached by artesian wells.

THE recent discovery of inexhaustible deposits of excellent coal on the Isthmus of Panama is an unexpected and most important matter with reference to the future of American commerce. It was unexpected, because the accepted theories of Humboldt and other "physical geographers" did not admit the existence of considerable coal formations in volcanic regions; and its importance may be measured by the expense attending the transportation of coal for steamship and railway use from Europe or the United States to the Isthmus. The mine is but thirty-five miles from Aspinwall, is owned by an Englishman, and is susceptible of being readily worked.—*Western Christian Advocate.*

A DANGEROUS PLAYTHING.—A well known citizen left at this office yesterday a specimen of a kind of "torpedo," which is now being sold in this city among other fire-works. The sample left at this office is about the size of a small marble, colored blue and red, and it looks a good deal like a sugar plum. One of these getting into the hands of a little boy a few days ago, was ignorantly or innocently put by him into his mouth, and almost immediately exploded, disfiguring him very much and endangering his life. The sample left at this office was accidentally exploded, and from the havoc it made among the papers and other matters near it we had a good opportunity to judge of the injury and destruction this dangerous plaything is capable of producing in inexperienced hands. As it appears to be mainly intended for children, it is very questionable whether its manufacture and sale should be permitted. At all events parents and guardians should be warned against it.—*Phila. Ledger.*

FRIENDS' INTELLIGENCER.

"TAKE FAST HOLD OF INSTRUCTION; LET HER NOT GO; KEEP HER; FOR SHE IS THY LIFE."

VOL. XXVIII. PHILADELPHIA, SEVENTH MONTH 15, 1871. No. 20

EDITED AND PUBLISHED BY AN ASSOCIATION OF FRIENDS.

CONTENTS.

COMMUNICATIONS MUST BE ADDRESSED AND PAYMENTS MADE TO

JOHN COMLY, AGENT,

At Publication Office, No. 144 North Seventh Street:

OFFICE OPEN from 9 A. M. to 4 P. M.

TERMS:—TO BE PAID IN ADVANCE.

The Paper is issued every week.

The TWENTY-EIGHTH Volume commenced on the 4th of Third month, 1871, at Two dollars and fifty cents to subscribers receiving it through the mail. To those receiving it through our carriers, THREE DOLLARS.

SINGLE NOS. 6 CENTS.

It is desirable that all subscriptions should commence at the beginning of the volume.

REMITTANCES by mail should be in CHECKS, DRAFTS, or P. O. MONEY-ORDERS; the latter preferred. MONEY sent by mail will be at the risk of the person so sending.

AGENTS.—T Burling Hull, Baltimore, Md.

SIR JOHN HERSCHEL.

It is a good sign for England that the death of a scientific man like Sir John Herschel, although he had lived for many years in close retirement, had rarely been seen except by members of his own family and personal friends, and had long given over scientific work of the more serious kind, is felt as a great and national loss. High and low, rich and poor, lament the absence of one who has been to most of them little more than a name; first, because the dignity of a life spent in the study of nature is beginning to assert itself; and secondly, because in Sir John Herschel the power of scientific observation was pre-eminently associated not only with the power of appealing to tens of thousands by his writings, but with all those qualities which, when we find them in a great man, make him universally beloved.

In attempting to give a sketch of a man who was so emphatically the son of his father, both in thought and work, it is impossible to speak of one without referring to the other. Not only were they laborers in the same vast field, but for many years of his life Sir John Herschel was engaged in researches which may be looked upon as an extension of those commenced by his father. Born at Slough in 1792, he passed his childhood under the shadow of that giant telescope which his father's skill and indomitable perseverance

had erected, and to which the liberality of the King, who endowed the father with a sum of 400*l.* a year, enabled him to devote all his energies. Here we may stop to remark upon the large amount of immortal work which has been done under analogous conditions. The names of Ptolemy, Galileo, and Tycho at once occur to us as having been similarly aided in the very science which the Herschels have so brilliantly cultivated.

John Herschel, indirectly profiting without doubt by this magnificent endowment, and reared in an atmosphere of wonderful discoveries, went to Eaton and subsequently to St. John's College, Cambridge, filled with an intense love of his father's pursuits. . . .

In 1816 we find him engaged in astronomical work in one of those prolific fields of observation which his father had opened up to an astonished world. The fixed stars, on which the prestige of immutability had rested after Galileo had snatched it from the sun, had been found to include some which appeared double or treble, not because they were in the same line from the eye, but because they were physically connected, revolving round each other, or rather round a common centre of motion, as our earth does round the sun. This, and an examination of the nebulae and clusters discovered by his father, engaged much of Herschel's attention for some years, and in conjunction with Sir

James South he presented a paper to the Royal Society, embodying upwards of 10,000 observations on the double stars, which was printed in 1824; and in 1832 a catalogue of 2000 nebulae and clusters was also printed in the *Philosophical Transactions*.

But this by no means represents the sum total of his activity during this period. The mathematical papers communicated in 1813 and the following years to the *Philosophical Transactions*, were soon supplemented by papers on Chemistry, many of which appeared in the *Edinburgh Philosophical Journal* about 1819. In 1820 physical science was added to chemical science, and Herschel broke ground in his many researches on optical questions by a paper in the *Philosophical Transactions* on the action of crystallized bodies in homogeneous light; while, with astonishing versatility, in 1824 he had sufficiently mastered the subject of electricity to deliver the Bakerian Lecture before the Royal Society on the motion produced in fluid conductors when transmitting the electric current. We note these incidents merely to show Herschel's many-sidedness in his scientific work, not by any means to exhaust its list; for this many pages in the Royal Society's Index of Scientific Papers would have to be quoted. There is one item of what may be termed his miscellaneous work to which we must specially refer. In 1822 we find him investigating the spectra of colored flames, and these researches were carried on, at intervals at all events, till 1827, when he wrote, "The colors thus contributed by different objects to flame afford in many cases a ready and neat way of detecting extremely minute quantities of them." Here we find spectrum analysis almost stated in terms, and yet, although Herschel, Brewster, and Fox Talbot were on the track of the most brilliant discovery of our age, the clue was lost and little came of their labors. It is one thing to make observations, and another to plan and conduct researches in a perfectly untrodden field; and it is no disparagement of Herschel to make this remark in connection with his experiments on spectrum analysis, for although he would certainly, as a result of these experiments, have anticipated Kirchhoff and Bunsen, if he had been gifted with that kind of genius which dominates the mind of the discoverer, his mind was intent upon a great project which he did not delay to put into execution. This was nothing less than an endeavor to do for the Southern heavens that which his father and himself had done for the Northern ones. This project he carried into execution in the year 1834, by taking his celebrated 18½ inch reflector, of 20 feet focal length, made by him-

self, and a smaller refractor, to the Cape of Good Hope, and erecting his observatory at Feldhausen, near Table Bay. Here for four years of self-imposed exile his industry was simply unparalleled. It requires an intimate acquaintance with the working of large reflecting telescopes of the construction adopted by Sir John Herschel to appreciate the tremendous labor and patience involved in the work he had set himself to do. Those who have only seen astronomical observations carried on in an observatory where for the most part equatorially mounted refractors, with observing chairs allowing the utmost ease to the observers, are employed, can form no idea of the extreme discomfort of him who is perched high up, on a small stage, standing for the most part in the open air; yet this was Herschel's self-imposed duty, not only in his Cape observations, but in the earlier work to which we have before referred. Such was his industry that he by no means confined himself to his "sweepings," double star observations, and "night-work" generally. Some of the most beautiful drawings of sun spots that we possess are to be found in the volume in which his work is recorded, entitled "Results of Astronomical Observations made during 1834-38 at the Cape of Good Hope, being the Completion of a Telescopic Survey of the whole Surface of the Visible Heavens, commenced in 1825;" a volume, let us add, which was published partly at the expense of the Duke of Northumberland. In addition to all the new knowledge of old nebulae, and descriptions of those he had discovered in the Southern hemisphere, Sir John Herschel took advantage of the position at the Cape to delineate the magnificent nebulae of Orion, as well as that sounding η Argus, and to determine the places of all the included stars visible in his large instrument. The fidelity of these drawings is something wonderful.

We may fitly complete our notice of Sir John Herschel's work by referring to the two catalogues which within the last few years he has presented to the Royal and Royal Astronomical Societies—one of all known nebulae, in which are brought together all the observations of Messier, his father, himself, Lord Rosse, Lassell, Bond, and others; the other a *seventh* catalogue of double stars, completing the former lists presented to the Royal Astronomical Society during the years 1827-37.

So much in brief for Herschel's observational and experimental work. As a scientific writer he was equally diligent. Immediately after taking his degree, in 1813, he commenced writing on mathematical subjects, and afterwards these were changed for

physical studies. In the *Edinburgh Philosophical Journal* and in various encyclopædias articles of unsurpassed excellence and clearness are to be found from his fertile pen, for instance, his articles on Meteorology, Physical Geography, and the Telescope, which have been reprinted in a separate form. Some of this work appeared before he went to the Cape, as also his Preliminary Discourse on Natural Philosophy and his Treatise on Astronomy. In all these there is evidence of Herschel's great power as a writer, and of his appreciation of the importance of natural knowledge in itself; while his thorough acquaintance with the position of England with regard to science may probably have had something to do with the fertility of his pen. For instance, in his Treatise on Sound he writes: "In England whole branches of Continental discovery are unstudied, and indeed almost unknown even by name. It is vain to conceal the melancholy truth. We are fast dropping behind." This charge, we grieve to say, still holds good, because our Governments, existing as they do for political reasons, care little for the cultivation of science as a means of national advancement. This consideration gives additional value to another class of Herschel's writings—writings which have endeared his name to tens of thousands and made it a household word, and have been a powerful engine of instruction and a valuable incentive to scientific study.

With all his consciousness of intellectual powers, he was never tempted into the weak vanity of scepticism. Very lately he observed of a well-known work upon the origin of species, that, if its author had only recognized a Creator, he would have made one of the greatest discoveries of science.

Herschel's latest scientific publication was his *Outlines of Astronomy*, first published in 1849, a work which would have almost if not quite sufficed to make the reputation of any ordinary man; it has already run through several editions, and has been translated into several languages, Chinese among the number. The last publication which bears his name, was the fruit of that vigorous old age which sought recreation in change of occupation; and it is characteristic alike of the versatility of Herschel's genius and of the immortal interest of the Homeric poems, that his final volume should have been a translation of the *Iliad* into English hexameters. Sir John Herschel had long been accustomed to charm his friends by sparkling *vers de société*, and in his leisure hours he would divert himself with indulging in the composition of Latin verse.

It is some consolation to know that the

great man at whose labors we have rapidly glanced died full of honors in a ripe old age. Too often the merits of an English man of science are for the first time recognized when he has gone from among us. This was by no means Herschel's case. His scientific labors received the highest honors which the Royal Society, the Paris Academy of Sciences, and the Royal Astronomical Society can bestow. A baronetcy was conferred upon him on his return from the Cape, where, let us add, all his observations were made at his own expense. St. John's College conferred upon him the first of its Honorary Fellowships; Oxford granted him her D. C. L.; and Marischal College, Aberdeen, claimed him as its Rector. But he was never President of the Royal Society or of the British Association.

The distinguishing feature of his character was the quality which we can best describe by a very trite but expressive appellation, simplicity. The pride of intellect and the vanity of cleverness—qualities different in themselves, though often confounded—were equally absent from his nature, while that self-reliance which is their better counterpart never failed to assert itself. The womanly jealousies and partizanships which too often discredit the career of philosophers were abhorrent to his nature, while in the scramble for titular distinctions his form could never be desecrated. His spirits were those of a boy, happy, not only in the enjoyment of life, but in the consciousness of being able to give the highest pleasure to others, while his sympathy was ever ready and ever judicious.

It is a welcome indication of the growing feeling of the value and dignity of scientific work that the remains of Sir John Herschel should rest in Westminster Abbey, close to the grave of Newton. Of his private life in his beautiful home of Collingwood, at Hawkhurst, in the rich Weald of Kent, we should have much to say if we could bring ourselves to expose to the public gaze the interior of a household singular for the unbroken affection which united all its members, the earnestness and purity of its aims, the talent, the taste, the gracefulness of all its pursuits. The lady whom Sir John Herschel made the partner of his life was in every way worthy of him, with an intellect to apprehend his deepest studies, a self-forgetting devotion to ease every labor, a beauty and gentleness which lightened the philosopher's study with all the charms of graceful happiness. The children who grew up under such auspices reflected the virtues and abilities of their parents, while in Alexander Herschel we find the third generation of a family of science.

For Friends' Intelligencer.

THE test of true discipleship is love, and "love worketh no ill to its neighbor;" so far from this, it is even willing to deny itself for the good of its neighbor.

It is an enlightening principle in the human mind, far-seeing in its operations, and as we yield to these we shall be careful not to present anything as a beverage to others which may endanger them, but rather endeavor to shield all who come under our influence from temptations of every kind. I believe there is nothing we are so much in danger of *undervaluing* as our own *influence*, when it comes in conflict with our desires and opinions.

Let us, then, let our light shine in unobstructed brightness, and the cause of Truth prosper in our day by unceasing effort to fulfil the law of love, remembering the promise, "They who are faithful in the little shall be made rulers over more." R. H.

For Friends' Intelligencer.

"THE GOD-GIVEN POWER TO SEE OR RECEIVE A TRUTH, IS GOD'S COMMAND TO IMPART IT."

BY BENJAMIN HALLOWELL.

I regard all *truth* as coming from God, and hence eternal, universal, always good, and, from its nature, incapable, when rightly used, of being *anything but* good, to any person, in any place, or at any period. There is, and can be, no new truth. Every truth, however recently discovered, has existed through all time. Every mathematical or philosophical principle, every property of the triangle, the circle, or of material bodies, is eternal. No matter when or by whom it was discovered, *it pre-existed* in the Divine mind, and is the embodiment of a Divine thought. The mind of the discoverer is brought in harmony with, and to understand, the Divine mind, so far as to be able to receive this impress, or revelation from it.

Hence, all that the mathematician or philosopher can do is to *discover what previously existed*, although *unknown*. When Dr. Herschel, and Prof. Leverier, each discovered a "new planet," as it was termed, to which the names of Uranus and Neptune were applied, they were only favored to see what had existed from the time of creation. The *discovery* was new, not the *object discovered*. So of each principle and property in every department of physical science.

The same I believe to be true in relation to spiritual truths, which are as much realities as physical truths. They are from the same eternal Source, and communicated in like manner, whenever a mind or soul is *prepared*—that is, sufficiently enlightened, expanded, and purified—to see or receive them. And

every such revelation, spiritual or physical, is *for good to mankind*—is a blessing. Witness the happy influences of the physical discoveries within a century past, upon the comforts, conveniences, and interests of humanity. Besides the sewing machines, mowing and reaping machines, and various other *labor performing* inventions, that so expedite operations in the household and upon the farm, and lessen muscular exertion, the truths or principles upon which these rest, as well as all those other God-given ministers to man—the laws governing steam, so as to adapt it to the supply of so great a variety of our wants, and greatly to lengthen our lives if measured by what we are enabled to perform,—the sunlight to paint the pictures of our absent friends, and scenery and objects of interest in foreign lands, and thus "bring a distant country into ours" with a reliability that no human delineation can equal; and the same agent in spectral analysis, rendering such aid in understanding the composition of terrestrial substances, and giving a better acquaintance than was previously possessed with many bodies in the planetary and stellar regions,—the truths or laws of electricity and magnetism, in their application to that wonder, the telegraph, to electrotyping, and many other valuable and labor-performing processes; all of which and many others, may be regarded, so far as their general practical benefits are concerned, as the gifts of the last one hundred years. But unquestionably, these laws and principles have all existed from the epoch of creation. Then whence come they into use? And why at this time?

I have just now called these truths or discoveries "God-given ministers," for they are certainly "good gifts," and minister greatly to man's convenience and comfort, and we have the assurance that "every good gift, and every perfect gift, is *from above*, and cometh down from the Father of Light, with whom there is no variableness, neither shadow of turning, He being the same yesterday, to-day and forever."

Now, as we have the assurance of the apostle, which we all believe, that *God does not change*, and these "good gifts," though existing from the period of the creation, have been withheld, or rather not imparted to his children, beneficent as they would have been, till within the last one hundred years, and far the greater number of them, and the most valuable, till within the last half-century, there must exist *some cause* for this; *something* must have changed. I think it is *man*. There has been a progress in *humanity*. So far from man being a fallen being, and his *highest condition past*, so that we must *look back* for the most elevated and favored types of hu-

manity, the human family has been continually advancing, taken all together, from the first creation, so that man has come to occupy a higher plane than ever before. He has come nearer to God, and been enabled to partake more of His image, both in the creative faculty, so to call it, and in the diffusion of blessings to his fellow-creatures, so as to be capable of apprehending, receiving, and propagating the great truths that have long been waiting to burst forth in a revelation to bless mankind, as soon as a mind should be prepared to receive it.

But, this *preparation* must be by man. The *means* are furnished him, but he must industriously use them. He must put diligent inquiries to nature, and attentively and patiently await her answers. It is interesting to note how *gradually* all these revelations have been made. One person discovers one truth, and makes it known. This raises the mind one step towards the object. Then, the same person, or some one else, discovers another, and so on, until the present elevated degree has been attained, in all the sciences, and the arts resting upon them. This grand result has arisen from each discovery of a new truth, when made, being thrown into the common stock of knowledge, thus bringing up all well-informed and thinking minds to that level, and preparing them for further advances. Not that the highest possible degree, or one near it, is yet attained; great blessings, no doubt, are still in the Divine Treasury, waiting till some one is sufficiently advanced or elevated to receive them, and add them to the already long list of "good gifts" from above.

Now, let it be observed, emphatically, that these revelations, as I term them, or the knowledge of these truths or laws that have proved of such incalculable benefit to man, have not been made to, or obtained by, the idle and the thoughtless, but they are the reward of the industrious, patient, devoted *worker*, the close *observer*, the man who questions nature, with an unshaken confidence in the uniformity of her laws, which are the laws of God, and partake of His unchangeableness, wisdom, and goodness.

All this, in my confident belief, is equally true of spiritual realities, and the revelations of spiritual truths. Every God-given truth is good. These truths make up the heart or condition of humanity. Every added one expands the mind or soul, and increases its enlightenment. Their being successively imparted, is interesting evidence of the progress of humanity. They are not revealed to the idle and the thoughtless, but to the industrious and devoted seeker into the depths of his spiritual nature, watchfully observing the changes in his moral consciousness, inquiring

into the causes by which these changes are produced, and, by the aid of that Light which is freely furnished to all, discovering spiritual truths never before revealed. By this means he becomes deeply instructed in spiritual things, learns the nature and power of spiritual influences and forces, and that they are as real and invariable as those governing material bodies. When not restrained by considerations of policy arising from Society organizations, there is the same noble impulse to impart what has been discovered; to share with others the treasure that has been found, and place it in the common stock of knowledge. Such devoted workers were the venerated George Fox, Fenelon, Luther, Calvin, Wesley, and no doubt many others. George Fox in the fields and woods, in retirement,—Newton in his observatory,—Luther and Calvin and Wesley in places of silent meditation,—Davy in his laboratory, and others who have made discoveries in their respective provinces of research, were all industriously and devotedly engaged in studying those laws established by Deity, through which man may acquire a higher and fuller knowledge of His works, spiritual and physical, and of Him, and become a more enlarged recipient of His bounties and blessings.

A succession of these laborers, astronomers, chemists and other physicists, and also of the explorers and expounders of spiritual truths, has been steadily maintained, but their labors have been attended with very different results. In every department of science, whose votaries make known every discovery, or what is believed to be such, as soon as it is made, there has been a great and steady advance,—an advance proportioned to the industry, devotedness and skill with which they were pursued. One discovery prepared the way for another. Recognizing the unvariableness of the Great Father and of His laws,—that He was no respecter of persons, had no favorites, but that He rewarded humble and thoughtfully directed industry and research alike in all; it was seen that what one man had done others could do by the same means, and by using the additional knowledge his industry had gained, other laborers in the same field could even surpass. This important fact was continually verified in their experience, and herein lies the source of the successive and important discoveries and developments in the last hundred years, in every department of scientific pursuit.

In the *spiritual* department, if so it may be termed, the case has been very different. The field has been largely occupied, but the advance, if whatever change has been produced can be called an advance, has been

comparatively very slow. For this difference there must be some cause, and this cause must be with *man*, not *God*. *He* would assuredly reveal truths connected with man's higher life and eternal interests, as freely and fully as *He* has revealed those in the other departments which *He* has enabled man to explore.

The hindering cause or causes appear very clear to me, and I feel free to express my views in regard to them. They are principally two. Among the generality of the people from whom it would be expected such investigations and advancement would be made, a conviction has obtained that all revelation has ceased, that the whole mind and will of *God* respecting man is contained in the Bible; that every spiritual discovery, or illumination, must conform to what is therein recorded, thus regarding any advance as unhopd for and impossible, and that the *only* means of progress in a knowledge of spiritual truths, is to study this Book. Oh! if only all had been led to study the book of their own lives and experiences, the varying influences of their moral consciousness, with the same zeal and industry that they have studied the Bible (for I believe them honest,) what progress would they have made in the knowledge of spiritual realities! Even greater and of incomparably more benefit to man, than has been made in any department of physical science.

With Friends, who nobly maintain that *God* is unchangeable, and that consequently the blessing of His immediate revelation to man has not ceased, its benefits are yet not fully realized, from the belief which too generally prevails, that it was, in its fulness, made to George Fox, William Penn, and other early Friends, and that nothing therefore can be in advance of what was made known to and recorded by them, to which all doctrines and beliefs of members of the Society are expected to conform.

The second impediment is a prevailing belief that a knowledge of spiritual Truths is not obtained through devotedness, inquiry and observation directed to the influences of our consciousness, but that *God* reveals these truths, not naturally, but super-naturally to a favored few, and also that there must be great discrimination when and to whom these Truths are imparted: so that those who have been enabled to see more advanced and elevated Truths, are restrained from disseminating them, lest they should thereby disturb the harmony of the religious organization of which they are members. In this respect, society organization, though possessed of so many advantages, has been as a bond or restraint, preventing its development and growth.

Moreover, no two religious societies agree in what they maintain to be the fundamental doctrines essential to the soul's salvation, and ignoring reason and practical evidence, because it is feared they will conflict with super-natural revelation and some other received doctrines, no means are left by which to arrive at certainty in their conclusions on these most important subjects. In astronomy, chemistry, mathematics, and all the sciences, certainty prevails; but in spiritual realities, the most important of all, there are uncertainty and mystery, bigotry and superstition.

Now, with these views which I honestly entertain, it will be seen why I regard the "God given power to see or receive a Truth, to be *God's* command to communicate it," believing it to be for the benefit of the race, and not of the individual alone; and that every Truth that the Father reveals, is a *universal* Truth, and needed to bring up, or complement, the heart or mind of humanity to the present period in its progress.

A great loss, in my view, has been sustained by our Society, for want of a fuller and more honest expression of the deepest convictions of the soul, which I regard as the revelations of *God* to that soul, with authority to proclaim them. This revelation is by the language of impression. This language must then be interpreted to others, and the interpretation can only be as high and pure as accords with the highest conceptions of the recipient of the impression. But it is so much an advance in the right direction. By thus making it known, one of two benefits may arise. If erroneous, it may be corrected by more advanced minds; and if true, it may correct and enlarge the opinions of others, and, like the discoveries in science, lead to a still greater discovery.

Doubts have a right place in the mental and spiritual economy. They lead to a deeper and more careful examination of the subject, in search of evidence to establish the Truth. An honest doubt that one cannot remove had better be expressed than withheld. The expression may lead to the removal, not only from the mind that expressed it, but from many others, but if withheld, it may prey upon the soul like a canker.

It is my full belief, that less danger may exist, if there is any, from the free and honest expression of the deepest convictions of the soul, than has arisen from that "withholding more than is meet which tendeth to poverty." Truth is to be preferred in all things, because it is more in harmony with man's nature than the error it displaces.

The Truths to which I have referred a

being imparted by the Most High, are *universal Truths*, and, like His laws, they are of *universal application*. With regard to *special* utterances, injunctions, encouragements, or reproofs, it may be different. Truth I understand to be the reference of the Blessed Jesus in the quotation, "I have many things to declare unto you, but you cannot bear them now." These evidently were not *universal Truths*, but something *especially applicable to them*—some deficiency to point out, reproof to administer, or instruction to impart, which they were not then able to bear.

In the very instructive parable, when the servants proposed to gather the tares from among the wheat, the injunction was, "Nay, *let them alone, lest while ye gather up the tares, ye root up the wheat with them.*" The plan of the servants, as seen from the reply, was to "root up" the tares. But the wise and effective way is to "root up" nothing; contradict nothing; but to plant and nourish the *true seed*, plant Truth, propagate and cultivate Truth, and then, in accordance with the theory of "natural selection," that the strongest will prevail, Truth, being stronger than all opposing principles, and possessed of greater vitality and power, will flourish and spread, overshadowing and causing to decay and die out, everything of a contrary nature, till "the mountain of the Lord's house shall be established on the tops of the mountains, and exalted above the hills, and all nations shall flow unto it:" *which mountain is Truth.*

For Friends' Intelligencer.

A GREETING TO THEM THAT ARE AFAR OFF,
AND THEM THAT ARE NIGH.

Dwell in love, and the God of peace and love be with you. Abide in the true Vine, and your fruit will be to His praise. Keep low and humble, for herein is your safety and preservation. Watch daily unto prayer, that your vessel may be kept in sanctification and honor. Guard closely against evil suggestions, lest some root of bitterness spring up and trouble you, and many be defiled by its pernicious influences. Adhere simply to impressions made by the Divine Spirit. Enrich the soul by dwelling on the sublime truths unfolded by an emanation from the pure Fountain of light and life, through whatever channel conveyed; the more we cherish and nurture these, the more lovely they appear, and we exclaim with the apostle, "Oh! the depth of the riches both of the wisdom and knowledge of God! How unsearchable are His judgments, and His ways past finding out." Let us cease all endeavor to scan the infinite, all-wise Jehovah through the unaided intellect, but open every avenue of the heart

to the revealings of the Holy Spirit. If the eye be kept single to these, light will spring up, and by the glorious inshinings of the Sun of Righteousness shadows will flee away, vapors will be dispelled, and in communings with the soul's Well-Beloved, we will realize the truth of prophetic vision in days gone by: "Thou shalt see the King in His beauty;" "Thine eye shall see thy Teacher." This Heavenly guest when received becomes the chief among ten thousand, and altogether lovely. His invitation to the young is: Come up higher; tread in the paths of virtue, give the brightness of your days to the service of your Redeemer; purify your souls in obeying the truth, and when the day of final reckoning comes, the language may be heard, Bring hither my servants that have made covenant with me by sacrifice. They shall walk with me in white, for they are worthy. How much of heaven would come down to men, did all live this life of dedication. The erring would be reclaimed, the sorrows of the suffering mitigated, the balm of consolation would calm the troubled and sorrow-stricken, the hungry would find that "in the Father's house was bread enough and to spare," and the thirsty, that streams from the river of life were ever flowing.

May all so live as to be recipients of that blessing which maketh truly rich, and to which no sorrow is added.

Scrap

FROM UNPUBLISHED LETTERS.

Thy early and welcome reply to my note accompanying the communications alluded to, reached me yesterday. The assurance thou gave me that they were anticipated was quite strengthening; as I begin to have that faith which hopes to so walk in the best wisdom, as will bring me into harmony with all souls resting in the true faith, so I find these evidences add to my strength and hasten my progress. To-night my spirit seems to be under a cloud, and I find it best at such times to stand still, holding to the anchor of faith, until the sunlight again dispels the darkness.

I realize that I am young in religious experience, and crave counsel from those who have gone before me, yet I feel that whatsoever my hands find to do, I should do, trusting all results. We here, I think, and I hope everywhere throughout our Society, are arousing to a desire to improve our condition, and my heart has craved that all who

seek may be watched over and guarded and guided into a strength that can walk alone, under the influence of Christian love and spiritual insight into their needs. I believe that instrumentalities are used to aid all or nearly all children in their first steps physically. May those who might be used as instruments be spiritually alive and watchful, willing to aid the weak and steady the tottering steps of the little ones.

SANTEE AGENCY.

The warm weather is progressing, and with it our busy time approaches rapidly. Our crops look well, and while I write we are having a violent thunder storm with copious rain, which I presume will insure our wheat and help our corn very much.

I send thee some cottonwood seed, which thou wilt perceive is very much like thistle-down. It is blown over the country in great abundance. The seed of the willow is also a downy seed, though smaller. We may see in this a wise provision of Providence for supplying this country with wood, these seeds being so easily carried, and as easily covered by the shifting sands of our rivers; thus is insured the growth of myriads of young willows and cottonwoods.

The cactus plants I have sent to my friends *should* bloom. They do here in great perfection. I have one in my yard about 10 inches in diameter, bearing 40 flowers. The prickly pear also blooms. The flowers on it are larger and of a rich yellow color, but not so fragrant as the cactus. We have another plant which bears spikes of flowers two feet long, white, and bell-shaped. One stalk is quite enough for a handsome bouquet, but it grows on the tops of our barren hills where its beauty is lost to us.

By a letter received from Wisconsin, I find the potato bug has destroyed their crops to such an extent that many farmers have ploughed them under. Here they have not been quite so bad. It has been a new experience for me. One morning I took a bucket and went through my patch, knocking the tops of the vines over it, and in the course of two or three hours I collected a gallon of these vermin. Where they are allowed to have sway, they destroy everything, leaf and branch, and were they not a slug-gish insect we should not be able to overcome them. They increase so rapidly that we find them in all stages of growth, from the leaf covered with eggs to the great grand-parent, and as their appetites are always good, whatever their age, the result may be seen.

A GOOD conscience is a continual feast.

FRIENDS' INTELLIGENCER.

PHILADELPHIA, SEVENTH MONTH 15, 1871.

THE INDIANS.—From a private letter we have obtained information that the four Pawnee Indians so long imprisoned at Omaha were released from jail *on bail* on the 13th ult., and allowed to go to their reservations. They had been in prison there about twenty-two months. After they were tried in the U. S. Court and turned over to the State authorities, they were indicted by a grand jury in Butler county, and the case transferred by a change of venue to Lancaster county, to be tried at Lincoln. Superintendent S. M. Janney attended the court there several times with counsel and witnesses, but the prosecuting attorney was never ready. On the 5th ult., at Lincoln, the counsel on behalf of the prisoners presented a petition praying for their discharge, which the judges promised to consider. They were brought before him by a writ of habeas corpus in Omaha, when agent Troth and the four principal chiefs were present. The judge decided to admit them to bail if the chiefs would become responsible for their appearance at the next term of court, to be held in the Fall. He required the chiefs to enter bail in the penalty of \$5,000, and Superintendent Janney and Agent Troth jointly in the penalty of \$1,000. The terms were accepted; the chiefs readily pledging their annuity money to that amount, and the prisoners went home rejoicing. It is thought that Yellow Sun will not live long, and it is said that he is the only one among them that would probably be convicted if tried.

DIED.

CLEAVER.—On the 19th of Fifth month, 1871, near Westland, Washington Co., Pa., of paralysis, Jane Cleaver, wife of Peter Cleaver, in the 72d year of her age; a member of Salem Monthly Meeting, Ohio.

OWEN.—Suddenly, near Fair Haven, Puebla Co., Ohio, Abbie A., wife of David Owen, aged 30 years. She was the daughter of Abner S. and Esther W. Scott, members of Westfield Monthly Meeting of Friends. She had been a sufferer for many months, but was thought by her physician and friends to be improving in health; but as "in the twinkling of an eye," she was called from earth to heaven. She gave evidence of unusual thoughtfulness. From early childhood it was her daily practice to read the Scriptures of Truth, and her dear parents were com-

forted in the perusal of a diary of her feelings on serious subjects, clearly manifesting the close self-examination to which she felt herself called. When health permitted, she was a regular attender of the meetings of Friends of which she was a member; the earnest zeal with which she labored to establish a First-day School in her own neighborhood, gave encouragement to those less hopeful in the good work, and she lived to realize something of the blessing of obedience to the command, "In the morning sow thy seed," &c. We have an abiding trust that her concern was to walk in that "straight and narrow way" that leads to life eternal; and in her life and in her death there was a recognition of this truth: His ways are ways of pleasantness, and all His paths are paths of peace.

CIRCULAR MEETINGS.

- 7th mo. 16. Schuylkill, Pa., 3 P.M.
 " Bethpage, N. Y., 11 A.M.
 " Jerusalem, N. Y., 3½ P.M.
 " Gunpowder, Md. (old house), 10 A.M.
 No meeting at other house.
 " Woodstown, N. J., 4 P.M.
 " 23. Salem, N. J., 4 P.M.
 " 30. Alloways Creek, N. J., 3 P.M.
 8th mo. 6. Greenwich, N. J., 3 P.M.
 " Moorestown, N. J., 3 P.M.
 " 13. Port Elizabeth, N. J., 10 A.M.

FIRST-DAY SCHOOLS.

The Association of Friends within the limits of Philadelphia Yearly Meeting will hold its next meeting at Penn's Manor Meeting-house, Bucks Co., Pa., on Seventh day morning, Eighth month 5th, at 10½ o'clock, to which the several First-day Schools and similar organizations are invited to send delegates, and such reports and other communications as will add interest to the meeting. The attendance of Friends generally is invited. Passengers will leave at 7 o'clock in the morning in steamer "Twilight" from Chestnut Street wharf, Philadelphia, and return in the "Forrest" at 6 P.M. from Robbin's Wharf. Cars leave Kensington Depot for Tullytown at 7 A.M.

Jos. M. TRUMAN, JR., } Clerks.
 EMMA WORRELL, }

The Executive Committee will meet on board the steamboat on its upward trip, at 7½ o'clock.

D. COMLY, Clerk.

For Friends' Intelligencer.

TWO DAYS AT THE BEACH.

We have just returned from two delightful days at Cape May, and long to have every one who goes thither find the same sweet, fresh, delightful stopping-place.

Our friends Walter W. Green and his wife have taken the house on Ocean St., called La Pierre, and neatly fitted it up with every accommodation for a Friends' boarding house. Comfortable, airy chambers extend along each side of a wide hall, through every story of the large and commodious building, affording pleasant draughts of air in all directions. The house is about a square from the beach, and in all its appointments leaves nothing to

be desired. Taken all in all, we found our two days' sojourn there full of refreshment and delight.

Philada., 7th mo., 1871.

J. P. G.

A word of encouragement seems due to the editors of the *Intelligencer*, in the great and important duties that devolve upon them in gleaning and preparing matter so useful and encouraging to a large number, not only of our own particular fold, but to many of other denominations, who are perusing it with a concern to find that upon which the mind can rest with a degree of confidence and hope. The high moral tone and the deep religious feeling, so beautifully blended with the spirit of kindness, liberality, and love, as portrayed in its pages, is very evidently touching a tender chord in the hearts of many who until recently have stood aloof from us with a degree of fear. This has been very much the case where our numbers and meetings are small, and the evangelical element, so called, has greatly preponderated. But I am rejoiced to see and feel that a more wholesome sentiment is unfolding, which I trust will more and more be developed as we are individually concerned to place our light upon the candlestick, that the light thereof may be shed abroad. As a means of attaining this much-desired end, it rests upon my mind to encourage Friends throughout our widely extended country to use their influence to extend the circulation of the *Intelligencer* as much as practicable, believing that a weekly periodical of such pure and unsectarian tendencies is much needed, and would direct attention to that light that enlighteneth every man that cometh into the world, but which is lying too much obscured in the minds of many.

7th mo. 3d, 1871.

S. S. T.

LOCAL INFORMATION.

Fishing Creek Half year Meeting was held on the 22d and 23d ult. The meeting of Ministers and Elders, and also Fishing Creek Monthly Meeting, occurred on the 21st. Besides our own members generally, Amos Jones, Mark and Louisa A. Wright, from Bucks Quarter, Sarah T. Betts, from Abington, and Susan N. Williams, from Philadelphia, were present with minutes—and Catharine Foulke, from Stroudsburg, and Jeremiah Moore, from Centre Quarter, ministers, and several Friends from different places without minutes. Much was communicated in the different meetings, both with regard to doctrine and practice. Supplication was more than once offered. One Friend, at the close of her testimony, and while still standing, poured forth her feelings in supplication, the people keeping their seats.

It was very impressive. The public meeting on the 23d was larger than usual—many extra seats were brought in and filled. We have had, I think, a pleasant and profitable meeting.

My object in writing is to continue an interest in our meeting in the minds of Friends in other places, for we like to be visited.

Milville, 7th mo. 2d, 1871.

G.

FROM NEW YORK.

During the late Yearly Meeting of Friends in this city, a joint meeting of the men and women was held on Fifth-day morning, in Rutherford Place meeting house, to hear the report of the committee having charge of the Indian concern, at which the writer of this was present.

It was a very large meeting, and doubtless contained a few who were not members. But could it have been a public meeting, and due notice given, the house would, perhaps, not have held one half of those who would have attended on the occasion. Such is the deep interest that seems to exist in the public mind, at this time, in that which is known as the "Quaker Policy."

The report consisting of the minutes of the committee for the past year, and other matters, was read by a member of the committee, occupying over an hour and a quarter, and was closely listened to by all present. The writer happened to sit where he had a view of nearly the whole meeting, and never before has he seen a large assembly so completely absorbed in the subject before them, thus giving unmistakable evidence of the deep interest felt in the progress of this important experiment.

Several communications followed, generally applying to the subject in hand, and one Friend, after speaking of the great responsibility which rested upon the Society, and the heavy burthen of duty it had assumed, expressed the hope, and trust that Divine assistance would continue to be extended to them, and make their labors a success. She then, in few words, set forth the necessity that all should extend a helping hand, with means to carry on the work.

This, in the opinion of the writer, is a matter of great moment. If men and women can be found to leave the comforts of civilized life and go to dwell with the rude, untutored Red Man, to be to him an earthly Redeemer, the least those can do who remain in comfort at home, is, to make the path of those good men and women comparatively easy, by a generous and continued contribution of means. Thus placing at their disposal, a lifting power for the elevation of the Red man.

Let no one sit down with folded hands, and

wait for the wealthy, but let each do a share according to his or her capability, and then whatever the result may be, they will not be troubled with remorse for neglect of duty, but will have the pleasant reflection of having done what they could.

Think for a moment, how few dollars an hundred yards of cheap calico cost, and how many neat garments for their Indian sisters, an association, meeting in pleasant reunion, can construct out of them, and how pleasantly the hours would pass devoted to such duty. There is scarcely a village or neighborhood, which does not contain persons enough of the right sentiment to form such an association, if they only awake to the fact that there are many ways in which they can singly, or in association, by the sacrifice of a little time and money, assist in leading our red brothers and sisters to adopt the habits of civilized life, thus furthering the great cause. The progress made during the past two years, through the self-sacrifice, industry and devotion of those on the scene of action, and the generous aid furnished to them, give pleasing hopes of success in the coming time. In fact that "good time coming" seems almost in sight, when the poor Indian will be acknowledged to have rights, which white men will be bound to respect.

Failure is too gloomy to contemplate; involving as it possibly would, a recurrence to that fratricidal, and more than savage theory of extermination of the Red man by the sword.

On the other hand, the successful working out of the PEACE POLICY, with all the blessings which will follow in its train, will be cause of gratitude to the hearts of all good men and women.

D. D. W.

6th mo. 30th, 1871.

MORAL INFLUENCE.—The influence of a good example is far reaching; for our experience and conflicts with the world lead us at times to indulge misanthropic sentiments, and charge all men with selfish and impure motives. The play of pride, prejudice and passion, and the eagerness manifested by the great majority of men to advance their own interests, often at the expense of others, and in violation of the golden rule, cause us to look with suspicion on the best intents of others. Arrogance, hypocrisy, treachery, and violence, every day outrage justice, till we are almost disposed to distrust human nature, and become discouraged. But amid all that is sad and disheartening in this busy, noisy world, now and then there is presented to us a life of such uniform virtue that we recognize in it a character that brings hope for the perfect development and ultimate regeneration

of our race. Such characters are precious, and such examples should be held up to the world for its admiration and imitation; they should be snatched from oblivion and treasured in the hearts and thoughts of all who are in process of forming habits and maturing character.

For Friends' Intelligencer,
SWARTHMORE COLLEGE.
COMMEMORATION DAY.

The annual closing exercises at Swarthmore took place on Fourth-day, the 28th of Sixth mo., commencing at 11 o'clock A. M. The day was unusually fine, and at an early hour visitors began to come in by the different trains and in private conveyances, and upon the arrival of the special train, a few minutes before the hour appointed for the opening, the college was thronged as it has never been before since it was first opened for the admission of students. In a few moments, the large public hall where the exercises were to take place was completely filled, the seats in the centre of the room being reserved for the students, who, after the audience were seated, filed in, in the most quiet and orderly manner, and took their appointed places. The members of the Board were generally present, and many interested friends from the limits of the three Yearly Meetings, New York, Baltimore and Philadelphia.

Punctually at the hour appointed, the Principal, Prof. E. H. Magill, opened the exercises by the following introductory remarks:

"We are assembled to-day, my friends, to listen to some exercises in original composition and selected declamations, prepared by the students of Swarthmore, as a fitting public close of the more arduous labors of the year. We trust that you will all bear in mind that, while we claim the name of a college, we have been in existence but two years, and have not, therefore, any graduating class to present to you to-day, our most advanced students being those who entered with us as Freshmen two years since, and who are, therefore, just closing their Sophomore, or second collegiate year. In two years from this time we hope to send forth our first graduating class, and we trust that we shall be able to present to you at that time exercises in every way worthy of the young men and women who shall then have completed their full collegiate course. In judging of our exercises to-day, you will therefore remember that we do not aspire to reach the level of an ordinary college commencement, and if in expression, and utterance, and depth of thought, we fall but *two years* short of what the managers and friends of the college have a right to

expect of its graduates, we should be content."

The first speaker was then introduced, and the exercises proceeded according to the following programme:

"Tauler," by John G. Whittier. A declamation by Margaret H. Carpenter, of the Sophomore class.

"How they brought the Good News from Ghent to Aix," by Robert Browning. A declamation by Wm. Rodman Wharton, of class A.

"Republics and their Faults." An original essay by Phebe A. Field, of the Sophomore class.

"Woman's Rights," by Wendell Phillips. A declamation by Susanna P. Wharton, of class A.

"Politeness." An original essay by Elizabeth C. Miller, of the Sophomore class.

"Watch on the Rhine." A declamation by Anne M. Lukens, of the Freshman class.

"Painter of Seville," by Susan Wilson. A declamation by Edith R. Hooper, of class A.

"What is it to be a Quaker?" An original essay, by Maria C. Pierce, of the Sophomore class.

"Progress of Humanity," by Charles Sumner. A declamation by George E. B. Conrow, of the Freshman class.

"Robespierre aux Français." A declamation by Helen Magill, of the Sophomore class.

"The Occultation of Orion," by Henry W. Longfellow. A declamation by S. Frank Parrish, of the Sophomore class.

"The Station of Woman." An original essay by Ella H. Evans, of the Freshman class.

"The duties of Students." An original essay by James Walter Pancoast, of the Sophomore class.

Amid so much that was excellent and commendable, both in the original and selected performances, it would be invidious to particularize, but we may be allowed to say that if these are to be taken as an augury of what the future is to bring, the young men of the rising generation are destined to find in their sisters and female friends no unworthy rivals in their aspirations for literary and forensic ability. The care evinced in the preparation of the various exercises, and the ability displayed, were highly gratifying to the friends of the college present, reflecting credit upon the students for their faithful and successful efforts, and upon their instructors for the pains taking and conscientious training which they had evidently received.

At the close of the exercises, the President of the Board, Samuel Willets of New York, expressed the deep interest which he had always felt in the college, an interest which had been

strengthened and deepened by what he had heard and witnessed this day; and he most earnestly invoked, on behalf of all entrusted with the management of Swarthmore, the aid of that Power, without whose guidance all human effort can be of no avail.

After the dismissal of the audience, a universal expression of pleasure and approbation was heard on every side, and the friends of the college separated to their homes, feeling that the future of their beloved institution never appeared brighter than to-day.

Most of the students return next year, and the prospect is the list will be quite full before the summer vacation is over.

DIVINE PROMPTINGS.

Often, in temporal matters, we are warned by a secret voice, which comes to us like a mandate from above, to do, or forbear. It is always wise to accept such warnings. We cannot hope to prosper if we sacrifice our own instinct to formal reasons and the judgment of others. People come to you, when you are hesitating between two courses of conduct, and say, Do thus or so. It is all very well, so long as no instinct of your own prompts otherwise; but if something within you says, Do no such thing, then be sure you do no such thing. If this is true doctrine in matters of temporal import, how much more in things pertaining to our spiritual well-being! Resist not the sacred force! Beware of alienating the Divine influence! Whenever you feel yourself prompted to any good work, to any act of kindness or self-denial, to any course of discipline or holy living, accept the impulse, hasten to obey while the fire burns. It is God that speaks in these secret promptings. Harden not your heart when you hear that voice. The Spirit will leave you if you refuse obedience; every warning disregarded is a door closed against future progress. If you do not now the good which you can, the time will come when you cannot do the good that you would.—*Dr. Hedge.*

PUBLIC DUTY.

Among the means of self-culture so liberally spread before the people of a free land like our own, there are perhaps none less appreciated as such, than the relations and duties which each man owes to the State. Indeed, it is not uncommon to see good men shrinking from all political action, from the very motive of preserving their characters from the corruption which they conceive to be inevitably involved in such an arena. The violence of party spirit, and the fraud and corruption to which it leads, induce them to think they can best subserve their

personal improvement, by quietly laying down the responsibilities and duties which rest upon them as citizens. If they were right in this conjecture, if personal self-culture really required the sacrifice of solemn obligations to others, we should even then despise the selfish spirit that would seek to benefit ourselves at the expense of a public duty, but this is not the case. No such perilous choice exists, save in imagination. The welfare of every individual is wrapped up in the welfare of the public, and will only be promoted in proportion to his brave and unreserved acceptance of every responsibility, and fulfilment of every duty that falls to his lot.

Aside from this, however, the political obligations which are binding upon every citizen of a free government have in their observance a direct and important influence for good upon his personal character. If he discharge them faithfully, he must be prepared to discuss great subjects, to decide important interests, to determine measures affecting not only himself and his generation, but also of posterity. He must consider the resources of his country and her foreign policy; must cultivate an earnest desire for her prosperity, and a still greater anxiety for her integrity. Can he sedulously inform himself on topics so momentous without enlarging his mind and strengthening his judgment, or can he cherish such a spirit of patriotism without elevating his moral nature? Every impartial and thoughtful person will see at once that he cannot. The public questions continually arising, and appealing as they do to his reason and intelligence for decision, necessarily expand his intellect, and raise his thoughts above merely selfish interests, thus giving him a breadth of view and a force of character that can never distinguish the people under a despotic government.

If these are not the actual results upon the minds and hearts of those who do take an active part in the politics of their country, it is not the fault of the subject itself, but of the spirit that is brought into it. It is because honesty, candor and simple, earnest patriotism are laid aside, and replaced by selfishness, artifice, fraud, malice and party spirit, in its worst forms. It is undoubtedly right that every citizen should support that side in politics which in his conscience he believes to contain the best principles for the country's good. But if, when he does this, he merges his own judgment and moral sense in the party he has espoused; if he upholds them in all things, and at all hazards, regardless of his own responsibility to support only what is true and right; if he yield to the blind fury which inspires hatred of every

one who differs in opinion and resistance to every measure that an opposing party can suggest—then indeed he degrades politics; and corrupts his own nature.

Whenever a party becomes dearer than a principle; whenever victory is more precious than truth, then moral independence receives its death blow, and political life is robbed of all its significance. The vindictive spirit that inspires so many to malign the motives and to bring the most unfounded charges against the leaders of any opposing party; the selfish artifice to obtain power and station; the frauds and bribes used to corrupt men and obtain their votes, are so utterly opposed to all justice and goodness that we cannot wonder that those who believe such things to be inseparable from politics, should hold themselves aloof and shrink from pollution. But the mistake they make is in confounding the subject itself, which is weighty, momentous and noble, with the spirit so often brought into it. The politics of a free country need the soundest minds and the purest hearts that the land can furnish, and these, if all brought to bear upon its high and absorbing interests, will purify what is now corrupt, and ennoble what is now sordid. Duties and responsibilities can never be shirked for any cause without damage to the character. As well might a man resign his domestic relations because there are unfaithful husbands and fathers, as to refuse to fulfil his responsibilities of citizenship because many citizens are perfidious.

Nor can any man in this country plead inability to become a power for good in this direction. Every one who has good sense enough to pursue his own occupation, if only independent in thought, pure in heart, and loyal to his conscience, may become a signal influence in his country's welfare. Each one here is invested with power; let him see to it that he neither tamely lay it down and bury his talent in the ground, nor yet employ it for base and unholy purposes. Let him determine to acquaint himself as far as possible with the constitution and laws of his country; to obtain a clear understanding of the questions which agitate the community, and the principles which underlie them; to judge impartially of the characters and actions of those whom he aids to put into authority; and above all firmly, yet modestly, to act his part, when the time comes, from pure motives, and with an independent mind; and thus will he exert a sensible influence for good on his country's welfare, and at the same time develope truth and virtue in himself.—*Public Ledger.*

STAND FIRM.—With all the lessons that

humanity has to learn in life's school, the hardest is to wait. Not to wait with folded hands that claim life's prizes without previous effort, but, having struggled and crowned the slow years with trial, seeing no such result as effort seemed to warrant—nay, perhaps disaster instead. To stand firm at such a crisis of existence, this is greatness, whether achieved by men or women.

THE OLD FAMILY CRADLE.

Laid in the garret, where darkness and dust
Are the sole wardens of many a trust,
Silently standing amid its compeers,
Motley mementoes of many score years,
Shapeless and homely, a cast-aside thing,
Thus the old family cradle I sing.

Once with vermilion its coating was gay,
Now all its brightness is faded away;
Worn is the paint from the sides and the head,
There no soft coverlid longer is spread,
And the stiff rockers creak over the floor
Like a rheumatic, limb-weary and sore.
Yet there are thoughts full of goodness and grace
Brightening with beauty the homeliest face;—
Speak to us now of the years that are fled,
Changed are the living and peaceful the dead;
What are thy memories mournful and glad,
Family histories, mirthful or sad?

Once a young mother bent over thy side,
Fair, as a maiden, and blest, as a bride,
There were warm kisses and tears of delight,
And the kind angels looked pleased at the sight.
While the old cradle rocked gently away,
Seeming in musical murmurs to say,
"To and fro, to and fro, little one, sleep—
Angels their watch o'er thy cradle shall keep;
To and fro, to and fro, thus as we rock,
Softly and solemnly ticketh the clock,
And the swift moments, while hurrying by,
Lullaby, lullaby, sing as they fly."

But the light moments bear years on their wing—
Summer and Autumn and Winter and Spring
Quickly succeeding, pass quickly away,
And the young parents are care-worn and gray;
Children are gathered by table and fire,
Blessing and honor to mother and sire.

Still the old cradle rocks steadily there,
Still there are treasures to trust to its care;
He who its pillow in infancy pressed,
Soothed by the song of a mother to rest,
Now in his manhood stands proud at its side,
Watching the sleeper with fatherly pride,
And the old cradle as lovingly still
Guards like a casket its jewel from ill.

Gone are the aged ones now to repose,
Sleep which no dreaming nor weariness knows—
Gone are the children who grew by their side
Far from the home of their childhood and wide,
And the old cradle, forsaken, forlorn,
To its long rest in the garret is borne.

Yet not forever its usefulness o'er,
In age it is summoned to service once more.
Another new comer, bewildered, astray,
Would sleep in thy bosom its troubles away.
But alas for the love that its sorrows would share,
Alas! for the ceaseless and weariless care,
A guardian sterner is sought in thy room,
And the sleep of the cradle exchanged for the tomb.

Rest, then, old friend, in a quiet profound,
 Stirred not nor startled by movement or sound,
 Or if the wind, with its deep, mournful sigh,
 Bring to the memories long since gone by,
 Softly as one who may murmur in sleep,
 Rock in thy dreams, and thy solitude keep.

—*Massachusetts Teacher.*

J. K. L.

A LESSON.

Last night I weighed, quite wearied out,
 The question that perplexes still;
 And that sad spirit we call doubt
 Made the good nought beside the ill.

This morning, when with rested mind
 I try again the self-same theme,
 The whole is altered, and I find
 The balance turned, the good supreme.

A little sleep, a brief night's rest,
 Has changed the look of all that is!
 Sure any creed I hold at best
 Needs humble holding after this.

—*Chambers' Journal.*

JOHN WOOLMAN'S RELIGION.—In the season of harvest it was customary among farmers to kill a calf or sheep for the laborers. John Woolman, unwilling that the animal should be slowly bled to death, as the custom had been, and to spare it unnecessary suffering, had a smooth block of wood prepared to receive the neck of the creature, when a single blow terminated its existence. Nothing was more remarkable in the character of Woolman than his concern for the well-being and comfort of the brute creation. "What is religion?" asks the old Hindoo writer of the Vishnu Sarman. "Tenderness toward all creatures." Or, as Woolman expresses it, "Where the love of God is verily perfected, a tenderness towards all creatures made subject to our will is experienced, and a care that we do not lessen that sweetness of life in the animal creation which the Creator intends for them under our government."—*Whittier's Journal of John Woolman.*

A PRESENTIMENT.

The Scranton (Penn.) *Republican* tells the following sad story of one of the victims of the late Pittston, Penn., coal mine disaster:

William James expired about 3 o'clock on the afternoon of the Tuesday following the catastrophe, and was the last added to the list of those upon whom the death angel laid his hand in that awful havoc. He was a Welshman, and had been in this country about seven months. On the morning of the dreadful day in question he had taken his breakfast, and his wife had made ready his dinner and set the pail beside him. For some time he sat wrapped in thought, his arms folded, his eyes fixed vacantly upon the stove, and a deep melancholy apparently brooding over him. He was aroused from

his reverie by his wife telling him that his dinner was ready, and that he would be late, as the bell had rung. He started to his feet, and gazing upon her for a moment with a look full of tenderness and significance, said to her, "If I should not come back alive, would you be in such a hurry getting me out?" The wife answered "No," but remarked that "if he was going at all, it was time he was gone." He lifted his pail without saying a word, and after kissing his wife, kissed his four little children, who were sitting playing on the doorstep. When he had got about fifty yards from his home, he returned again, and kissed wife and children once more with great fervency. His wife noticed that he was the victim of gloomy forebodings, and as he turned away she was about to entreat him not to go to work if he apprehended any danger. But hope and courage, and the necessities of their family, overcame her intention, and she let him go. She stood in the door and watched him on his way to the fatal pit. When at a point where he turned out of her sight, he paused and cast a wistful look toward his home and little ones, and, seeing his wife, waved with his hand a last adieu. He parted with his loved ones forever.

TRUTH IN BRIEF.—Anybody can soil the reputation of an individual, however pure and chaste, by uttering a suspicion that his enemies will believe and his friends never hear of. A puff of the idle wind can take a million of the seeds of a thistle, and do a work of mischief which the husbandman must labor long to undo, the floating particles being too fine to be seen and too light to be stopped. Such are the seeds of slander, so easily sown, so difficult to be gathered up, and yet so pernicious in their fruits. The slanderer knows that many a mind will catch up the plague and become poisoned by his insinuations, without ever seeking the antidote. No reputation can refute a sneer, nor any human skill prevent mischief.

EARLY IMPRESSIONS.

We once read in an old "Journal of Education" a series of articles well worthy of regard by all who have the care of the young, but principally of mothers; since it is they who are the special agents in the formation of the habits and character of their offspring. We give a faithful transcript of the ideas, though the language may not convey them as elegantly as in the original.

The object of education is to form the character, not by means of regular stated lessons, but principally through the influence of example and surroundings. From the

moment the infant opens its eyes, and feels the pressure to its mother's bosom; from the hour it becomes capable of noticing objects around it, for instance: the light, bright colors, or whatever is passing before its vision, the child is exposed to right or wrong influence. So powerful and gradual are the influences of these early months, though unnoticed by the parent, that at ten months, if humored and indulged, the infant will have become a petty tyrant, and in two or three years a thing so selfish, discontented and irritable that everybody but the fond mother turns from it in disgust. During infancy and the early period of childhood every human being is making his or her first observations, and acquiring his or her first experience, forming habits that become ingrained into his or her character for life. Right or wrong notions, according to surroundings and influence, will take such firm hold; and good or bad impressions, depending upon circumstances, sink so deep as to be with difficulty eradicated—perhaps too strong for any after force that may be brought to bear against them to effect. There is no doubt that much of that crookedness of disposition attributed to nature would be found, if properly traced, to have originated in the early circumstances of life, in the first influences and impressions; just as a crooked, stunted, unsightly plant is so, not from any natural defect in the seed from which it sprung, but from the circumstances of the soil and situation where it grew, the influence of light and shade, the degrees of heat and cold to which it was exposed. At the root of all good influence is example. Whenever the home atmosphere is clouded by the elements of discord, arising from ungoverned passions or wrong tempers of the parents, or any older members of the family household, it is impossible that the dispositions of the children should be kept in a healthy state; or if the heads of the family are addicted to melancholy or reserve, can the young branches be said to breathe a wholesome air? "Boys make men," and the man will not easily forget the character of the influence brought to bear on his boyhood's home. Then, too, when childhood has passed, and, as young men and women, the children find themselves not quite so good perhaps as they themselves could wish to be, they not unfrequently reflect upon the training they received; and a feeling of bitterness will creep into the most affectionate heart against those who, by wrong management, marred what by nature was perhaps a lovely character; or by a total want of control allowed passions to gain the mastery, and smother the good that by proper training might have been cultivated and developed.

The importance of making just impressions on the young mind first is very great, and such impressions depend upon the mother. It has often been said that no man, however depraved or vicious, need be wholly despaired of with whom his mother's influence still lingers on the side of virtue. It is his last preserving link; and as it operated sweetly when life was new and experience unsullied by lasting stains, so in the hour of strong temptations it often operates with a potency peculiarly its own. It is the early impressions she makes on the character of her child that determine the character of her influence over the man.

"If thou wouldst be happy and easy in thy family, above all things observe discipline."

REVIEW OF THE WEATHER, ETC.

Have we had an Earthquake?

SIXTH MONTH.

	1870.	1871.
Rain during some portion of the 24 hours.....	14 days.	10 days.
Rain all or nearly all day....	2 "	1 "
Cloudy, without storms	2 "	5 "
Clear, as ordinarily accepted	12 "	14 "
	30 "	30 "
TEMPERATURES, RAIN, DEATHS, ETC.	1870.	1871.
Mean temperature of 6th mo., per Penna. Hospital,	77.21 deg.	74.51 deg.
Highest point attained during month.....	95.50 "	90.50 "
Lowest do. do. do.	61.00 "	60.00 "
RAIN during the month, do.	2.89 in.	3.77 in.
DEATHS during the month, being for 4 current weeks for each year	1140	1211*
Average of the mean temperature of 6th month for the past <i>eighty-two</i> years....		71.21 deg.
Highest mean of temperature during that entire period, <i>last year</i> (1870).....		77.21 "
Lowest mean of temperature during that entire period, (1816),.....		64.00 "
COMPARISON OF RAIN.	1870.	1871.
First month,	4.07 inch.	3.46 inch
Second month,	2.53 "	3.08 "
Third month,	4.06 "	5.81 "
Fourth month,	5.60 "	1.82 "
Fifth month,	6.28 "	3.38 "
Sixth month,	2.89 "	3.77 "
Totals, for the first 6 months of each year,	25.43 "	21.32 "

*This is the first month of the *present* year wherein the deaths have *exceeded* the corresponding record of *last year*, the statistics standing thus: For *twenty five* weeks of 1870, ending with 6th mo. 25, 8207 For do. of 1871, ending with 6th mo. 24, 7043

From the above exhibit it will be seen that although we felt that we were passing through a cool month, it was only by comparison with last year (being about two and three-quarter degrees below our record then), the mean temperature of the month the present year exceeding the average by about two and one-half degrees. It may also be noticed that we are still short in the quantity of rain as compared with last year.

An esteemed friend, in furnishing us with the following newspaper slip—

“NEW YORK, June 19.

“Last night, at five minutes past ten, there was a severe shock of an earthquake on the northern shore of Long Island. In Brooklyn, on the hill, and on Staten Island, the reports indicate a wave whose centre was probably further east, somewhere in New England”—adds his own experience in reference to Philadelphia as follows :

“On the evening of the eighteenth, fifteen minutes earlier (at ten minutes before ten o'clock), the shock was distinctly perceived at Twelfth and Berks Sts., in this city—the bed on which the writer lay, going twice from east to west with a returning motion, and with the chamber floor appearing to be somewhat raised and lowered as a boat would by a swell on the river, attended by a rattling of the window sash and shutters.”

The Delaware County Republican, of Chester, Pa., had this item: “The shock of an earthquake was very distinctly felt in some parts of this county, on Sunday evening last (the 18th), shortly after ten o'clock.”

While still another newspaper clipping informs us that “The bottom of the Morris Canal for forty to fifty feet between New Village and Broadway, N. J., fell out Monday morning. Apertures were also found in adjoining woods, in which rocks and trees were swallowed. It is attributed to a shock of earthquake.”

More detailed accounts of the occurrence have been published, but too lengthy for insertion here. Referring again to the symptoms of an “earthquake” in Philadelphia, we would ask as an especial favor of any who may have observed similar phenomena at that time, to forward a detailed account to

J. M. ELLIS,

Philadelphia, 7th mo. 31, 1871.

SECRET OF SUCCESS.—The true secret of the growth of any place is the inducement held out to strangers to settle among them. Encourage active and worthy men, whether they have any money or not. Their labor alone is worth money. Stimulate every legitimate enterprise by giving it all the friendly aid in your power. Cultivate a public spirit, and help your neighbor. If he is in danger of breaking down before you know his situation, set him up on his feet again. His misfortune is to be pitied, not blamed, and his talents and labor are worth money to the community. Besides, it may some day be our turn to need a corresponding sympathy. Let us speak well of our neighbors. Talk well and encouragingly of our town, of its growth, its prospects, its advantages, and, in short, everything likely to advance its welfare.

ITEMS.

FORKS.—Forks were first known in Italy towards the end of the fifteenth century. It was a hundred years before they came into use in France, and nearly a hundred more before they had traveled as far northward as Scotland. Their introduction into England was at first ridiculed as a piece of affectation and effeminacy. In repeated instances, the progress of inventions has been thus resisted by the popular clamor, and even opposed by popular violence. The first man who appeared with an umbrella in the streets of London, drew down upon himself a pelting shower of mud and stones, which was far worse than the rain against which he had spread the new-fangled protector. The old way of making boards was by splitting logs with wedges; and clumsy as the method was, it was no easy matter to persuade the world that there was a better. Saw mills were first used in Europe in the fifteenth century. In 1663 a Dutchman built one in England, but the public cry against it was so vehement, that he was soon obliged to remove it.

THE great difference between the sun and artificial light is due to the fact that, of the light emitted from the former, about half the quantity of rays are luminous and calorific at the same time; but as regards our artificial light, for ordinary oil the amount of non-luminous yet calorific rays is 9 per cent.; for white-hot platinum, 98 per cent.; alcohol flame, 99 per cent.; electric light, 80 per cent.; and gas light, 90 per cent.; while for petroleum and paraffine oils the amount is 94 per cent. It is this large quantity of caloric rays in artificial light which causes fatigue to the eyes; but this inconvenience may be almost entirely obviated by intercepting the thermic rays by glass, or better yet, mica plates. The use of these renders the light soft and agreeable to the eyes.

SEVENTEEN HUNDRED YEARS IN THE OVEN.—One house in Pompeii had evidently been in a state of repair, when the volcanic storm buried it. Painters and decorators, and cleaners were masters of the situation. The family, if not out of town, must have been undergoing that condition of misery which spring cleanings and other like afflictions inevitably entail. Painters' pots and brushes and workmen's tools were scattered about. Tell-tale spots of whitewash starred wall and floor. Such domestic implements as pots and kettles had been bundled up in a corner all by themselves. Dinner, however, had not been forgotten. A solitary pot stood simmering (if it ever did simmer) on the stove. And there was a bronze dish in waiting before the oven, and on the dish a sucking pig! all ready to be baked. But the oven was already engaged with its full complement of bread. So the sucking pig had to wait. And it never entered the oven, and the loaves were never taken out till after a sojourn of 1,700 years! They have been cooking ever since the 23d of November, A. D. 76. M. Fiorelli has them now in his museum at Pompeii, twenty one of them, rather hard, of course, and black; but perfectly preserved.—*Leisure Hours.*

THE Persian insect powder, as we find stated in the *Journal of Applied Chemistry*, consists of the pulverized flowers of a plant raised on the Caucasian Mountains, and called the *Pyrethrum carneum*. Seeds have been brought to this country, and efforts made to cultivate this valuable plant, with various success.

WILLIAM CLARK.

A memorial issued by Genesee Yearly Meeting, held at Farmington, N. Y., 6th mo., 1871.

To commemorate the lives of those who have given evidence of an earnest effort to live in obedience to the requisitions of Divine Wisdom, and who have thereby been preserved amid the many trials and temptations which do frequently assail the human mind, so that, when called to their final account, they have left behind them an assurance that there was a well-grounded hope for their final acceptance, may be a means of encouragement to others, inducing them, amid all their difficulties, to "press forward towards the mark, for the prize of the high calling, which rests in Christ Jesus our Lord."

Believing we have such an evidence in the life of our departed friend, William Clark, we have thought it would be right to preserve some account of his life, and the effect of the operation of Divine Power, as manifested in and through him, trusting that it may prove an encouragement to those who now survive him, as well as to those who may hereafter come upon the stage of action.

He was the son of Philip and Mary Clark, and was born in the town of Unionvale, in the county of Dutchess, and State of New York, in the year 1797.

When about ten years of age, he was deprived of the care and counsel of his father, who was removed by death suddenly; and

his mother being left with a family of small children, it was deemed expedient and best to place him under the care of a friend, to assist what he could in farm work, and attend school till he should be old enough to learn a trade. On becoming of suitable age, he was placed with Friends by the name of Resolved and Abiah Gardner, to learn the tanning and shoemaking business.

These Friends, it appears, were so far concerned for his spiritual welfare, as to require him to attend religious meetings, and to exercise a care over him, to induce him to lead a godly life.

But, being of a naturally volatile and lively disposition, and fond of the society of the young of his own age, and thereby having many temptations thrown in his way, he evinced but little concern for things of a serious nature, until about the 18th year of his age, when his mind was reached and tendered under a communication from Daniel Quinby, which wrought so powerfully upon him, that he then resolved he would be obedient to that monitor which had so often counseled and reproved him, but from which he had turned away, and that he would endeavor, henceforth, to live more in accordance with its requisitions, and more worthy of the profession in which he had been educated. He left the gay circles in which he had been wont to mingle, and often retired by himself for reflection and meditation, lamenting in those

seasons, his former inattention to the pleadings of the still, small voice.

He chose for his reading the Scriptures and other good books, from which he at times found comfort, consolation and encouragement to persevere in the path he had then chosen, and, although there were seasons when the allurements of earth seemed again to draw him away from his good resolutions, he was enabled to return again to the fold of rest, and renew his covenants with his Divine Master.

About the 19th year of his age, he felt called to bear public testimony to what the Lord had done for him, in His love, mercy and goodness, and in yielding to the call, found true peace of mind, and renewed strength to obey further and more extended duties.

He continued to reside with the Friends before named, working diligently at his trade until the time of his marriage, which took place about the 22d year of his age, to Anna Sweet, daughter of Jonathan and Mary Sweet, of Apoquage, Dutchess Co., N. Y.

In the spring following, they removed to Hyde Park, and after staying one year, again moved to Chestnut Ridge, in the same county, where they resided, he working at his trade, until the year 1835, when they removed and settled within the limits of Farmington Monthly Meeting.

Continuing to faithfully endeavor to be obedient to his Heavenly Master's call, he grew in the exercise of his gift, and his public appearances were very satisfactory to his friends, and in due time his ministry was acknowledged by Nine-Partners Monthly Meeting, of which he was a member.

He was very diligent in the attendance of our religious meetings, when health permitted, and his quiet, solid deportment therein evinced his mind was endeavoring to hold communion with the Master of all rightly gathered assemblies.

In the performance of this reasonable duty, during his residence at Hyde Park, he was situated some 10 or 12 miles from meeting, yet was rarely absent, either on First-day or in the middle of the week, except on account of sickness, thus evidencing his devotion to the cause he had so ardently espoused, and furnishing an example of what may be done when we are willing to be obedient to the requisitions of Truth.

His communications were solemn and impressive, tending to turn the mind to the indwelling Teacher, and exhorting to faithfulness to His teachings, holding up to view the benign effects of love upon the heart, and calling to the exercise of that charity which suffereth long and is kind, and often tenderly

appealing to his hearers to let the time past suffice, and improve the present opportunity; reminding them that the present was only theirs, that the past was gone beyond recall, and the future uncertain.

His labors from home were not extensive, yet, from time to time he felt called to visit various parts of the heritage, and we believe that, as he was thus faithful in obedience to the call, these visits were satisfactory to the visited, and he was enabled to bring home the sheaves of peace as his reward.

The purifying effects of this life of devotion to the requirings of his Heavenly Father, manifested itself in his intercourse with his neighbors and friends, so that, though like other human beings, he was at times found off the watch, yet the general tenor of his life, the evidence he gave of an earnest desire to live in obedience to his God, endeared him to them, and gained their affection and respect.

In the Fourth month, 1861, our dear friend met with a close trial, in the removal by death of his loved companion, who had shared with him in his deep exercises, and whose love and counsel had oft sustained him in many dark hours, and who had thus proved a true helpmeet to him, yet under this severe affliction his mind was preserved in calm resignation to this severe dispensation. Though his life here was thus made lonely, yet his deportment evinced that true decorum and cheerfulness becoming a Christian, and he continued to labor on in the cause in which he was engaged, seeking to be found prepared when the messenger should be sent to call him home; and we believe he attained to that true state of waiting, so that when the summons came, though in a sudden and unexpected moment, he was found in readiness.

Our dear friend was stricken down with paralysis, while making preparations to go to meeting, on the 11th of Third month, 1869, and he lingered until the 28th, when his spirit took its departure for its abode, we doubt not, among the mansions of the blest.

The funeral was held on the 30th inst., and was a solemn and instructive opportunity.

The general course of his life, to those who most intimately knew him, as well as his persuasive language, bespoke to them the invitation to "Come, and follow me, as I am endeavoring to follow Christ;" and these, in speaking of him, can truly adopt the language, "Mark the perfect man and behold the upright, for the end of that man is peace."

RELIGION is universal; theology is exclusive. Religion is humanitarian; theology is sectarian. Religion unites mankind; theology divides it. Religion is love, broad and all-comprising as God's love; theology preaches

love and practices bigotry. Religion looks to the moral worth of man; theology to his creed and denomination. Religion teaches us the common fatherhood of God and the common brotherhood of man; theology predestination, eternal damnation, and that we should rather fear the anger of God than trust to His paternal love and mercy. Religion is light and love, and virtue and peace, unadulterated and immaculate; but theology is the apple of discord, which disunites and estranges one from another.—*Dr. M. Lelienthal.*

ABRAHAM WILSON.

A memorial issued by Genesee Yearly Meeting, held at Farmington, N. Y., Sixth month, 1871.

The subject of this memoir was the son of Ezekiel and Sarah Wilson. He was born on the 30th of Eleventh month, 1778, in the town of Adams, Berkshire Co., Mass., whence, during his infancy, his parents removed to Putney, Vt. Here a favorable opportunity offered for acquiring an education, and he, by diligent application, became a good English scholar, making also some proficiency in other languages.

In his early years, he evinced much activity and discernment of mind, becoming an acknowledged leader among his companions, a position cheerfully conceded by them because of the high esteem in which they held him.

About the 20th year of his age, he united with the Baptists, submitting to water baptism, and soon after entered Newfane Academy, with a view of preparing for the ministry. While attending this Institution, he alternated his studies with teaching school, and on one of these occasions became located in a neighborhood composed principally of Friends. Being zealous on the subject of religion, he sought frequent opportunities to converse with them on religious matters, by which he learned that they esteemed of little value almost everything on which he had been building, viz.: water baptism, human learning as a qualification for the ministry,—the Bible, as the only rule of faith and practice, and the outward celebration of the eucharist. They believed that since there was but *one* baptism, that of the Holy Ghost was the essential one; that the only true qualification for a Gospel ministry was the anointing of the Holy Spirit—none being fit to take the office upon himself unless especially called of God; that all Scripture given by inspiration of God was profitable for doctrine, for reproof, for correction, for instruction in righteousness, but were not the only rule of faith and practice; *the voice of God in the soul* being the true Light that enlighteneth every man that cometh into the world—able to enlighten even where the

Scriptures are not known, and to bring, if obeyed, final salvation; and that instead of the offerings of the communion table, a pure and humble heart was the best sacrifice to present to the pure and living God. Here, he observed, were two systems, differing essentially from each other: the one ritual, the other spiritual; both could not be correct. He thought, however, that if Friends could prove all they claimed of being moved by the Spirit to act and speak—and of being made capable of discerning the spiritual or mental states of their fellow beings, without outward help—he should be convinced of the correctness of their position; and he remained in this state of mind for some time, prayerfully seeking to be rightly directed.

At length a minister of the Society came into the neighborhood on a religious visit, and Abraham was invited, and accepted the invitation to spend the evening at the house where the Friend had taken lodgings. After conversing for a while upon common topics, he observed that the company became suddenly still, and the thought came into his mind that if some one would now pray zealously the time might be more profitably employed than by sitting in such blank silence. Soon, however, the minister engaged in supplication, so fervent and powerful, as to surprise if not to solemnize the mind of Abraham; after which he resumed his seat, and turning toward our friend, addressed him personally, commencing back with his early years, and giving a correct and particular account of the spiritual exercises experienced by him up to that time: he also informed him of what had been passing in his mind on the then present occasion. The result was, he was fully convinced of the truth of Friends' claims as to the sufficiency of the inward Light, and being true to his convictions he no longer depended upon outward works or learning—but turned to the teachings of Truth in his own soul, which he found to be in all cases sufficient for him. About the year 1812, he became a member of the religious Society of Friends, and for some time resided in Queensbury, N. Y. He continued to follow the business of teaching school—a calling for which he was eminently qualified, his powers of mind, discriminating judgment and affectionate disposition always securing to him the respect and love of his pupils—and thus rendering him always successful.

In the year 1817, he visited some parts of the Genesee country, and finally settled within the compass of Farmington Monthly Meeting, N. Y.

On the 2d of Fourth month, 1829, he joined in marriage with Abigail Seymour, who, with one son, still survives him. He was an affec-

tionate companion, a careful father, a kind and agreeable neighbor. As a Christian, he saw no cause of gloom in his religion, feeling that no condition in human life was so conducive to cheerfulness and temperate joy, as the Christian state.

He had by prudence and industry accumulated a substantial property, but afterwards lost a large portion of it by trusting it in the hands of those who failed to repay it, a circumstance which seriously affected him in his declining years.

For many years he filled the station of Elder, not as one whose authority to be active was derived from the appointment of the Monthly Meeting alone—but as one who believed that nothing short of the anointing spirit of Truth could enable him to give right and seasonable counsel. By waiting for the sensible impression of this spirit, he was thoroughly qualified to encourage when encouragement was needed—to sympathize with the afflicted—and to exhort to patience those who were passing through the ordeal of deep baptism: and there are those still living who can bear testimony that as an instrument in the Divine Hand, he was to them what Paul was to Timothy—a father in the truth.

He set a worthy example in the diligent and seasonable attendance of meeting—never being absent when his own and his family's health permitted him to leave home.

He observed method and order in his temporal affairs, and believed the same care to be requisite in transacting the affairs of a religious organization—and always stood firmly against everything which was calculated to make an improper innovation on Society. He believed that when Truth called for any labor either of the church or the individual, it allowed of none but truthful means by which to advance the work. He had well learned the fact, both from history and observation, that to speak or labor for the advancement of an unpopular truth, was but to call down opposition and persecution—that the messengers of the present age, when they come to us as Jesus came to the Jews, on a mission of love—were liable, like Him, to become martyrs to the righteous cause; and thus he was prepared to say to such as were persecuted for declaring truths against the spirit of the world and a lifeless profession, "Be not discouraged, for no new thing has happened unto you."

His health had been declining for some years, which, together with the infirmities of advanced age, admonished us his departure was drawing near; weakness increased upon him until the 26th of the 6th month, 1867, when he peacefully closed his earthly pilgrimage, aged 88 years, 6 mos. and 26 days. His remains

were interred in Friends' burying ground at Farmington, on the 28th, a large and solemn meeting being held on the occasion.

MUTUAL FORBEARANCE.

If we wish to succeed in life, we must learn to take men as they are, and not as they ought to be; making them better if we can, but at the same time remembering their infirmities. We have to deal, not with the ideal man of dreaming poets, but with the real men of every-day life, men precisely like ourselves. This fact of common aims, ambitions, and infirmities ought to create constant sympathy and forbearance. While every man has his own burden to bear, he may at the same time in some way help another to bear his peculiar burden, and be himself helped in turn. God has linked all men together by this curious fact of mutual dependence, and this wonderful possibility of mutual help. The poor may be relieved, the sick may be visited, the sorrowing may receive sympathy, the inexperienced may be counselled, the faint-hearted encouraged, and the feeble established. All these, in turn, may help the hand that gives help to them; for God has so ordered it that no man is absolutely independent of his fellows. At the very time we help others, we find by that act our own moral power strengthened, and the time may come when in a more direct way the aid we have extended may be returned.

This principle of mutual forbearance is especially applicable to those mental and moral infirmities of which every man is conscious—infirmities which make us sometimes detest ourselves, and render us a burden to our friends. Some are peevish and fretful; some have a chronic suspicion that everything will go wrong; some are easily offended, having touchy tempers; some have a rough, blunt way of expressing themselves, imagining that they are frank, when they are simply uncivil; some are haughty and overbearing, holding their heads above the common herd; some are headstrong, never yielding a position once taken.

These disagreeable infirmities, in common with others which might be named, have their origin in different sources. They sometimes spring from constitutional peculiarities, and indeed are often hereditary. Some of them may be the result or the symptoms of nervous disorder. Some may be traced directly to defective education.

Whatever their origin, we must learn to bear with them. For this there are several good reasons which commend themselves to Christians, whatever others may think of them. God commands a love for our neighbor which shall equal self-love. His word

directs the strong to bear the infirmities of the weak; exhorts us to bear one another's burdens, declaring that those who do this fulfil the law of Christ, which is the great law of love; and presents for our imitation the wonderful example of Christ, who pleased not himself. If we can help men by bearing with their infirmities, we ought to do it.

Another reason just as powerful, though appealing more directly to our selfishness, is to be found in the fact that we expect others to bear with us. It surely is not fair for us to ask our fellow-men to make allowance for our infirmities while we make none for theirs. We must give and take, each yielding something to the other, like well-behaved men in a crowd. The man who should undertake to go through a crowd by an air-line route would soon find his passage blocked. Let him yield a little to others, and others will yield to him.

It is the part of religion, as well as of good breeding, to avoid as far as possible coming in contact with the infirmities of others, and to take as little notice as we can of their manifestation. We do this in reference to physical deformity; why not in regard to mental or moral infirmities? We are careful not to tread on a tender toe, not to brush against a broken arm, not to stand in the way of the blind; we ought to be equally careful not to ruffle the temper of the irritable, not to wound the feelings of the sensitive, not to excite the fears of the timid.

There must, of course, be a limit to this, since our own rights and feelings must be respected as well as those of others; but we presume no man who sincerely desires to do right will have any difficulty in fixing the limit. No general rule can be given which shall apply to each particular case. Common sense and divine grace must be the guides. Each man ought to endeavor to lessen the burden he expects others to help him bear. If a man have a bad habit, he ought to try to break himself of it. Men ought not to be perpetually obtruding their evil tempers and other infirmities before their friends, imposing on their Christian forbearance, and excusing themselves by saying: "It is my way." It is a very bad way, and cannot be mended a moment too soon. Less excusable are these infirmities in their continuance than those of the body, since the grace of God is promised to all who seek it, and thus the burdens may be lessened.—*Methodist*.

PRESENCE OF GOD.

The habitual conviction of the presence of God is the sovereign remedy in temptations; it supports, it consoles, it calms us. We must

not be surprised that we are tempted. We are placed here to be proved by temptations. Everything is temptation to us. Crosses irritate our pride, and prosperity flatters it; our life is a continual warfare, but Jesus Christ combats with us. We must let temptations, like a tempest, beat upon our heads, and still move on; like a traveller surprised on the way by a storm, who wraps his cloak about him and goes on his journey in spite of the opposing elements.

In a certain sense, there is little to do in doing the will of God. Still it is true that it is a great work, because it must be without any reserve. His Spirit enters the secret foldings of our hearts, and even the most upright affections and the most necessary attachments must be regulated by His will; but it is not the multitude of hard duties, it is not constraint and contentment that advance us in our Christian course. On the contrary, it is the yielding of our wills, without restriction and without choice, to tread cheerfully every day in the path in which Providence leads us, to see nothing, to be discouraged by nothing, to see our duty in the present moment, to trust all else without reserve to the will and power of God. Let us pray to our Heavenly Father that our wills may be swallowed up in His.—*Fenelon*.

LETTERS FROM THE WEST. NO. 4.

(Continued from page 296.)

Life among the Dakotas.

FROM MY DIARY.

6th mo. 5th. Crossing the Missouri, during the June rising, in a frail canoe that will barely accommodate two with the baggage of the passenger, is often perilous. The flood began to pour down last night, bringing with it an extra supply of mud, besides trees and drift wood in abundance. The current, always rapid, is vastly increased, and the bottom lands are in many places under water. My hospitable friends, by whom I had been so kindly entertained—trembling for the safety of the tiny craft and its occupants—watched us push off into the whirling, rushing torrent. I sat motionless, for the slightest movement of my body might have been fatal in its results. We were carried down stream a considerable distance; the oarsman knew the danger and was equal to it. In and out, among the floating logs, just escaping one to find ourselves running upon another, we at last reached the other side, where after several fruitless efforts we secured a tolerably good landing place. By a most fortuitous coincidence, the agency wagon was at the landing, waiting for another person who did not arrive; I took the vacant seat, beside a stalwart In-

dian of pure blood, and sat as much at my ease as if he had been white as myself.

Our road wound through a perfect garden of wild roses; the morning air was laden with their perfume, and the birds trilled out their sweetest songs. Evidently this bottom land, as it is called, has been washed in by the changing current of the river. The bluffs are, on this side, a mile or more from shore—a narrow belt of sapling willows and a heavy skirt of cottonwoods, with a few elms, constitute the timber. Most of this is being cut down for the erection of the new houses on the Indian claims.

Reached the agency village, as it may be termed, in safety, and was set down at the doctor's door, quite unexpectedly to him—he was at a loss to know how I had been so fortunate as to secure transportation. All was soon explained, and I was introduced to the rude abode which was to be my home for an indefinite period. It is rough, certainly, and needs the busy hand of a willing woman to make it endurable.

Many of the Indians came forward to give me the hand of welcome. I share the hospitalities of the agent's family, and endeavor to accommodate myself to the new life I am entering upon.

6th. Cut and fitted a dress for an Indian to make. She is a fair needlewoman, though not very neat. The log huts of these people are scattered thickly around. The buildings stand on the first bluff that rises from the bottom land; a belt of cottonwoods grow at the base of the bluff, and affords some shade. These trees are tall and straight—many of them as much as forty feet high before branching. I go with C. to visit some families. The afternoon is very hot, but a fine breeze makes it less oppressive.

7th. This is "issue day." At an early hour the people from every quarter begin to come in. They squat around in circles on the bare ground; each band, of which there are six, forming a circle. I start out with C. to look at them. They are a motley crowd; all the men have citizens' dress, in various stages of wear, and of decidedly various forms and colors. The moccasin is the usual covering for the feet, though all have shoes issued them. I notice how daintily small and shapely their hands and feet are.

The women, especially the old ones, are more decidedly Indian—their limbs are encased in cloth leggings, and their feet in moccasins—they wear a broadcloth skirt, with the selvage at the bottom for a border; some have the other selvage turned down like an overskirt at the top. These bags of cloth, as they might be called, are gathered round the waist with a string or sash, and a calico sack, loose

and ill fitting, covers the body. Over all, in these sweltering summer days, they wear a heavy cloth shawl, laid on the head, and falling around the shoulders. Most of these old women are hard featured, and bear the marks of toil. Very many of the middle aged are corpulent, and there are a number of fine faces among them; some wear the dress of civilization, but quite as many dress as their mothers do. The young women and the children usually well fitting dresses, and wear shoes and stockings, but the inevitable shawl is always on the head or shoulders. Some of the younger girls are tastefully dressed. I see one with a gold chain wound several times around her neck, and fastened with a locket; there are several who have finger rings and breast pins.

Those finely dressed have ridden in on nice ponies, with handsome side saddles, and flourish their riding whips gracefully. It must be a cross for them to sit on the bare ground. I see they have found a log, but it scarcely prevents their nice dresses trailing in the dirt. Some have sun shades, but most of them sit in the broiling sun, with the perspiration running down in a fair stream from their faces. They are very orderly and quiet.

The heads of the bands or others deputized by them deal out. They are furnished according to the size of their families. Flour is issued first; after all are served, they move further up near the scales—we follow. Again they seat themselves in circles, with the half or a quarter of a beef in the centre. Two women in each band lay hold of the sinews in the fore quarters, which they carefully take out, scraping all the meat from them. From these, when dried, they draw out the thread with which they sew their moccasins—five beeves are usually slaughtered for each issue.

One woman, with an axe, makes terrible onslaught on the quarter assigned her—she strikes with a will, and is not particular where the blow falls, so that the bones are broken. Another woman, with the assistance of a man, cuts off a shoulder. A third attempts the same, but so clumsily that I am tempted to show her how it should be done—both men and women do the cutting up. The entrails and the vital organs are choice bits, which are eagerly appropriated.

After all have received their portions, said to be generally satisfactory, they gather up the provender that is to last for the next three days, and stow away their papooses in the indispensable shawl, which they form into a kind of pocket on the back—the child's head peeping out over the shoulder of the mother or grandmother (who is the usual one to carry it), and trudge off home. Those living at a

distance, come on ponies or in wagons. I see most of the old women are parrot-toed, the result, doubtless, of carrying such heavy burthens. Everything that can be put into a bundle is slung across the shoulders, and held in place by a broad leather band that goes round the forehead, and supports the load.

L. J. R.

REPLY of the Hindu, Keshub Chunder Sen, to some of the English clergy who addressed him a letter urging their Church doctrines: "As regards the peculiar doctrines of your Church, which you consider to be of vital importance, and which you naturally wish me to accept, permit me respectfully to state that I cannot subscribe to them, as they do not accord with the voice of God in my own soul. I may simply say that, as a "Theist," I believe in the one living God, as my Father and Saviour, and I prayerfully rely on His grace alone for my salvation. The Lord is my life and my light—He is my creed and my salvation; I need nothing else. I honor Christ as my Father's beloved Son, and I honor all the prophets and martyrs, but I love my God above all. There is no name so sweet, so dear as that of Father."

Scraps

FROM UNPUBLISHED LETTERS.

1844.

I believe I have now got through with my conveyancing writing for this season, and am therefore at liberty to acknowledge the reception of thy welcome lines dated the latter end of last month. I find I have not got to the end of the chapter, for there are many lessons yet to be learned. I suppose it is one of the hardest, to learn really to love enemies—to bless them that curse us, and to pray for them that despitefully use us and persecute us. But I have confidence to believe it can be learned. And yet, when we look at what is (improperly) called the Christian world, how far, how very far, professing Christians generally are from this standard!

Thou wants "to know my opinion on the signs of the times." I have latterly been thinking of the position which Edward Young was placed in, either really, or in imagination, when he said,

"Here, on a single plank, thrown safe on shore,
I hear the tumult of the distant throng,
As that of seas remote or dying storms."

The "tumult of the distant throng" does not yet appear to have yielded to that powerful wind (or spirit), that once passed over

the earth, when the highest mountains were covered with the fluctuating and unstable elements, for then those waters became calm, and gradually returned from off the earth. I see no sign of this now. But it is not for us to know the times and seasons which the Father hath in His own power. It is sufficient for us to wait at Jerusalem until we be endued with power from on high. Then, and not till then, can we or any others be witnesses, testimony bearers of the power of Truth. Ah! my dear friend, patience, enduring patience, patient waiting for the *power from on high*, how much this is wanting, even among the professed advocates of spiritual light and understanding, even among professed Friends of Truth. And yet, among the signs of the times, when so many are running out to see, and to hear, and to learn, and to teach, and to amuse—there is one thing which has been, and which may be again. When the flood of waters was upon the earth, Noah sent out a *dove*; she returned, the prospect was as dreary to her as the state of society is to my dear friend R. But Noah waited seven days, and sent her again. How very discouraging it would have been, had not faith and hope of better times dwelt in his mind! Now let us mark the event: the dove again returned, but it was in *the evening*, and lo! in her mouth was an olive leaf, fresh and green, just plucked off—clear evidence that the waters were abating from off the earth. Oh! my friend, the fervent, effectual prayer of the righteous, travailing seed of Divine life, yet availeth much. It was this in righteous Noah that availed to his support and preservation and confidence in Divine superintendency.

"In your patience possess ye your souls," is an excellent motto for the exercised, tribulated mind. Do the signs of the present times bear any resemblance to those of the times when this watchword was given as reported by one of the Scripture writers? If so, may we not dwell with some faith and hope on the result as then described, and which may yet be the result of the present commotions, when it may be emphatically said, "the sea and the waves are roaring." All this may be permitted in Divine wisdom in order that the powers of the false heavens may be shaken; "and then, (Oh! glorious sight!) shall they see the Son of man coming in or through the clouds with power and great glory." Ah! these clouds that obscure the brightness of the Divine Light in the soul of man! how awfully have they been raised by priestcraft and the cunning devices of crafty men and women: yes, even in our Religious Society.

FRIENDS' INTELLIGENCER.

PHILADELPHIA, SEVENTH MONTH 22, 1871.

AN EXPLANATION.—An editorial with the prefix, "Protestantism is a Failure," published some weeks since, called forth a reply from our Friend S. M. Janney, which was sent, as soon as received, unaccompanied by comment, to the printer.

The language used by us may perhaps justify the inference our friend has drawn, but we regret that he has so misunderstood our meaning, and as we do not wish to be credited with sentiments we do not hold, it may be proper to say, that if our editorial conveyed the idea that we were insensible to the blessings which have followed the noble protest made by Luther and his associates against the corruptions of the then dominant church, it was not our intention that it should do so. By "failure," we meant that Protestantism had failed to accomplish what might have been anticipated, from a movement that professed (if we are not mistaken) to restore primitive Christianity. And again, though well aware that many severe persecutions have come upon Protestants through the Catholic Church, we cannot ignore the fact that some Protestant Churches have exhibited the same spirit, persecuting, even unto death, members of other sects.

The apparent difference of view may be caused by our friend S. M. J. looking at Protestantism from one standpoint, while we have looked upon it from another.

"Protestantism," in the sense in which we used it meant more than a protest against the corruptions of a sect. It meant religious liberty, toleration, charity, and Christian equality. That it has paved the way for all these, we freely admit, while we at the same time regret that it has accomplished so little toward bringing about that day in which "The kingdoms of this world shall become the kingdoms of our Lord and of His Christ."

Our friend says he "is encouraged by observing in the publications of the various Protestant Churches in this country, an increasing liberality of sentiment—a diminished reliance upon the dogmas of theology,

and a more earnest teaching of practical piety."

We share this feeling, and look hopefully to the future of Protestantism, when we shall no longer be able to say, "Protestantism is a failure."

ERRATUM.—In No. 20, last week's issue of the *Intelligencer*, on page 311, first column, 5th line from the top, for "Truth," read "Such."

DIED.

MAROT.—On the 7th inst., at Che'ten Hills, Elizabeth, widow of the late Davenport Marot, in the 74th year of her age. Though in feeble health for a number of years, a sweet and uncomplaining disposition was vouchsafed her to the last, and she so quietly departed that the moment the spirit took its flight could scarce be designated. E.

GUMERY.—Suddenly, of heart disease, on the evening of the 19th of Sixth month, 1871, at his residence in Harrison County, Ohio, Isaac Gumery, in the 60th year of his age; a consistent and worthy member of Short Creek Monthly Meeting.

HOOPEES.—On the 25th of Fifth month, 1871, at his late residence in New Garden, Chester Co., Pa., Halliday Hoopes, aged nearly 62 years. His removal has left a void in his neighborhood, and in the particular meeting (Mill Creek) of which he was a member, and when in health a regular attender. He had not been well for some months, and the day previous to his death, returning from a ride, was much exhausted, and soon lost the power of speech and apparently of consciousness, and so continued until the close. Although thus unable in this solemn period to give evidence to his friends of a preparation for the change, it afforded consolation to know that in hours of health and prosperity, as well as in sickness, the interests of the soul-life and concern for his beloved Society were themes apparently most dear to him. While we miss his pleasant smile and warm greeting socially, and his aid in the Church militant, we mourn not for him as without hope that he has been admitted to the Church triumphant. H.

SHOEMAKER.—On the 11th inst., Silas Shoemaker, in the 76th year of his age; a member of Upper Dublin Monthly Meeting, Pa.

HUSBAND.—On the 1st inst., John J. Husband, in the 69th year of his age; a member of Deer Creek Monthly Meeting, Harford Co., Md.

A meeting of the Board of Managers of the New York First-day School Association will be held at Westbury Meeting-house the time of the Quarterly Meeting, on Fifth-day afternoon, 7th mo. 27th, at 5 o'clock. All who feel an interest in First day Schools are cordially invited to meet with them.

EFFINGHAM COCK, Chairman.

SARAH H. BAKER, Secretary.

EXTRACTS FROM THE MINUTES OF GENESSEE YEARLY MEETING OF FRIENDS,

At Genesee Yearly Meeting of Friends, held at FARMINGTON, N. Y., by adjournments from the 12th of the Sixth month to the 15th of the same, inclusive, 1871:

On calling the names of the representatives they were all present except seven.

Certificates of unity for Friends in attendance from other Yearly Meetings were read as follows:

For Andrew Dorland, a minister from Saratoga Monthly Meeting, N. Y.; Thos. C. Stringham, a minister, and Naomi Stringham, an elder, from Creek Monthly Meeting, N. Y.; Rachel C. Tilton, a minister, and Mellis S. Tilton, an elder, from Purchase Monthly Meeting, N. Y.; Elihu Durfee, a minister, from Cincinnati Monthly Meeting, Ohio; Sarah Hunt, a minister, from Chester Monthly Meeting, N. J.; Isaac Lippincott, an elder, from the same meeting; Martha Dodgson, an elder, from Darby Monthly Meeting, Pa.; Louisa A. Wright, a minister, from Falls Monthly Meeting, Pa.; and Mark Wright, from the same Monthly Meeting.

Epistles were read from our brethren of New York, Philadelphia, Baltimore, Ohio, and Indiana Yearly Meetings. Their interesting contents bearing evidence of an increased concern to promote the object of our organization, to call from outward formality to a higher and more spiritual dispensation, and to labor for the amelioration of the sorrows, and the eradication of the wrongs, among the family of man, have awakened feelings of thankfulness in our hearts, and tended to incite us to renewed energy in the performance of our part in this important field of labor. To essay replies thereto, as way may open, a committee was appointed.

A proposition was forwarded from Scipio Quarterly Meeting, to discontinue those clauses in the Book of Discipline relative to taking part in elections and using the produce of the labor of slaves, which was referred to a committee who, in conjunction with a like committee of women Friends, are to take the subject into consideration, and report at a future sitting.

A request was forwarded from Canada Half Yearly Meeting, asking the Yearly Meeting to define what it considers countenancing a hiring ministry—which was also referred to a committee who, in conjunction with a like committee of women Friends, are to take the subject into consideration and report their judgment thereon at a future sitting.

Third-day.—John J. Cornell was appointed clerk, and Isaac Baker assistant clerk.

Our friend Sarah Hunt paid us an acceptable visit at this time.

The meeting proceeded to the consideration of the state of Society, as exhibited in the answers to the queries as they came from our Quarterly and Half Yearly Meetings, the following summaries of which were adopted, and directed to be recorded as descriptive of our present state.

During this examination, our minds were deeply exercised, and much pertinent counsel was handed forth.

The importance of faithfully fulfilling the

reasonable duty of assembling together for the purpose of public Divine worship, was earnestly impressed upon us; it was shown that this was one of the means by which we manifested that we truly love God, and that when this duty was faithfully attended to, a blessing would be witnessed. The example of our early Friends was cited, showing that they were concerned and faithful to meet, even when human laws forbade it, and although thereby subjected to cruel persecutions, they were rewarded by the reception of the Divine blessing, and enabled to bear all outward afflictions to obtain this heavenly enjoyment. We were appealed to, in this day of ease and high privileges, to be willing to make the sacrifice necessary to attend our mid-week meetings, and were shown that we would derive strength therefrom, to meet the varied trials of life as becomes the Christian, and to perform all those duties by which harmony is maintained with the Father, and our spiritual progress and true happiness secured. The Divine blessing does not depend upon the number assembled, but upon the proper preparation of the heart, for where the two or three are gathered in His name, He will be found in the midst.

Intimately connected with this love to God which prompts us to publicly manifest our allegiance to Him and flowing out therefrom, as the standard by which men may judge of the purity of our motives, is love to our fellow men. "By this shall all men know that ye are my disciples, if ye have love one unto another." We were entreated to let this be our badge of discipleship, and to guard against the inroads of anything which shall interrupt the outflow of such a feeling.

An earnest concern was felt for the proper, careful training of the dear children, that they might be kept in that simplicity of language, apparel and deportment becoming a Christian mind, and that they might be preserved from the entanglement of Fashion's votaries, and from being led away by the follies of the world.

Our testimony against the use of alcoholic stimulants has claimed an unusual share of our attention. The increase of this great evil—its direful consequences upon the human family—were feelingly portrayed. And, although the reports show that we, as a people, are nearly clear from its unnecessary use, yet it was felt that we had an influence to exert among our fellow-men, to ameliorate the suffering, and check the crime occasioned by its indulgence; and we were earnestly called on to endeavor to exert that influence to accomplish so desirable a result.

The use of tobacco was the occasion of considerable exercise, and we were exhorted to

use our influence to check the spread of a habit at once unnecessary, and often hurtful in its tendency; and those in whom the habit has become confirmed, were entreated to endeavor to eradicate it, that their example might be useful in restraining the young from contracting it.

While our testimony against a hireling ministry called forth but few remarks, yet we have not lost sight of its importance nor of the necessity for a proper and firm maintenance of it, and while a public testimony to a free Gospel ministry may often be necessary, yet we feel that in the willingness to come together, and sit down to worship God in solemn silence, trusting to Him to qualify for all instrumental means that are requisite for counsel or encouragement, we will bear a powerful testimony to its purity and completeness, and that a man-made, paid ministry is entirely unnecessary.

Our attention was earnestly called to the necessity of still endeavoring to faithfully maintain our testimony against war. The sufferings occasioned by the unhappy strife in Europe was brought to view, and we were shown that to labor rightly in that direction, we must begin at the root from which this state of things springs. That, if man truly loves God and his fellow-man, it would be impossible under this state of feeling that any would be willing to participate in the carnage of the battle-field; and hence, to advance our testimony against this enormous wrong, we must seek, under Divine direction and qualification, to draw men by our example and precept to participate in the peace and joy arising from the fulfilling the two great commandments, "Thou shalt love the Lord thy God with all thy mind, with all thy might, and with all thy strength," and "Thou shalt love thy neighbor as thyself."

Fourth day.—The Committee on Indian Affairs made the following report, viz.:

To Genesee Yearly Meeting:

Since our last annual report nothing has occurred to abate our interest in the welfare of the Indians, or to cloud our hopes for the final success of the efforts now making for the amelioration of their condition and their ultimate civilization. The delegate selected by the committee last year to visit the superintendency under the care of the Society, was accompanied in his visit by a delegate from Ohio Yearly Meeting, and they visited all the agencies. On their return they prepared a report, which was printed by subscription—your committee taking 75 copies—and distributed among our Quarterly and Half Yearly Meetings. We do not therefore deem it necessary to refer to its details in the present report. Their statements concerning the

improved and improving condition of the Indians, their increasing confidence in the efforts of Friends on their behalf, have afforded the committee much encouragement.

The delegate reported his expenses while performing his mission, to have been \$160, which has been paid by the treasurer of the Yearly Meeting.

In the Eleventh month a communication was received from Wm. H. Macy, Acting Correspondent for the six Yearly Meetings, stating that it was deemed advisable to call a convention of delegates from each of the Yearly Meetings, to meet in Philadelphia, on the 19th of Twelfth month, for the purpose of concluding upon some method for more concentration of action. Accordingly, a special meeting of the committee was called, and after a full consideration of the importance of the movement, John Searing was appointed to attend such convention, with full power to act for this committee. For the result of their deliberations, we present the subjoined report of their proceedings.*

In the Second month, the members of the Executive Committee, belonging to this Yearly Meeting, were notified that Samuel M. Janney had tendered his resignation of his position as Superintendent, and Asa M. Janney had also tendered his resignation as agent. S. M. Janney, from reasons stated in the report alluded to, and Asa M. Janney in consequence of the state of his health. And said Executive Committee were called to meet in Philadelphia, to take proper measures to secure successors to them. After considering the matter, the members of the Executive Committee of this Yearly Meeting were of the opinion that inasmuch as the action of the Convention had not been ratified, and some doubts were felt as to the propriety of appropriating the funds on hand to pay their traveling expenses, and as the term of the appointment was nearly expired, and circumstances since the appointment had so materially changed, it was deemed best to await the action and instruction of the Yearly Meeting, before taking further measures. We have been informed that such of the Executive Committee as met, have selected Barclay White, of Philadelphia Yearly Meeting, as Superintendent, in place of Samuel M. Janney, and gave the selection of an agent, in place of Asa M. Janney, to the charge of the committee of Philadelphia Yearly Meeting.

Early in the Fall, a call was made upon the committee for clothing and dried fruits, to ameliorate the sufferings of the Indians at the Santee Agency, which being laid before Friends, was responded to promptly. And

* This report has appeared in our paper.

there was forwarded, as has come to the knowledge of the committee, the following :

2 boxes of clothing from Scipio Quarterly Meeting, valued at \$90.00

2 barrels of apples, 3 barrels of dried fruit, and clothing, from Rochester Monthly Meeting, valued at 32.50

1 box clothing from Friends of East Hamburg Monthly Meeting—value not known.

Fruit, sent to Asa M. Janney and S. M. Janney, from Farmington Monthly Meeting, valued at 14.50

The committee appropriated \$15.00, of the one hundred raised last year and placed in their hands, for defraying the freights on the articles sent; and subsequently forwarded \$20.00, in money, and \$11.24, in garden seeds. The agent, in acknowledging the reception of the donations, says, "We think Friends have been very prompt to furnish assistance, and I do not think I could have disposed of more funds to advantage."

In view of the magnitude of the concern, the happy effects which have already followed the efforts made, the improved condition of the Indians, and the increasing confidence in the community in the peace policy, we feel much encouraged, and can hopefully recommend to the Yearly Meeting the continuance of a committee to co-operate with the other Yearly Meetings in carrying out the concern.

In view of the experience we have had during the last three years, we have become convinced, that for this proper co-operation, it is necessary that there be such an Executive Committee as was appointed in Twelfth month last, who shall be empowered to act under instructions from the General Committee, on behalf of this Yearly Meeting; and that appropriations be made to defray their necessary expenses, while attending to their duties. We therefore recommend that the Yearly Meeting empower the General Committee, should they appoint one, to select such an Executive Committee; and that it place sufficient funds at the disposal of the committee, to defray their expenses; and that the General Committee be empowered to call on the Yearly Meeting's Treasurer for such amounts as may be needed to pay this meeting's proportion of money called for by the joint action of the six Yearly Meetings of New York, Philadelphia, Baltimore, Indiana, Ohio and Genesee.

It was the judgment of the Committee, that \$100 would be needed in addition to the amount at their disposal, to meet the current expenses of the coming year.

The report being read was satisfactory to the meeting, and the recommendations therein named are approved and adopted. And

our Subordinate Meetings are requested to raise their respective proportion of the one hundred dollars named, and forward it to the treasurer of this meeting.

A committee was appointed to consider of and propose at our next sitting, the names of suitable Friends to constitute a committee to continue our care in the concern.

The Minutes of the Representative Committee were read, and the proceedings of that body were satisfactory to this meeting.

Fifth-day.—The Committee to consider the subject from Scipio Quarterly Meeting, relative to the advices, reported as follows:

The committee, having under consideration the proposition from Scipio Quarterly Meeting, to omit in the advices the clauses recommending Friends not to participate in elections, also that relating to the dealing in or consuming the produce of the labor of slaves, unite in proposing that they be retained as they now stand.

After a time of consideration the meeting concluded to adopt the report, Women's Meeting concurring.

The committee to whom was referred the subject from Canada Half Yearly Meeting, reported as follows:

Most of the committee upon the proposition from Canada Half Yearly Meeting concerning the sixth query, met, and upon consideration, agreed upon the following as their understanding of it, viz.:

Accomplishing a marriage by the assistance of a hiring minister; or,

Contributing to the support of a hiring minister, because he is such.

After an interchange of views, the meeting concluded to accept and adopt the report, and direct it to the observance of our subordinate meetings, Women's Meeting concurring.

The committee to nominate Friends to constitute the Committee on Indian Affairs, reported the names of 18 men and 18 women, which being satisfactory to the meeting, they are appointed to that service for three years—they are authorized to carry out the recommendations contained in the report of the former committee, and to call on the Treasurer for such sums in his hands for their disposal as circumstances shall seem to require for the promotion of the welfare of the Indians, and they are to report to this meeting annually, Women's Meeting concurring.

A memorial of Sunderland P. Gardner, concerning our deceased friend Abraham Wilson, was read, united with and directed to be printed with the Extracts, women Friends concurring.

A memorial of Farmington Monthly Meeting, concerning our deceased friend William Clark, was also read and united with, and di-

rected to be printed with the Extracts, women Friends concurring.

The Committee on Epistles reported that most of them met and prepared an essay of an epistle to be forwarded to each of the Yearly Meetings in correspondence with us. The essay being read, was satisfactory to the meeting, and the clerk is directed to transcribe, sign and forward a copy to each of the Yearly Meetings referred to.

The clerk is directed to have seven hundred copies of the usual extracts printed and distributed among our Quarterly, Half Yearly and Monthly Meetings, and call on the Treasurer for the expense.

The business of the meeting being concluded, and having been preserved in much Christian harmony and condescension, and witnessed therefrom a renewal of strength, we can truly adopt the language, "Verily, the Lord hath been with us, and it has been good for us to be together."

Under a feeling of deep gratitude to Him for thus preserving and blessing us, we adjourn, to meet at PICKERING, Ontario, the usual time next year, if so permitted.

JOHN J. CORNELL, *Clerk.*

As the subjects which claimed the attention of the Women's Meeting were the same as those published in the extracts of the Men's Meeting, we append only the closing paragraphs :

"The epistles read from the Yearly Meetings drew forth expressions of thankfulness to the Father of all our sure mercies, that we were thus permitted to mingle in spirit with our distant sisters, and to exchange with them these tokens of affectionate remembrance.

The business of the meeting, from sitting to sitting, has been conducted with so much harmony and love, that we feel to bow in reverence and gratitude to the great Father of the Church, for the precious favor. And while thus enjoying the good things at His bountiful table, we were reminded that very many of our dear sisters who are of this fold are from various causes prevented from mingling with us—and we feel desirous to gather up of the fragments to impart to them.

The company of many dear Friends from other Yearly Meetings, who we believe were drawn in the love of the Gospel to come and be with us, has been strengthening and encouraging to us. With these evidences of the Father's continued care over us, we feel to look forward, in hope that He will yet call into His service many who are standing idle, saying, "No one has hired us."

In reviewing the state of Society, as portrayed by the answers to the queries, the meeting was brought into much exercise.

The non-attendance of our religious meet-

ings in the middle of the week, was impressively adverted to, as a disease, a state of lukewarmness, and we were encouraged to greater diligence, each doing whatsoever she may find to do, even if it be but little things; for it is by our faithfulness in these, that we shall be entrusted with more or greater ones. Remember there are many gifts and callings, that as one star differeth from another in glory, so we in our callings may differ, but we should all become stars of greater or lesser magnitude—stars of charity, of goodness, of mercy and love, in the firmament of our Zion. We have been reminded that there are those who sit as in solitary places, and we were exhorted to remember these in their afflictions, and go to them with a word of kindness and encouragement, bearing in our hand these tokens of affectionate interest to cheer their drooping spirits.

The frequent attendance of places of diversion, was the cause of much solicitude, and the question was feelingly propounded, Is life so long and eternity so short, that we can waste our precious time with these things, when the command is, "Seek first the kingdom of heaven and its righteousness, and all things necessary shall be added unto you?"

We believe that First-day Schools held in our Yearly Meeting, have tended to interest the youth in the Scriptures, and were truly a bond of union between them and their elder brothers and sisters.

Having been favored through the exercises of this meeting to feel the presence of Him who is the Crown and Diadem of all rightly gathered assemblies, we feel to gratefully acknowledge His loving kindness in thus enabling us to transact the business of Society in harmony and love.

With desires for the welfare of each other, we adjourn to meet again, at PICKERING, Ontario, the usual time next year, if so permitted."

PHEBE W. CORNELL, *Clerk.*"

SUGGESTIVE PARAGRAPHS.—It is very beautiful to see how the God who has bound His world into a grand harmony by its very diversity has arranged for this same end in His Church, by giving the members their different faculties of work,—how the pure light that comes from the sun breaks into its separate hues when it touches the palace house of Christ, with its varied cornices and turrets, till every color lies in tranquil beauty beside its fellow. If it is not so, it should be so, and as the Church grows, it will be so. Use and ornament, the corner stone and the cope stone shall both be felt to have their due place. To see how this may be is to perceive that an end can be put to all jealousies and heart-

burning, and may help us even now to take our position calmly and unenviably, working in our department, assured that our labor shall be found to contribute to the full proportion of the whole.—*J. Kerr.*

Selected.

FAITH AND LOVE.

On the majestic Alpine heights
A little flowret grows,
And blooms in Nature's solitude,
Amid eternal snows.

When morning dawns, the golden sun
Pours forth his kindling rays,
The ice-crowned cliffs with crystal sheen
Glow as the diamond's blaze.

This humble flower exhales its sweets
As incense to the sky,
To Him who placed its beauties there
Mid awful cliffs on high.

There, isolated from the world,
By mortal eye unknown,
It lives among those scenes sublime,
And blooms for God alone.

In the vast temple of His works
It shines a little gem,
The Hand that formed its tiny leaves
That hand created *them*.

There is a flower resembling this
Formed by the Spirit's breath,
That blooms in amarantbine life ;
It is the flower of Faith.

Above these meaner things below
'Tis planted far on high,
Warm'd by the Sun of Righteousness
Near the celestial sky.

Refreshing dews of heavenly grace
To nurture it are given ;
The incense of its sacred sweets
The angels waft to heaven.

The coldest, roughest winds pass by,
But still its beauteous form
Is guarded by a Hand unseen,
Nor shrinks from cloud or storm.

Its fragrance cheers the lonely heart,
Revives the drooping soul,
The leaves a healing balsam prove
To make the wounded whole.

The Christian ever wears this flower
A treasure on his breast,
Till, called by God to come up higher,
He passes to his rest.

Then he conveys it far from earth
To purer realms above ;
Transformed and changed, it there becomes
The heaven-born flower of Love.

Selected.

DOMESTIC FELICITY.

These simple lines depict a tranquil, happy phase of rustic life, and will doubtless move a smile, if they do not awaken any very strong emotion in the reader.

In summer's heat I till the ground,
And work and toil and get my bread ;
No interval can there be found,
Between my labor and my bed.
My wife declines to knit by night,
And I, to read by candle-light.

But when the south receives the sun
Beyond the Equinoxial line,
And all my summer's work is done,
Substantial pleasure then is mine ;
When she begins to knit by night,
And I, to read by candle-light.

And what I read she tries to hear,
And what she hears she tries to scan ;
If aught to her obscure appear,
I then explain it if I can.
O, how she loves to knit by night,
And hear me read by candle-light.

CHILDREN WHO WORK.

Looking up with one of the sweetest little smiles in her baby face, a small girl, perhaps seven or eight years of age, replied to my question :—

"I work at feathers."

Her's was not the rosy, dimpled, child-face whose type is familiar in all our happy homes. She was thin in flesh, and pale ; yet the bright, mirthful eyes, and the peculiarly infantile expression about the mouth, intimated that happiness and love were not altogether strangers to her life.

It was in one of the evening, or "night" schools, as they are more properly called, of New York City, and she was one of the hundred thousand working children in that metropolis, who, after a day of toil, try these uncertain night paths to knowledge.

Do you care to hear her brief story ?

She was ten years of age—none are admitted to the evening schools younger than that. Her sister, not yet old enough to come to school, worked with her at stripping feathers in an establishment on Walker street.

"What kind of feathers are they, and what kind of work is stripping feathers?" we asked.

"Why, like that in your hat," said the bright little creature, looking astonished at my ignorance. "That is what they are like when we have finished them ; but we girls work at them before they are dyed. I make about three dollars a week, and my sister—she is only six years old—she does not make as much ; sometimes a dollar a week, and sometimes more."

Her father was dead, and her sickly mother could earn but a little money by sewing. Such is the pitiful story of thousands in this great Babel of business, pleasure, wealth, poverty, fashion, and suffering.

Soon the invalid mother will pass away, confiding her little ones to the mercy of a heavenly Father. Will He send guardian angels to watch over them, to protect their little steps and strengthen them for a struggle with the destiny which stares them in the face, and that seems inevitable ?

With the addresses of a dozen or more

feather and artificial flower establishments in various portions of the city, nearly three days were passed in the vain attempt to witness and sketch the simple operations of stripping or cutting feathers. The manufacturers in this business are remarkably fearful of the light, and have adopted stringent rules—unalterable as the laws of the Medes and Persians—excluding all visitors from their work-rooms; but some of them refuse us politely and invent the best excuses they can.

One proprietor has no young girls at work, just now, either in the feathers or flowers; another is making repairs; one, whose refusal is expressed beforehand in his forbidding face, informs us that he has “no time to be bothered; the young people are well enough off; never you mind them.”

The gentleman in charge of the establishment on Walker street, where our little friend of the night school works, was polite and willing to give information, but as determined as others not to admit visitors. Another gentleman assured us frankly that no manufacturer of feathers and flowers in the city would allow visitors in his work-room, and the reason given is that each have particular patterns of their own, and fear that they may be copied by others. Some, it is stated, even send their “hands” to seek work in other establishments, and, after a few days, take them back to enjoy the benefit of what they may have learned.

When quite discouraged we found a very small workshop, one of hundreds carried on in the city, employing about a dozen girls. The proprietor, a Frenchman, who is just commencing business, was not only willing to let us sketch the little girls at work, but desired a picture made of the larger girls curling the colored feathers and preparing the flowers. All seemed pleased with the idea of being “put into a book.”

Manufacturers of feathers and flowers say that there are engaged in this work as many as ten thousand girls in New York and Brooklyn, two-thirds of whom are under fifteen years of age, and some as young as six and seven. The work done by the youngest children is simple, and manufacturers insist that it is very easy, consisting merely of stripping or cutting the feathers and stringing them, preparatory to dyeing, or preparing the material for flowers, by equally simple operations. It is thought much more pleasant than any other work in which large numbers of children are engaged. The work-rooms are not foul with unhealthful odors, but are generally tolerably well ventilated. Yet the children do not thrive upon this “easy” work. Few of them look as children should—fat, rosy, and cheerful.

Many thousands of children, some of them very small, are at work in the tobacco factories of New York city. More than one thousand are employed by a single firm, and there are hundreds of smaller establishments scattered through the city, sometimes consisting of merely the members of a single family. Permits to visit the larger factories are not easily obtained. In this craft, also, proprietors have methods of work which they jealously guard.

“I have expostulated,” said the manager of one of the oldest tobacco establishments, as he gave us a permit to visit the factories under his charge, “against the employment of young children; but the overseers say that the children will go elsewhere and get work; that their parents are in want and need their labor, so it seems impossible to avoid hiring them.”

In one of their factories the youngest girl employed is four years of age, the oldest person, a woman of eighty. They work side by side.

Children so young as four years we are told are not regularly hired, but, in cases where their parents or guardians are employed, are brought with them for safe keeping, and as it is quite impossible for them to “keep still” all the time, they are glad to imitate the others in “stemming,” and are soon able to add a dollar or two to the weekly wages of mother, sister, or grandmother. Thus, they learn the business, and in the course of a year or two become regular “hands.”

I saw a very pretty little baby, certainly not more than four years of age, trying to learn. She looked very demure, sitting upon an inverted basket, and occasionally glancing sideways at visitors. Every worker in this room, we are told, is Irish; but this nursling, with her prominent forehead, delicate features, blue eyes, and golden hair, looks more like a stray fairy who has lost her way and fallen into the foulest and darkest of prisons. The entire building steams with the fumes of tobacco, and some of the rooms are positively unbearable to those not accustomed to the odor. The rooms where the women and children work are the least objectionable; but they are dreadful places for young children to grow up in.

The youngest girls are separated from each other in their work by a goodly number of steady old women being placed between them, “otherwise, you know,” said our cicerone, “the children would play.” They sit upon benches, ranged along in regular rows, quite near together. At the end of every bench hang upon the wall numbers of hoopskirts, ready for duty upon the street when it is time to go home, but unnecessary and inconveni-

ent about the work.

In addition to the outrage of sacrificing the health and educational interests of children by keeping them at mechanical drudgery nearly all their waking hours, certain kinds of labor they perform are absolutely dangerous to life and limb. At the evening schools we heard of girls who, while working in twine manufactories, had lost one and two joints of their fingers. The principal of one school stated that last winter she had ten girls who had lost their initial finger from the right hand, and therefore could not be taught to write. One child, who learned to write with the left hand, came to school afterwards with the initial finger of that hand also gone. It was taken off in the twitching machinery at a twine factory.

Determined to see this terrible machine, we learned the address of the largest twine establishment in the city, and away up town, nearly to Central Park, we went one bitter cold day, so cold that to keep our courage up it needed the reflection that little girls, thinly clad, struggle through such weather all winter long, plunge into it from hot work-rooms, and with vitality consumed by labor in impure air.

We found about three hundred persons at work, two hundred of them being children under fifteen years of age, and nearly all girls, who spin, wind and twist the flax.

We were shown a very picturesque machine for hackling the flax, tended by ten sturdy little boys of twelve or thirteen years of age, five on each end. They were mounted upon a platform to enable them to reach and change the clamps which held the flax. This monster machine, which supersedes the small hacklers upon which our grandmothers dressed their flax, requires to be fed at either end continuously, and it works with the regularity and remorselessness of fate. Not discovering this peculiarity at first, and observing the boys working for dear life, we remarked to the proprietor, "These boys seem to be trying to show off before you." "No," he replied, "the machine keeps them at it."

"Is it not better for them than running in the streets?" asked the proprietor.

"Better than that, yes; but how are they to be educated?"

"They never all go to evening schools."

Studying in the evening after working like this all day! No wonder they fall asleep over their lessons.

This tread-mill of a machine made me forget for a moment the terrible twisters we came to see. Only for a moment. Descending to the next floor we find a few women at work, and a few boys, but nearly all girls, of various ages, and engaged in many different

labors, but all of one complexion—sooty, grimy, dusty, flaxy; all were dressed in a coarse skirt of hemp, often ragged and tattered. They ran from one corner of the room to another, carrying heavy boxes and arms-full of bobbins. You might almost imagine they were having a grand play, with such celerity do they fly from place to place; but the little faces are very sober, some thin and pale, and all appear to have arrived at a "realizing sense" of the burdens of life. There is one wielding a broom almost twice as high as herself, and almost as large around as her legs; the thinness of the latter showing painfully under her short tattered dress. If she could go to the Childrens' Aid Society's schools for even a part of the day, they would dress her warmly, and give her at least one nourishing meal in the twenty four hours.

Here are the dreadful twisting machines, very disappointing in appearance, seeming to be only long rows of spindles stretching from one end of the room to the other, with nothing peculiarly dangerous about them. The proprietor is anxious to confirm the impression caused by their harmless appearance.

"A few girls," he says, "have had their fingers hurt in these machines; but it was always in cases where they forgot or neglected their work to talk or play. The twisters are not more dangerous than other machines at which children work."

I asked a little girl who had lost the fourth finger of her right hand how it happened, and she replied:—

"It was the rule that we go to help the others, and I went to help a girl, and she kept twisting the twine so," giving her hands a great flourish. "But my little finger always *did* stick out from the others, and it got caught among the flax, and I knew it would take my hand off, and I jerked it out with all my might, and only lost half the finger. If I had been slow, my hand would have been taken off."

This is the simple story of a girl of twelve years. She was trying to imitate one more skillful than herself. The stories of other fingers lost in twine factories would differ but slightly from this. A moment's forgetfulness of the danger, but one moment of yielding to the universal childish impulse to play, and the mischief is done.

It is expected that penalties must follow violations of the law of mechanics, as of other laws, but children should not be placed in situations where so sad a penalty is the result of a moment's inattention. Their innocence and ignorance appeal for protection against the possibility of such calamities. An engine of 150 horse-power, driving a

balance-wheel of 18,000 pounds weight, is an irresistible force when it clashes with the little finger of a child. Should not children's fingers be protected from the destruction threatened from such machinery, in some manner, by law if not otherwise?

But if the situation of children engaged in regular employment is so sad, what can be said of those who are drifting about the streets of the city, without any real homes or steady employment, but supporting a miserable existence by such irregular work as they can obtain—living "by their wits." From fifteen to twenty thousand is considered a moderate estimate of the number of boys and girls situated thus in the midst of this great centre of wealth and refinement. Many of these are orphans—others worse than orphans—children of criminals and poor wretches sunk deep in the degradation of drunkenness. Some are runaways from other cities; some are children of emigrants whose parents died upon the way here; some have fathers in the army and no mothers; others have invalid mothers and no father. Their daily portion is hunger, cold, and misery of almost every description. They may be seen almost every day upon the street, bent double, staggering under heavy loads, sweeping the crossings, or begging. Sometimes they go without food until sick with hunger. Often their loathing of the miserable holes they call home is so great that they seek lodging in the station-house, and not unfrequently the beginning is made in crime for the sake of the shelter of even a prison over their heads.

The magnitude of this evil is not appreciated. When it was proposed by Mr. Brace, the leading spirit in the Children's Aid Society work, to start the Rivington street lodging-house for boys, many persons, even those who were engaged in the work, doubted the necessity of the step. The President of the Society thought there were not homeless boys enough to need it; but very soon it was full, and now applicants for lodging have to be sent away every day.

I asked some bright little newsboys, lodgers at this house, how many such hotels they thought there ought to be for boys in New York? One thought that thirty would do, and another said it would need fifty. I asked another if he thought there were many boys now out of employment in New York? He said:—

"The city's full of them. Why, there's men even offering to work for boys' wages."

When this unequal struggle of childhood with hunger, cold, and all the nameless horrors of poverty has produced its natural effect, and the boy or girl has become hard-

ened, the people in self-protection, are obliged to support them in reformatories or prisons, while any plan by which all the poor children might be supported and schooled, and thus made useful citizens, would seem to the same people like useless extravagance.

Horace Mann, the great apostle of the people, as President Sarmiento so justly designates him, saw the truths which underlie this question more clearly, and stated them more forcibly than any other person has ever done. Twenty-five years ago he told the people of this Republic that—"No greater calamity can befall us as a nation than that our children should grow up without knowledge and cultivation. If we do not prepare them to become good citizens, develop their capacities, enrich their minds with knowledge, imbue their hearts with a love of truth and duty, and a reverence for all things holy, then our Republic must go down to destruction as others have gone before it, and mankind must sweep through another vast cycle of sin and suffering before the dawn of a better era can arise upon the world."—*Scribner's Monthly*.

TO SEE what is right, and not to do it, is want of courage.—*Confucius*.

ITEMS.

WE recently looked through a microscope, and examined a drop of rain-water. In that single drop we counted nearly a hundred playful little creatures, apparently as large as the common house fly, frolicking and frisking about as merrily as minnows in a meadow brook. Then we reached a book from the shelf, and detected a speck of a white insect hurrying off at a double-quick, to hide behind a grain of dust; for we had opened on him by surprise. The little fellow was retreating rapidly; for the shaking of a book leaf, or even causing as much of a leaf to tremble as to hold a single letter was to him a commotion equal to a hundred earthquakes. But we pursued him, excited as he was, until we chased him on a bar of polished brass, and, by a strange stratagem, drove him to an entrenchment on the bar. He was smaller than the dot on an *i* in your pocket Bible. But we pressed him into our service, a prisoner in his house of brass, and snugly covered by a glass slide, until we reviewed him beneath the microscope. His prison was less roomy than the eye of a fine cambric needle, yet, under the microscope, his liberties as well as his body were greatly enlarged. The creature, to the naked eye so small, was now apparently as big as a bee, and white as snow, with limbs of perfect symmetry and proportion. We were affected by his efforts to get free. He hurried from side to side of his prison house, and tried to force the walls apart. Through his clear, transparent flesh could be seen the beatings of his heart and the purple veins of blood. His movements were restless and pitiful as those of a newly-caged bird. If we could, by some magnifier of sound, have heard his voice, and understood his language, doubtless it would have been a plaintive cry for liberty. How wonderful are the works of the Almighty Hand!—*Journal of Microscopy*.

FRIENDS' INTELLIGENCER.

"TAKE FAST HOLD OF INSTRUCTION; LET HER NOT GO; KEEP HER; FOR SHE IS THY LIFE."

VOL. XXVIII. PHILADELPHIA, SEVENTH MONTH 29, 1871. No. 22

EDITED AND PUBLISHED BY AN ASSOCIATION OF FRIENDS.

COMMUNICATIONS MUST BE ADDRESSED AND PAYMENTS MADE TO

JOHN COMLY, AGENT,

At Publication Office, No. 144 North Seventh Street.

OFFICE OPEN from 9 A. M. to 4 P. M.

TERMS:—TO BE PAID IN ADVANCE.

The Paper is issued every week.

The TWENTY-EIGHTH Volume commenced on the 4th of Third month, 1871, at Two dollars and fifty cents to subscribers receiving it through the mail. To those receiving it through our carriers, THREE DOLLARS.

SINGLE NOS. 3 CENTS.

It is desirable that all subscriptions should commence at the beginning of the volume.

REMITTANCES by mail should be in CHECKS, DRAFTS, or P. O. MONEY-ORDERS; the latter preferred. MONEY sent by mail will be at the risk of the person so sending.

AGENTS.—T. Burling Hull, Baltimore, Md.

MARY C. BAKER.

A memorial issued by New York Yearly Meeting, held in Fifth mo., 1871.

Having confidence in the declaration that "the memory of the just is blessed," we believe it right to preserve this memorial of our beloved friend Mary C. Baker, deceased.

She was born at Shrewsbury, New Jersey, on the second day of Second month, 1787. Her parents George and Patience Corlies were exemplary and worthy members of our religious society, and careful to train up their children in piety and virtue.

Early in life this dear friend was concerned to give heed to her Heavenly Teacher, and she was thus enabled to follow her Divine Master in the way of His requirements.

In the year 1818 she was married to Dobel Baker, and in 1825, they removed and settled in the city of New York, and became members of this monthly meeting. Here her sphere of usefulness in the society was enlarged, she filling the stations of overseer and elder with much acceptance to her friends.

She was of a retiring disposition, yet in fulfilling these and other public duties in the society, she was a faithful example. But it was in the family and social circles that the beauty of her character was most strikingly exhibited. To her husband she was a faithful and loving wife, they having lived together in beautiful harmony and affection during

the whole of their married life, which embraced a period of more than fifty-one years.

To her children she was a devoted mother, earnestly endeavoring to imbue their minds with the love of their Creator in the days of their youth, and to "bring them up in the nurture and admonition of the Lord."

In the social relation she greatly endeared herself to all. For the young she ever felt the deepest solicitude; and ardent were her aspirations that the subject of religion, when conversed upon, should be presented to them in its most attractive form, in order that they might be persuaded to embrace it early in life, and thereby realize for themselves, how much their happiness would be increased.

The predominant feature in her character was that of love, and this not only embraced those who were near and dear to her, but extended to the whole human family; and this feeling prompted her when opportunity offered, to visit the sick and afflicted, and to address to them words of sympathy and kindness, and we believe there are many who have cause gratefully to acknowledge that the influence of her loving spirit on these and other occasions, has cheered them on in their spiritual journey with renewed hope and confidence.

The same feeling also prompted her to seek out and notice strangers who came to our meetings, who in many cases felt them-

selves lonely and unknown even amid large numbers.

She would often take these by the hand in the most cordial and affectionate manner, adding words of kindly welcome; and many can testify that they have been comforted and encouraged by her kind manner of performing this Christian duty, one which is worthy of all imitation.

In the attendance of religious meetings she was an excellent example, considering it not only a duty, but also a precious privilege, and after their close, she often expressed her gratitude for the renewal of spiritual strength therein received. When her health declined, and she was no longer able to attend public worship, she would pass the hour set apart in solemn silence, in communing with the Father of Spirits, afterwards remarking that she had had a precious meeting, her countenance bearing evidence that the Master had been with her; and in order that all may be encouraged in fulfilling the duty of attending meetings, it may be stated, that, in conversation with a friend, she expressed her belief that by her steady attendance of meetings through life, it had been made easier for her (now that she was deprived of that privilege) to approach the Divine Presence in seasons of deep inward retirement.

The Bible was almost her constant companion, and in it were found, after her decease, many beautiful texts, marked by her hand, also copies of verses of devotional poetry, one of which is as follows, viz.:

I love to think of mercies past,
And future good implore,
And all my cares and sorrows cast
On Him whom I adore.

Her dwelling on mercies *present* as well as *past*, was a beautiful feature in her character. When suffering severely from bodily distress, during a protracted period of ill health toward the close of her life, instead of complaining of her sufferings and privations, her mind seemed almost constantly clothed with a spirit of thankfulness and praise for mercies vouchsafed.

On Him alone her cares were cast. He was alone adored, and we believe she realized in a good degree the fulfilment of the declaration of the prophet, "Thou wilt keep him in perfect peace, whose mind is stayed on thee, because he trusteth in thee."

Truly did she trust in Him, and when scarcely able to articulate, said in reply to her kind physician, who remarked that he trusted her Saviour would be with her, "Yes, He is my hope, my light, my life, my joy." Her countenance indicating a state of heavenly peacefulness as she was enabled to bear this testimony.

He was indeed with her throughout, illuminating the dark valley of the shadow of death, during which, when mortality was about to put on immortality, the holy feeling that pervaded the minds of all present will long be remembered by them.

Her last illness was only of a few days' duration, her mind remaining in perfect peace. Her consciousness continued until near the close, which took place the eleventh day of the Eighth month, 1869, in the 83d year of her age.

Thus has passed from our midst a beloved mother in our Israel, whose spirit we doubt not, has been admitted into companionship "with Saints and Angels, and with the spirits of the just made perfect."

May we, her survivors, follow her, encouraged by the triumphant ending of her long and exemplary life, that we too may at the end of the race, be mercifully permitted to enter into that rest prepared for the righteous of all generations.

Her funeral took place on the 13th of the Eighth month, 1869, on which solemn occasion testimonies were borne to her worth, and to her dedication to the cause of her Divine Master.

For Friends' Intelligencer.

"PROTESTANTISM."

BY BENJ. HALLOWELL.

The editorial in No. 15 of the current volume of the *Intelligencer*, headed "Protestantism is a Failure," and the communication on the "Blessings of Protestantism," in No. 18, are highly calculated to arrest the attention of a person who is seeking after Truth. The difference in the conclusions of these two honest minds, is no doubt owing to the different [standpoints from which the subject was viewed.

In order to understand whether or not Protestantism has been a failure, regard must be had to what is understood to have been its aim. This could not have been to substitute one form of restraint upon intellectual freedom, and liberty of conscience, for another; but to emancipate the soul of every individual from *all human thralldom*, whether of the Pope, the Priesthood, or a religious organization, and permit it to enjoy that spiritual freedom with which God inspires it, responsible to Him alone. This liberty of conscience, and freedom to express the loftiest and deepest convictions of the soul, together with the recognition of the Fatherhood of God, and the brotherhood of *all men*, and the conscious impression of the varied filial and fraternal obligations which this recognition imposes, are what were to be looked for and hoped for

from the Reformation, as the religion of Protestantism.

D'Aubigné, in the preface to his "History of the Reformation," published in Philadelphia in 1843, says :

"Christianity and the Reformation, while they established the great principle of the equality of souls, and overturned the usurpations of a proud priesthood, which assumed to place itself between the Creator and His creature, at the same time laid down as a first element of social order, that there is no power but what is of God—and called on all men to love the brethren and to fear God.

"The love of Truth, of holiness, of eternal things, was the simple and powerful spring which gave effect to 'the Reformation.' It is the evidence of a gradual advance in human nature. In truth, if man, instead of seeking only material, temporal and earthly interests, aims at a higher object, and seeks spiritual and immortal blessings, he advances—he progresses.

"Christianity and the Reformation are the same revolution, but working at different periods, and in dissimilar circumstances. They differ in secondary features—they are alike in their first lines and leading characteristics. The one is the re-appearance of the other. The former closes the old order of things—the latter begins the new. Between them is the middle ages.

"The history of the Reformation is altogether distinct from the history of Protestantism. In the former, all bears the character of a regeneration of human nature, a religious and social transformation emanating from God Himself. In the latter, we see too often a glaring depravation of first principles—the conflict of parties—a sectarian spirit—and the operation of private interests.

"*Modern Protestantism, like old Catholicism, is, in itself, a thing from which nothing can be hoped,—a thing quite powerless.* Something very different is necessary, to restore to men of our day the energy that saves. A something is requisite, which is not of man, but of God."

It is clear to my mind that this learned author confessed in the two paragraphs last quoted that Protestantism had not fulfilled the high and pure aim of the Reformation, and that consequently it was a "failure."

In the article on the "Blessings of Protestantism," it is stated, that "the Roman Church, by asserting its infallibility, and claiming for its clergy the sole right to expound the Scriptures, endeavored, before the Reformation, to prevent religious inquiry, compelling all to accept its doctrines, and submit to its oppressive sway, under pain of excommunication, attended often by imprisonment, torture and death.

"Since the Reformation, the same cruel measures have been pursued in Catholic countries, wherever the priests could prevail on the secular powers to sustain them in their unchristian proceedings."

Now, a searcher after Truth would be led to inquire whether, as this language seems to imply, these "cruel measures" were confined to "Catholic countries," and whether persecutions for religious opinions, and the sacred rights of conscience, have been unknown among Protestants, and where Protestants were in power?

The Reformation obtained in England, during the reign of Henry VIII., who died in 1547; and from about that period the Protestants were in authority in that country, and in its colonies on this continent.

According to the testimony of the learned authors of "Fox's Book of Martyrs," "Sewell's History of the People called Quakers," and "Jauney's History of Friends," the bitter persecutions and imprisonments imposed upon George Fox, William Penn, Robert Barclay, and many, *many* others, and the hanging of Mary Dyer and Marmaduke Stevenson in Boston, Massachusetts, for obeying the dictates of their consciences, were all by Protestants, and under governments where Protestantism was in authority.

Human nature is much the same in all times, all countries, and all sects; and when it is unrestrained by the Spirit of God, and possesses authority, its instincts lead alike, whether Catholics or Protestants, to bigotry, intolerance and persecutions.

The fact is, however it may be with some individuals or even communities, the great body of *humanity* is progressive—the heart of humanity is becoming more and more tender—and it is due to this *improvement of the race* from the operation of the Spirit of God in the individual souls of all men, causing them to aspire after something higher, and purer, and freer, far more than to any particular system of religion, or all systems, that liberty of speech, spiritual freedom, and the sacred rights of conscience, are so increasingly respected and tolerated in our favored day.

This progress in enlightenment, and melioration of the heart of humanity, is strikingly witnessed in the legislation of different countries, especially during the present century, in withdrawing the arm of the civil power from the support of persecution for religious opinions; in removing oppressive restrictions from the Catholics and Jews; in the "disestablishment of the Irish Church" by the act of 1869, in increased opposition to capital punishments, war, and all manner of cruelty, even to dumb animals; in the manumission of the serfs in Russia, and the slaves in our own

country and some others; all evincing an advancement towards a higher, nobler, purer condition of our race, and that it is gradually approximating by the drawing cords of God's love to become the image of God in disposition and conduct,—a little lower than the angels, and crowned with glory and honor. *So may it be.*

Sandy Spring, Md., 7th mo. 14th, 1871.

For Friends' Intelligencer.

THE PROVIDENCE OF GOD.

Perfect sincerity and an entire willingness to do all which, according to the light of the understanding, appears to be a duty, constitute a platform sufficiently broad for the support of every member of the human family. Whatever ministry, therefore, is instrumental in winning individuals to the performance of their varied duties, is beneficial. But most of all is that ministry beneficial, which assists us in judging as to the nature of those required duties, which draws the attention more and more from all that is merely outward in its nature—from all ceremonial rites—from a dependence on the traditions and teachings of men or of books, to the one inspeaking voice, an omnipotent, omnipresent God.

The Divine Spirit holds converse with our spirits through the language of impression; and this is not more mysterious in its nature, than that the mind should through the external senses, receive impressions of things pertaining to the material world; or that through the material organization, mind should hold communion with fellow-mind, as is the case in social converse. By learning to recognize and to obey this inspeaking voice, we shall be not only instructed, but also gifted with ability to restrain the undue gratification of such propensities which, if indulged to excess, would lead to actions which, under the established laws of God's government, must land us in danger and difficulty, piercing us through with many sorrows. These sorrows and suffering it is not the will of the kind Heavenly Father we should feel, else He would not so strive to draw us from pathways leading to such results. This appears to be the true interpretation of such parts of Holy Writ as represent the all-merciful and loving Father, to be a God of anger and severe judgments. From the penalty of the transgression of His laws we cannot escape, without the interposition of miracle. The consequences of a violation of them are as severely visited upon us, as though a result of His anger and judgment; and they were represented as such by those of old, to meet the understanding of a people not prepared to recognize a world of govern-

ment and law, and as a means of warning them against the dangers of evils ways, and a disregard of the voice of the inward monitor.

“Are not two sparrows sold for a farthing? Yet one of them shall not fall to the ground without your Heavenly Father's notice. Ye are of more value than many sparrows.” Let us not then fall into the mistake of fearing that, in the magnitude and multiplicity of the works of the Creator, we shall be overlooked; or of supposing that anything pertaining to our well being, however small, is beneath the notice and superintending care of Him by whom the hairs of our head are numbered. Let us rather adopt and feel the force of this language of the pious Dr. Chalmers: “Though His mind takes into its comprehensive grasp immensity and all its wonders, I am as much known to Him as if I were the single object of His attention.” In regarding Him as less omniscient than this, we more circumscribe His power than do that increasing class, who, not being able to conceive that Spirit can operate upon inert matter, conclude that miracles have never been, and that they cannot be.

Surely the might of that Being who first called the material universe into existence, and established the multifarious laws for its government, so adjusting and balancing their interworkings and counterworkings, as to produce the general harmony, yet sometimes also fearful commotions in nature, is still equal to the suspending or changing of their action; so that the doubting children of men may know that He is the Lord, learn to trust in Him and be saved. God works by means, but they are means of His own creating, and therefore subject to His will. He is not alone Power, He is also an acting Intelligence. For all things possible relative to the material world, He is in Himself sufficient; but every soul must of necessity, by His aid, and under His direction, work out its own salvation with fear and trembling.

Man is gifted with the power of will and choice, without which he were but a machine, bound fast in fate, incapable of possessing virtue, and therefore incapable of becoming an heir to the inheritance of eternal life. The soul, while possessing this power of will and choice, cannot become a subject of coercion. The human soul cannot be saved without its own consent and co-operation. The creature must become a co-worker with the Creator.

Under the hand of cultivation earth produces more abundantly, and her flowers and fruits become richer and of larger growth. Animals under domestication, change and are developed within certain limits. The intellect that otherwise had remained feeble

and dwarfed, becomes, by healthful exertion, able to range at ease through mysterious fields of nature and the intricate sciences. So also must the spiritual growth be by exercise and patient toil. Had the Creator so willed it, the varied productions of earth, vegetable and animal, might have been by nature all and more than all they have by cultivation become. But the capability of improvement by culture in them, meeting with the capacity in man for bestowing that culture, he becomes a co-worker with Deity; the labor and care extended by him being as promotive of man's development as of theirs.

Of intellectual power, the native shrub might have been made to more than equal what is now the growth of the cultivated tree. The soul, though by virtue of its free agency rendered liable to fall, could not be made to become more than a joyless existence, without its own co-operation with Him who first called it into being.

As in order to witness this increase and advancement, the earth must yield to timely tillage, the tree endure the pruning knife of the gardener, the kine submit to the fostering care of the herdsman, and the pupil follow the directions of his judicious preceptor, so must we bow in perfect submission to Him who will become our husbandman, shepherd, teacher, father and God. Then, and not till then, may we become a co-worker with Him to keep and dress the garden of the heart. Then, and not till then, may we experience the joy of God's salvation.

Do we plead human weakness and frailty as an excuse for evil doing? This were a reflection upon the wisdom of the Highest, who has said, my grace is sufficient for thee. Man, with all his weakness and frailty, is as noble and exalted in his nature, as an all-wise, all-powerful Deity could constitute him while a being of earth, though designed for Heaven. He is as perfect as without his own co-operation he can be made; but with such co-operation he may become perfect, as his Father in Heaven is perfect.

When we have refused to work with the Creator, but have chosen to work against Him, and we find ourselves involved in a labyrinth of difficulty, danger and threatened ruin, we would then fain cry to Him for assistance, but having separated ourselves from Him, we feel Him to be a God afar off; and are ready to conclude that His ear has grown heavy that He cannot hear, and His arm has become shortened that it cannot save. Let us bear in mind that our own ear first grew dull to the hearing of His voice, that we have trusted in the strength of our own arm, and found it weakness; let us remember how often He would have gathered us under the

protecting wing of His care, but we would not. We may not now, therefore, expect that a miracle will be wrought for our deliverance. We must suffer in accordance with God's established laws, the penalty of our transgressions.

Yet even here the prayer, rising in humble, contrite faith, asking not for deliverance from afflictions, but for strength to endure it, will be heard. As we abide in patient submission and trust, we may yet experience the truth of the promise, A way will be made where there seems no way, and we shall come to feel the banner of His love to be spread over us, enabling us to partake of the joys of His kingdom. L. B.

LETTERS FROM THE WEST. NO. 5.

(Continued from page 296.)

Life among the Dakotas.

FROM MY DIARY.

6th mo. 8th. A little girl came to the agent's early this morning, asking for hospital stores for a sick child. Some doubts arising, H. and I follow her home, and find it a subterfuge to obtain a little tea, sugar and rice. Of late, neither sugar nor coffee have been issued them. They are extravagantly fond of both, and resort to many such efforts to obtain them, though I believe no coffee is ever given to the sick. Crackers and dried fruits, the latter of superior quality, furnished by Friends, are added when needed.

The sick (?) child was sitting on the bed. He was fat and dirty, with a frying pan in front of him, from which he was helping himself very freely to fried meat and bread, seeming to enjoy it. The family are very untidy, and have little character or standing among the people.

C. and I go among the houses lying between the agency and the P. mission. Most of the families are thrifty and intelligent. One woman, a widow, interested me particularly. She was busy over a pile of odds and ends of old clothing, patching them into what will be a warm, though homely bed-quilt. She showed us four others she had made out of better material, mostly donated by Friends. Her house was in good order, the earth floor swept clean, and everything neatly arranged. She appeared to me to be a model Indian woman. Her corn looks well; she told us that *she* hoed all the weeds out.

We enter another house, where a young woman lives with her grandmother. Her husband has deserted her, and she seemed to be in much trouble. She was sitting on her bed, as do most of them, with her feet tucked under her, and a few pieces of half washed

clothes that had not been ironed, lying beside her. She can sew, but has no knowledge about mending her stockings: seeing them very ragged, I offered to show her how to make new feet to them, if she will bring them to me. All the people appear glad to see us; some make considerable demonstrations.

In another house we see that they are strangers to the darning needle. I arrange to give instructions in its use. One of the women speaks good English. They are not a reputable family. Two half-breed children belong to one of them. Violations of the 7th commandment are not looked upon as crimes by very many. I am sorry to add, that even church members are among the delinquents. In every house we see evidences of the labor of the agent's daughters. Their "works praise them." Little seats for the children, neatly covered with pieces of cloth of various colors, toilet stands, lounges and bed quilts, all the outgrowths of their self-sacrificing efforts, are adding to the comfort, and cultivating a taste for better things among these people. Some of the quilts are very pretty, and the colors arranged with skill. These Indians are, however, still destitute of nearly all the comforts of civilized life, being in the transition state. Having given up the tent and its surroundings, with the wild, free life of their ancestors, they are trying to adapt themselves to our civilized ways, which in many instances are to them a real disadvantage, through ignorance and a certain shiftlessness, that cannot well be prevented until they have better homes, and more incentives to industry. All the women have much spare time that might be turned to good account, if there was any way to make it available. Scores of bed-quilts lie unfinished for want of pieces. Men and women clamor for work, but the agency has not employment to give them. Every thing that can be turned to account to bring them a little money is made and sold, always at the highest possible price.

First day, 6th mo. 11th. A beautiful morning, though warm, with a good breeze stirring. Every thing wears the mark of a true Sabbath. A more perfect quiet I never witnessed. The missionaries have taught the people that one day in the seven must be given unreservedly to their Heavenly Father. It is a marvel to me that they have been brought so completely to observe it, and is an evidence of their orderly and teachable condition. Occasionally an old woman, who still clings to her ancient customs, presents herself at the agent's with some trifle to sell, or asking some coveted good; but such occurrences are rare.

We see the people in their best, either on foot or riding their ponies, on the way to

their respective places of worship, the mission houses, which are a mile apart, at either extremity of the range of log huts which constitutes the village.

Friends' meeting is also held at the house of the agent, attended only by the employees. Thirteen formed the little gathering this morning. It was a very precious season to me, and I doubt not to others then present.

After dinner, G. and I walked about a mile down the river to see a boy, said to have been run over by a loaded wagon.

His grandfather is one of the influential Indian men, and has a roomy house, with more comforts than are usually found among these people. The child had not been seriously injured. We gave him an orange; rested ourselves under the lodge in front of the house for awhile, and then returned home through a luxuriant ravine, a little nervous about snakes; but seeing none. A profusion of wild beauty charmed us. Roses, rich in perfume, and varying in color from bright red to the purest white, are blooming everywhere. We crush them under our feet, though it seems a profanation to tread upon anything so fragrant and beautiful. Many plants, entirely new to us, are in bloom; though we see some old familiar friends growing among them.

13th. I gave the proposed lessons in darning. One of my pupils does it beautifully. I shall have to loan them needles and cotton, as there are none for sale in the store. The deserted wife of whom I spoke came with her stockings, which I cut and arranged for her to sew. She was pleased with the effort, and did her part quite satisfactorily. I want to continue in this labor; it will give occupation for many of the hours which now hang so heavily upon the women.

I wrote home, asking for needles and cotton to be sent forthwith, and I hope my request will be responded to.

Many of the women look in at the door, half ashamed, waiting to be invited to join us; they bring their babies hung on their backs, in the indispensable shawl. I show them the pretty things given me by the children of Green St. schools. They never tire looking at the pictures, and I doubt not would like to possess them.

Every picture that falls into their hands is carefully fastened to the walls of their houses, which in many cases are covered with illustrated newspapers and such things.

L. J. R.

REPOSE.

In the constant turmoil of a struggling life it is not strange that the value of repose should be depreciated. In this country, useful work of every kind is justly deemed dig

nified and honorable, and the idler, whatever is external advantages, or his internal resources, is rightly despised. But our enthusiasm for labor sometimes blinds our eyes equally to the necessity and the value of repose. In shunning the pernicious doctrine that would degrade the life of poverty and toil, and honor that of inaction and leisure, we are apt to swing too far to the opposite extreme, and to esteem only the busy restlessness that scorns or dreads repose and finds its only happiness in ceaseless occupation. It may be thought that the class who err from excessive activity is not numerous, and that however they may injure themselves, they must at least benefit the world by their perpetual industry. Such, however, is not the case. A wise economy should govern work, as well as time or money, and that man most effectually serves his race and develops himself who most fully recognizes this truth. The idea possesses some men that labor is in itself achievement, that it is not a means to some higher end, but itself the final and crowning end of life. They toil unremittingly, grudging and curtailing even the necessary time consumed in sleep, denying themselves all recreation, and their friends all pleasure and benefit from their society. When they are checked or hindered, they fret at the supposed waste of power, and when occasional enforced leisure comes to them they find their power of enjoyment gone, their social nature contracted, their thoughts meagre and life insipid. The truth is, there is a natural and wise limit to our capacity of laboring effectively, which if we try to overleap we but hurt ourselves, and weaken future efforts. Any one who watches the motion of the laborer as he plies his tool, will see a deliberateness about each act that seems needless to the unpractised hand. But were he to do his work in half the time, his strength would be exhausted and nothing would be gained. His repose comes in small instalments, but it comes surely, or his labor would be defective. In proportion to the rapidity or intensity of the labor, whether of head or of hand, must be the length of interval allowed for repose, if we would render work effective.

All happiness as necessarily includes the idea of repose as that of activity. The powers that always crave exercise, that cannot subside at the proper time from action to rest, are unhealthy in their nature and irregular in their action. The happy child enjoys his play with keen avidity, and then, tired out, falls into needed repose. If either element fail to give him pleasure, we say that he is unnatural, or deficient in some portion of a healthy organization. So the man

who can only be satisfied when his powers are in active exercise, who chafes at every hindrance, and is restless and uneasy when circumstances enforce quiescence, is lacking in character and forfeits much natural and rightful happiness.

There is a repose of mind which is even more to be desired than rest for the body. The restless mind, ever on the alert, swayed by every influence, and ruffled by every adverse circumstance, can never acquire the strength or supremacy that marks the calm, self-possessed spirit, observing the laws of alternate action and repose. Equanimity, and the power of self-control are essential to greatness of mind, and these are impossible, where uneasy restlessness banishes repose. No character is reliable without this element. It is the tranquility of the captain in the fearful storm that inspires all on board with confidence and hope. It is when passion is asleep, and emotion subdued, and impulse controlled, and the spirit calm and steadfast, that the greatest mental triumphs are achieved. He who enters life with restless excitement and follows his pursuits with feverish impatience, makes but slow and irregular progress and wastes much of his energies.

Let it not be thought, however, that the repose we would cherish is in any way equivalent to inactivity, or can be any plea for indolence. On the contrary, it is a chief element of power, and can never exist in its true efficiency, except as coupled with energetic action. They are twin sisters, each needing the other for her own perfection. The idle can never know the value of repose. It is labor that makes rest sweet. But one of the most important works of life, and one demanding all our energies, is that of holding in repose the passions and appetites. He who can so control himself as to maintain a firm ascendancy over his own desires, has learned to measure his powers and to assert his dignity. Let us, then, while bringing every faculty into exercise and developing all our powers, also cultivate repose. Let us "learn to labor and to wait"—so shall we find the true happiness, efficiency and dignity of life.—*Philada. Ledger.*

Scrap

FROM UNPUBLISHED LETTERS.

The disciple is not above the Master, nor the servant above his Lord. The pre-eminent one suffered for and by reason of the sins of the world—and that especially near the time of his departure from this scene of suffering

and deep baptisms—baptism into a feeling (as John Woolman said) of the miseries of his fellow-creatures, separated from the Divine harmony. Yet this travail of spirit, this deep exercise of soul, the work and fruit of living faith, was and is an acceptable sacrifice to God. For so his children bear the sins of many, and make intercession for transgressors. Oh! my dear friend, may thou and I and others keep the faith in holy patience unto the end. Thou hast known this living faith in Divine revelation, and its blessed influence to be thy morning light, thy noonday strength, and at seasons thy evening staff and consolation. And though clouds of discouragement in deep suffering for the Seed's sake, may sometimes intervene, so as for a season to obscure the brightness of the light of God's countenance, yet hold fast the faith, and hope thou in His mercy and all-controlling power,—for these clouds will pass away, and thou shalt enjoy the health of His countenance forever. My spirit salutes thee in a fresh feeling of Gospel love.

I have for two or three years past been a constant reader of the *Intelligencer*, and I but speak the sentiments of Friends generally in this vicinity, when I say, I consider it almost indispensable in a Friend's family; and the more I read it, the more fervent are my desires to be brought into a more intimate acquaintance with, and a partaking of, "that better life" towards which its teachings so plainly point the way.

FRIENDS' INTELLIGENCER.

PHILADELPHIA, SEVENTH MONTH 29, 1871.

"THE LIFE THAT NOW IS."—We have received from the publisher a volume of discourses with the above title, by R. Collyer. As far as we have examined them, they bear the impress of a loving, hopeful, and tender nature. Their tendency, (with the exception of one discourse) is to recommend and enforce "whatsoever things are pure, lovely, and of good report." These are often beautifully and forcibly illustrated by analogies drawn from the simple things in nature, and from the domestic affections.

As the title implies, the discourses are practical in their character; the *life we live* being, in the view of the author, the best preparation for heaven. He says in his preface, "I am so sure that if we can but find the right way through this world, and walk in it, the

doors of Heaven are as sure to open to us, as ours open to our own children when they come eagerly home from school."

The *exception* alluded to, is the discourse "At the Soldiers' Graves." We could not but regret that while doing full justice to the *motive* that influenced many who entered into the recent deadly conflict, he had not taken occasion to show how mistaken a form patriotism and self-sacrifice assume, when they dare to disobey the command, "Put up thy sword into its sheath." "They that take the sword shall perish with the sword." Charles Sumner, when invited to deliver the customary oration on the Anniversary of American Independence, was courageous enough to choose for his subject "The True Grandeur of Nations," showing that this is to be found in peace and not in war. Who can estimate how much this masterly and eloquent discourse has aided in producing that public sentiment against war, which now seems to be on the increase. The pomp and glitter of war have long hidden its deformity, and given it a charm in the eyes of many; but these attractions seem to us less insidious and dangerous than is the attempt to connect it with some of the noblest sentiments of the human mind. It is true that He alone who knows the heart, can pronounce upon the degree of its culpability; but it is dangerous for us to allow our admiration of the *motive* which prompts an act, to interfere with our calm judgment as to its *nature*. It is peculiarly important that the public religious teacher should make this distinction; otherwise he lends what influence he may have to perpetuate a system so monstrous, that were it stripped of its trappings, civilized men would turn from it with abhorrence.

DIED.

HOWELL.—On the 25th of Sixth month, 1871, at his residence in Charlestown, West Virginia, of heart disease, David Howell, in the 73d year of his age; a member of Hopewell Monthly and Particular Meeting.

EACHUS.—On the 15th inst., Lydia M. Eachus, widow of the late Homer Eachus, in the 81st year of her age.

OUTLAND.—On the 6th of Tenth month, 1869, Elizabeth L. Outland, daughter of Salathiel and Louisa Lukens, aged 37 years.

MULENIX.—On the 1st of Seventh month, 1871, near New Paltz, Ulster Co., N. Y., of a protracted illness, Thomas Mullenix, aged 71 years; a member

of Oswego Monthly Meeting. Being remotely situated, he could seldom meet with his friends in religious worship, but the past five years, when health permitted, he was a regular attender of the indulged meeting held in Friends' meeting-house near his residence, by the opposite branch of Society; his house being ever open to receive Friends, whether of his own Society or those with whom he mingled. A few weeks before his decease, after a period of extreme suffering he remarked, that he had felt it to be a duty to welcome and entertain Friends, and that the remembrance thereof was now a comfort to him.

MORRIS.—At Fall Creek, Ind., on the 11th of Third month, 1871, Charles William, infant son of W. F. and Mary E. Morris, aged 2 months and 13 days.

MILLER.—On the evening of Fourth month 24th, at his residence, Riverton, N. J., Daniel L. Miller, in his 51st year.

HENSZEY.—On the 27th of Sixth month, 1871, at the residence of her son Samuel C. Henszey, Philadelphia, Ann, widow of Joshua Henszey, in her 82d year; a member of the Monthly Meeting of Friends of Philadelphia.

HENSZEY.—On the 2d of Seventh month, 1871, at the residence of her son Dr. Samuel C. Henszey, Jr., West Philadelphia, Priscilla H., widow of Samuel C. Henszey, in her 72d year; a member of Green Street Monthly Meeting.

LOVERING.—On the 3d of Seventh month, 1871, Sarah S. Lovering, in her 80th year; a member of Spruce Street Monthly Meeting.

CIRCULAR MEETINGS.

- 7th mo. 30. Alloways Creek, N. J., 3 P.M.
- 8th mo. 6. Moorestown, N. J., 3 P.M.
- “ Greenwich, N. J., 3 P.M.
- “ 13. Flushing, L. I., 11 A.M.
- “ Port Elizabeth, N. J., 10 A.M.
- “ 20. Haverford, Pa., 3 P.M.
- “ Roaring Creek, Pa., 10 A.M.
- “ Catawissa, Pa., 4 P.M.
- “ Orange, N. J., 10½ A.M.
- “ Gunpowder, Md. (old house), 10 A.M.
- “ (No meeting in other house.)
- “ Orangeville, N. Y., 11 A.M.
- “ Cape May, N. J., 3 P.M.

FIRST DAY SCHOOLS.

The Association within the limits of Philadelphia Yearly Meeting will hold its next meeting at Penn's Manor Meeting-house, Bucks Co., Pa., on Seventh-day morning, Eighth month 5th, at 10½ o'clock. A general invitation to attend is extended. The different Schools, &c., are desired to send delegates, and forward such reports and other communications as will add to the interest of the gathering. *Special arrangements* have been made for the conveyance of those attending to leave in the steamer "Twilight" from Chestnut Street wharf, Philadelphia, at 7 o'clock for Robbin's Wharf, touching at their usual intermediate landings; returning in the "Forrest" from Robbins' at 6 P.M. Excursion tickets 40 cts. A cordial invitation has been extended for Friends to remain over First-day, and attend the monthly meeting for worship at the "Maoor." The boat leaves that day for the city about 5 P.M.

Jos. M. TRUMAN, JR., } Clerks.
EMMA WORRELL, }

The Executive Committee will meet on board the "Twilight" at 7½ o'clock, A.M.

D. COMLY, Clerk.

FIRST-DAY SCHOOL CONFERENCE.

A Conference with Friends of Providence (Del.

Co.) in reference to First-day Schools, will be held in the meeting-house of that place on First-day afternoon, 8th mo. 6th, at 2 o'clock. Friends from Philadelphia, &c., will take the 9 A.M. West Chester train to Wallingford Station.

In Friends' Meeting-house, Camden, N. J., on First-day afternoon, the 30th inst., at 3 o'clock, a meeting of the Peace Society will be held, to which all Friends are invited.

For Friends' Intelligencer,

LETTER FROM CALIFORNIA.

GRAND HOTEL, San Francisco, Cal.,
6th mo 15th, 1871.

We arrived here last night a while before sunset, and are putting up at "Grand Hotel"—and truly it is grand. I have never been in a finer anywhere in my travels. The room we occupy is on the second floor, with a large bay window fronting the street, and with carpets, furniture and wall decorations of the most expensive kind. Very fine in every respect is our entertainment in this great city by the peaceful sea.

There is a constant sound of wheels on the street, and the houses on Montgomery street remind me of eastern cities, both in beauty and solidity. I have only been round a few squares to the Post-office and brokers, and in that walk I saw a number of the Chinese. They dress very much alike; in the place of a coat they wear a garment like a hunting shirt without any collar, and they have pantaloons like others. Their shoes are of cloth, with wooden soles. Their hair is long and black, and done up in three plaits, either hanging down the back or curled round the head under the hat. I saw one on the street whose hair touched his heels in walking. In several places on the Central Pacific R. R. they waited on the table, and at one station we saw some ladies with their little feet. A great many men (Chinese) are employed on the railroad as laborers.

We saw many Indians of different nations in our travels west, all of whom seemed friendly, but very few of them could understand our language. At one station, a number were standing and sitting round, the sexes apart. Mothers had their infants tied to a board, the top of which had something like woven willow work to cover the head, with a cloth over the face. This was suspended from the head of the mother, over which ran a leather strap. I asked an Indian mother to uncover the face of her papoose, and showed by signs what I wanted. She asked, "How much?" They often ask for money, and come to the car windows while the passengers are eating lunch, and gladly receive good things, such as pie, meat, cakes, candies, nuts, &c.

We left Salt Lake on Second-day last, returning to Ogden, the junction of the Union

Pacific and Central Pacific Railroads, and took a Pullman palace car about 5 o'clock P. M., and were two days and two nights reaching San Francisco.

What a barren waste we have come through! The American Desert, unlike the Sahara, is not sandy, but the soil is a hardish clay, cracked all over the surface, and white with alkali. The almost never-ending sage bush is nearly all that meets the eye in the shape of vegetation, save a bush that resembles it. Animal life is scarce, but now and then we would see a white rabbit in his flight.

For many miles east of Omaha to the Sierra Nevada, it is nearly all a woodless region, with mountains always in sight. Sometimes they approach each other, leaving a cañon wide enough for railroad passage; at others they stretch away far to the right and left, leaving a vast level plain. Sometimes we follow water courses, and at others there is no water anywhere. Yet in this dismal region we found men and women at different points, who have taken up their abode amid the desolation. Along some of the larger streams, such as the Humboldt, there are narrow strips of green grass, and here cattle are grazed, herded and fattened for this market. Through all this region there is a mixed race of Indians, negroes, Chinese and Anglo Saxons, representing the four quarters of the globe. They are rough looking people, yet in their hearts we found there was human kindness.

Some of the Indians were painted with red over the face, which gave them a strange but not repulsive appearance.

There is a great part of the desert country which is only barren because of the absence of rain. Wherever there is a stream of water, it is turned on the soil, and good crops are raised.

There was less snow than usual last winter, and of course there was less to melt, and keep up the flow of the streams, and springs are of rare occurrence. Through all the valley of the Sacramento, on the Sierra Nevada, and all the way here, there has been a great drouth, and the crops are poor, and the land dried up. On great wide productive valleys, with rich soil, we scarcely saw a green spot. The mountains of the coast range look rich, but are devoid of timber and grass, and seem as if burned over.

The wild oats was a native grain in the Sacramento valley, and much is still seen growing along the road. The second morning out from Ogden we were in the Sierra Nevada range, and I rose with the morn, so anxious was I to see timber, and the grand sights for which these mountains are famed. How provoking were the snow sheds that for miles and miles interfered with the view. Just at some

grand opening prospect, as Donna Lake, in a deep ravine in the mountains, we shot into them, and all our prospects are ruined. But still we were favored with much grand scenery—high rugged mountains, deep precipices, wild cañons, large timber, strange flowers and plenty of snow. At the summit there was a station and eating house. Snow was all around, below and above, and the air was chilly, the thermometer standing at 45°.

On the west side of these mountains is the gold region, and all the streams were diverted from their courses, carried about in ditches, troughs and pipes, to wash the gold out of the soil. About Dutch Flats there are miles of hills that have been torn down and washed away. The streams run mud. At one place the waters of a large stream were falling over a steep bank, and at the same time two streams from iron pipes ran with great force apparently against the same place.

As we crossed the bay last night, the Golden Gate was pointed out to me. It is said to be half a mile wide where the waters of the Pacific ebb and flow between almost mountain banks.

We start on Second-day, the 19th, for the Calaveras grove of big trees and the Yosemite Valley, and our trip will occupy more than a week.

WEAR AND TEAR.

There are very few subjects that deserve more serious attention from all the active classes of American society, whether they be men or women, than the question of that wear and tear of human life that characterizes our people with constantly increasing gravity. The early decadence of mental, nervous and physical forces, the rapid increase of distinctively nervous diseases, the early loss of the bloom and freshness of youth, are facts of the most serious significance in their bearing upon the whole future of this country. For it cannot be doubted that even after the keen struggles for prosperity, which belong to the development of all new countries,—and ours is yet but a new country,—shall have given way to the more steady-going pace of a more settled nationality, there will remain a mental and physical inheritance of defect, the result of our present wear and tear, that will not be obliterated by generations of more rational methods of working and living.

The fact of the unusual wear and tear to which the American people subject themselves, or are subjected by the systems that govern our lives, needs no demonstration. Our men become old and break down in middle life, or sooner. Our girls come to womanhood, only in exceptional cases blessed

with that blended maturity of body and mind which fully fits them for the duties and enjoyment of their after lives. Very few of either our men or women fill out the measure of a robust and vigorous life, and where they do, we find it because they have either inherited the rare gift, now-a-days, of an iron constitution, or have lived by different rules from those that have governed society generally.

This subject of the wear and tear of the American people has engrossed the attention of political economists and scientific men, with an increasing interest, and has recently been discussed with admirable good judgment, by Dr. S. Wier Mitchell, in a little volume, published by J. B. Lippincott & Co., called "Wear and Tear." Within a brief space, and in a popular style, from which the technology of science is almost wholly excluded, Dr. Mitchell presents this topic in a way that deserves the most thoughtful consideration. Accepting as a fact the climatic influences that make brain-work and muscle-work harder in this country than in Europe, the writer points out with much force the evils that spring from the over-cramming of boys, and still worse, of girls at school, and from that desperate devotion of mind and body to the pursuit of business, which breaks down both professional and commercial men before their time.

Of the wear and tear of the present generation of American women, the author before us charges the greater part to our "American view of female education." All the hard work done by our girls at school is ordinarily done between the years of ten or twelve and seventeen. During that time most girls are occupied with study from seven to eight hours a day, working with their brains, as Dr. Mitchell puts it, "as long a time as the mechanic employs his muscles." Our author takes the Girls' Normal School of Philadelphia as an illustration, and says in such a school "this sort of tension and this variety of study occasion an amount of ill-health which is sadly familiar to many physicians." "The doctor knows how often and how earnestly he is called upon to remonstrate with this growing evil. He is, of course, well enough aware that many girls stand the strain, but he knows also that very many do not—and that the brain, sick with multiplied studies never thoroughly mastered, plods on, doing poor work, until somebody wonders what is the matter with that girl; and so she scrambles through, or else breaks down with weak eyes, headaches, neuralgias, or what not." Dr. Mitchell, who we know has given laborious study to this whole subject of wear and tear, sums up his views of female educa-

tion by saying that "as concerns the physical future of women they would do far better if the brain were very slightly tasked, and the school hours but three or four hours a day until they reach the age of seventeen."

But the wear and tear among American men is a matter of equally serious consideration. It is not enough to say that we *must* work harder here than in Europe, nor is it any comfort to know that in Europe brain-work, for some mysterious climatic reason, is easier than in America. If a man's mental and physical health is of the first consequence, it is possible in nearly all cases to deal with it more honestly than we ordinarily do. Work of any kind that is done under a strain is mischievous work, and it is all the more mischievous when the worker is so intent upon upon his success that he does not recognize the pressure under which he pursues it. Our American haste to get rich is the great mischief worker with the mass of our business men. Our men plunge early into the full current of active business, and before the brain has had any real training for steady, heavy work, it is whirling forward under a pressure of business responsibility which soon brings its wear and tear to punish the trifler with Nature's laws. Dr. Mitchell thus sketches a true picture of a large class of our business men: "Late hours of work, irregular meals bolted in haste away from home, the want of holidays and of pursuits outside of business, and the consequent practice of carrying home, as the only subject of talk, the cares and successes of the counting-house and stock board. The man who has worked hard all day, and lunched or dined hastily, comes home or goes to the club to converse—save the mark!—about goods and stocks. Holidays, except in summer, he knows not, and it is then thought time enough taken from work if the man sleeps in the country and comes into a hot city daily, or at the best has a week or two at the sea-shore. Men have confessed to me that for twenty years they have worked every day, after traveling at night or on Sundays to save time; and that in all this period they have not taken one day for play. There comes to them at last a season of business embarrassment; or, when they get to be fifty or thereabout, the brain begins to feel the strain, and just as they are thinking, 'Now we will stop and enjoy ourselves,' the brain, which, slave-like, never murmurs until it breaks out into open insurrection, suddenly refuses to work, and the mischief is done."

The little treatise before us, which we would gladly place in the hands of all who are to-day overworking themselves or others

as a most sensible monitor and counsellor, seems to miss one very important element that enters into the causes of this terrible wear and tear of American life. There are comparatively few business men who have not some hours of relaxation; but there are also very few who make the best use of them. A very large class of our younger business men must charge the wear and tear that pulls them down into premature old age and disease, to their needlessly late hours in hot billiard and club-rooms, their excessive smoking and their habitual, even if not what is commonly called excessive use of stimulating drinks. Thousands of brains yield before these influences, when the wear and tear is charged to the overwork of the counting-house or the office. Our large cities are crowded with young business men who would easily stand the brain-work of the day if they would systematize their hours of sleep at night and pursue that "temperance in all things" which is the great precaution against all human wear and tear.

It is nearly impossible to put an efficient curb upon the ambitious professional man's labors, or to set a limit which the successful business man shall not pass, in his race to be rich; and yet, if the curb and the limit are not voluntarily imposed, Nature inevitably steps in with her grim fiat, "Thus far shalt thou come, and no further," and the penalty that she exacts cannot be evaded. There is no man in haste to grow old, or who wishes to break down with weakened brain and diseased frame before the race-course is half circled. But there are, unfortunately, too few who have wisdom and moral courage enough to live and work with such sober moderation as will save brain and body from needless wear and tear, with a capacity for enjoying in after life the fairly-earned fruits of the honest work of earlier days.—*Philadelphia Evening Bulletin.*

WHITTIER'S INSCRIPTION FOR A SUN-DIAL.—

With waning hand I mark time's rapid flight,
From life's glad morning to its solemn night.
But through the dear God's love I also show
There's light above me by the shade below.

EXTRACT.

When one that holds communion with the skies,
Has filled his urn where these pure waters rise,
And once more mingles with us meaner things,
'Tis e'en as if an angel shook his wings;
Immortal fragrance fills the circuit wide,
That tells us whence his treasures are supplied.
So when a ship, well freighted with the stores
The sun matures on India's spicy shores
Has dropped her anchor and her canvass furled,
In some safe haven of our western world,
'Twere vain inquiry to what port she went,
The gale informs us, laden with the scent.

—COWPER.

THE VOICE IN THE TWILIGHT.

I was sitting alone toward the twilight,
With spirit troubled and vexed,
With thoughts that were morbid and gloomy,
And faith that was sadly perplexed.

Some homely work I was doing
For the child of my love and care,
Some stitches half wearily setting
In the endless need of repair.

But my thoughts were about the "building,"
The work some day to be tried;
And that only the gold, and the silver,
And the precious stones should abide.

And remembering my own poor efforts,
The wretched work I had done,
And, even when trying most truly,
The meagre success I had won;

"It is nothing but wood, hay, and stubble,"
I said; "it will all be burned—
This useless fruit of the talents
One day to be returned.

"And I have so longed to serve Him,
And sometimes I *know* I have tried;
But I'm sure when He sees *such* building,
He will never let it abide."

Just then, as I turned the garment,
That no rent should be left behind,
My eye caught an odd little bungle
Of mending and patchwork combined.

My heart grew suddenly tender,
And something blinded my eyes
With one of those sweet intuitions
That sometimes make us so wise.

Dear child, she wanted to help me;
I knew 'twas the best she could do;
But O, what a botch she had made it—
The gray mismatching the blue!

And yet—can you understand it?—
With a tender smile and a tear,
And a half compassionate yearning,
I felt her grown more dear.

Then a sweet voice broke the silence,
And the dear Lord said to me,
"Art thou tenderer for the little child
Than I am tender for thee?"

Then straightway I knew His meaning,
So full of compassion and love,
And my faith came back to its Refuge,
Like the glad returning dove.

For I thought when the Master Builder
Comes down His temple to view,
To see what rents must be mended,
And what must be builded anew;

Perhaps, as He looks o'er the building,
He will bring my work to the light,
And seeing the marring and bungling,
And how far it all is from right,—

He will feel as I felt for my darling,
And will say as I said for her,
"Dear child, she wanted to help me,
And love for me was the spur.

"And for the real love that is in it,
The work shall seem perfect as mine;
And because it was willing service,
I will crown it with *plaudit* divine."

And there in the deepening twilight
I seemed to be clasping a Hand,
And to feel a great love constraining me
Stronger than any command.

Then I knew by the thrill of sweetness
'Twas the Hand of the Blessed One,
Which would tenderly guide and hold me
Till all the labor is done.

So my thoughts are nevermore gloomy,
My faith no longer is dim;
But my heart is strong and restful,
And mine eyes are unto Him.—
—*Woman's Work for Woman.*

A CORRESPONDENT of the *London Times* at the Prussian headquarters writes as follows: "Last mail I received a letter from Egypt, in which there was a remark which struck me greatly: 'How can you Christians,' asked the writer, 'expect us to pay the least attention to your missionaries, when we read of two of your greatest nations making war and committing all sorts of cruelties on each other, although you declare it is against your book to do so, and other great Christian nations not at war are making preparations for it and are in fear of being attacked? We, afar off, read and hear of your doings, and beg you will keep your missionaries at home.'"

THE GREAT DISPERSION.

From the middle of June to the middle of July the practical question with most of our people seems to be, How shall we escape from the heat that is to come? Trying to keep cool is the chief business of thousands, and a business which many of them drive with far more energy than success. Whoever shall devise some plan by which our people can keep comfortable through the heated term, will deserve and receive the title of a public benefactor as one of the least of his compensations.

We have no original suggestions to make on a subject which has already exhausted all the possibilities of wisdom and of wit, and upon which enough good sense has been written and forgotten to furnish mankind with all needed advice forever. It is only important to remind them at the present time, that in order to prevent getting heated it is only necessary to keep cool; and that the less people do, the fewer excitements they witness and dissipations they indulge in, the more temperately they live and the less they disturb the equanimity of their mind and mood, the healthier and happier will they be. We know people who have stayed in this city and attended to business steadily through every summer for twenty years, with less sickness and discomfort, and more real enjoyment, and greater freshness and vigor of body and mind when autumn opened, than

three-quarters of those who steamed across the country from beach to prairie, and from the mountains to the lakes, in quest of a refreshment they could not find, and in pursuit of a comfort which they were always too early or too late to overtake. Those who forsake large and well-furnished houses, in which they have all the conveniences if not all the luxuries of a city home, and retreat into two or three small rooms they would not think of assigning to their servants, living on fare they would consider inedible elsewhere, forced to spend a third of their time in dressing to be seen by people they do not care for and never expect to see again, obliged to wait on themselves, and paying enormous sums for their extraordinary privileges, may congratulate themselves if their experience gives them a higher appreciation and keener relish for the comforts of home. * * * *

Our busy, overworked people need change, and the rest that comes from change; and summer, when business is least exacting in its demands, is the most convenient time for vacations. Let all who can do so avail themselves of the opportunity, and get the utmost recuperation and enjoyment from their release. Still the less they travel and the quieter they keep through the hot months, the better for them in every way. The difficulty with our vacations is, that, coming so seldom, people hardly know how to use them, either for pleasure or for profit, and they waste in effervescence what should settle into real exhilaration and refreshing. Moreover, few of our people understand the real value and joy of those little interruptions of the order of life made by occasional respites and excursions. The Germans could teach us a valuable lesson in the art of recreation and enjoyment, had we the good sense to learn what their social dinners, gardens, and frequent retreats into the country mean. Thousands of our people would find their health and happiness increased forty per cent. by taking an additional hour every day through the summer for social enjoyment with their families at home, and one day every week for an excursion on the water, into the woods, or among the hills. We do not want huge lumps of recreation, amusement by the wholesale, or long stretches of idleness away from home, so much as daily respites, weekly interludes of refreshment, occasional and constantly recurring patches of delight, like so many oases in the journey of life, made all the sweeter by the toil and care that precede them, and throwing the flavor of their delights in glad and glorifying memories over the labors that follow them; and these would diffuse a spirit of gladness and wholesome cheer through all our toils

and recreations, and lessen the need of these annual dispersions which neither rest the body nor refresh the mind.—*The Golden Age.*

HOWEVER slow the progress of mankind may be, or however imperceptible the gain in a single generation, the advancement is evident enough in the long run. There was a time when the most part of the inhabitants of Britain would have been as much startled at questioning the truth of the doctrine of transubstantiation, as they would in this age at the most skeptical doubts on the being of a God.—*John Locke.*

FRANCES E. W. HARPER.

The following letter, written by this well-known colored orator to William Still of Philadelphia, published in the *Press* a few days since, will no doubt be read with interest by many. It is supplemented by a lengthy editorial from the *Mobile* (Alabama) *Register*, referring to one of her addresses delivered in that city, in highly complimentary terms. The editor says, "she is giving her people the best kind and the wisest of advice:"

MOBILE, July 5, 1871.

MY DEAR FRIEND:—It is said that truth is stranger than fiction, and if ten years since some one had entered my humble log house and seen me kneading bread and making butter, and said that in less than ten years you will be in the lecture field, you will be a welcome guest under the roof of the President of the Confederacy, though not by special invitation from him, that you will see his brother's former slave a man of business and influence, that hundreds of colored men will congregate on the old baronial possessions, that a school will spring up there like a well in the desert dust, that this former slave will be a magistrate upon that plantation, that labor will be organized upon a new basis, and that under the sole auspices and moulding hands of this man and his sons will be developed a business whose transactions will be numbered in hundreds of thousands of dollars, would you not have smiled incredulously? And I have lived to see the day when the plantation has passed into new hands, and those hands once wore the fetters of slavery. Mr. Montgomery, the present proprietor by contract of between five and six thousand acres of land, has one of the most interesting families that I have seen in the South. They are building up a future which if exceptional now I hope will become more general hereafter. Every hand of his

family is adding its quota to the success of this experiment of a colored man both trading and farming on an extensive scale. Last year his wife took on her hands about 130 acres of land, and with her force she raised about 107 bales of cotton. She has a number of orphan children employed, and not only does she supervise their labor, but she works herself. One daughter, an intelligent young lady, is postmistress and I believe assistant book keeper. One son attends to the planting interest, and another daughter attends to one of the stores. The business of this firm of Montgomery & Sons has amounted, I understand, to between three and four hundred thousand dollars in a year. I stayed on the places several days, and was hospitably entertained and kindly treated. When I come, if nothing prevent, I will tell you more about them. Now for the next strange truth. Enclosed I send you a notice from one of the leading and representative papers of rebeledom. The editor has been, or is considered, one of the representative men of the South. I have given a lecture since this notice, which brought out some of the most noted rebels, among whom was Admiral Semmes. In my speech I referred to the Alabama sweeping away our commerce, and his son sat near him and seemed to receive it with much good humor. F. E. W. H.

SECRET OF SUCCESS.—A Christian merchant, who from being a very poor boy, had risen to wealth and renown, was once asked by an intimate friend to what, under God, he attributed his success in life.

"To prompt and steady obedience to my parents," was his reply. "In the midst of many bad examples of youths of my own age, I was always able to yield a ready submission to the will of my father and mother, and I firmly believe that a blessing has, in consequence, rested upon me and upon all my efforts."

A TOUCHING STORY.

A curious story, and one in which Irish landlord and tenant play a hitherto unique part, reaches us from Galway. A certain Captain Nolan, coming many years ago into possession of large estates, while still a very young man, made some effort to improve them, and for this purpose evicted three Irish families from the land they had held for one or two generations, in order to hand their farms over to a man named Murphy, already the tenant of a holding amounting to a gross area of four thousand acres. Captain Nolan, of course, had the unquestionable legal right to do what he pleased with his own, and was amenable to no earthly tribu-

al for his course of action. Murphy succeeded with the land, and the former tenants scattered.

As Nolan grew older, however, he began to be conscious that humanity had higher and broader rights than are given by the sharp-edged rules of the law, and to feel that he had wronged them. Most men broaden into more liberal justice as they advance in years, but few are minded to go back and atone for their early errors. The Captain, however, it appears, after great labor and expense, brought together the three families he had evicted, sixty six in number, all in great poverty, and placed their case and his own in the hands of three arbitrators, to decide what compensation it was just he should make them for their losses. He selected three gentlemen as judges in the case, chief among whom is Sir John Gray, M. P., all of them well known sympathizers with the Irish tenant farmers. The judgment was to make a future rule of Court. The arbitrators sat, therefore, at Oughterard, after receiving power to examine witnesses under oath. The testimony of the evicted tenants, given in Irish, was full of significant facts and a terrible pathos. The judgment was a remarkable one, when we consider that the party on one side was a man of vast wealth and political weight and the personal friend of the arbitrators, and that on the other a body of helpless, unprotected paupers, and proves how entirely Captain Nolan's motives were appreciated in their integrity of honor by the judges. He was required not to confine his remuneration to money, but to reinstate his tenants in their former holdings. "No mere payment in money," read the decision, "can adequately compensate a man for being driven from his home and land." We doubt if many Americans would consider this point of sentiment as weighty enough to give its place to a precedent in law, but it will be keenly appreciated by the Irish people.—*N. Y. Tribune.*

WE want such an access of truth that the general mind can be fed with a worthier conception of God, which will make every thought of Him inspiring as the dawn of the morning, and will banish the superstition that this life is the final state of probation as an insult to His plan of eternal education and a chimera of a barbarous age.—*Thomas Starr King.*

A HINT TO MOTHERS.

"Baby, say mamma?"

Baby sat in his mother's lap, bright and pretty as a fresh rosebud, the very picture of health and good nature. His whole vocabu-

lary, so far, amounted to just three words, and these three he could say perfectly. He would almost always talk when alone with mamma; but a friend had come in, and she very much wished her to hear the little music-tones. But baby was shy, and only curled his head down on her breast, a roguish smile lighting his blue eyes, and dancing in the dimpled cheek and rosy mouth.

"Won't baby say mamma? Just once,—mamma?"

"Well, what does the dog say? Baby say bowwow?"

But no, baby wouldn't. Mamma tried again and again; and then, patting his round, plump knee, asked: "What is this?"

Baby only smiled, and cuddled closer.

"What's this, baby? Baby say knee?"

"Don't press him, Mary," said her friend. "It's no use, and in one way will do harm."

The mother seemed surprised.

"If you urge him, when not inclined to talk, it will only induce a habit of setting his will in opposition to yours; a habit that will 'grow with his growth and strengthen with his strength,' and will become obstinacy. Now, of course, you cannot reason with him; and there is no more moral wrong in his refusal than in refusing his milk when he is not hungry. But this, like all childhood, is seed time. Much may be done, almost from earliest infancy, by inducing, unconsciously to the child, habits of obedience, and preventing their opposites—thus making the afar-way far easier for both child and mother."

"I see it now," the lady said, frankly; "I never thought of it in this light before; but it is reasonable, and I will remember it. Of all things, I desire to avoid a 'contest,' as it is called, in the future, with my children."

"That it can be prevented—nay, ought to be prevented—is my firm belief," rejoined the friend. "Temporary and external obedience may be obtained by it, in some cases,—though not always even that, but at what a fearful cost! Not only of suffering, but affection and confidence between child and parent are never the same with as without it, and 'breaking the will,' as it is called, instead of training it, is a dire mistake. There can be no self-governing force, no stability of character, without a resolute, well directed will. The young tree, you know, must be pruned—never broken. The colt must be trained by gentle firmness, not severity. And immortal souls and human hearts need no less care and watchfulness."—*Home Magazine.*

As sometimes small evils, like invisible insects, inflict pains, and a single hair may stop a vast machine, the chief secret of comfort lies in not suffering trifles to vex one, but in

prudently cultivating an undergrowth of small pleasures, since very few great ones are of long duration.

MINGLING WITH STRANGERS.

The effect of mingling with new people, who have new ideas and new methods of thought, is very salutary. Always to see the same people, do the same things, feel the same way, produces a stagnant condition of the mind and heart that is very distressing to behold. There are thousands of invalids who might be greatly benefitted by getting away from home, if only for a short time, to mingle with strangers, and be touched with the magnetism of the great world as it courses in its accustomed rounds. And there are mental and moral invalids, who need the same change, to get their minds and hearts enlarged, and let in a little more of the great light of life. Outside influences are very valuable to those who at home have been well trained by healthful influences in early youth, so that they can avoid the snares and pitfalls into which those who go blindly often fall.

ITEMS.

OZONE DEVELOPED BY FLOWERS.—From Professor Mantegazza's experiments on this subject, we have the following: The essences of mint, turpentine, cloves, lavender, bergamot, anise, juniper, lemon, fennel, nutmegs, cajeput, thyme, cherry, laurel, in contact with atmospheric oxygen in light, develop a very large quantity of ozone, equal if not superior in amount to that produced by phosphorus, by electricity, and by the decomposition of permanganate of potash. The flowers of the narcissus, hyacinth, mignonette, heliotrope, lily of the valley, etc., develop ozone in closed vessels. Flowers destitute of perfume do not develop it, and those which have but slight perfume develop it only in small quantities. As a corollary from these facts the professor recommends the use of flowers in marshy districts and in places infected with animal emanations, as the powerful oxidizing influence of ozone may destroy them. The inhabitants of such regions should surround their houses with beds of the most odorous flowers.

EARTH EATING.—It is well known that, in different parts of the world, there are people who eat earth; among them are some of the natives of Java, who eat a red kind of earth as a luxury. This earth, which is soft and smooth to the touch, has been analyzed by a German chemist, who finds it very rich in iron, with a small quantity of potassa and soda. Some tribes eat earth to stave the pangs of hunger, by filling their stomach, and because at times they can get nothing better; but the people in Java eat their earth, baked in thin cakes, as an agreeable variety in their general diet. The cakes, when slightly moistened, are rich and unctuous, and the enjoyment in eating is supposed to consist in the sensation produced by a fatty substance. It is a curious fact in the history of human habits.

PROBABLY the most curious ant in the world is the parasol ant of the West Indies, if the accounts which we receive of its habits are correct. Dr. Forbes Winslow, in his work on Light, referring to

Mrs. Somerville as his authority, says that these ants walk in long procession, each one carrying a cut leaf over its head as a parasol, in the sun, and they deposit these in holes ten or twelve feet under ground, apparently with no other object than to form a comfortable nest for a species of white snake, which is invariably found coiled up among them on digging up the deposit.

HOW TO QUIT USING TOBACCO.—"How can I abandon the use of tobacco without subjecting myself to excessive prostration, as has been the case heretofore when attempted?" It is impossible to quit the use of tobacco after it has become a settled habit, without more or less bad feeling and prostration. The man who would free himself from tobacco-using, must make up his mind that he has a hard struggle to pass through, call all will-power to his aid, and resolve to quit at once and forever. This leaving off by degrees seldom succeeds. It is better to make the battle short, sharp, and decisive. A thorough course of bathing to eliminate the tobacco from the system, will make the struggle much less severe, and prove the greatest aid that can be given.

THE handsome mansion, school building and grounds, well and favorably known, not only to Philadelphia but to other cities, as belonging to Dr. Saunders, President of the Courtland Saunders College, West Philadelphia, were recently transferred by their proprietor to trustees in use for the Presbyterian Church as a hospital for every creed, color and nationality.

PALM LEAF HATS.—The only place in the United States where palm leaf braid is manufactured is in Massachusetts, the principal towns where the trade is carried on being Amherst, Palmer, Barre and Fitchburg. The raw material is brought from Cuba to New London, Conn., in bunches of twenty-five leaves from four to five feet long. The bunches, placed on the stock end, are packed in the bleaching rooms and subjected for sixteen days to the fumes of brimstone. The leaf, after being bleached, passes into the hands of the splitters, and about one-third of the material is rejected. This waste, until recently, was useless, but is now sold as paper makers' stock for fifty dollars a ton, when delivered at the mills. The split leaves are now sent out into the country to be braided into hats and woven into webs for Shaker hoods. This work is done by the wives and children of the New England farmers, and large teams are constantly passing over the steep hills and into the most remote recesses of the country, carrying the raw material to be braided and bringing back the finished work. A large number of persons find employment in braiding, and nimble fingered girls can earn as much as an adult woman. The pay is small, but odd moments which otherwise would be disengaged are devoted to this labor.

THE pitcher-plant of California grows sometimes to a height of twenty-four inches. Within the surface is smoothed for a little way; but beyond that is armed with stiff, needle-like, colorless hairs, pointing downward. The size diminishes from two inches to nothing. Flies and various insects travel down this road, never to return. The needles converge, and the poor creatures find their death at the bottom, without the possibility of retreat. Cutting into an old pitcher, one may find a layer from two to three inches deep of densely-packed insect remains. Whether the plant is insectivorous no one can say. It is allied to the *Sarracenia*, so common in our swampy woods.

FRIENDS' INTELLIGENCER.

"TAKE FAST HOLD OF INSTRUCTION; LET HER NOT GO; KEEP HER; FOR SHE IS THY LIFE."

VOL. XXVIII. PHILADELPHIA, EIGHTH MONTH 29, 1871. No. 23

EDITED AND PUBLISHED BY AN ASSOCIATION OF FRIENDS.

COMMUNICATIONS MUST BE ADDRESSED AND PAYMENTS MADE TO

JOHN COMLY, AGENT,

At Publication Office, No. 144 North Seventh Street.

OFFICE OPEN from 9 A. M. to 4 P. M.

TERMS:—TO BE PAID IN ADVANCE.

The Paper is issued every week.

The TWENTY-EIGHTH Volume commenced on the 4th of Third month, 1871, at Two dollars and fifty cents to subscribers receiving it through the mail. To those receiving it through our carriers, THREE DOLLARS.

SINGLE NOS. 6 CENTS.

It is desirable that all subscriptions should commence at the beginning of the volume.

REMITTANCES by mail should be in CHECKS, DRAFTS, or P. O. MONEY-ORDERS; the latter preferred. MONEY sent by mail will be at the risk of the person so sending.

AGENTS.—T Burling Hull, Baltimore, Md.

PATIENCE.

BY R. COLLYER.

JAMES i. 4: "Let patience have her perfect work."

The apostle, in speaking of patience, intimates that it is not a belonging, but a being, a spirit separate, in some manner, from the human spirit, as the angels are; trying to do something for us, but only able as we will give it free course; so that his charge to his fellow Christians all the world over, to let patience have her perfect work, is not so much that we shall do something, as that we shall let something be done for us. All the help required of us towards patience, is not to hinder her working; then she will do all that is needed, in her own time and in her own way, and we shall be perfect and entire, lacking nothing. So that, when a man or woman says, "I will have patience," they speak closer to the truth than when they say, "I will be patient." To say, "I will be patient," has a touch of assumption in it; to say, "I will have patience," denotes humility. The one word means, I will be what I will; the other, I will be what God will help me be. It is as if one man said, "I will be learned," and another said, "I will have learning." And a very brief reflection will enable us to see that the apostle is borne out in this happy distinction by the nature and grace of things as we see them all about us, and by what we feel within us. Patience is not there to be-

gin with. It is no inborn grace, like love. It comes to us by and by, and tries to find room in our nature, and to stay and bless us, and so make us altogether its own.

The first thing we are aware of in any healthy and hearty child, is the total absence and destitution of this spirit of patience. No trace of it is to be discovered in the eager, hungry outcries, and the aimless, but headstrong, struggles against things as they are, and must be, but that never would be for another moment if these young lords and kings of impatience could have their way. But presently Patience comes, and rests on the mother's lifted finger as she shakes it at the tiny rebel, and puts a tone he has never heard before within the tender trills of her voice, and he looks up with a dim sort of wonder, as if he would say, What is that? But if the spirit be really and truly with the mother, it goes then to the child, and sheds upon him the dew of its blessing.

Then, in a few years, she looks at him out of the face of the old kitchen clock. It seems impossible that this steady-going machine should be so impassive, and persist in that resistless march; should not be quick to strike the hour he would drag before its time out of the strong heavens, or should not delay a little as he sits in the circle when the day is done, and dreads the exodus, at the stroke of eight, to his chamber. Poor little man! he has got into the old sorrow. It is not the

clock, but the sun and stars he would alter, and the eternal ways.

Then, as the child passes into the boy, he has still to find this angel of patience. It is then very common for him to transfer his revolt from the sun to the seasons. If he is in the country, he rebels at the slow, steady growth of things: they never begin to come up to his demand. It is with all boys as it was with John Sterling. His father gave him a garden-bed, to till as he would; and he put in potatoes. They did not appear when he thought they should; so he dug them out, and put in something else; and so he kept on digging in and out, all one summer, because the things sprouted and bloomed at once in his hot little heart, like Jonah's gourd. It was an instance of the whole boy life. Nature can never come up to his notion of what she ought to do until patience comes to help him. She shows him at last that the seasons must have their time, and he must bring his mind and action into accord with the everlasting order; for without that he can do nothing.

But every boy, of any quick, strong quality, struggles with things as they are and must be—wants to alter them to suit himself. It seems as if he had brought the instinct, but lost the memory, of a world and life that were just what he wanted; and he cannot give it up until this angel comes and helps him conform to his new condition, and he only minds her at last when he feels he must. The only children in whom she has her perfect work are those small martyrs that begin to suffer as soon as they begin to live, and are never released from their pain until God takes them to His breast in heaven. There is no such patience besides as they show, as there is no such pity besides as they win.

But your big, healthy boy fights it out, hard and long; nothing is just as he wants it. Christmas comes like a cripple, and school, when the holidays are over, like a deer. It is a shame cherries and apples will not ripen sooner, and figures find their places more tractably, and geographies run as straight as a line. He knows no such felicity besides as to run to a fire, or after a ball, or to burn fireworks, or scamper away on a horse. The reason is just that which we always give as we watch him, when we say, "Now he is in his element." He is striking out, like a strong swimmer, on a splendid tide of impatience. He hears the mighty waters rolling evermore, and deep calleth unto deep in his heart.

It is easy to see, again, that these habits of the child and boy are only the germs of a larger impatience in the youth and the prime. We soon get our lesson from the angel about the kitchen clock, and the courses of the sun,

and the limits of our power to make this world turn the other way. We learn to come to time, and set ourselves to its steady dictation in all common things; and patience, so far, has her perfect work.

I wonder to see the patience of some children, at last, about what they know they have got to do and be, in their tasks and strivings. I see small girls of ten who might well shame big men of forty as they buckle to their lessons, and go steadily through them; and even boys are sometimes almost admirable; though the angel of Patience must always feel about boys, I think, as that man in New York must feel, who keeps in the same cage the cat and the canary, and the mouse and the owl, with half a dozen more of the sharpest antagonisms of nature. Patience must feel about boys as that man feels about his animals,—that, after all his pains, there is no telling what they may do at any moment.

But if the boy does learn all he ought to learn about times and seasons, and tasks and treats, and lines and limits, it is very seldom that the lesson holds good as he begins the march to his manhood, or when he gets there. Patience, then, has to teach him deeper things: time still says one thing and his desire another, and he hungers again for what God has forbidden in the very condition of his life. But now it is unspeakably more serious than it was ten years ago, as she comes to him and tries to teach him her great lesson. She has to remember what myriads of young men, strong, and eager, and headstrong as he is, have broken away from her, after all, like the impatient prodigal in the Gospels, and have only come back and listened to her word when they had run through their whole possessions; and had to be patient under pain and loss, when they might have rejoiced with exceeding joy over powers incorruptible, undefiled, and of a perennial strength and grace.

Fortune and position, weight for weight, with what faculty the Maker has given him, is just as sure to come to a man in this country as the crop to the farmer and the web to the weaver, if he will only let this angel have her perfect work. The bee does not more surely lay up her honey, or the squirrel his nuts in store, enough to last until May brings the new bloom, and the tender shoots break forth in the woods, than a man, with the same temperate and enduring patience, can lay up life enough, and all life needs, to last him from the time when the frost seals his faculties to the new spring that waits where the Lord is the Sun. But what multitudes want to do, is to trust themselves to some short cut across the dominion of the sworn enemy of this angel.

Travellers in India tell us they have seen a magician make an orange tree spring, and bloom, and bear fruit, all in half an hour. That is the way many believe fortune ought to come. They cannot wait for its patient, steady, seasonable growth; that is all too slow, as the time-piece and garden bed are to the child; they must put the time piece forward, and that will bring thanksgiving, and gather their crop when they sow their seed. Patience comes and whispers, "It will never do; the perfect work is only that done by my spirit; the magician can never bring his thirty-minute oranges to market, because they can never nourish anybody as those do that come in the old Divine fashion, by the patient sun and seasons." He gives no heed to the wise, sweet counsels; takes his own way; and then if he wins, finds that somehow he has lost in the winning; the possession is not half so good as the expectation: but the rule is, that the man who will not let Patience have her perfect work in building up his position and fortune, ends bare of both, and has nothing but a harvest of barren regrets.

No man, again, comes to middle age without finding that this is the truth about all the noble sensations that give such a color and grace to our life, and are such loyal ministrants to its blessing, if we can say "No" to the enemies of our good angel when they come and counsel us to disregard her ways, to let our passions take the bit in their teeth, and go tearing where they will.

Twenty years ago last June, when I had been a few weeks in this country, I tasted, for the first time in my life, an exquisite summer luxury; and it seemed so good that I thought I could never get enough of it. I got some more, and then some more, and then I found, for the first time, I think, what it is to have too much of a good thing. I ate, that day, of the tree of knowledge of good and evil; and now I care nothing for that good thing any more when I taste it. The angel is there with his flaming sword, insisting that I shall only eat of it out of Eden. It has been to me ever since a parable of this deep old verity. I disregarded the angel whispering, "You had better take care; if you eat that for a steady diet, through a whole June day, you do it in spite of me; the hunger for some more, which has been growing all your life, is a pledge that the good of this will abide with you as long as you live, if you will always let hunger wait on appetite." I had no idea of doing that. Impatience got the rein, and I gathered and ate the whole harvest of that good thing between dawn and dark. I mention this, because it is one of those experiences we all buy at a great price by the time we are forty, and

then offer to give them away to young friends of twenty, but can seldom find anybody who wants them. In our youth, it is our misfortune, in a great many of these ways, to refuse to let Patience have her perfect work, and then to rue it as long as we live.

Every glass of wine, or dram of whiskey, drunk by a healthy and strong young man, is an insult and injury to this good angel, and makes it so far impossible for her to do her perfect work, because he is spending ahead of his income of life, and bringing a fine power of being to beggary, if not to worse than that. He can only get that glow and flame at a heavy discount, both of life itself and of all that makes life worth living. Patience would help him to infinitely finer pleasures from her simple and wholesome stores, and they would stay with him as long as he lived; but he will not listen to her counsels, and will have none of her reproofs; therefore will she weep at his calamities, and mock when his dole cometh.

This is but one way in which we can make this vast mistake through our impatience and desire to forestall the good that God will give us in his long, steady, seasonal fashion. There is a whole world of evils of very much the same sort, some more fatal still than the one I have named. It is the same thing whichever way we turn. Nature says one thing, and desire another. Only the perfect work of Patience can make both one, and then the result of both is grace. She comes to you, young men, as she came to us when we were young; some of you will put your life into her hands, as some of us did, whose hair is gray, and she will lead you forth into peace and joy. Some will refuse, and go for a short life and a merry one, and they will get the brevity but miss the mirth, and be dead at forty, though for twenty or thirty years after they may still remain unburied. Byron was a dead carcass long before he went out to the Greeks.

All this, in all these ways, as it comes to us from our infancy to our prime, is only the outward and visible part of a patience, or want of it, that touches the whole deeper life of the heart and soul, and makes the most awful or the most celestial difference to our whole being.

This is true, first, of our relation to one another. The very last thing most of us can learn of our relations to each other is to let Patience have her perfect work. Very few fathers and mothers learn the secret this angel is waiting to tell them about their children until perhaps the last is born. It is probable that he will give more trouble than any one of the others. If his own bent is not that way, the big margin he gets, when we

are aware this is really the Benjamin, is likely to make that all right: we bear with him as we never bore with the first. Then love and duty were the motive powers; now it is love and patience. We would fain undo something now we have done to the elder ones, and the young rogue reaps all that advantage; and then the angel, by this time, has had her way, if Solomon, with his axiom about sparing the rod and spoiling the child, has no more weight with us than he ought to have. She has shown us what power and grace are under the shadow of her wings, and how in each of these little ones we have another life to deal with, that is only fairly to be brought out to its brave, strong beauty, as the season brings out the apples and corn. Patience is the only angel that can work with love. To refuse her blessing is to refuse God's holiest gift, after what he has given us in the child's own being. I think the day is yet to dawn when fathers and mothers will feel that they would rather scourge themselves as the old anchorites did, than scourge their little ones; and will not doubt that they, and not the child, deserve it, when they feel like doing it. I suppose there is not an instance to be found of a family of children coming up under an unflinching and unfailling patience and love turning out badly; the angel prevailing with us prevails with the child for us, and turns our grace to its goodness. The fruit ripens at last all right, if we have the grace to let the sun shine on it, and to guard it from the destroyer. All the tendencies of our time to give children the right to have a great deal of their own way, are good tendencies, if we will understand that their own way is of course the right way, as certainly as a climbing vine follows the turn of the sun; all we have to do is carefully and patiently to open the right way for them wherever they turn.

Patience, again, must have her perfect work in our whole relation to our fellow-men. It is very sad to read of the shameful things that have been done in the name of Religion, for the sake of conformity: how the fagot has burned, and the rack has wrung. We cannot believe that we could ever do that, and very likely we never should; yet we are, most of us, inquisitors in our way, and want to force human beings into conformity with the idea we have of fitness, though it may not be theirs at all.

It is reported that the flitch of bacon at Dunmore, in Essex, is hardly ever claimed. It is a noble piece of meat, you know, always ready, with ribbons for decorations, and no little rustic honor besides, for the man and woman that have been married a year, and can say, solemnly, that their life, the whole

twelvemonth, has been a perfect accord. Only once in many years is it claimed, though to many an Essex peasant it must look very tempting. The loss lies in the fact that they did not take this angel with them, and make her the equal of love. They imagine that love is omnipotent, and can guard them from that sharp word. Love very often leads them on to it, since love, they know, is justified of love; but when all hope of the flitch is lost, if they are true and good, the angel comes, and stays, and has her way. . . .

We have very much the same thing to learn in our relation to each other in the whole length and breadth of our life. Ministers with their people, and people with their ministers; employers with their servants, and servants with their employers; men in their dealings with men, and women in their judgments of women. We would all be very much more careful in what we say and do, if, when we pray, we should say, "Our Father, give us grace to let thine angel have her perfect work, to guide and keep us till we reach the line at which forbearance ceases to be a virtue; and then, if the storm must come, make it like the lightning that cuts its quick way through the clogged and dead atmosphere, only to restore and bless, to set all birds singing a new song, and deck the world with a new beauty,"—that would be a blessed prayer.

For, finally, there must be a Divine impatience, too. Jesus Christ felt it now and then; but you have to notice that it is never with weakness or incompleteness, or even folly or sin; for all these he had only forbearance and forgiveness, and pity and sympathy. What roused him, and made his heart throb, and his face glow, and his voice quiver with Divine indignation, was the hollow pretence and ugly hypocrisy he had to encounter, and the judgments one man made of another out of his from a sense of superior attainment. That is our right, as much as it was his right, as we grow towards his great estate. I have seen an impatience as divine as ever patience can be; but this is needed only now and then, and can only come safely and truly to the soul in which her great sister has her perfect work. The perfectly patient man is always justified in all his outbreaks. Nobody blames the flaming sword, or the quick stroke home that comes from a noble forbearance, any more than we blame the thunderbolts of the Lord.

Last of all, for this angel of Patience we must cry to Heaven. One of the old pagan kings would not let the sage go, who came and told him that when passion was like to be his master, he would do well, before he gave way, to recite to himself all the letters of the alphabet. The counsel seemed so ad-

mirable, that the king cried, "I cannot do without you." It was only a dim pagan shadow of the sheen of the patient angel as the apostle sees her. There she sits, the bright, good servant of the Most High, ready to help all who cry to Him. The good servant that, through untold ages, wrought at this world to make it ready for our advent; laying together, an atom at a time, this wonderful and beautiful dwelling-place, with all these stores of blessing in mine and meadow, mountain and vale; then when her great charge came, she was waiting for him, to nurse and tend him, own sister of faith, and hope, and love, and twin-sister of mercy; tireless, true, and self-forgotten, anxious only for her charge, and never to leave us, if we will let her have her perfect work, until, through all hindrance, she leads us through the golden gate, over which is written, "Here is the patience of the saints; here are they that keep the commandments of God, and the faith of Jesus;" then she will have her perfect work, and we shall be perfect and entire, lacking nothing.

DO NOT speak of the evidence of Christianity being inadequate. Have you ever tried it? There is here a celestial chemistry which no man can learn, who does not go into the laboratory himself, and use his own crucibles and his own fire.—*Dr. McClinton.*

A SHORT ACCOUNT OF JOHN GOODWIN.

BY JAMES GOUGH, OF ENGLAND.

John told me that his father and mother were both convinced of truth about the same time, and received it in the love of it. At that time his father was clerk of the parish, and master of the free school thereof; but upon his joining with Friends, and giving up faithfully to Divine conviction, he was turned out of both these places, and obliged to have recourse to hard labor, wherein his mother heartily joined. But that himself, their eldest child, then well grown toward the state of a youth, not understanding their case, thought them fools to turn Quakers, and resolved he would not be like them in that. Nor did they offer any compulsion to him therein; but their prayers, put up to the Lord for him, were manifestly answered, and they had in their son the comfort they desired. At this time Friends were grown numerous in Wales; but soon after, upon the encouragement given by William Penn, most of the Friends in some parts of this principality removed and settled in Pennsylvania, and amongst the rest John's father and mother, with most of their children. From inclination he would have removed with them; but a higher power directed his stay in his native

land, and to that he gave up father and mother and everything. This good man recounted to me the great favors of the Lord to him all along to that day, to the following purport: "When the Lord pointed out poor Wales as a field of labor for me, He promised that if I was faithful to Him in it, He would be with me and favor me therein; and now I have in my heart a testimony for Him in my old age, that He hath abundantly made good His promise to me, both outwardly and inwardly, far beyond what at that day I could have ever expected." Which favors, in divers respects, he related over to me in a very edifying, thankful frame of mind; and speaking of his wife in particular, he related the steps by which the Lord (whom they loved and served) conducted and joined them together; lively adding, "I think I may say, if ever man in the world got his right wife, I got mine." He further told me that he lived and maintained his family on a farm of four pounds a year, but at length had purchased it and improved it, so that at that time he reckoned it worth six pounds a year. The first journey he travelled in the ministry, being to visit Friends through Wales, he had then got of clear money above forty shillings in all; and he was free to spend it (if there were occasion) in the Lord's service, knowing that He could give him, or enable him to get more; that the first time he began to entertain travelling Friends (most of the meeting being then gone to Pennsylvania), he had but one bed, which he left to them, he and his wife taking up their lodging in the stable. Divers have been convinced by his ministry; and one of the principal worthies of our age I have esteemed him.

The foregoing narrative of this worthy elder was edifying and profitable to me, not only at the time, but frequently since in the review and recollection thereof; and I thought it worthy of recital as conveying profitable instruction to every class of readers, whether of high or low degree. To the former a lesson of instruction, how humbly thankful they ought to be to the gracious Giver of all good things, for His extensive bounty to them, when they consider this truly good man, in circumstances we should reckon mean indeed, and a manner of living suitable to his circumstances, bearing a lively and grateful testimony to the goodness, mercy and truth of the Lord, in His gracious dealings with him. Also when he dedicates his little all (in faith) to his Lord's service, doth he not in the silent and reaching language of example, convey this intelligence to thy soul, who art blessed with abundance? Go thou and do likewise; honor the Lord with thy substance and the first fruits of all thine in-

crease; "love mercy, and walk humbly with thy God;" deeply pondering in thy heart "how much owest thou to the Lord?" And those of low circumstances from hence may learn that happiness is confined to no station in this life, but is the result of observing the law of God in the inward parts, being (as it prescribes) content with the things which we have, not minding high things; but reducing our desires to the level of our station in life, that so we may fill it with propriety and act our parts well. If we thus walk by the unerring rule of truth, though we be esteemed poor in this world, we shall be rich in faith, and, with this worthy man, enjoy in the obscurity of the humble cottage what palaces too seldom afford—solid content, the consolation of a conscience void of offence, and, in the reward of well doing, "the peace of God that passeth the understanding of men." The most splendid and extensive earthly possessions, when laid in the balance against durable possessions like these, are indeed as nothing and lighter than vanity.

EARNESTNESS.—No man can ever become eminent in any thing, unless he work at it with an earnestness bordering upon *enthusiasm*.—*Robert Hall*.

COMMUNICATED.

Editors of Friends' Intelligencer:

Reading your editorial in last *Intelligencer* referring to S. M. Janney's previous communication, recalled to my mind that excellent article by Benjamin Hallowell in No. 20, and still more vividly brought before me the exhortation of the Apostle Paul, wherein he says, "Examine yourselves whether ye be in the faith; prove your ownelves; know ye not your ownelves how that Jesus Christ is in you, except ye be reprobates," and he further says, speaking to the Romans, that whatsoever may be known of God, is made manifest in man. Jesus says, "Behold the kingdom of God is within," and that a good man out of the good treasure of his heart, bringeth forth good things; while an evil man out of the evil treasure of his heart, bringeth forth that which is evil," and the experience of every individual will, I think, verify the statement, that all the evil that exists in the world, all the darkness, all the superstition, all the error, exists in and comes from the heart of man! This being true, we can realize Paul's zeal in urging boundless charity, and the vital importance of self-examination; for in proportion as we institute a thorough examination of our own selves, do we discover our frailties, and aspire to a higher and purer life, and with the aspiration the power is given, which, if we will ac-

cept and follow closely our Guide, keeping our eye single to the Light, will carry us to the height of our aspirations, and unto perfection. Jesus said, "If I go away, I will send you another Comforter, even the spirit of Truth, whom the world cannot receive, because it seeth him not, neither knoweth him: but ye know him, for he dwelleth with you, and shall be in you." Why does not the world see and know him? because no two things can occupy the same place at the same time; hence if we be filled with "the lusts of the flesh, the lust of the eye, and the pride of life," which are of this world, we cannot fully know the "Spirit of Truth," for it pertains to the life eternal. Then, just in exact proportion as we know our errors, and aspire to be freed from them, does the power and wisdom of God enable us to rise above them into the fulness of Truth. The blessed Master has declared that when we know the Truth, the Truth shall make us free. If Truth is freedom, then bondage is its opposite, untruth or error. Hence, if we are bound by the observance of customs, traditions, rituals, creeds, dress or address, we are in error, in exact ratio to our conformity to others' views, rather than such as are revealed to us: as B. Hallowell truly says, our society has sustained a loss, I think a great loss, "from withholding the honest expressions of our soul." I speak this with a living concern for the welfare of our Society, and the world at large, for I believe we are upon the eve of a still higher development of Truth, from the recognition and adoption of that *great Truth*,—individual freedom of conscience—which necessarily leads to self-examination and aspirations after purity, perfection, and fulness of Truth. Shall we then rest quietly in the traditions of the past, while the world is bursting the barriers and restraints that have bound it, and preparing to stand upon that higher plane? Not that we should move *merely* because the world moves; but let us examine ourselves and see for ourselves if we are dwelling in the full light of Truth. If the spirit of Truth is given to every human being in proportion to his capacity to receive it, there must be some common ground upon which all mankind may unite; we know that it is not in creed, ritual, observance, or form of worship, for these are various. What then? That only which is essential, which all believe, which all strive after, which the spirit of Truth declares to be necessary for our salvation, and which all accept as from God through His Holy Spirit, which is righteousness, holiness and godliness.

BENJ. E. HOPKINS.

Cincinnati, Seventh month 24th, 1871.

Scraps

FROM UNPUBLISHED LETTERS.

There may be Pauls yet found whose spirits are stirred within them by the Holy Spirit, to declare the God that made the world, and that is not worshipped by *men's hands*. But of the means and operations by which Divine Providence carries on his own work in the earth, we know but little. The Babylonish monarch, in the pride of self-consequence, and the might of his *own power*, and for his *own honor*, pleased himself with what he had contrived and built in the city of confusion, with his golden god, higher than any other, and set up in the plain of Dura, in the province of Babylon; but in an unexpected moment, there came a voice from heaven, "The kingdom is departed from thee," and he was degraded to a beastly life, until he knew that the Most High ruleth in the kingdoms of men, and overruleth their contrivances and their pride, and giveth the power to whomsoever He will. So, as what has been, may be again, there may be a Divine interposition in the affairs of the present day. "Wherefore lift thou up thy prayer for the remnant that is left."

Faith, living, operative, saving faith, is a firm belief in the immediate revelation of the Holy Spirit in the soul of man, and a correspondent obedience to the manifestations of the Divine will. This I consider to be practical saving faith, and hence the truth of the saying, "He that believeth and is baptized, shall be saved." And again, "Whatsoever is not of faith, is sin." All the work of man's contrivance to promote any other kind of worship that is not of and from the revelation of the Divine will, are only like Nebuchadrezzar's image, or great Babylon built for the house of *his* kingdom (not Christ's) or like the Athenian altars, among which was one to the unknown god.

Paul, and all other faithful servants of the living God, fought, and still have to fight, the good fight of standing opposed to and wrestling against principalities and powers, against the rulers of the darkness of the wisdom of this world, and even against spiritual wickedness in high places. But Paul kept the faith, and in it was made victorious; so will all be who keep in the faith, and the word of faith abide in them; the crown of the righteousness of the obedience of faith is laid up for them. But alas! for all them that depend on a historical faith, or assent to gospel truths, even to the belief in inward immediate revelation, if they *keep not this*

faith, they will be overcome by the policies of the world, the serpentine deceptions of the reasoning powers of man, and they will become as the branches that abide not in the Vine, cast forth and withered, and trodden under foot of men. For these I mourn. For these things I weep—for the slain of the daughter of *my people*, and for the world of intelligent beings around me, in bondage to the spirit that ruleth in the children of disobedience.

My mind has been introduced into a nearer sympathy with Noah when he had been floating on the unstable waters for upwards of one hundred and fifty days, than I ever before remember to have felt. What patience he must have had in his new and unknown manner of life, in the ark; but as if hope and confidence were about to fail him, and he wanting a greater evidence of his release from this watery floating habitation, he opened the window of the ark, he wanted to see firm ground again, but all was fluctuating around him, and no rest appeared. He sent forth a winged messenger, to see if there was hope of release or relief; but it was a raven, who went to and fro and brought him no tidings. Finding his mistake, he next sent a *dove*, emblem of innocence and peace and love. But as yet there was no rest even for her, so she came back again to the ark. Ah! what discouragements attended poor Noah, who had a vast weight of charge and responsibility on his shoulders for the passengers in the ark. But he waited patiently another period, and again sent his innocent peaceful messenger, who having industriously surveyed the vast expanse of waters, at length discovered an olive leaf (emblem also of peace and rest) that appeared *above* the unstable element. This she plucked off, and in the evening returned with the joyful and expressive tidings in her mouth to Noah. Who can conceive his emotions? Who can paint his feelings? Who can estimate the value of this certain evidence that the waters were abating from off the earth? Who can measure the depth of his gratitude for this renewal of his hope of salvation and deliverance? But the faithful, the innocent, the peaceful dove, the very spirit which on another occasion was made the evidence of the coming of the Messiah, the prince of *peace*, how precious to the aged, tried, tribulated, and often tossed mind! I indulged a little view of the application of the emblem and state of Noah to us who are yet in the ark of probation, passing down the current of time and drawing towards its close. I felt an ardent desire that all those in this stage of life who had ever known the Truth, might

feel this anchor of hope, from the evidence of having this dove in their ark, in their hearts. But my attention was turned to the state of the Baptist, who was premonished (in his looking for the coming of the reign of peace) that on whomsoever he should see the spirit *like a dove* descending, and *remaining* on him, that same is the sent and anointed of God that taketh away the sins of the world. John saw, and bare record or witness of this joyful truth. Oh! that all who assume to stand as witnesses and testimony bearers, may not only see this dove-like spirit, but feel it abiding and *remaining* in and *on them*. What greater evidence of their being Divine-ly anointed to bear witness to the Truth?

FRIENDS' INTELLIGENCER.

PHILADELPHIA, EIGHTH MONTH 5, 1871.

WE have received from the publishers, Claxton, Remsen & Haffelfinger, a copy of a manual, descriptive of Fairmount Park. It contains a chart; also thirty-five engravings, illustrative of points of interest, which will give some idea of the beauties of the scenery that characterizes these "pleasure grounds." We think the little work, so neatly prepared, will be an acquisition to those who may wish to visit the Park and are unacquainted with its localities.

DIED.

SHAW.—At his native place, in Solebury, Bucks Co., Pa., on the 13th ult., Mathias Shaw, in the 69th year of his age. The great concourse of people of all classes and religious professions, who met in Buckingham Friends' Meeting-house on the afternoon of the 16th inst., to perform the last tokens of regard, filled that spacious house to overflowing, where he had so long assembled with his friends to worship the Father of Spirits; and during the hour spent there great order and solemnity prevailed, although all appeared desirous of taking a farewell look upon the lifeless form of a good man. He has left a beloved wife to deeply feel her bereavement; his friends and the community are also aware of the loss they have sustained. In the early period of his life he was a justice of the peace, a member of the State Legislature, and treasurer of the Farmers' and Mechanics' Mutual Insurance Company; but his love for the retirement and serenity of domestic duties was much more congenial to his inmost feelings, than political or public honors, though he continued in the care and management of the funds of others. He was not quick to discern the faults of others, but watchful over his own spirits. To a friend who remarked that he was glad to find him always in so happy a state of mind, he replied, "I am grateful for the favor." After a pause he added, "By the grace of God I am what I am; I don't feel to claim any merit of myself, but I feel at liberty to say that on life's journey I have felt desirous of

doing no harm, and have tried to do some good, but I might have done more. I have been blessed with a plentiful store of the treasures of *this* world, but now *they* are all naught—naught." Those who have been thus concerned through life to do their Heavenly Father's will, may feel an assurance of an entrance into His kingdom. P.

BLACKBURN.—On Fifth-day, the 29th of Sixth month, 1871, Clara Jane, aged 6 years and 8 months; on First-day, the 2d of Seventh month, Anna Della, aged 5 years and 3 months; on First-day, the 9th of Seventh month, Edith Rebecca, aged 2 years and 11 months; and on First-day, the 16th of Seventh month, Sarah Lizzie, aged 1 year and 3 months: all of scarlet fever; daughters and only children of Uriah and Hannah M. Blackburn, of Dunning's Creek, Bedford Co., Pa. Thus, in the brief space of sixteen days, has this little flock of birdlings—scarce fledged for the journey of life—been clothed with angel plumage, and safely gathered under the sheltering wing of Divine Goodness. The fond parents who, with so many tears, have given back their treasures, find a sweet solace in the thought that their dear ones are safely housed from the storms and besetments of a terrestrial life.

WHEN men are most sure and arrogant, they are commonly the most mistaken, and have then given views to passion, without that proper deliberation and suspense which can alone secure them from the grossest absurdities.

AN APPEAL.

Believing there are Friends who have plenty and to spare of this world's goods, we are willing to call their attention to some cases that have come under our notice as members of the Finance Committee of Swarthmore College.

We refer to young women who desire to educate themselves for teachers. Some of these were among our best pupils last year, but were unable to remain on account of the expense, being orphans or children of Friends in straightened circumstances. Are there not those who will give of their abundance something for this purpose? We know of cases where less than one hundred dollars, loaned for a year or two, in addition to what has previously been saved or can be raised among their friends, would be sufficient to give them a year's schooling. We had an application from a teacher aged 18, who was so anxious to become better qualified for her duties, that she proposed to assign to us a legacy of \$300 which she was to receive on coming of age, for a year or part of a year's tuition. Such pupils will be a credit to our Institution.

Persons in country neighborhoods in which it is difficult to get well qualified teachers, by applying to us can hear of good pupils in our Freshmen or Sophomore classes, who for a year's tuition advanced to them will engage to pay it back by teaching.

The cost of a year's tuition at Swarthmore is \$350, but we will be pleased to receive any amount Friends can spare. Any funds placed in our hands for the above purpose will be carefully used to the best of our judgment.

We hope this appeal will meet an early and liberal response. Please address

For Friends' Intelligencer,

EXTRACTS FROM CALIFORNIA LETTERS.

CALAVERAS Co., Cal., 6th mo. 21st, 1871.

I write lying on the ground in the Mammoth Grove, in the dense shade of a forest, the like of which I have never seen before. There is inspiration here for favored ones, but if I have caught any in thought, I have no way of communicating it in writing. Our measurements do not quite correspond with those in the printed description, being *less*. One big fellow, lying on the ground, we measured, and it was over 400 feet long. Part of the top was sawed off, and from the diameter at this part, as well as the indentation in the ground made by the tree in falling, it must have measured at least 50 feet more.

To compensate for the lack of timber in many parts of this western region, Nature seems to have gathered all her forces, and in one mighty effort to have displayed her powers. The trees are not only of mammoth size, but they have a grandeur and beauty which must be seen to be felt. Like the mountains and the ocean, no tongue or pen can make us sensible of their real sublimity and beauty.

We left San Francisco on Second day at 4 o'clock P. M., on a steamer for Stockton. There we took the cars for Milton, a distance of twenty-eight miles. At this place we took the stage to this spot, a ride of thirty-six miles. Over this dusty, parched country, it is very unpleasant to travel in this way; but here among the foot hills of the Sierras, about four or five thousand feet above the tide, we have a cool retreat, and an overcoat is pleasant mornings and evenings.

SAN DIEGO, 7th mo. 9th, 1871.

We left San Francisco on Fourth-day last, on the "William Taber," a coast steamer, that runs between this and the former place, touching at a number of towns on the way.

Passing round a portion of the city into the mouth of the bay, we soon passed the "Golden Gate," just one mile and an eighth wide. There were frowning forts on both sides, with large black cannons lying on the

embankments, and seen through port holes. A light house stands on high ground, both north and south of the channel.

Soon we round the point, and steer southward, pass the cliff house and "seal rocks." They seem to have been once a portion of the land, but probably being harder, and of a more resisting nature, have stood the ocean's shock, while the softer ones have been disintegrated. They stand several hundred yards from shore, and are three or four in number, the largest of which has an archway through which the surf passes and repasses, dashing the water into spray at every shock.

The lower ones are covered with seal or sea lions, some in apparent sleep, while others are barking, and growling, and contending with each other about the right of occupancy. They move very awkwardly on the rocks, but are swift in the water, and all are very fat. They appear to live in great harmony with the sea fowls, whose nests are on the higher points.

In going down the coast, which we never lose sight of, the Coast Range, and often the Sierra Nevada, are in full view, the latter far beyond and above the former. They never lose their attractiveness. They are continually varying in shape and size like the thunder clouds of evening.

At this season of the year there are almost continual fogs, for several hundred miles south of San Francisco, and the air is cold and raw. Winter clothing, with overcoats and shawls, are a necessity for comfort. The vegetation thrown on the beach, and growing upon the rocks, and in the channel of this bay, is entirely different from that of the Atlantic coast.

Just before entering the bay of San Diego, there is a growth of sea weed called "Kelp," that has its root on the bottom, rises to the surface, and floats a long waving vine, with beautiful alternate leaves as large as a small hand.

The vessel passes through acres of it, breaking and mangling it to pieces. We are told it is this that is first dried and then burned, and the ashes are made into soda.

The pelican, the cormorant, the gull, and ducks of different kinds are very numerous, and the waters are sometimes black with them.

The little islands near shore and the isolated rocks in the sea, are their roosting places, and are covered with a white deposit, that were it not for the seasons of rain would be excellent guano.

It is very interesting to watch the fish,—jelly fish of the brightest colors throwing out their feelers,—porpoises, traveling in schools faster than the steamboat,—flying fish a foot

long going through the air, just skimming the surface of the water,—whales spouting up fountains, and many others I cannot name.

As we approach San Diego, the atmosphere clears of fog and mist, and the ocean changes into a deep indigo blue, and the mountains of Mexico come in view. Before us are two or three lonely islands, or naked, rocky-looking cones,—they belong to Mexico.

About fifteen miles from here is the line, marked by a white marble monument, and east is Arizona, abounding in mineral wealth, but little developed, because of the lack of transportation, and Indian hostility. This place has one of the finest harbors in the world. It is completely land-locked. Two peninsulas put out from the mainland, and come together within rifle shot, keeping out the sea. All within is smooth, where ships may ride in deep water in perfect safety.

The town is new, and has a population of two thousand five hundred. The wonder is how they live, as there is the same dryness and want of timber here, that has been so common in all California. Our captain told us they lived on "their climate for breakfast, their harbor for dinner, and the railroad for supper." Here we have an excellent hotel—the best of beef, mutton and ham, fresh fish in abundance, gas-lights, and as *pure* air as I ever breathed. The mercury scarcely varies twelve degrees throughout the year, and the soil is rich and productive, all it wants is moisture. The gardens about town that are watered grow everything in abundance. They are about to sink artesian wells, and if successful in getting a plentiful supply of water, may change the whole face of the country, which is now treeless. All their timber comes from Oregon.

They are confident that in a few years they will have a railroad across the continent, and town lots are held at enormous prices. It is true their prospect is good, for there is no other good harbor this side of San Francisco. Then the timber of the Sierra Nevada may be brought here by rail, probably not over a hundred miles away.

With best wishes for thy happiness, I am truly thine,

N. HAINES.

GRAND HOTEL, SAN FRANCISCO, Cal.,
7th mo. 15th, 1871.

We wrote from San Diego, but found it would take longer for the letter to reach thee across the country, than to carry it with us on our return here by steamer.

We left San Diego on Third-day morning last, at 9 o'clock, and on Fourth-day morning reached San Pedro Bay; then took a little steamboat to Wilmington, a military station; and thence to Los Angeles, twenty miles by rail.

Having about seven hours there, we took a carriage and drove round the place, and on the heights that overlook the valley, and on which Gen. Fremont had his fortifications and took the place from the Mexicans. It is the *most* beautiful place we have seen in California.

The Los Angeles river, now reduced by long drouth to a small stream, is taken out of its channel above the city, partly to distribute the water throughout the town, and the balance is conveyed by artificial ditches all about through the valley, making a green spot, as it were, in the desert.

This greenness may extend ten miles in length by three or four in width, and seen from the heights, contrasts strangely with the nakedness around. In this green spot are raised nearly all kinds of vegetables and fruits. The orange orchards are beautiful, and lemons of the largest size seem going to waste on the ground. Apples, pears, peaches, pomegranates, olives and the date palms are seen everywhere. Here, too, are large vineyards, and wine is made in abundance.

The boat stopped an hour and a half at Santa Barbara, a half day's sail north of Los Angeles, where we went ashore and gathered shells and moss.

This, too, was another green spot, and an old Catholic mission stood on the hill back of the town, to which one of our party drove, and reported a beautiful place, with its old olive grove, and date palms.

About ten miles this side, the ocean is covered for miles with an oily substance resembling petroleum, that in the sunshine and waving of the waters reflects all the colors of the rainbow. Oil has not been bored for on the land, but I do not doubt it could be struck not far from the surface. Our captain said it proceeded from springs under the sea.

It was very interesting to watch the porpoises, or boneta, as some call them, playing for miles just before the bow of the ship. Their tails are horizontal, and the slightest motion drives them through the water with bird-like rapidity. They are brown above and white below, with white fins and sharp noses. They pitch their whole length out of water. They weigh from 100 to 300 pounds, and have teeth like a hog, and at night a phosphorescent light shines along their pathways.

N. H.

From the Atlantic Monthly.

BOTANIZING.

BY WILSON FLAGG.

In this paper I do not intend to treat of the nomenclature and classification of plants, nor of the laws of vegetable physiology. There is a branch of this science, not involy-

ing any deep research, but serving rather to amuse the mind than to store it with knowledge, to which I invite the reader's attention. I allude to the study of flowers, or that part of botany which belongs to poetry and romance, rather than philosophy, and affords more exercise to the taste and imagination than to the higher mental faculties. This study is generally regarded by the female sex as one of the most interesting branches of natural history; but the pleasure of the pursuit is derived principally from the cheerful exercise attending the search for plants in field and forest. A ramble in the haunts of birds and flowers on any pleasant day of the year, even when we go out for no particular purpose, is always delightful; and this pleasure is greatly magnified if we have some interesting object in view, like hunting, fishing, or collecting plants and minerals.

But women cannot conveniently become hunters or anglers, nor can they without some eccentricity of conduct follow birds and quadrupeds to the woods, and study their manners and habits in their native haunts. The only part of natural history which they can pursue out of doors is the study of plants. Even in this field they meet with obstacles not encountered by the other sex. A young woman cannot safely roam at will in any place and at any distance. She is exposed to many annoyances and to some dangers not to be overlooked or despised. While a young man may traverse the whole country in his researches, his sister must confine her walks to the vicinity of her own home and to the open fields and waysides, and in these limited excursions she sometimes needs protection.

My own interest in botany was first awakened by collecting flowers for my sisters which they afterwards analyzed and named. Thus I came to know the names of many plants before I had learned the first rudiments of botany, and could designate their respective haunts before I knew anything of botanical classification or science. Even to this day I am more acquainted with the habits of our native plants and with their forms and beauty than with their botanical characters. While thus employed by my sisters, I felt conscious that I enjoyed the principal pleasure of the pursuit, while they performed all the drudgery; for half the pleasure of the study is lost, if the students be not the collectors of their own specimens. In this case, however, my sisters shared from sympathy a great part of the interest I felt in my own adventures, and valued a flower which had cost me a great deal of search, and some perilous and perplexing travel through bogs, brambles, and thickets, before I could obtain it, as a great prize. My ad-

ventures, when I recounted them, gave them an interest in my acquisitions which they could not have felt, if I had just picked them up from the roadside. If at any time I had got a ducking, or had come home covered with mud, or with bruised limbs, or a scratched face, in my scrambling after a rare plant, my mishaps gave it in their eyes an additional value. There is a philosophy in these matters, which has never yet received the attention it deserves, and is still very imperfectly understood, especially by those who would make the path through every field of learning so smooth and easy as to excite nothing of the spirit of adventure.

Hence the perfectly uninteresting character of the study of botany when pursued in a garden. We meet with no adventures here, no dangers, no obscurity and uncertainty of course, no perplexity or suspense, no mysterious intricacy of paths to be unravelled, nothing of that gratification which is the reward of patient and diligent search, no excitement, indeed, of any kind. Botanizing in a garden is like gunning in a poultry-yard. It is like sitting at a sumptuous feast and being fed, instead of killing your game and making your repast under the shade of a wood. Every hunter knows that the pleasure of any excursion is increased by the scarcity of his game and by the roughness and intricacy of his hunting-ground, provided the game exists there, and the difficulties of his pursuit are not insurmountable.

Though I was never addicted to perilous adventures, I still remember those with the most pleasure that partook in the highest degree of this character, and were followed by the greatest weariness. One of my most agreeable reminiscences was an occasion of a long day's journey with a fellow-student, in quest of the three-leaved Solomon's Seal,—a very rare species, which some years before had been found in a swamp about eight miles from our homes. Our rambles through narrow lanes, and past rustic cottages, with their lilacs and roses, their simple gardens, and their loquacious inhabitants; then down through woodland paths, and over meadows spangled with violets; through bogs and over potato-patches; scaling precipices and wading through ditches, slaking our thirst with the water of musical streams, and appeasing our hunger with a few scattering strawberries, made the whole day one of intense delight. How completely would the pleasure of this excursion have been destroyed, if on our road some florist had exhibited to us a profusion of these flowers in his conservatory! All the pleasures of expectation, of action and resolution, of alternate hope and uncertainty, and finally of fruition, made a hundred-fold

more delightful by the toils and hardships of which it was the reward, would in this case have never been felt.

On the next morning, when we were to commence another similar journey, I found my comrade in a fit condition to be photographed as a *lusus naturæ*, his eyes being entirely closed and his face swollen and inflamed with the poison of Sumach. Indeed, his features were not discernible at all; but in the place of them were certain indentations or dimples in his rotund face, giving it the likeness of an enormous red skinned potato. Here was a new cause of excitement and philosophic inquiry. It awakened our interest in identifying the poisonous plants and learning their properties. Our journey was postponed, but my comrade, who was both a wag and a philosopher, amused me during his blindness with a lecture on toxicology.

Of the poisonous plants which many persons dread as they would a serpent, there are only two that are known to communicate their effects by being touched or handled. These are two of the Sumachs, one bearing the common name of Poison Ivy, the other that of Poison Dogwood. But, as I am not writing a botanical description of plants, I will only say that neither of these two bears conspicuous or beautiful flowers. Their flowers are of a greenish clay-color, very minute, borne in irregular clusters, and possessing no beauty of any kind. Their fruit also is small, and offers not the least temptation to the sight or to any other sense. The young rambler may therefore put aside all fear of gathering or handling any plant in our woods that bears a beautiful flower or an agreeable fruit. Flowers of great beauty are often the product of plants which, like the Aconite and Stramonium, are deadly poisons, if their juices are taken into the stomach. But any of these may be safely handled. It is remarkable, however, that the flowers of such plants never emit an agreeable odor: they are always fetid and offensive. Nature has so qualified her vegetable productions, that animals shall recognize all those of a poisonous character by their disagreeable odor, and those of a wholesome kind by their agreeable properties of taste and smell.

It will not be denied that the dangers as well as the annoyances to which we are exposed in the wilds of nature are the source of half the pleasure of botanizing as well as of hunting and angling. The interest we feel in a garden is of a different kind. It is generally one of taste, perhaps of ambition; the love of a quiet and voluptuous employment, enlisting all the senses, and gratifying in the highest degree a passion for beautiful forms and colors and their harmonious arrange-

ments. It is like a love of painting, drawing, music, and reading verses. But the study of wild-flowers is intimately associated with action and adventure, and the rude and sublime as well as the beautiful scenes of nature. Hence we do not find these two habits of mind always united in the same person, and neither of them is like a taste for science, which is quite a different thing. In the garden we generally admire profusion, artful arrangement, and splendor. But, as I have said before, profusion in the fields would destroy all the fascinating interest that attends a botanizing tour. The same flower that would hardly gain from us a look of recognition among the hosts of a garden, awakens the most intense delight when discovered, after several hours of wearisome search, dangling from a high rock or glowing upon us from the opposite bank of a river. In either of these cases our zeal is heightened by our partial disappointment, and by the new difficulties we must encounter, before the flower can be gathered.

I cannot describe the joy I felt, mingled with about equal chagrin, when, after a long and tiresome journey in quest of the yellow Lady's-slipper, I discovered one on the opposite wooded side of the Shawsheen River,—a beautiful stream that wanders through the classic grounds of Andover and Boxford. I thought at first of swimming for it; but there were so many clumps of Button Bush and Dutch Myrtle scattered about the stream, which in this place was widened into a muddy shallow, that it was not safe to wade or swim across it on account of the soft mud at the bottom, and the tangled roots of these aquatic shrubs. My only alternative was to follow the river about half a mile down to a bridge, then cross it and return on the other side. My pains were doubly rewarded by obtaining the plant and by the rare discovery of an oven-bird's nest, which I had never before seen. Thus any such disappointment in traversing the woods may lead to new discoveries by changing our course and guiding us into new paths.

Yet while we are aware that certain perils and inconveniences increase the pleasures of botanizing, it is not to be understood that we should neglect to study the art of avoiding and surmounting them. This is an important part of the science of botanizing; and it should include knowledge of the best hours of the day for rambling, and the means of performing our intricate and often pathless journeys, and finding our way through the woods without guide or compass. It should treat also of the habitats of different plants and how they are to be discovered. The art of preserving flowers is another thing. This

is one of the fine arts, and seems more nearly allied to that of painting.

Several hours of the morning must elapse, before the dews will be dried from the grass and shrubbery. These are a source of great discomfort unattended with any satisfaction, especially to the female sex, who cannot with impunity draggle their garments through the wet grass and bushes. For them, if not for all, the best time for botanizing is the afternoon during the three or four hours preceding dewfall. There is a serene delight attending an early morning walk that may be compared only with the bliss of paradise. The earth never seems so much like heaven as on a fine morning in summer, a little while before sunrise. But a walk at this hour is a luxury which only the hardy and robust can safely enjoy, except with great moderation. Some flowers, like the *Convolvulus*, are bright only in the morning; some close their petals before noonday. Some, like the white Water-Lily, do not open until they meet the direct rays of the sun; others, like the Evening Primrose, wait, except in cloudy weather, until the sun begins to redden in the west. But hundreds of species are bright and beautiful nearly the whole day; so that an early morning walk is not necessary, except to obtain sight of certain flowers of peculiar habit.

We may by chance discover a rare and interesting plant in a situation that would be the last to invite our attention. The apparent unfitness of the place for aught but common weeds may have preserved it from observation. I have sometimes encountered by the roadside a species for which I had long vainly traversed the woods. On the borders of some of the less frequented roads in the country, the soil and the plants still remain in their primitive condition. In such grounds we may find materials for study for several weeks, without leaving the waysides. Indeed, all those old roads which are not thoroughfares—byways not travelled enough to destroy the grass between the ruts of wheels and the middle path made by the feet of horses—are very propitious to the growth of wild plants. The shrubbery on these old roadsides, when it has not been disturbed for a number of years, is far more beautiful than the finest imaginable hedgerow. Here are several *Viburnums*, two or three species of *Cornel*, the Bayberry, the Sweet Fern, the Azalea, the Rhodora, the small *Kalmia*, and a crowd of Whortleberry-bushes, besides the Wild Rose and Eglantine. The narrow footpath through this wayside shrubbery has a magic about it that makes it perfect bliss to pass through it. Under the shelter of this shrubbery Nature calls out the Wood Anemone, blue, white, and pedate Violets, and in damp places the Erythro-

num, the Solomon's Seal, and the Bellwort. When I see these rustic ornaments destroyed for the improvement of the road, I feel like one who sees his own paternal estate swept of its productions and measured out into auction-lots.

There are indications by which we may always identify the haunts of certain species, if they have not been eradicated. We know that fallow grounds are inhabited by weeds, and that mean soils contain plants that seem by their thrift to require a barren situation; but they are like poor people, who live in mean huts because the better houses are occupied by their superiors. These plants would grow more luxuriantly in a good soil, if they were not crowded out by those of more vigorous habit. Every one is familiar with a species of Rush (*Juncus tenuis*) called Wire Grass, which is abundant in footpaths through wet meadows. It is so tough that the feet of men and animals, while they crush and destroy all other plants that come up there, leave this uninjured. This remarkable habit has caused the belief that it thrives better from being trampled under feet. The truth is, it will bear more hard usage than other species, and is made conspicuous by being left alone after all its companions have been trodden to death. The same may be observed of a species of *Polygonum*,—the common "knot grass" of our back yards. A certain amount of trampling is favorable to its growth by crushing out all its competitors.

(To be continued.)

From the Christian Register.

THE STILL SMALL VOICE.

"I hear it often in the dark,
I hear it in the light—
Where is the voice that calls to me
With such a quiet might?
It seems but echo to my thought,
And yet beyond the stars;
It seems a heart-beat in a hush,
And yet the planet jars!

"Oh, may it be that far within
My inmost soul there lies
A *spirit-sky*, that opens with
Those voices of surprise?
And can it be, by night and day,
That firmament serene
Is just the heaven where God Himself,
The Father, dwells unseen?

"O God within, so close to me
That every thought is plain,
Be judge, be friend, be Father still,
And in thy heaven reign!
Thy heaven is mine—my very soul!
Thy words are sweet and strong,
They fill my inward silences
With music and with song.

"They send me challenges to fight,
And loud rebuke my ill;
They ring my bells of victory,
They breathe my Peace, be still!

They ever seem to say, My child,
 Why seek me so all day?
 Now journey inward to thyself,
 And listen by the way!"
 —John W. Chadwick.

WAIT AND SEE.

When my boy with eager questions,
 Asking how, and where, and when,
 Taxes all my store of wisdom,
 Asking o'er and o'er again
 Questions oft to which the answers
 Give to others still the key,
 I said, to teach him patience,
 "Wait, my little boy, and see."
 And the words I taught my darling
 Taught to me a lesson sweet:
 Once when all the world seemed darkened
 And the storm about me beat,
 In the "children's room" I heard him,
 With the child's sweet mimicry,
 To the baby brother's questions,
 Saying wisely, "Wait and see."
 Like an angel's tender chiding
 Came the darling's words to me,
 Though my Father's ways were hidden,
 Bidding me still wait and see.
 What are we but restless children,
 Ever asking what shall be?
 And the Father, in His wisdom,
 Gently bids us "Wait and see."

—Anon.

THE HOOSAC TUNNEL.

This, one of the most extraordinary engineering labors ever projected in this country, was undertaken with the view of forming a more direct railway connection, and one more central to the State of Massachusetts, between the Hudson river and Boston, than that afforded by the principal route hitherto existing (the Boston and Albany Railroad). The Tunnel route—if carried to a successful culmination, and of this, the untiring energy and engineering talent of the Messrs. Shanly, the present superintendents of the enterprise, furnish the strongest grounds for belief—will have for its western terminus the city of Troy, and will be about ten miles shorter between that point and Boston than the existing route; while in respect to gradients, the tunnel line will have greatly the advantage over the latter, in having no inclines exceeding forty-five feet in the mile, against gradients of from eighty to ninety feet on the other.

The railways of which the tunnel is designed to be the connecting link, are already completed up to the mountains on either side. At the present time and until the completion of the tunnel, stages are in requisition to carry travelers over "the Hoosacs," to complete connections on either side. The westerly portal of the tunnel is at North Adams, fifty miles distant from Troy, and the easterly one is in the valley of Deerfield river, 136 miles from Boston.

The Hoosac Mountain, through the ribs of which the tunnel is being pierced, is, at its highest point along the line, 2508 feet above tide, and the two portals a trifle over 760 feet above the same. Lithologically, it consists, almost throughout, of mica schist, the westerly side displaying for half a mile or less a fault of somewhat altered granite, beyond which again a very hard quartzite is encountered for another half mile or more, which has not yet been fully penetrated. The east end workings, now upwards of 8,000 feet inwards, are in unmistakable mica schist, occasional narrow veins of quartz being met with. At the "central shaft," which is located nearly midway between the two ends, and is 1030 feet in depth, the workings are through the same material.

The tunnel is designed for a double line of rails; its length, when completed, will be 25,031 feet; its width is 24 feet; height in centre, 20 feet; and it is graded from each end to the centre 6 inches in the 100 feet, ascending from either end.

The mountain has already been penetrated:

From the east side,	8,200 feet
From the west side,	5,820 "
And at "central shaft,"	200 "
Showing a total progress in the	—
work of	14,220 "

And leaving still to be accomplished, 10,811 feet.

The daily progress averages at present 15 feet, which it is anticipated will be increased to 18 feet when machine drills have been introduced into the central workings; this, we understand, will take place in about two months.

The system of working varies with the locality. At the east end, where the greatest advance has been made, the work is more simple than at the west end or at the centre. Here (east) the rock is run out by an engine and train of cars, and disposed of in the valley of the Deerfield river. At the east end two operations are going forward. Nearly one half mile from the portal inward is in bad ground, requiring to be arched with brick, the progress of which is necessarily slow, and the appliances for this work taking up the whole space of the tunnel, the rock from the solid workings farther in cannot be run out through the portal. This unlucky state of affairs necessitated the taking of the "bad ground" in the rear, by sinking a shaft, called the "west shaft," 318 feet deep, through which all the rock from the western workings, behind the portion requiring arching with brick, is hoisted. This is effected by a double lift, worked by steam power, one bringing to the surface a car loaded with

rock, the other taking an empty car to the bottom. This alternate process goes on with great regularity, a car of rock emerging at the surface every 2½ minutes.

Nearly midway between the ends of this tunnel, and in a deep depression of the mountain, another shaft has been sunk. Its depth is 1030 feet, its shape oval, and its dimensions 27 by 15 feet. This is termed the "central shaft," and has recently been completed, and the work of driving the tunnel east and west therefrom commenced. The method of hoisting the rock here is identical with that at the "west shaft;" the machinery is, however, more powerful, and considerable pumping is required to keep the bottom workings free of water.

The drilling is chiefly done by the machine known as the "Burleigh Rock Drill," worked by compressed air, the air compressors being also of the Burleigh Rock Drill Company's make, the drills working either horizontally or vertically, as occasion requires. The material is taken out, full tunnel width, with the aid of eight of these machines, mounted horizontally on two carriages, which are run back—with the drills still in place—far enough to be out of harm's way during the operation of blasting, which is performed twice in each "shift" of eight hours. Of the drills it may be mentioned that each weighs about 540 pounds, and under a pressure of 60 pounds to the square inch will make upwards of 200 strokes per minute, drilling a hole 1¼ inches in diameter.

The air power for the drills is obtained through the agency of water power at the east end, and with the aid of steam at the other two points. It is compressed to give a pressure of 65 pounds on the square inch, and is conveyed to the point where it is needed through cast iron pipes, 8 inches in diameter, which are fitted with air tight joints.

At the east end the work of compressing the air is carried on upwards of 9,000 feet from the point where the drills are in operation, the difference in pressure at the working points being only two pounds per square inch compared with that recorded without the tunnel. The exhaust from the drills furnishes a good supply of fresh air to the workmen, and the atmosphere of the workings, now 8,000 feet from the outer world, is perfectly endurable.

The blasting is principally accomplished by means of nitro-glycerine, manufactured on the place by G. M. Mowbray, an experienced chemist. This material, which must be handled with the most intelligent caution, is allowed only in the hands of those who are adepts in its use, and who are employed especially for that purpose.

Though its cost is ten times that of blasting powder, it is nevertheless found advantageous to employ it in certain portions of the works. In the nitro-glycerine blast, the number of holes simultaneously charged varies from ten to fifteen, their depth is usually 60 to 72 inches where the hole is horizontal; where it is vertical, the glycerine charge is put down 10 feet and upwards. These figures will, of course, vary with the nature of the rock and other conditions.

The labor employed in the work is chiefly of the kind termed "skilled labor," the underground workers being, for the most part, regularly bred miners (a large proportion of them being of the very best and most intelligent class of Cornish miners.) There are also a large number of Irishmen employed underground, who are highly prized; while of the French Canadians, who are well represented, it is said their aptitude for learning has already made excellent miners of many of them. The overground men employed are chiefly mechanics and American. The employees number about 900, men and boys.

The work is carried on day and night (except Sunday,) the twenty-four hours being divided into three working days or shifts of eight hours each.

Such, in brief, is an outline of the nature and present status of this most important work, the rapid and satisfactory progress of which reflects eminent credit upon its talented superintendents.—*Journal of the Franklin Institute.*

DUNCES.

Fisher Ames entered Harvard at the age of twelve, and Edward Everett at thirteen; Bishop Heber translated *Phœdrus* into English at seven; Anna Seward repeated from memory the first three books of "Paradise Lost" at nine; and Lord Brougham wrote on philosophy at eighteen.

But all eminent men have not been remarkable for early attainments. Some of the grandest spirits that the world has ever known—men whose works and memory are enduring—were regarded in youth as dunces. They flowered late, but bore the rarest fruit.

It is somewhat discouraging for a boy of moderate abilities, who aims to do his best, to be told that others accomplished in childhood what he can do only by hard study in the best years of his youth. But such a boy should not relax his efforts. He will succeed, if he gives his heart and mind to the work.

That distinguished teacher, Dr. Arnold, of Rugby, after speaking of those who zealously cultivate inferior powers of mind, said of such a pupil, "I would stand to that man

hat in hand." He once spoke sharply to a dull boy, who replied :

"Why do you speak angrily, sir? Indeed, I am doing the best I can."

Dr. Arnold said he never so felt a rebuke in his life.

Sir Isaac Newton was a pronounced dunce in his early school days. He stood low in his classes, and seemed to have no relish for study. One day the "bright boy" of the school gave him a kick in the stomach, which caused him severe pain. The insult stung young Newton to the quick, and he resolved to make himself felt and respected by improved scholarship. He applied himself resolutely to study, and, ere long, stood in his classes above the boy who had kicked him, and ultimately became the first scholar in the school.

Newton owed his pre-eminence in his philosophical studies more to perseverance and application than to any marvellous natural endowments.

Oliver Goldsmith, than whom no boy could appear more stupid, was the butt of ridicule at school. A school dame, after wonderful patience and perseverance, taught him the alphabet, a thing which she deemed creditable to her skill, and which she lived to mention with pride when her pupil became famous. He made no progress in the exact studies, but liked history and Latin poetry.

He was a sore trial to his ambitious mother, who made many fruitless efforts to quicken his wits by her sharp words. His relatives, teachers and schoolmates all told him that he was a fool, which verdict he did not dispute, but took good humoredly. Even when he had produced the "Traveller," an eminent critic said to a friend, "Sir, I do believe that Goldsmith wrote that poem, and that, let me tell you, is believing a great deal."

Sir Walter Scott was a dull boy, and when attending the University at Edinburgh, he went by the name of "The Great Block-head." But he wasted no time on trifles, and, in pursuing a study that he loved—as, for example, history or the classics—he was persevering and methodical. He was one of those whose knowledge on a subject that interested increased, until it lay like a great volume in his mind. When Walter Scott began to make use of that knowledge, society gave him another name, somewhat different from the Edinburgh appellation. It was "The Great Magician."

Hutton, the antiquarian, whose knowledge of books was deemed remarkable, was slow to learn when a boy. He was sent to school to a certain Mr. Meat. He thus tells his experience: "My master took occasion to

beat my head against the wall, holding it by the hair, but he could never beat any learning into it."

Sheridan found it hard to acquire the elements of learning. His mother deemed it her duty to inform his teacher that he was not bright to learn like other boys. Adam Clarke was pronounced by his father to be "a grievous dunce," and Dr. Chalmers was pronounced by his teacher as an "incorrigible" one. Chatterton was dismissed from school by his master, who, finding himself unable to teach him anything in a satisfactory manner, settled it that the boy was a "fool."

Teachers are apt to become impatient over dull scholars, and predict of them that they will never come to anything. Such uncalled for prophecies ought to discourage no scholar who tries to do well. A certain Edinburgh professor once pronounced upon a student his severe opinion: "Dunce you are, and dunce you will ever remain." That student was Sir Walter Scott.

If a dull boy feels an inspiration stirring within to do something worthy in literature, science, or art, let him set his face as a flint towards his object; let him be patient, hopeful and self-reliant, unmoved by laughter, undiscouraged by evil prophecies.—*Moravian.*

ITEMS.

SPECTACLES, according to "Once a Week," are not such a recent invention as might be thought. Although they did not come into use in Europe until about the year 1300, they are, it is stated, of unfathomable antiquity in China, being made, it is true, not of glass, but of rock crystal. The Esquimaux also, although ignorant of the manufacture of glass or even of pottery, and, therefore, not able to construct a lens, have devised an instrument of wood and bone, with a narrow slit, which assists the visual powers of the eyes. The Esquimaux call these instruments "ittee-yaga," or "far sight," a term which is the exact synonym of the English telescope.

COMPLEMENTARY COLORS.—Complementary colors, by reflected and transmitted light, are admirably shown by a simple arrangement, to which attention has been called by Prof. E. C. Pickering, of Boston. A plate of glass is coated with a layer of the violet-colored ink, made from aniline color, now much used, and this fluid is allowed to dry upon it. If we then place this in such a position that light is reflected from its surface to our eyes it will appear of a metallic golden color, as though coated with a gold bronze; but if we look through it at the light, the color will be a very rich purple. There are many other bodies having a similar action, but in none that we know of is it so striking as in this.

Thus, glass flashed with silver has a green color by reflected, and an orange-red by transmitted light. Salts of the sesquioxide of chromium, which are green by reflected, are red by transmitted light; a solution of ordinary litmus is blue by reflected, but red by transmitted light.—*Annual of Scientific Discovery*

For Friends' Intelligencer.

"THE REVELATION OF TRUTH."

I have been deeply interested as well as instructed by an article that appeared in the *Intelligencer*, from the pen of Benjamin Hallowell, entitled, "The Revelation of Truth."

And, although I am fully persuaded that the qualifications that should attend the conclusions that may be drawn from it are fully understood and appreciated by that dear friend, yet I am somewhat apprehensive that such may not be the case with all his readers. For neither in the scientific nor spiritual world are the advances made by one generation on preceding generations uniform and continuous. The knowledge thus derived is an accumulation of human experience, and is of advantage to us all; and is doubtless the chief agent in advancing the cause of true civilization, which may be defined as a desire on the part of mankind to live in accordance with the laws established by Divinity for the government of mind and matter in all their various relations. But the question will arise, How is a knowledge of these laws to be obtained? Our friend very properly says, by labor, which is quite true. But no one knows better than he how much of this labor is requisite to obtain even a partial knowledge of a few of the laws by which matter is governed. A large part of mankind has to accept the conclusions of the learned with unquestioning faith, or it will know but little. Now, if the

spiritual world is governed by the same laws of enquiry, it naturally follows that, to advance the race, many things must be regarded as accepted truths, which the individual has not been made acquainted with by his own experience. Hence, no one should deny a thing to be true which has been so acknowledged by the good of former generations, unless it clearly conflicts with his perceptions of truth as made known to him by a close communion with the Author of all truth; for there is a unity in truth that is to be found in nothing else. Opinions vary, and the closest deductions of the human understanding often lead astray; but, as our friend justly remarks, "every truth, however recently discovered, has existed through all time."

It is this indestructible quality of Truth, and of the things which are true, to which I desire to call the attention of Friends. Acknowledging, as we all do, that there may be and generally is a direct communion between the soul of man and its maker, and that it is through this agency men are to look for the unfoldings of such truths as more immediately affect their individual condition, yet we all admit that there are various other sources to which we may also look for aid in the work of spiritual education. Thus a spiritual truth, once clearly revealed through the action of the Holy Spirit, must be acknowledged as a truth ever afterwards. But the question arises whether there must not

necessarily be a similar condition existing in the soul receiving the truth on testimony, as was existing in the soul on which it was first impressed, before this acknowledgment can be truly made? If this be so, as I fully believe, then it does not follow that each generation has fuller and clearer perceptions of spiritual truth than the ones preceding it. The individuals of which it is composed must be baptised with the same spiritual baptism with which their fathers were baptised before they can realize their spiritual conflicts, or receive the fruits that come of them. These are not transmissible by inheritance, as is the garnered wisdom of intellectual knowledge. Each individual soul has to undergo the second birth for itself, and until it has done so it cannot feed on the food which nourishes the soul to eternal life. How much less, then, can it act as an instrument in furnishing food to others! How fully is this exemplified in the present condition of the church of Rome as compared with primitive Christianity! Rome professes to believe all that Christ and his apostles taught. She has not shortened the hand of God by denying an existing revelation of his will, but contends that, in some mysterious way, this power is confined to certain channels, and is transmissible by human agencies, until finally she has raised a man to the position of a god and made his dictum equal to the Divine will. This result is not brought about by denial, but by substitution. The fact she admits is true, but her mode of applying the truth destroys its essence.

Now, we all admit that Christianity wrought a wonderful revolution in the spiritual condition of mankind; not by denying any of the truths that God in many ways had revealed to his children, but by casting off the errors with which these truths had become associated by tradition, and by an increased enlightening of the souls of men, growing out of a greater dedication of heart on their part. They were born of the Spirit, and of the Spirit received instruction.

But by the conflicts to which Christianity was afterwards exposed, it became corrupted, and ceased to be the pure word of God. A remnant kept it alive, and at the Reformation a spasmodic effort was made for its re-establishment with only partial success. The early Friends were enabled to see, with much clearness, wherein its efficacy lay, and, by much dedication of heart, did, through much suffering, restore it to its original simplicity. They were an earnest body of workers in the Lord's vineyard. *But they did not claim to have discovered any new thing.* To restore primitive Christianity was the work at which they labored.

And, although the records of the Society prove that advances have been made by individuals in spiritual growth, it is a question whether, as a body, we of the present day are as advanced in righteousness as were our fathers of two hundred years ago. That the world has been benefitted I have not a doubt; nor do I deny that we might have progressed also had we been equally as dedicated. But is it not true that whilst the world at large has received many of the truths taught by our early Friends, it has, by its allurements, won us to its way of seeing many other things that are not true?

If we make advances on former generations, and truth is indestructible, our progress must be upwards and onwards. We will not only be enabled to have clearer perceptions of those things that qualify the soul for everlasting life, but we shall also be strengthened to avoid those ways which are inimical to the best interests of mankind. We will not follow its foolish fashions, nor will our best energies be devoted to garnering its perishing riches.

But, as we are obedient to the light we already have, we shall be strengthened from day to day, until our vision will be strong enough to bear the light of that day that has no ending.

W—s.

7th mo., 1871.

IF we save the moments of time, we will have enough for every needful work. Moments are the material of which days and years are made. If these be well improved, we will have years devoted to profitable employment.

THE ELDER SISTER.

There is no character in the home circle more useful and beautiful than a devoted elder sister who stands side by side with the toiling mother, lightening all her cares and burdens. How beautifully the household machinery moves on with such efficient help! Now she presides at the table in mother's absence, always so neatly attired that it is with pride and pleasure the father introduces her to his guest as "our oldest daughter." Now she takes a little troop with her into the garden, and amuses them, so mother may not be disturbed in her work or her rest. Now she helps the boys over their hard lessons, or reads father's paper aloud to rest his tired eyes. If mother can run away for a few days' recreation, she leaves home without anxiety, for Mary will guide the house wisely and happily in her absence. But in the sick-room her presence is an especial blessing. Her hand is next to mother's own in gentleness and skill.

Her sweet music can charm away pain, and brighten the weariest hours.

There are elder sisters whose presence is not such a blessing in the house. Their own selfish ends and aims are the main pursuit of life, and anything that stands in the way of these is regarded with great impatience. Such daughters are no comfort to a mother's heart.

Which kind of an elder sister are you in the household?—*Presbyterian.*

For Friends' Intelligencer.

WHAT HAS BEEN, MAY BE AGAIN.

To rightly estimate blessings, we must look to the channel through which they come; to appreciate privileges, we must count their cost, especially in relation to the free exercise of all the faculties, in the fulfilment of those solemn duties that stand immediately between God and the soul,—the inestimable boon of liberty of conscience. Who that looks into these things will say the reformation was naught, that Protestantism is a failure? Think of a Huss, a Latimer, a Ridley, and thousands whose names are lost in oblivion, who wore away their lives in loathsome prisons and in dungeons, enduring all the tortures evil men could inflict upon them, and in the midst of all these miseries stood as true as the needle to the pole! The work assigned them was to pull down the walls of superstition and bigotry, to rend old systems and structures that stood in the way of advancement and enlightenment, to creep by slow degrees from under the iron rule of a dominant Priesthood, and to break the bonds of tradition. That all these should be swept away, and give place to the sublime sentiment of universal saving grace, which is freely offered to all mankind,—that the great doctrine of the Christian religion was simple and adapted to all states and conditions, opening wide the channels of investigation and of free action,—let us rise up and call them blessed, who were instruments in the Divine Hand in clearing away this rubbish, and in opening a more pleasant pathway for us to the kingdom of heaven which is within, and which stands not in meat, nor drink, but in righteousness and peace, and joy in the Holy Spirit. Call not such a great work a *failure*. Though all mankind are not yet regenerated, and much remains to be done, the work is on the wheel, and many who still rest under forms, and who still cling to ceremonials, acknowledge the Holy Spirit to be a teacher sent from God, to guide in the way of life and salvation,—and that conversion must be the result of conviction. "Old things must be done away, all things become new, and all of God." This change must be wrought by the redeeming power of "Christ within the hope of glory."

Here he stands in all his beatific majesty, saying, "I am he, look not for another."

Here no clerical monopoly rules the consciences of men, for whom the truth makes free, are free indeed. These drawn together by the indwelling life constitute the Church of Christ, to whom he is Head and High Priest forever. None can move these away from the hope of the gospel, that stands not in word but in power. Here they rest their eternal all, building on the Rock of Divine revelation—immediate revelation of God's will to each mind through the gift of grace. God be thanked for the cloud of witnesses whose names are as way-marks to the cross-bearers in this our day—whose unflinching faith sustained them in persecutions, in prisons, in dungeons and at the stake, when fire and faggot encircled them.

One host of veterans leaves the stage of action; another succeeds them. Luther, Melancthon and Zuingli follow close upon their martyred brethren before spoken of. Where should we have been now, but for these threshers of the mountains of wickedness in high places?—who set their faces as flint against Pope and Prelate, unveiled the fallacy of monk and recluse, and by their assiduous labors roused the people to think for themselves, and conform their lives to the example and precepts of Jesus Christ, the despised Nazarene. Do not let us look at what they left undone, but at what they accomplished, and see to it that we act our part as well, lest it be said to us as to the Jews of old: "It shall be more tolerable for Sodom and Gomorrah in the day of judgment than for you." Every testimony we let fall, we prepare suffering for generations to come. "God will not give His glory to another, nor His praise to graven images," and if we of this age and generation do not faithfully vindicate His ways to men, He will arise in His might, and assert His supremacy through other means.

Next in the line of co-workers come Whitfield, Wesley and Fletcher, armed with the sword of the Spirit, the Word of God,—not the written word alone, but a vital power and energy that made the transgressor tremble, melted the obdurate into contrition, and caused them to cry, "What shall we do to be saved?" Thus step by step was an advance made, until the time came for the bursting forth of that greater effulgence by which all shadows were to be removed, all obstacles from between the soul immortal and its Redeemer and Judge taken away. Then rose a Fox, Penn, Barrough and Barclay, who called, to Christ within, a light "that lighteneth every man that cometh into the world," always present, teaching the way of life and salvation

without money and without price. The pearl hid in the field was at last discovered and brought to light, to the great joy of thousands of sickening souls; a highway was opened leading directly to the Paradise of God.

My theme is exhaustless, but I will close with "thanks be to God for His unspeakable gift."

SARAH HUNT.

OFFERINGS TO GOD.

The most indifferent actions cease to be such, and become good, as soon as one performs them with the intention of conforming one's self in them to the will of God. They are often better and purer than certain actions which appear more virtuous,—first, because they are less of our own choice, and more in the order of providence, when one is obliged to perform them; second, because they are simpler and less exposed to vain complaisance; third, because if one yields to them with moderation, one finds in them more of death to one's inclinations than in certain acts of fervor in which self-love mingles; finally, because these little occasions recur more frequently, and furnish a secret occasion for making every moment profitable. It is not necessary to make great efforts, nor acts of great reflection, in order to offer what are called indifferent actions. It is enough to lift the soul one instant to God, to make a simple offering of it. Everything which God wishes us to do, and which enters into the course of occupation suitable to our position, can and ought to be offered to God; nothing is unworthy of him but sin. When you feel that an action cannot be offered to God, conclude that it does not become a Christian; it is at least necessary to suspect it, and seek light concerning it. I would not have a special prayer for each of these things; the elevation of the heart at the moment suffices.—*Fenelon.*

LIFE'S DETAILS ENNOBLED.

To those who are interested in the great problem of life, and its practical working, a question will often be presented as to what is the best preparation for life's small and simple duties. All agree that to conduct worthily large and weighty affairs, demands breadth of view and loftiness of purpose, but it is commonly supposed that for the ordinary business of men, for what we are pleased to term menial or petty offices, no special dignity or elevation of mind is necessary; that the virtues of plodding industry, patient frugality, and unthinking honesty are all sufficient; and that great ideas, deep thoughts, and exalted aims rather unfit than prepare a man for ordinary duties. Such a notion as this, however, proceeds from undervaluing

the practical every-day occupations that fall to the lot of the majority of mankind, and of not perceiving the secret of their worthy performance. It is a truth that few appreciate, and yet it lies at the root of all excellence, that where the mind is occupied with the noblest ideas, small duties will be most perfectly performed. The services of social life, petty and trivial as we are apt to think them, demand the generalship of a clear mind, a strong will, deep affections and pure motives, to steer safely through the daily trials, the innumerable cares, the complicated relations which they involve. How much of home happiness is sacrificed for the want of a comprehensive grasp of all that is necessary to it. Some single point, such as frugality or the maintenance of authority, absorbs the mind and is carried out at the expense of comfort, or to the destruction of those sweet affections which alone can bind a household together. Or the desire to please and gratify overcomes the sense of duty, and abuses are suffered to creep in and poison the home circle. Where an intelligent desire for moral beauty unites with a deep fountain of domestic love, narrow and one-sided notions disappear; the various wills and tastes of the family are harmoniously adjusted, innocent pleasures multiply, and the home circle becomes one of peace, love and mutual improvement. Such results ensue from a breadth of moral view that can only be had by living on an eminence. Just as, when standing on a hill-top, we discern the objects beneath in their just proportions, so when our thoughts are raised above the many details of life, we shall accord to each their just value, allowing none to absorb us to the exclusion of the rest.

The spirit of contempt with which some people regard offices called menial, will utterly fade away before a soul of large and comprehensive ideas. It is the narrow mind that adopts paltry rules of judgment concerning the dignity of occupations as such, and shrinks from certain offices as degrading. To the pure all things are pure. It is the *purpose* which ennobles or degrades the action. The most menial service wrought in love is no longer menial, but a pledge of the tenderest affection. The kindly offices rendered to the sick and suffering by the willing hands of compassion and benevolence are no longer petty and trifling, but sweet privileges that bring a double blessing to the giver and receiver. Just as the widest and deepest root brings forth the tender blossoms in the richest profusion, so the largest heart and deepest sentiments will produce the most perfect performance of the minute details of daily duty.

If this truth bears strongly upon small

duties, equally does it apply to the smaller trials and annoyances of life. Every one is beset with many vexations, but few know how to bear them with dignity and repose. It is not a mere matter of volition. Hard striving may repress the outward expression of irritation, but it is only as we can raise our spirits above the little stinging causes of it, so as to view our life as it were from an eminence and see how its troubles subside and are lost, that we can gain that real tranquility of soul that shall make us gentle and serene in the midst of annoyances, disappointments and cares.

If any one despises small things, throws contempt upon menial occupations, scorns manual labor, or ignores petty offices of kindness and benevolence, it but proves him narrow-minded, small souled, and unable to view things in their just proportion. To the large hearted man, who takes a broad and comprehensive view of life, and studies its meanings, nothing is small and nothing trifling. Pure motives glorify the smallest action, and make it noble; high purposes dignify and exalt the life, however commonplace it seems to the superficial. It is the principles we hold, the heart we bring into our work, the soul energy we exert, which alone can make us efficient or worthy actors in the scene of life. Only as we cherish the great truths and broad views that lie at the foundation of life's activity, can we maintain the peace and love of our homes, the serenity of our hearts, and the moral beauty of our lives.—*Philada. Ledger.*

INDUSTRY will make a purse, and frugality will give strings to it. This purse will cost you nothing. Draw the strings as frugality directs, and you will always find a useful penny at the bottom.

LETTERS FROM THE WEST. NO. 6.

(Continued from page 296.)

Life among the Dakotas.

FROM MY DIARY.

6th. mo. 24th. After early tea G. and I started out for a walk over the hills to the south of us. The extreme heat of mid-day has given place to a cool refreshing breeze that adds greatly to our enjoyment. We strike one of the numerous Indian trails that diverge from the agency village in every direction. These trails are wonderfully direct, always the nearest route to any given point, and trodden as hard as a macadamized road—just wide enough for the footsteps of one person, they seem lost in the luxuriant growth of grass and wild flowers, but when we are once started, there is no difficulty in keeping the

path. Following the one we select, we are led through a wilderness of tall prairie grass, glowing in the bright colors with which nature adorns her lowly children, the flowers, and fragrant with the perfume of the roses, and, after a little time, we come to a ravine, through which flows a lost creek, so called from the fact of its losing itself at intervals in the quicksands and re-appearing again, a peculiar feature of many of the streams in this prairie land.

I confess to an instinctive dread of snakes. Every unfamiliar sound of insect startles me. A rattlesnake, to my imagination, is ever ready to spring from the underbush upon us, and the assurance that such reptiles seek sunny hillsides and rocky hiding places is scarcely sufficient to repress my fears, therefore the dread of a bite from some huge creature abates, in no small degree, the enjoyment of our walk.

The ravine through which the creek flows is deep and in places precipitous, worn through the gravelly and chalky hills, by the rushing torrents that pour down with every hard rain, carrying trees, sand and rocks along in tumultuous confusion. This chalk stone has been quarried, and though soft enough to be cut with a knife, becomes harder after exposure to the weather, and is used for building purposes. The agency mill, just completed, has been built of it, and is a very fine structure.

We find Larkspur and Yucca out of flower, but gather some seed, as both differ from home varieties. Roses have nearly done blooming, but are still fragrant. Wax bush grows everywhere, and is just coming into flower in profusion. Clematis, convolvulus, hops and grapes are tangled up in every clump of shrubs. We see white ranunculus in bloom, also spiderwort and oxalis. Euphorbia and Asclepias grow all over the bottom land, but are not yet in flower. Besides these familiar plants, we see a great variety with which we are entirely unacquainted, some of them delicately beautiful. A native gooseberry is now ripening; there are currants, but neither the one nor the other is equal to our cultivated ones; these and a seedy whortleberry are offered for sale by the Indians. Black cap raspberries are ripening and appear to be plenty.

We follow the course of the creek (which at this point is dry except after heavy rains), until we strike a trail leading to a distant hill, used as a place of sepulchre. The Indians always bury on the tops of their highest hills. This air is so bracing one may walk a long distance without fatigue. As we follow our narrow path, something larger than a grasshopper stirs the grass before me, and

my heart beats more quickly, but it is only for a moment. A poor harmless little gopher in his elegantly shaded brown jacket was the innocent cause of alarm; I beg for his life, but he is an enemy and must be killed. We climb to the summit of the hill and stand among the rude monuments, placed by the hands of affection; many of the graves are without other mark than a stick at the head and foot. Over one a house has been erected, which is neatly covered with white cotton cloth, and at a distance it looks like marble; others are enclosed with fences, made of such material as the means of the survivors enable them to procure. We take possession of two rude seats near an inclosure containing two little graves. The view from here of the surrounding country is of great extent. To the north we see the tortuous course of the Missouri, its muddy waters lit up by the slanting beams of the setting sun. Across to the right, the village of Bon-homme is all aflame with golden light, streaming from every window pane—far away beyond the river, in direct line stretches for more than fifty miles, the level prairie-land of Dakota, dotted here and there with the cabin of some enterprising Bohemian. On this side the river, a skirt of timber covers the bottom land which is at least a mile in width, and then begin the bluffs, bordered by a line of lofty cotton-wood trees; on the table land, between the bluffs and this range of hills, the Santee agency buildings lift their humble proportions; and humble enough they are. Whatever may be said about the luxury and extravagance of *other* government officials, it can never be charged against the employees at this point, that they used the money of the government for their own profit, or lived in luxurious ease; so rigid has been the economy in the construction and arrangement of these buildings, that even the privacy of the home circle, so dear to every family of cultivation and refinement, has no centering point, but is at any hour subject to invasion.

I can scarcely see the propriety of Friends who come out here as agents for the government, cutting themselves down to the barest necessities of physical life—food and shelter from the storms. I think all this and more as we sit on the rude seats, placed here by the hand of some mourning mother (for I have come back again to this little plot.) The heart of the Indian woman has a mother's love to which an answering chord in my own heart responds. Here she comes to weep over her babes, and a tear for the loved—gone, but not lost—wells up. Submission to the providence, faith in the promise, brings comfort. Has the sad mother of these buried

babes, bowed to the one and found peace in the other?

The shades of evening gather around. The full moon, in clear silvery beauty, is shining down through the dewy twilight, and we turn our footsteps into a trail which leads directly to the village. On our way we pass the lone grave of the unfortunate Cook, who was murdered by the Indians about a year ago. He is said to have been a man of violent temper, and in a quarrel with some Indians who were working under him, he became so enraged that he fired upon them, killing one. The others then took the gun from him and beat him to death with it. It was a sad affair, and spread a feeling of gloom over the settlement. In one of my walks among the people, I met with the widow of the murdered Indian. How many occurrences of the kind might be avoided if we only learned to rule ourselves, before we undertook to govern others.

L. J. R.

LAMPS do not talk, but they do shine. A light-house sounds no drum, it beats no gong, and yet far over the waters its friendly spark is seen by the mariner. So let your actions shine out your religion.

LESSONS FROM NATURE.

St. Francis de Sales so constantly manifests an extraordinary love of nature in his writings that they have been compared to the sacred veil of Isis, on which was embroidered all created things. Here is an extract taken at random from his writings, which lose their rare *bouquet* in translating: "It had been snowing, and there was in the court at least a foot of snow. Jean swept a small space in the centre, and scattered grain on the ground for the pigeons to eat. They came in a flock to take their food there with wonderful peace and quietness, and I amused myself with looking at them. You cannot imagine how much these little creatures edified me. They did not utter a sound, and those who had finished their meal immediately made room for others, and flew a short distance to see them eat. When the place was partly vacated, a quantity of birdlings that had been surveying them came up, and the pigeons that were still eating drew up in one corner to leave the more space for the little birds, who forthwith began to eat. The pigeons did not molest them. I admired their charity, for the pigeons were so afraid of annoying the little birds that they crowded together at one end of their table. I admired, too, the discretion of the little mendicants, who only asked alms when they saw the pigeons were nearly through their meal, and that there was enough

left. Altogether, I could not help shedding tears to see the charitable simplicity of the doves, and the confidence of the little birds in their charity. I do not know that a sermon would have affected me so keenly. This little picture of kindness did me good the whole day." And again, in writing to Madam de Chantal on the repose of the heart on the Divine will, he says: "I was thinking, the other day, on what I had read of the halcyon, a little bird that lays on the seashore. They make their nests perfectly round, and so compact that the water of the sea cannot penetrate them. Only on the top there is a little hole through which they can breathe. There they lodge their little ones, so if the sea rises suddenly they can float upon the waves with no fear of being wet or submerged. The air which enters by the little hole serves as a counterpoise, and so balances these little cushions, these little *barquettes*, that they are never overturned."—*Catholic World*.

It is much easier to think right without doing right, than to do right without thinking right. Just thoughts may, and often do, fail of producing just deeds; but just deeds are sure to beget just thoughts.

Scraps

FROM UNPUBLISHED LETTERS.

When the "love of God is shed abroad in the heart," and is the moving spring of our actions, then it is that our fruit glorifies the Father. Even in simple things we speak His praise, and when we feel the blessed influence of this heavenly love, we can availingly speak to one another, if it should only be to portray the feelings and exercises of our own minds. There is often a little encouragement conveyed through such intercourse; for knowing that others are poor, that they too are tried and heavily laden, we feel assured that no new thing has happened unto us. Thine of 5th mo. 8th was as "deep calling unto deep." While sitting alone this afternoon and musing (as I often do) on the state of our Society, some of the prominent weaknesses were held up to my view, with a disposition to reflect upon and trace effects to their causes; and though there are many discouraging things, yet my mind was a little cheered by the renewed evidence that there are in the younger ranks those who will be made instrumental in exalting the standard of Truth. I desire that these may faithfully fill up their appointed stations in the church,

that the failings and missteps of those who are older may not cause them to stumble. "Truth is truth, though all men forsake it," and it is able to preserve all who cleave unto it. I feel a concern for the welfare of my own dear children, but I am often discouraged on account of the inability I feel to "bring them up in the nurture and admonition of the Lord," and when I cast my eye over our religious Society, and discover a disposition in parents to lay waste the testimony to simplicity and plainness, and see so few of the children of ministers and elders that promise usefulness in the church, being apparently strangers to the cross of Christ, I feel discouraged, and hardly know whether to attribute this state of things to the unfaithfulness of parents or whether I must conclude there is nothing in what is termed a guarded education. We see many valuable men and women, who were in early life left to try for themselves the *broad way*, and who knew no restrictions from parents or guardians. But, my dear friend, though I am not always able to answer these questions or to solve this problem to my own satisfaction, I feel sure such considerations must not come in as an excuse for individual unfaithfulness in the care of the lambs that have been committed to our care. We must do our part, then I am sure a blessing will attend the effort, even if it comes not to us exactly in the shape we would desire. It may be even religiously minded parents often miss it, by trusting to their own powers, instead of asking heavenly direction and blessing. "Paul may plant and Apollos water, but it is the Lord alone that giveth the increase."

You and I have been differently situated, but I feel we have all been working toward the same end—trying to do the present duty in the strength that our Heavenly Father gives—in the belief that He will take care of us and of our interests, if we trust in Him and follow the guidings of His Spirit. How good He is! and how He has been with me through all these trying years. I cannot tell it, but you have felt it, and know how sweet it is to rest as a tired child in the arms of a loving father. I have learned to feel that God marked out my way in love, and brought me by a way I knew not, into a place and situation better calculated to lead me to Himself, and to advance me in the Divine life, than the one I would have chosen in my ignorance. I have often blessed the Father that left me not to myself.

HE who commences with certainty will end with doubts; but he who is content to begin with doubts may end with certainty.—*Bacon*.

FRIENDS' INTELLIGENCER.

PHILADELPHIA, EIGHTH MONTH 12, 1871.

We have been frequently requested to ask our contributors to attach their full names to articles designed for publication. It is especially pleasant to us to have that liberty, when the essay sent refers to anything which has been previously published. We shall be glad if this practice should obtain.

A correspondent who has written in reference to a "National law to prohibit the sale of intoxicating drinks," may be interested in an article in our paper this week, entitled, "A Great Need." As the subject is very fully discussed in this essay, we think it may take the place of one sent by him.

DIED.

BRIGGS.—In Knox, Albany Co., N. Y., on the 8th of Fifth month, 1871, Lydia C., wife of Hebron W. Briggs, and daughter of William and the late Phebe Davenport, in the 54th year of her age. Her disease being cancer, she suffered most intensely for months, yet not a murmur escaped her lips,—bearing all not only patiently, but cheerfully. "That life is long that answers life's great end;" and she remarked to a friend shortly before her departure: "I have seen how unwise it is to defer a preparation for death until sickness comes;" adding, "If I had that work to do now amid all this bodily suffering, it would be poorly done." But she had been wise in time, and had most conscientiously performed all her various duties. Always cheerful and kind, ever ready to visit the sick and afflicted, she is sadly missed; but as we looked upon her face so sweet y peaceful in death, we felt it was all well with her, and that we ought rather to rejoice than mourn that she was done with suffering. She was a member of Duaneburgh Monthly Meeting.

DOUGHTY.—In Albany, N. Y., on the 28th of Second month, 1871, after a lingering illness, Elizabeth, daughter of Martin and Lydia Doughty, deceased, aged 77 years; a member of Albany Monthly Meeting. Having become a member of our Society by conviction, she was strongly attached to its principles, a faithful attender of meeting while strength permitted, and advocated by precept and example the beauty and excellency of Christian simplicity. She had long anticipated her departure, and we believe was ready for the change.

FROST.—Of consumption, in Tenth month last, at the residence of his uncle, I. M. Arnold, Folsom, California, where he was sojourning on account of ill health. Leonard, son of Gideon and Mary W. Frost. His remains were brought to Long Island for interment. At a time of severe physical prostration, and in view of an early departure, he wrote: "I have but little to say, but that I feel not only willing but happy to enter the spirit world."

KNIGHT.—On the 8th of Seventh month, 1871, Ruth, widow of Andrew Knight, in the 92d year of her age; a member of Blue River Monthly Meeting,—formerly from New Garden, N. C. She was a diligent attender of meeting as long as her health permitted, and her mental faculties were nearly as bright as in the morning of her day.

PRICE.—At Shrewsbury, N. J., on the 4th of Fifth month, 1871, at the house of her son-in-law, Preston Lafretra, Susan, widow of the late Ichabod Price, in the 88th year of her age; a member of New York Monthly Meeting.

WALTON.—In New Garden, Chester Co., Pa., 7th mo. 16th, 1871, Grace, infant daughter of Joel M. and Lydia Y. Walton, aged 3 months and 3 weeks.

CIRCULAR MEETINGS

- 8th mo. 13. Flushing, L. I., 11 A.M.
 " Port Elizabeth, N. J., 10 A.M.
 " 20. Haverford, Pa., 3 P.M.
 " Roaring Creek, Pa., 10 A.M.
 " Catawissa, Pa., 4 P.M.
 " Orange, N. J., 10½ A.M.
 " Gunpowder, Md. (old house), 10 A.M.
 " No meeting in other house.
 " Orangeville, N. Y., 11 A.M.
 " Cape May, N. J., 3 P.M.
 " 27. West Nottingham, Pa., 3 P.M.

For Friends' Intelligencer.

I notice in the *Intelligencer* of 6th mo. 24th, an article under the heading of "The Indians," in which extracts have been taken from a private letter written to a Friend in Philadelphia.

I know very well that the written word does not always convey just the meaning that the author intends, but our time and thoughts here are closely occupied, and the earnest demand for letters is often granted in that hurry and despatch which is but poorly calculated to do justice to any. I wrote, and in said letter I may not have given my views clearly, but feel it right to say, that while I cherish the deepest respect for the motives of my friend "R." in thus extracting, that justice to the Indian, to the noble efforts of our friends in the east, and to our labors here, requires a little different construction on parts of said article.

The box of clothing sent from Philadelphia was "particularly valuable" indeed; and although copies of Children's Friend and portraits of William Penn, which it contained, were truly acceptable, yet I *did not* mean to infer that it was "particularly valuable" on that account, but for the *real value* of the clothing contained, and the demand that there was for it at that time.

The Indians of the east no doubt do "revere the name of William Penn," but I might say that as far as we can learn, no tradition had ever reached these Indians concerning him until within the last two years.

The clothing that we have been enabled to give these poor people has certainly been a great strength to our hands, and comfort to them, and goes far toward breaking down the long-established blanket custom, yet we have all the encouragement we could expect in their willingness to buy clothing, and to dress in accordance with our views.

I have feared that a wrong impression

might also be received from the passage, "most of the Iowa tribe *have houses*, and although some of them are made of bark, are quite comfortable."

'Tis true that most of them *do live* in houses, yet several families are housed in those that are or have been connected with the agency buildings, and should not be understood as their own houses; the bark houses are "quite comfortable" only as *summer homes*, but are open and very cold for winter, the fire being made on the ground floor, while the smoke is allowed free access to a hole in the roof, which it does not always find until the whole room is filled, and to which cause we attribute much of that common complaint of the Indian—sore eyes.

I might also add that the general condition of the Indians at this agency is encouraging, labor is no longer considered degrading, and the old custom of the women having to do all the field labor, is rapidly becoming a thing of the past.

The Atchinson and Nebraska R.R., which has lately been constructed through this Reservation, has been a source of great help to the Iowa Indians, not only from the money received for right of way, but made a market for railroad ties, which the Indians cut, dressed and hauled, getting from forty to sixty cents apiece for them.

Their crops of corn, and some little oats, look well, and promise a fair yield; but spring wheat is almost a general failure in this section of country, having been destroyed by an insect called the chintz bug. This is very discouraging to our Indians, who for the first time have been influenced to sow it. We hope after this to get it all seeded in the fall, as fall wheat is much more successful.

The appearance and behaviour of the children is really pleasant to look upon, and often as I view them, at their innocent romps and plays, or as they may gather in the store, I can but feel that they are quite as modest, as gentle and as well-behaved as any class of children I ever saw. Quarrels and tale bearing are of rare occurrence, but often do I see them in pairs with encircled arms, evidencing a feeling of love and affection that it would be well for some to pattern after who may give to these little children the name of savages.

How often I have thought, as I have stepped in the school-room and beheld them in their classes, or assisted them in their lessons, or as they gathered around their teacher, mother, friend, while she arranged their sewing, or fitted on some needed garment, that a blessing is indeed now being given to them, and I have so often felt that could these children be only kept entirely aloof

from the degrading influences of Indian life, as it has been in the past, and will be to a greater or less extent for some time yet to come, that they might indeed experience a bright and useful future.

The mission house, so lately opened, now cares for fifteen children, nearly all orphans; its success is no longer a question, but a reality that is indeed gratifying to us. The children seem contented and happy together, under the kind care of those who have charge of them; their regular and early attendance at school is a great source of satisfaction to Mary L., their teacher; and we most earnestly hope that it may receive the encouragement and support that it truly merits, so sure are we that its value is not to be estimated as a means of educating these poor neglected little ones in all that pertains to civilized life, and the nobler and higher laws of Christianity and religion.

M. T. B.

Great Nemaha Agency, Neb., 7th mo. 5, 1871.

From the Atlantic Monthly.

BOTANIZING.

BY WILSON FLAGG.

(Concluded from page 365.)

Most of our naturalized plants inhabit those places which were once reduced to tillage and afterwards restored to nature. Such are the sites of old gardens and orchards, and the forsaken enclosures of some old dwelling house. The White Bethlehem Star is a tenant of these deserted grounds, glowing meekly under the protection of some moss-covered stone wall or dilapidated shed, fraternizing with the Celandine, the sweet Chervil, and here and there a solitary Narcissus. The Euphorbia and Houseleek prosper in similar places, growing freshly upon ledges and heaps of stones, which have been carted by the farmer into abrupt hollows, mixed with the soil and weeds of the garden. In shady corners we find the Coltsfoot, the Gill,—a very pretty labiate,—and some of the foreign mints. Spikenard and Tansy delight in more open places, along with certain other medicinal herbs introduced by ancient simplers. These plants are seldom found in woods or primitive pastures.

Wild plants of rare beauty abound in a recent clearing, especially in a tract from which a growth of hard wood has been felled, if afterwards the soil has remained undisturbed. In the deep woods the darkness will not permit any sort of undergrowth except a few plants of peculiar habit and constitution. But after the removal of the wood, all kinds of indigenous plants, whose seeds have been wafted there by the winds or carried there by the birds, will revel in the clearing, until they are choked by a new growth of trees and

shrubs. Strawberries and several species of brambles spring up there as if by magic, and cover the stumps of the trees with their vines and their racemes of black and scarlet fruit; and hundreds of beautiful flowering plants astonish us by their presence, as if they were a new creation. We must look to these clearings, and to those tracts in which the trees have been destroyed by fire, more than to any others, for the exact method of nature. Among the very first plants which would appear after the burning, beside the liliaceous plants whose bulbs lie too deep in the soil to be destroyed, are those with downy seeds, which are immediately planted there by the winds. One very conspicuous and beautiful plant, the Spiked Willow Herb, is so abundant in any tract that has been burned, the next year after the conflagration, that in the West and the British Provinces it has gained the name of Fireweed.

But the paradise of the young botanist is a glade, or open space in a wood, usually a level between two rocky eminences, or a little alluvial meadow pervaded by a small stream, open to the sun, and protected at the same time from the winds by surrounding hills and woods. It is surprising how soon the flowery tenants of one of these glades will vanish after the removal of this bulwark of trees. But with this protection, the loveliest flowers will cluster there, like the singing birds around a cottage and its enclosures in the wilderness. Here they find a genial soil and a natural conservatory, and abide there until some accident destroys them. Nature selects these places for her favorite garden-plots. In the centre she rears her tender herbs and flowers, and her shrubbery in the borders, while trees form a screen around the whole. I have often seen one of these glades crimsoned all over with flowers of the *Cymbidium* and *Arethusa*, with wild roses in their borders, vying in splendor with a sumptuous parterre.

While strolling through a wood in one of those rustic avenues which have been made by the farmer or the woodman, we shall soon discover that this path is likewise a favorite resort for many species of wild flowers. Except the glade, there are but few places so bountifully stored by nature with a starry profusion of bloom. The *Cranesbill*, the *Wood Anemone*, the *Cinquefoil*, the yellow *Bethlehem Star*, the *Houstonia*, to say nothing of crowds of *Violets*, adorn the verdant sward of these woodpaths; and still beyond them, cherished by the sunshine that is admitted into this opening, *Ginsengs*, *Bellworts*, the white starlike *Trientalis*, the *Trillium*, and *Medeola* thrive more prosperously than in situations entirely wild and primitive. It

is pleasant to note how kindly nature receives these little disturbances which are made by the woodman, and how many beautiful things will assemble there, to be fostered by those conditions which accident, combined with the rude operations of agriculture, alone can produce.

Leaving this avenue, we ascend the sloping ground, and passing through a tangled bed of *Lycopodiums*, often meeting with the remnants of a foot-path that is soon obliterated in a mass of vegetation; then wandering pathless over ground made smooth by a brown matting of pine leaves, beautifully penciled over with the small creeping vines and checkered foliage of the *Mitchella* and its scarlet berries, we come at last to a little rocky dell full of the greenery of mosses and ferns, and find ourselves in the home of the *Columbines*. Such a brilliant assemblage reminds you of an aviary full of linnets and goldfinches. The botanist does not consider the *Columbine* a rare prize. It is a well-known plant, thriving both in the wood and outside of it; but it is gregarious, and selects for its habitation a sunny place in the woods, upon a bed of rock covered with a thin crust of soil. The plants take root on every rocky projection and in every crevice, hanging like jewels from a green tapestry of velvet moss.

As we leave this magic recess of flowers and pursue our course under the pines, trampling noiselessly over the brown, elastic sward, we soon discover the purple, inflated blossoms of the pink *Lady's-slipper*. These flowers are always considerably scattered, and never grace the open field. Often in their company we observe the sweet *Pyrola*, bearing a long spike of white flowers that have the odor of cinnamon. Less frequently we find in this scattered assemblage some rare species of *Wood Orchis* and the singular *Coral Plant*. If we now trace the course of any little streamlet to a glen full of pale green bog-moss, covering the ground with a deep mass of spongy vegetation, there we may be lucky enough to discover the rare and beautiful *White Orchis*, the *Nun of the Woods*, with flowers resembling the pale face of a lady wearing a white cap. This plant is found only in certain cloistered retreats, under the shade of woods. It is a true vestal, and will not tarnish its purity by any connection with the soil. It is cradled like an infant in the soft, green bog-moss, and derives its sustenance from the pure air and dews of heaven. Like the *Orchids* of warm climates, it is half parasitic, and requires certain conditions for its growth which are rarely combined.

Flowers are usually abundant in pleasant situations. They avoid cold and bleak ex-

posures, the dark shade of very dense woods, and wet places seldom visited by sunshine. Like birds, they love protection, and we are sure to meet with many species wherever the singing birds of the forest are numerous. Birds and flowers require the same fostering warmth, the same sunshine, and the same fertility of soil to supply them with their food. When we are traversing a deep forest, the silence of the situation is one of the most notable circumstances of our journey; but if we suddenly encounter a great variety of flowers, our ears will at the same time be greeted by the notes of some little thrush or sylvia. If I hear the veery, a bird that loves to mingle his liquid notes with the sound of some tuneful runlet, I know that I am approaching the shady haunts of the Trillium and the Wood Thalictrum. If I hear the snipe feebly imitating the lark, as he soars at twilight, and warbles his chirruping song far above my head, I know that when he descends in his spiral course he will alight upon grounds occupied by the Canadian Rhodora, the Andromeda, and the wild Strawberry plant. But if the song of the robin is heard in the forest, I feel sure that a cottage is near, with its orchard and corn fields, or else that I am close to the end of the wood and am about to emerge into the open plain.

A moor is seldom adorned with plants that would prosper in the uplands; but if it be encompassed by a circle of wooded hills, a gay assemblage of flowers will congregate in its borders, where hill and moor are imperceptibly blended. We may always find a path made by cattle all along the border. If we thread the course of this path, we pass through bushes of moderate height, consisting of Whortleberries, Clethra, and Swamp Honeysuckles, and now and then enter a drier path, through beds of Sweet Fern, and occasional open spaces full of pedate Violets. The docile animals,—the picturesque artists who constructed this path,—while grazing upon the clover-patches will turn their large eyes placidly upon us, still heeding their diligent occupation. We keep close to the edge of the moor, not disregarding many common and homely plants that lie in our way, till we discover the object of our search, the Sarracenia, or Sidesaddle plant, with its dark purple flowers, nodding like Epicureans over their circles of leafy cups half filled with dew. This is a genuine "pitcher plant," and is the only one of the family that is not tropical. The *Geum rivale*.—Water Avens,—conspicuous for its drooping chocolate-colored flowers,—and the Golden Senecio, congregate in the same meadow, bending their plumes above the tall Rushes and autumnal Asters not yet in flower.

Very early in the season, if you are near an oak wood, standing on a slope with a southern exposure, enter it, and if fortune favors you, the *Anemone hepatica*, or Liverwort, will meet your sight, pushing up the dry oak leaves that formed its winter covering, and displaying its pale bluish and purple flowers, deepening their hues as they expand. When they are fully opened, there are but few sights so pleasant as these circular clusters of flowers, on a ground of dry brown foliage, enlivened with hardly a tuft of verdure, except the trilobate leaves of this interesting plant. As oaks usually stand on a fertile soil, there is a greater variety of species among their undergrowth than in almost any other wood. A grove of oaks, after it has been thinned by the woodman so as to open the grounds to the sun, becomes when left to nature a rare repository of herbaceous plants. Yet there are certain curious species which are found almost exclusively in pine woods. Such is the genus *Monotropa*, including two species, the Pine Sap and the Bird's Nest, plants without leaves or hues, with stems resembling potato-sprouts grown in a dark cellar; outside of pine woods, however, on their southern boundary, we may always look for the earliest spring flowers, because no other wood affords them so warm a protection.

In our imaginary tour we have visited only the most common scenes of nature; we have traced to their habitats very few rare plants, and have yet hardly noticed the flowers of autumn,—those luxuriant growers, many of them half shrubby and branching like trees. Some of them have no select haunts. The Asters and Goldenrods, the most conspicuous of the hosts of autumn, are found in almost every soil and situation; though they congregate chiefly on the borders of woods and fields, and seem to take special delight in arraying themselves by the sides of new roads, recently laid out through a wet meadow. The autumnal plants generally prosper only in the lowlands, which have not suffered from the summer droughts. Hence when botanizing in the close of the season, we must avoid dry sandy places, and follow the windings of narrow streams, that glide through peat-meadows, and traverse the sides of ditches, examining the convex embankment of soil which has been thrown up by the spade of the ditcher. On these level moors we meet with occasional rows of Willows affectionately guarding the waters of these artificial pools where they were planted as sentinels by the rustic laborers. The Gentians, which have always been admired, as much for the delicacy and beauty of their flowers as for their hardy endurance of au-

tumnal frost, are often strown in these places, glowing like sapphires on the faded green-sward of the closing season of vegetation.

The great numbers of wild plants which are often assembled in a single meadow seem to a poetical mind as something more than a result of the mere accidents of nature. There is not a greater variety or diversity in the thoughts that enter and pass through the mind than of species among these herbs. Each of them has distinct features, and some attractive form or color, or some other remarkable property peculiar to itself. How many different species bend under our footsteps while we are crossing an ordinary field! How many thousands are constantly distilling odors into the atmosphere, which is oxygenated by their foliage and purified and renovated by their vital and chemical action! There is not a single plant, however obscure, minute, or unattractive, that is not an important agent of Nature in her vast and mysterious economy.

There would be no end to our adventures, if we were resolved to continue them until our observations were exhausted. Hence the never-failing resources of the botanist for rational amusement and pleasure, who is within an hour's walk of the forest. The sports of hunting and fishing offer their temptations to a greater number of young persons; but they do not afford continued pleasure to their votaries, like botanizing. The hunter watches his dog and the angler his line; but the plant-hunter examines everything that bears a leaf or a flower. His pursuit leads him into all the green recesses of nature,—into sunny dells and shady arbors, over pebbly hills and plashy hollows, through mossy dingles and wandering footpaths, into secret alcoves where the Hamadryads drape the rocks with ferns, and Naiads collect the dews of morning and pour them into their oozy fountains for the perfection of their verdure.

A ride over the roads of the same region is nothing like these intricate journeys of the botanist. He fraternizes with all the inhabitants of the wood, and with the laborers of the farms which he crosses, not heeding the cautions to trespassers. He meets the rustic swain at his plough, and listens to his quaint discourse and his platitudes about nature and mankind. He follows the devious paths of the ruffled grouse, and destroys the snares which are set for his destruction. He listens to his muffled drum while he cools his heated brow under a canopy of birches overarched with woodbine, and picks the scarlet berries that cluster on the green knolls at his feet. He lives in harmony with created things, and hears all the voices of the woods and music of the streams. The trees spread their

shade over him, every element loads him with its favors. Morning hails him with her earliest salutation and introduces him to her fairest hours and sweetest gales. Noon tempts him into her silent woodland sanctuaries, and makes the hermit thrush his solitary minstrel. Evening calls him out from his retreat, to pursue another varied journey among the fairy realms of vegetation, and ere she parts with him curtains the heavens with splendor and prompts her choir of sylvan warblers to salute him with their vespers.

From The Christ an.

MY LEGACY.

BY HELEN HUNT.

They told me I was heir. I turned in haste,
And ran to seek my treasure,
And wandering as I ran how it was placed—
If I should find a measure
Of gold, or if the titles of fair lands
And houses would be laid within my hands.

I journeyed many roads; I knocked at gates;
I spoke to each wayfarer
I met and said: "A heritage awaits
Me. Art not thou the bearer
Of news? Some message sent to me, whereby
I learn which way my new possessions lie?"

Some asked me in; nought lay beyond their door;
Some smiled and could not tarry,
But said that men were just behind who bore
More gold than I could carry;
And so the morn, the noon, the day were spent,
While, empty-handed, up and down I went.

At last one cried, whose face I could not see,
As through the mists he hasted;
"Poor child, what evil ones have hindered thee,
Till this whole day is wasted?
Hath no man told thee that thou art joint heir
With one named Christ, who waits the goods to
share?"

The one named Christ I sought for many days,
In many places, vainly;
I heard men name his name in many ways;
I saw his temples plainly;
But they who named him most gave me no sign
To find him by, or prove the heirship mine.

And when at last I stood before his face,
I knew him by no token,
Save subtle air of joy which filled the place;
Our greeting was not spoken;
In solemn silence I received my share,
Kneeling before my brother and "joint heir."

My share! No deed of house or spreading lands,
As I had dreamed; no measure
Heaped up with gold; my elder brother's hands
Had never held such treasure.
Foxes have holes, and birds in nests are fed;
My brother had not where to lay his head.

My share! The right, like him, to know all pain
Which hearts are made for knowing;
The right to find in loss the surest gain;
To reap my joy from sowing
In bitter tears; the right with Him to keep
A watch by day and night with all who weep.

My share! To-day men call it grief and death;
 I see the joy and life to-morrow;
 I thank our Father with my every breath
 For this sweet legacy of sorrow;
 And through my tears I call to each: "Joint heir
 With Christ, make haste to ask him for thy share."

NAMELESS MARTYRS.

BY F. HEMANS.

The kings of old have shrine and tomb
 In many a minster's haughty gloom;
 And green, along the ocean's side,
 The mounds arise where heroes died;
 But show me on thy flowery breast,
 Earth! where thy nameless martyrs rest;—

The thousands that, uncheered by praise,
 Have made one offering of their days;
 For truth, for heaven, for freedom's sake,
 Resigned the bitter cup to take;
 And silently, in fearless faith,
 Have bowed their noble souls to death.

What though no stone the record bears
 Of their deep thoughts and lonely prayer;
 May not our inmost hearts be stilled,
 With knowledge of their presence filled,
 And by their lives be taught to prize
 The meekness of self-sacrifice?

From the Liberal Christian.

A GREAT NEED.

BY M. F. A.

There are certain sins which in their nature seem to defy legislation or any generalized treatment; there are certain reforms which God has manifestly entrusted to individual hands, and at the very head of these divisions stand the sin of drunkenness and the reform of temperance. In the present wide-spread ferment of thought, this evil—old as our physical life, and yet always new in the diversity of forms which it takes on—is confronting the nations, the philosophers, the philanthropists, as the danger which, above all others, threatens social order. Physicians know that the body has no worse enemy than this mad longing for stimulant. Clergymen can tell us what its work is with the soul. None of us have far to look for proof of the power of this terrible, inexplicable passion. Just now we are finding—we creatures who call ourselves civilized—that we are paying a higher price than we can afford for the comfortable ignorance of our past in regard to this matter. We have had our theories, our hot-headed crusades, our superficial legislation, but the root of the sin we have not touched, or even pruned its branches. Down deeper than we dared to look for it, intergrowing with the very strength of our nature, is that general physical love of stimulant which, under certain common moral conditions, yields us the drunkard. In these days, when we are acknowledging that our bodies are as much God's creation as are our souls; when not a

few strong men hold that in material law is to be found the secret of our being, no such question as this can be dealt with merely from the spiritual or moral side. However honest and earnest we may be, we shall never lessen this sin, nor even the results of this sin, until we draw upon our heads as well as upon our hearts for the motives of action.

Now any statistician can tell us how much our national intemperance costs us in hard cash; any moralist can compute for us the sum of sin and shame and folly which it represents; but what we need to know is why it is the most expensive and least inevitable of all the mistakes into which our animal nature leads us; why, in short, it is the commonest form of ruin. Within this great question are included various minor ones, as for example: Is one sex more prone than another to this form of sin? Has it increased with civilization? How far is it dependent upon the influence of climate and race? Are the causes of it to be found chiefly in physical or mental conditions? etc. And we must be moderately sure of the facts which supply the answers to these questions before we have any right to theorize or need look for any result from our experimental philanthropy. To perfect a system of work in this field it would be necessary to have a profound knowledge of the law, whose stern face meets our mistakes at every turn, and to possess a clear understanding of the relative value of man's material and spiritual life. Then we should neither commiserate sinners as the fire doomed victims of an insatiable thirst, nor condemn them as souls lost for eternity by their own weakness. We should deal with them neither as criminals condemned under the law nor as men diseased, and therefore not accountable, but as we gained a deeper insight and a wider view we should find, it may be, that vice is often but the mysterious shadow of possible virtue, and that only by cultivating the virtue do we overgrow the vice. As yet, however, we can scarcely approximate to any perfected system; our knowledge is too crude, too much distorted by prejudice, for us to hope to do more than disentangle from the perplexities with which our ignorance surrounds the subject, some fact, some suggestion, which shall show us the sort of work required of all who intend to fight intemperance intelligently.

A lack of self-control in individuals demonstrates at once the presence of physical or mental weakness or disease. Therefore we find that sound minds in sound bodies are self-controlled, and consequently temperate, and this at least gives us a starting point,

though it is a distant goal and a hard path that are thus placed before us, and we need look for no swift progress, for it even seems as if the best we can do for the moment is to avoid retrogression by making no false advances. The physical side of drunkenness is the result of the very strength of the life within us. Men and women refuse to stagnate. Our instincts teach us to avoid monotony as life avoids death. We want interest, excitement; in short, our bodies demand their rights, which are summed up in one word—health—such health as comes only from due exercise of every faculty; and, failing in its delicious stimulation, we turn to the ruinous imitations of it which civilization offers, and find brief, destructive satisfaction in opium and alcohol and kindred poisons. Possibly it would not be difficult to determine just what proportion of mankind are made drunkards by physical suffering or imperfection, and fortunately this class is apparently the most numerous, for its members are indubitably more susceptible of cure than are those highly strung, sensitive natures who sink into sin only when they despair of better things. When we lose our hope of worldly success; when the aspirations of our youth die within us from sheer inanition, and the faith which should take their place is beyond our grasp, when we find nothing but doubt here and darkness beyond, then drink, the Lethe of alcohol, is the most potent temptation this world can offer us.

Millions of men take it from the love of physical excitement; thousands take it only to forget. What shall the world do with the terrible aggregate? We have our answer, Make their bodies healthy, their souls pure; but the acknowledgment of our end does not give us the means to attain it. To reach the absolute virtue which is our safety humanity has a long journey before it; and, whether it be by evolution or revolution that the change is consummated, neither process is likely to be anything but immeasurably slow. In the meantime, as a practical question, have we no means of protecting the victims, and defending ourselves against the vice of intemperance? Legislation, except in the most modified form, is in defiance of the principle of republican government, and is, moreover, in general, either useless or harmful. Pledges, as a rule, only help those who have already helped themselves, and are not of any permanent assistance to the inebriate. Asylums can at best provide for so small a number, and their success is still so doubtful that they cannot be considered as of any general value. Associations are of more or less importance according to the intelligence which organizes

them; but it is becoming evident that in them, in one way or another, the temperate portion of the race are finding the most available channel for the application of their force. Associations of individuals not binding themselves to special abstinence, to political or theological dogmas, or, indeed, to anything beyond a general system of work, can advantageously include all shades of opinion, and in almost any community. Such associations, composed of men and women who bring to bear upon the question of intemperance the acuteness and energy which they exhibit when their own more immediate interests are concerned, find themselves able to control, both indirectly and directly, such offenders as are injuring themselves and their neighbors by supplying or consuming liquor. Their influence is felt in the general moulding of public opinion in the scarcely-to-be-estimated power of individuals over individuals, and in a wisely moderate local legislation, or adaptation of existing law to local exigencies. The first of these results is easiest of attainment, inasmuch as temperance, being in itself respectable, and having outwardly, at least, the adherence of the better classes, it is not difficult to raise, if need be, an exaggerated sentiment in its favor. But such sentiment is necessarily spasmodic and usually weak, and the individual exertion which must keep it strong and steady is the product only of earnest conviction and deep, tender desire for the exaltation of humanity. No man or woman will penetrate into the miserable details of drunken lives; will study the hidden curses which produce the awful, visible results; will know why the corner grocery stands here and the gin palace there, without a veritable God-sent inspiration—an inspiration which reaches every sense and makes the brain as quick to know as is the heart to feel. And this sort of personal devotion to an abstract purpose; this sin hating and sinner-loving, it is, which makes the power of individuals in a reform so disproportionately great, and creates the force which keeps in motion the machinery of associations. The question of the application of law needs to be carefully handled, and must be finally settled beyond the narrow limits of communities.

We have never had more interesting or useful discussions than those which the bills before the English Parliament, during the present session, have excited among all classes, from the honorable gentlemen in the House to the publicans and sinners who feel that they have got to do fierce battle for their favorite sin. The measures especially recommending themselves to general atten-

tion are comprised in certain clauses of the aforesaid bills permitting rate-payers to regulate the number of public houses within the limits of their jurisdiction, and giving them a well defined amount of power in respect to the sale of liquor, especially regarding its quality and the hours of closing public houses, etc. This makes legislation local, and affords safe opportunity for experiment, the necessary test of theories. A strong point is made of the early closing clause; for it is asserted that a large amount of the liquor consumed on the premises is drunk after nine o'clock P. M., and would consequently be at once diminished by a careful enforcement of this clause. Public houses in England have become so common an evil as to be scarcely recognized as such; and in our own villages and small towns there is a surprising lack of opposition to that deterioration in the public morals which an uncontrolled sale of liquor produces. At the same time, it is quite certain that only the most scientific legislation in America, England or anywhere else will permanently and surely assist these unfortunate human beings who, having lost their own self-control, are only driven deeper into sin by any but the wisest and most carefully-applied restraint. Legislators, as a rule, have neither sufficient breadth of views nor purity of principle to fit them to treat this matter successfully, and thus far in the history of the temperance reform legislation has only achieved its object when it has been purely local and fitted exactly to the circumstances. And, furthermore, it has even then been only a makeshift unless it had behind it the strong hands and earnest hearts of determined individuals, and it is pre-eminently such intelligent, loving labor that is needed just now in our nation of whiskey drinkers. The legislative problem has still to be demonstrated. The daily work is ready to our hands, and the amount of it to be done is out of all proportion to the number of willing and able workers. There is not one of us, man or woman, who, with a true conception of the misery which drunkenness causes, may not in some measure alleviate it. We can strengthen, we can restrain, we can sometimes remove, temptation, and oftener still can supply good food instead of bad, wholesome exercise and pleasure for body and mind instead of deceitful stimulants, which aggravate, instead of allaying, the craving which, in its last analysis, we may hereafter find to be only the demand of our natures for that full measure of life which is their birthright. Our duty to our fellows in this matter cannot be pressed too closely upon us, and our neglect of it is all the more shame-

ful because the claim upon us is not based upon any temporary phase of humanity's need, but upon hard, ugly facts which have been since time was. We Christians, who clothe ourselves daily in purple and fine linen, and intrench ourselves behind our theories of life, our cut-and-dried system, our logical faith, are in danger of forgetting that against these barriers in which we put such complacent trust, beat and rage the blind, uncomprehended passions of developing humanity. We satisfy our intellects with icy definitions of God and life; we crust our hearts over with an indifference which we flatteringly misname liberality, and take no heed of the death-in-life of our brothers, of the sins whose sinfulness is not lessened when we call them "tendencies," and "accidents of progress."

The danger from which our American society has most to fear is the indulgence of this appetite for drink. We are tempted by our national impetuosity, our love of excitement, our immense opportunities, and we have practically no curb upon us except that which the individual conscience supplies.

Here, now, is tangible work, which can be done among our neighbors, our friends, too often in our very homes. It need scarcely take us from the daily routine of our lives, so omnipresent is it, and to deny the demand upon us is folly and cowardice. For God's sake, for man's sake, in remembrance of him whose most blessed name is "Saviour," let us do what we can to save men and women from the shameful agony of drunken lives. Remember what intemperance costs us as a nation; remember the brains that it sears, the waste of love and strength that must be put to its account; remember the little children whose angels do behold the face of our Father in Heaven, who on earth are crushed and warped, and, for all good uses, made useless, and then remember that whether we be of one sect or another, whether we be Christians or unbelievers, religious fanatics or scientific materialists, each one of us most surely is his brother's keeper, and, as such, may here or hereafter have to answer for his brother's sin.

BENEVOLENCE.

A benevolent man is a happy man; he cannot be otherwise, for it is a universal law of our nature to be made happy by making others so. Those evil passions, such as envy, hatred, malice, pride and such like, do not exist in the heart of a benevolent man. These malign passions are found within the heart of the selfish man, which lead him to deception, fraud, murder, or crimes of the most heinous nature. Yea, the very worst elements in such

a one's nature are in activity against him.

A benevolent man has a heart cleansed from all those evil passions that would have a tendency to cause him to consult any act of injustice. He lives to make others happy, for their happiness is his, and he thus realizes the verity of the Divine assertion, "It is more blessed to give than to receive."

Bunyan once put the following riddle into his own peculiar verse:—

"There was a man, though some did count him mad,
The more he gave away the more he had."

The benevolent man has no difficulty in finding its solution, for he has already learned that for every act of liberality he has received a rich reward; and if not in like, which is often the case, it has been in the true enjoyment of doing good, and making others happy by tenfold. Conclusively every benevolent man, by experience, has found that acts of benevolence bring home to his heart happiness and joy which the cares of this world can neither give nor take away.

For Friends' Intelligencer.

REVIEW OF THE WEATHER, ETC.

SEVENTH MONTH.

	1870.	1871.

Totals, for the first 6 months of each year,	25.43 "	21.32 "
Seventh month,	3.94 "	6.81 "
	29.37 "	28.13 "

It cannot be denied that we have had an unusually large number of rainy days; that the quantity of rain is in excess of what generally falls, and that many days of the month have been quite cool, if not cold; and yet the figures show the temperature

to have been about three quarters of a degree above the average for the past *eighty-two* years.

There was frost at the White Sulphur Springs on the morning of the 22d.

In response to our query last month, "Have we had an earthquake?" (referring to the evening of 18th of ditto), we have received the following;

From a friend of ours residing at 3304 Hamilton street, who states that he was about retiring a few minutes before ten o'clock, when he was much surprised at the violent shaking of the house, he, at the time, occupying the room in the third story.

He also informs of another person, well known to both of us, who felt the shock distinctly at the same time while walking in Callowhill street, near Fifteenth.

We have received another written statement of a young lady that she "felt the bed raise up, and in alarm called to her mother in the next room."

These statements are confirmatory of the account we published last month, detailing a communication received stating that "the shock was distinctly perceived at Twelfth and Berks streets in this city—the bed on which the writer lay going twice from east to west, with a returning motion, and, with the chamber floor, appearing to be somewhat raised and lowered, as a boat moved by a swell on the river, attended by a rattling of the window sash and shutters."

A reliable correspondent writes from Bristol, Pa., that on the evening in question one of her daughters in the belief that some one was under the bed felt it raised up three times in quick succession, as if some person was lifting it in the act of creeping from under it. The house was searched carefully but no one was found.

Two of her friends in cheerful conversation the next day (the 19th), thus gave their experience: "Oh, we were so frightened last evening; we retired early in the same room, but in separate beds, and each of us felt the beds move as if some one had run against them, and called out at the same time, "Who's there?" &c.

While on this subject it may be well to mention that they have prevailed in other sections this month. Witne's Boston, Portland, Saco, Brunswick, Portsmouth, N. H., &c., all occurring on the 20th ult., about one o'clock in the morning. Concord also experienced one at the same time, severe enough to cause a church bell to ring.

Indeed, it has not only been a month of earthquakes, but of tornadoes, waterspouts and thunderstorms. This section of country has suffered but little from any of these.

Our correspondent at the Santee Agency, Nebraska, (Geo. S. Truman,) furnishes for the preceding month, but too late for our review, the following:

Mean temperature,	74.69
Highest average of any one day,	84.00
Lowest " " " " " "	65.00
Highest point attained during the month,	95.00
Lowest " " " " " "	58.00

He speaks of several hail storms, one of which "wound up with a most magnificent rainbow, such as is never seen in your city, and rarely in the country. The two ends resting on the earth and bent outward at the base, doubtless caused by reflection from the earth. The prismatic colors to the violet were more clearly defined than I have ever seen them on such occasions."

Other similar displays are noticed by him, as also an aurora on the 10th of the month.

Philadelphia, 8th mo 1st, 1871.

OLIVE DAVIS.

Memoir of Olive Davis, who departed this life in Mendon, Monroe Co., N. Y., on the first of the Ninth month, 1870, aged nearly 82 years.

She was born in Northbridge, Worcester Co., Mass., and sprang from an ancient family of Friends by the name of Southwick, from whom she inherited many of those elements of character which when properly directed adorn the true Friend and Christian.

It was the care of her concerned parents to endeavor thus properly to direct them, and she gave evidence early in life that the seed had not fallen on barren soil, and that the labor bestowed had not been in vain. It grew with her growth and ripened with her maturity, until she became a mother in our Israel.

About the year 1810 she removed in company with two of her brothers, and settled in the town of Scipio, Cayuga Co., N. Y., where she formed the acquaintance of a young man named Martin Davis, who subsequently became her husband.

His religious education had been widely different from hers, having been among the Presbyterians, although not in membership with them. As he was not committed to any particular religious organization, and was free to follow where divine Truth should lead the way, she felt it her duty through

Divine aid to endeavor to draw him into that fold where she had found true rest and peace. With the gentle moulding influence of her sweet and quiet spirit and example, she was instrumental in bringing him into the organization of her choice, and they became true co-workers in the same vineyard.

They were the first family of Friends who settled within the limits of what is now known as Mendon Preparative Meeting.

Though surrounded through all the middle period of her life with a large family, the care of which demanded her close attention, yet her religious duties were not neglected. She was a constant attender of her religious meetings when health permitted, and often in the latter portion of her life, when it was impracticable for her to attend, she would at the appointed time retire to her room, and there spend the usual time of the meeting in silent divine worship.

For several years previous to her death she was disabled by a fall from using one of her limbs, by which she was closely confined; but amid all her suffering and deprivation, she manifested the same patient resignation which so conspicuously marked her active life.
